ONC also began work in partnership with the CDC, the Department of Justice's Bureau of Justice Assistance, and the eHealth Exchange to develop a prototype to pilot an innovative technical solution for the delivery of patient medication histories across state lines via HL7® FHIR®. The eHealth Exchange is a network of networks that is active in all 50 states connecting federal and non-federal healthcare organizations to improve patient care and public health. To date, the prototype has been successfully tested in several states. Early prototype testing used synthetic data to evaluate system capacity to send and receive a patient's medication history request and response. The goal of the project is to allow any provider who is live on the eHealth Exchange to use that existing connection to query a patient's record on the RxCheck Hub, which routes the query to individual state PDMPs who are also live on RxCheck. This solution will enable health care providers to query PDMPs via existing connections to health information exchange (HIE) networks as a way to: (1) leverage existing technology; (2) reduce burden associated with multiple, disparate system interfaces and workflows; and (3) allow for the

[221] HL7® and FHIR® are registered trademarks of Health Level Seven International.

exchange and full integration of data within allowable law from the point of exchange for medication reconciliation, allergy checks, and other forms of clinical decision support.

Based upon these developments, which are advancing enhanced certified functionality, effective functional data exchange, and the use of open, mature standards, we believe there is a much better informed roadmap for achieving better integration between PDMPs and EHRs with enhanced interoperability of controlled prescription data across states and systems. We believe that as these activities develop, they can help to address some of the previous concerns raised by stakeholders around this measure, and we will continue to work with ONC to monitor these activities.

While we believe the Query of PDMP measure is very important to avoid and address the over-prescribing of opioids, we also recognize that some states and systems may not be ready at this time to effectively exchange this data. In light of further work in this area and our stated goals for increasing the impact of this measure, we are seeking stakeholder comment on plans for requiring the Query of PDMP measure in the Promoting Interoperability performance category in the near future. To advance in this direction with both transparent proposals and informed guidance, we request public comment on the future direction for the measure, specifically:

- To what degree would all MIPS eligible clinicians be prepared to report on the current Query of PDMP measure (Yes/No response) in the near future? What additional considerations would need to be addressed before transitioning to a version of the measure that requires the submission of a numerator/denominator?

- Would changes to the Query of PDMP measure be necessary to accommodate other technical approaches that may be implemented in the future, such as exchange of information with a PDMP or with multiple PDMPs using HL7® FHIR®?

- What, if any, exclusions should be made available as part of the measure's specifications with regard to MIPS eligible clinicians?

- When will state PDMPs be ready to effectively exchange data with provider systems using HL7® FHIR® to support this measure? What are the most common standards and approaches used to access PDMP data through provider systems currently?

- What technical considerations exist for intrastate vs. interstate PDMP queries? How could health information exchange networks play a role in expanding access to PDMP data? In what ways could FHIR® applications be supported to safely share PDMP data within a clinician's workflow?

(ii) Proposed Changes to the Provide Patients Electronic Access to Their Health Information Measure Under the Provider to Patient Exchange Objective

(A) Background

In the CY 2019 PFS final rule (83 FR 59812 through 59815), we renamed the Patient Electronic Access Objective to the Provider to Patient Exchange Objective, which includes the Provide Patients Electronic Access to Their Health Information measure. For more information about the Provide Patients Electronic Access to Their Health Information measure, we refer readers to the following preamble discussions in prior rulemaking: 84 FR 62995 and 62999 through 63000, 83 FR 59812, 82 FR 53674, 81 FR 77228, 80 FR 62841 through 62851, 77 FR 54007, and 75 FR 44353.

(B) Proposed Data Availability Requirement for MIPS eligible clinicians

The Provide Patients Electronic Access to Their Health Information measure requires, for at least one unique patient seen by the MIPS eligible clinician: (1) the patient (or the patient-authorized representative) is provided timely access to view online, download, and transmit his or her health information; and (2) the MIPS eligible clinician ensures the patient's health information is available for the patient (or patient-authorized representative) to access using any application of their choice that is configured to meet the technical specifications of the Application Programming Interface (API) in the MIPS eligible clinician's CEHRT (84 FR 62999-63000 and 82 FR 53674). We are proposing to modify this measure to require MIPS

eligible clinicians to ensure that patient health information remains available to the patient (or patient-authorized representative) to access indefinitely and using any application of their choice that is configured to meet the technical specifications of the API in the MIPS eligible clinician's CEHRT. MIPS eligible clinicians would be required to ensure this information remains available indefinitely (that is, not merely for a defined period of time). The proposed requirement would apply beginning with the performance period in 2022, and would include all patient health information from encounters on or after January 1, 2016.

Currently, the Provide Patients Electronic Access to Their Health Information measure does not specify how long MIPS eligible clinicians are required to make patient data available, or to ensure that patient data remain available to patients in the event that a MIPS eligible clinician switches EHR vendors (81 FR 77228). In an effort to minimize stakeholder burden, we want to align the date under our proposal for making information about encounters available with the date of service start date (January 1, 2016) as finalized in the Patient Access and Interoperability final rule (85 FR 25528), and as proposed for the Promoting Interoperability Program for eligible hospitals and CAHs in the FY 2022 IPPS/LTCH proposed rule (86 FR 25631). As an alternative to our proposal, we considered different encounter start dates, such as encounters on or after January 1, 2012, or encounters on or after January 1, 2019. We believe, however, that a requirement for MIPS eligible clinicians to ensure patient health information remains available indefinitely, as well as an encounter start date of January 1, 2016, would provide the most benefit to patients when accessing their health information as compared to the burden and costs to MIPS eligible clinicians implementing these proposed requirements.

We are seeking public comment on our proposal to modify the Provide Patients Electronic Access to Their Health Information measure, as well as the alternatives we have considered.

(iii) Modifications to the Public Health and Clinical Data Exchange Objective

(A) Background

In the CY 2019 PFS final rule (83 FR 59795, 59815 through 59817), for the Public Health and Clinical Data Exchange Objective, we finalized that a MIPS eligible clinician must submit a yes/no response for two different public health agencies or clinical data registries for any of the five measures associated with the Public Health and Clinical Data Exchange objective (Syndromic Surveillance Reporting; Immunization Registry Reporting; Clinical Data Registry Reporting; Electronic Case Reporting; and Public Health Registry Reporting) to earn 10 points for the objective. Failure to report on two different public health agencies or clinical data registries or submitting a "no" response for a measure will earn a score of zero. If an exclusion is claimed for one measure, but the MIPS eligible clinician submits a "yes" response for another measure, they will earn the 10 points for the objective. If a MIPS eligible clinician claims exclusions for both measures they select to report on, the 10 points will be redistributed to the Provide Patients Electronic Access to Their Health Information measure under the Provider to Patient Exchange objective.

The Promoting Interoperability performance category for eligible clinicians has been an important mechanism for encouraging health care data exchange. But in an attempt to reduce burden, we previously stated our intention to propose in future rulemaking to remove the Public Health and Clinical Data Exchange objective and measures no later than CY 2022 (83 FR 59816). Many commenters opposed this potential policy change and noted that interoperability of public health data is still evolving and incentivizes MIPS eligible clinicians to share data with public health agencies (83 FR 59816). In response to these comments, we stated that we will continue to monitor the data we compile specific to the public health reporting requirements and take the commenters' concerns into consideration related to future actions (83 FR 59816).

Effective responses to public health events, such as the COVID-19 pandemic, require fast, accurate exchange of data between health care providers and federal, state, and local public health agencies (PHAs). Health care providers collect these data for patient care and PHAs need

them to protect the public, whether to track an outbreak, initiate contact tracing, find gaps in vaccine coverage, or pinpoint the source of a foodborne outbreak.

While our current approach has encouraged health care systems to stand up some of these capabilities, significant gaps remain, and absent stronger incentives it will be difficult to stand up the comprehensive data exchange needed for future public health response. Thus, we believe that a more assertive approach is needed.

(B) Proposed Modifications to the Reporting Requirements for the Public Health and Clinical Data Exchange Objective

In this section, we are proposing to require two of the measures associated with the Public Health and Clinical Data Exchange Objective, beginning with the performance period in CY 2022: Immunization Registry Reporting; and Electronic Case Reporting. These two measures would put PHAs on better footing for future health threats and a long-term COVID-19 pandemic recovery by strengthening two important public health functions: (1) vaccine uptake; and (2) case surveillance. Requiring these measures would enable automated case reporting for fast public health response; and local and national visibility on immunization uptake so PHAs can tailor vaccine distribution strategies.

(aa) Immunization Registry Reporting Measure

Immunizations are considered one of the ten great public health achievements and have resulted in declines in cases, hospitalizations, deaths, and health care costs associated with vaccine preventable diseases.[222] The benefits and value of immunizations are realized when public policy, health systems, and community-based intervention efforts are working in coordination. Ensuring the coordination of these efforts can achieve high immunization coverage is dependent on the availability of timely, accurate, and complete information on vaccinations received by individuals in a population.

---

[222] Ten Great Public Health Achievements --- United States, 2001--2010 (cdc.gov).

Immunization registries (also called immunization information systems, or IIS) are powerful tools that allow collaboration between vaccine providers and public health agencies and enable coordination of population-based interventions. Immunization registries are confidential, population-based, computerized systems that record all vaccination doses administered by participating health care providers for individuals residing within a particular jurisdiction. At the point of clinical care, an immunization registry can provide consolidated immunization histories to assist vaccine providers in determining appropriate patient vaccinations. At the population level, immunization registries provide data on vaccination coverage assessment and program operations and in guiding public health action to improve vaccination rates.

Currently, 50 states, the District of Columbia, eight island territories, and three cities (New York City, Philadelphia, and San Diego) operate an immunization registry. CDC provides technical assistance and nationwide leadership to all state immunization registries to ensure the optimal use of immunization registries for determining vaccination coverage at local, state, and national levels. Immunization registries already have connections in place to capture administered doses in real-time for a substantial portion of the population, a process accelerated over the last 10 years by the Medicare and Medicaid Promoting Interoperability Programs. According to data from the most recent CDC IIS Annual Report (2019) available, immunization registries currently hold demographics and immunization data on 95 percent of children 0-6 years, 82 percent of adolescents, and 60 percent of adults.[223] While each state Immunization registry currently coordinates with health care providers and EHR systems to achieve interoperability and facilitate immunization reporting, varying state reporting policies limit the completeness and timeliness of records in immunization registries and the optimal use of immunization registries for determining vaccination coverage.

We are proposing to make the Immunization Registry Reporting a required measure under the Public Health and Clinical Data Exchange objective of the Promoting Interoperability

[223] https://www.cdc.gov/vaccines/programs/iis/annual-report-iisar/2019-data.html.

performance category beginning with the performance period in CY 2022 as it is critical for understanding vaccination coverage both at the jurisdiction level and nationwide and identifying where additional vaccination efforts are needed. For more information about the Immunization Registry Reporting measure, we refer readers to the preamble discussion in prior rulemaking at 81 FR 77230. Making standardized reporting to an immunization registry a required measure would provide an immediate benefit by increasing the COVID-19 vaccination records reported to these systems. Making the measure required would also improve the data quality of records in immunization registries and facilitate use of immunization registries for clinical decision support and tracking of vaccine administration and distribution.

We believe that making the Immunization Registry Reporting measure required would increase the reporting of immunization data by health care providers to public health agencies. Making the measure required is also critical for the COVID-19 vaccination response because it would provide a better view of the vaccines administered and distributed at national, state and local levels. This is a function immunization registries currently provide for all public vaccines, but is particularly important for COVID-19 vaccines. In addition to the COVID-19 vaccination response is the equally important need for routine vaccination coverage to increase. Fear of COVID-19 has caused deferrals of routine vaccinations as patients limit their interactions, including with their family doctors. More complete data in immunization registries as a result of the required measure would also optimize the use of immunization registries to determine who has not been vaccinated, pockets of under vaccination, and identifying where interventions should be focused for routine and emergency response vaccines. Requiring the measure would reduce the regulatory and administrative burden health care providers experience when exchanging information with immunization registries.

We are not proposing any changes to the description of the measure including any of the exclusions that we established in CY 2019 PFS final rule at 83 FR 59815 through 59817.

(bb) Electronic Case Reporting

Health care providers are required by state law to report certain diseases and conditions, a process called *case reporting*, which provides PHAs with data on approximately 120 diseases and conditions of public health significance.[224] Case reporting is a vital and longstanding tool that PHAs use to prevent the spread of infectious diseases. Case reporting serves as early notification to PHAs for potential outbreaks and includes information that enables PHAs to start contact tracing and other prevention measures. Case reports also include critical clinical information that would not be included in syndromic surveillance or laboratory reporting, and can help to illuminate the impact of comorbidities, treatments, and variable access to care. Information from the case reports can be used to further work on social determinants of health and ensure equal access to preventative care across populations. Electronic case reporting is the automated, real-time, bidirectional exchange of case report information between EHRs and PHAs. Electronic case reporting uses standard codes to trigger the transfer of relevant clinical data to PHAs for case investigation and follow-up. As of March 2021, most states do not require electronic submission of case reports as part of their regulations and case reporting often occurs through outdated manual methods (for example, fax, email, or phone), which results in delays, underreporting, and incomplete or inaccurate case data. Manual case reporting also imposes burdens on health care providers, taking staff time away from patients to submit case reports and comply with state reporting requirements. Electronic case reporting allows health care providers to fulfill mandated public health reporting requirements without imposing additional burden and disrupting the clinical workflow. This automated data exchange facilitates faster and more efficient disease tracking, case management, and contact tracing. Electronic case reporting provides more timely and complete data than manual reporting, including data on demographics, comorbidities, immunizations, medications, occupation, and other treatments.

Recent efforts by the CDC have sought to significantly improve the effectiveness of electronic case reporting through eCR Now, a strategic initiative that allows for rapid adoption

---

[224] CSTE State Reportable Condition Assessment page: https://www.cste.org/page/SRCA.

and implementation of electronic case reporting for COVID-19 (https://www.cdc.gov/coronavirus/2019-ncov/hcp/electronic-case-reporting.html). As part of this initiative, CDC and its partners have developed an eCR Now FHIR® application (app) to establish electronic case reporting capability in EHR systems. EHR vendors can also implement the eCR functionality within their products to accomplish this reporting. The initiative also supports an electronic case reporting infrastructure that is helping to advance interoperability. This infrastructure supports the transmission of electronic case reports to a shared service platform, and not directly to a PHA, which means that any health care provider that has established an electronic case reporting connection also has a connection with every state PHA, many large local health departments, and some territories. This promotes nationwide interoperability and increases the availability of data for patients who may be traveling or spending time away from their home state. For example, if a patient is a resident of one state but seeks care in another state, this infrastructure will automatically route the case report to both states that would have jurisdiction over this report. This increases inter-jurisdictional reporting, allowing for more seamless case investigation at the national level. The interoperable infrastructure and the use of a standard data format also reduces the variability of case report forms across conditions and jurisdictions, streamlining reporting forms for EHR vendors and health care providers.

As a result of the CDC effort to scale up eCR Now for COVID-19, all 50 states, the District of Columbia, Puerto Rico and 12 large local jurisdictions have connected to the shared services platform and are currently receiving electronic case reports, with more than 8,800 healthcare facilities on board and 8.6 million reports for COVID-19 received by PHAs as of June 28, 2021[225]. The eCR infrastructure is designed to rapidly scale for PHEs, such as COVID-19, and it is enabled to currently support data transmission for 99 reportable and notifiable conditions. While these are significant advancements, the piecemeal approach of encouraging

[225] Healthcare Facilities in Production for COVID-19 Electronic Case Reporting | CDC.

adoption of these tools by individual health care providers has not been an effective or efficient means to quickly scale this effort nationally as has been needed for the COVID-19 PHE response.

We believe the uneven adoption of electronic case reporting creates a public health vulnerability. We are proposing to make the Electronic Case Reporting measure a required measure under the Public Health and Clinical Data Exchange objective of the Promoting Interoperability performance category beginning with the performance period in CY 2022. For more information about the Electronic Case Reporting measure, we refer readers to the preamble discussion in prior rulemaking at 81 FR 77229. We believe making this a required measure would accelerate development of electronic case reporting capabilities in EHR systems, reduce health care administrative burden of complying with state-mandated disease reporting requirements, provide regulatory clarity for EHR vendors, and improve the timeliness, completeness, and utility of case report data for PHAs. We believe that requiring the Electronic Case Reporting measure would be feasible and beneficial for MIPS eligible clinicians. This change would encourage EHR vendors to make electronic case reporting available to their customers, which would make adoption of this capability relatively straightforward for MIPS eligible clinicians. To meet the CEHRT definition when reporting on this measure, in our EHR Incentive Program Stage 3 and Modifications to Meaningful Use in 2015 through 2017 final rule (80 FR 62870 through 62885) we established that health care providers are required to use a health IT module certified to the "Transmission to public health agencies — electronic case reporting" certification criterion at 45 CFR 170.315(f)(5) that relates to how the health IT uses structured data within an EHR to trigger or indicate the generation of an electronic initial case report.[226] They may then transmit the report in the manner specified by the case reporting requirements of the entity to which they are transmitting a report.

[226] For more information about this certification criterion, please see the Certification Companion Guide at https://www.healthit.gov/test-method/transmission-public-health-agencies-electronic-case-reporting.

We believe that requiring the Electronic Case Reporting measure would not only provide certainty to EHR vendors and facilitate an organized and industry-wide rollout of electronic case reporting capabilities, but would also help health care providers reduce their public health reporting burden.

We are not proposing any changes to the description of the Electronic Case Reporting measure and the exclusions that we established in the CY 2019 PFS final rule at 83 FR 59815 through 59817 will remain available.

(cc) Proposed Scoring of the Public Health and Clinical Data Exchange Objective

We are proposing that beginning with the performance period in CY 2022, a MIPS eligible clinician would receive 10 points for the Public Health and Clinical Data Exchange objective if they report a "yes" response for each of the following required measures: Immunization Registry Reporting; and Electronic Case Reporting. In the event that a MIPS eligible clinician is able to claim an exclusion for one or more of these required measures, we are proposing they would receive 10 points for the objective if they report a "yes" response for one measure and claim an applicable exclusion for which they qualify for the remaining measure. If the MIPS eligible clinician fails to report on any one of the two measures required for this objective or reports a "no" response for one or more of these measures, we are proposing that the MIPS eligible clinician would receive a score of zero for the Public Health and Clinical Data Exchange objective, and a total score of zero for the Promoting Interoperability performance category. If an MIPS eligible clinician claims applicable exclusions for which they qualify for both required measures, we propose to redistribute the points associated with the objective to the Provider to Patient Exchange objective.

We are proposing to retain the Public Health Registry Reporting, Clinical Data Registry Reporting, and Syndromic Surveillance Reporting measures, and to make them optional and available for bonus points beginning with the performance period in CY 2022. For more information about these measures, we refer readers to the CY 2017 Quality Payment Program

final rule (81 FR 77229) and the EHR Incentive Program Stage 3 and Modifications to Meaningful Use in 2015 through 2017 final rule (80 FR 62818 through 62825). We are proposing a MIPS eligible clinician may earn 5 bonus points if they report a "yes" response for either the Public Health Registry Reporting measure or the Clinical Data Registry Reporting measure or the Syndromic Surveillance Reporting measure. Reporting on more than one of these optional measures would not yield additional bonus points.

In connection with our proposal to make these measures optional, we are proposing to remove the three exclusions that we established in the CY 2019 PFS final rule at 83 FR 59815 through 59817 for the Public Health Registry Reporting measure, Clinical Data Registry Reporting measure, and the Syndromic Surveillance Reporting measure.

We are seeking comment on these proposals.

(d) SAFER Guides

(i) Background

ONC developed and released the Safety Assurance Factors for EHR Resilience Guides (SAFER Guides) in 2014, and later updated them in 2016. This series of nine user guides support the ability of health care providers to address EHR safety[227]. Collectively, the SAFER Guides help health care organizations at all levels, from small practices to multi-system chains and tertiary care facilities, to conduct self-assessments to optimize the safety and safe use of EHRs in the three areas listed in Table 43. The SAFER Guides are intended to be utilized by EHR users, developers, patient safety organizations, and those who are concerned with optimizing the safe use of health IT. Completing a self-assessment using the SAFER Guides is one of the first steps MIPS eligible clinicians can take to support a "culture of safety" within their organization, and ensure they are responsible operators of technology tools, including certified health IT products, which they utilize in the delivery of care. The SAFER Guides are based on the best evidence available at the time of publication, which included a literature

[227] https://www.healthit.gov/topic/safety/safer-guides.

review, expert opinion, and field-testing at a wide range of health care organizations, from small ambulatory care practices to large health systems.

In the case of system disruption, failure, natural disaster, the SAFER Guides provide recommended safety practices during planned or unplanned EHR unavailability, where end users are unable to access all or part of their EHR. Also included are back-up procedures to prevent the potential loss of clinical and administrative data, and how to utilize paper charting during such downtime. We believe that conducting an annual self-assessment starting with the High Priority Practices Guide would support consistent safety practices for all EHR users.

The High Priority Practices SAFER Guide identifies "high risk" and "high priority" recommended safety practices, intended to optimize the safety and safe use of EHRs.[228] This guide broadly discusses EHR safety concerns that are described in greater detail in the subsequent 8 SAFER Guides. The High Priority Practices Guide is considered the first to be completed of the 9 SAFER Guides.

TABLE 43: The SAFER Guides

Foundational Guides	- High Priority Practices - Organizational Responsibilities
Infrastructure Guides	- Contingency Planning - System Configuration - System Interfaces
Clinical Process Guides	- Patient Identification - Computerized Provider Order Entry with Decision Support - Test Results Reporting with Follow-Up - Clinician Communication

(ii) Proposed New SAFER Guides Measure

We are proposing to add a new SAFER Guides measure to the Protect Patient Health Information objective, beginning with the CY 2022 performance period/2024 MIPS payment year. For this measure, we are proposing that a MIPS eligible clinician must attest to having conducted an annual self-assessment using the High Priority Practices Guide (available at https://www.healthit.gov/topic/safety/safer-guides), at any point during the calendar year in

[228] https://www.healthit.gov/sites/default/files/safer/guides/safer_high_priority_practices.pdf.

which the performance period occurs, with one "yes/no" attestation statement accounting for the complete self-assessment using the guide. We propose that this measure would be required, but it would not be scored, and that reporting "yes" or "no" would not affect the total number of points earned for the Promoting Interoperability performance category. We believe this measure would further enable the electronic exchange of health information to improve the quality of health care, such as promoting care coordination, as described in section 1848(o)(2)(A)(ii) of the Act. We are also proposing to add corresponding regulatory text for this measure at § 414.1375(b)(2)(ii)(C).

In order to complete a "self-assessment" using the High Priority Practices Guide, we would expect that each MIPS eligible clinician would complete a review and mark the associated checkboxes (fully, partially, or not implemented) of recommended practices included at the beginning of the Guide. Detailed worksheets with the rationales for, and examples of how, to implement each recommended practice follows the checklist section of the Guide. These worksheets also include likely sources of information the practice can turn to in order to complete their assessment of a recommended practice, as well as fillable note fields to record follow-up actions.

We understand that every organization faces unique circumstances, and will implement a particular practice differently. As a result, some of the specific examples in the SAFER Guides for recommended practices may not be applicable to every organization. We note that a "self-assessment" does not require an organization to confirm that it has implemented "fully in all areas" each practice described in a particular SAFER guide, nor will an organization be scored on how many of the practices the organization has fully implemented. Rather, the intent of this proposed requirement is for MIPS eligible clinicians to regularly assess their progress and status on important facets of patient safety.

The recommended practices in the SAFER Guides are intended to be useful for all EHR users. However, we recognize that the individuals responsible for the proposed annual

assessment may vary across organizations. An optimal team for completing an annual review of the SAFER Guides might include clinicians (including physicians, nurses, pharmacists, and allied health staff), and the technical staff responsible for implementing and maintaining a practice's EHR as well as data connections with external partners (for example, an HIE). Regarding the frequency of completing the self-assessment for the High Priority Practices Guide, we are proposing that a MIPS eligible clinician must attest to completing their assessment using the High Priority Practices Guide on an annual basis, following an initial completion of the assessment (some clinicians may have already completed an assessment using the SAFER Guides prior to implementation of this requirement, if finalized). We would expect MIPS eligible clinicians to revisit this assessment to determine whether any changes have occurred for their organization. We believe that requiring MIPS eligible clinicians to periodically review this self-assessment as proposed would support a stronger culture of change management within organizations, and would assist organizations in actively understanding and addressing potential safety vulnerabilities, which may significantly impact an organization's safety posture. We recognize that organizations may be at different stages in their progress towards assessing patient safety vulnerabilities, and that MIPS eligible clinicians vary in the resources that they could devote to an annual review of the High Priority Practices Guide. Gathering this information may be time consuming for some, and others may not have the expertise available on staff to complete all of the requirements. For MIPS eligible clinicians with less experience in these areas, we note that there are a number of resources available, which may be able to assist with completing a self-assessment.

We are inviting public comment on these proposals.

(e) Incrementation of the numerator and denominator for Promoting Interoperability performance category measures

In the CY 2019 PFS final rule (83 FR 59799), we summarized a comment we received in response to proposals we had made in the CY 2019 PFS proposed rule concerning the measures

for the Promoting Interoperability performance category beginning with the performance period in 2019. The commenter indicated that for some measures, MIPS eligible clinicians and group practices should be able to get credit for actions that are taken outside of the 90-day performance period. We responded to the comment by stating that since the inception of the Quality Payment Program, we have limited the ability to increment the numerator and denominator of measures to actions occurring during the performance period chosen, with the exception of the Security Risk Analysis measure, for which the relevant actions may occur any time during the calendar year. We now understand that our response to this comment may have caused confusion, and we wish to clarify our response. Instead of referring to the inception of the Quality Payment Program, we should have stated that the measures we proposed beginning with the performance period in 2019 would limit the ability to increment the numerator and denominator to actions occurring during the performance period chosen, with the exception of the Security Risk Analysis measure, for which the relevant actions may occur any time during the calendar year. We note an additional exception would be the SAFER Guides measure (as proposed in section IV.A.3.d.(4)(d) in this proposed rule) because the relevant actions may also occur at any time during the calendar year.

(f) Changes to the Scoring Methodology for the 2022 Performance Period

For ease of reference, Table 44 lists the objectives and measures for the Promoting Interoperability performance category for the performance period in CY 2022 as revised to reflect the proposals made in this proposed rule. Table 45 lists the 2015 Edition certification criteria required to meet the objectives and measures.

TABLE 44: Objectives and Measures for the Promoting Interoperability Performance Category in 2022

Objective	Measure	Numerator	Denominator	Exclusion
e-Prescribing: Generate and transmit permissible prescriptions electronically	e-Prescribing: At least one permissible prescription written by the MIPS eligible clinician is queried for a drug formulary and transmitted electronically using CEHRT.	Number of prescriptions in the denominator generated, queried for a drug formulary, and transmitted electronically using CEHRT.	Number of prescriptions written for drugs requiring a prescription in order to be dispensed other than controlled substances during the performance period; or number of prescriptions written for drugs requiring a prescription in order to be dispensed during the performance period.	Any MIPS eligible clinician who writes fewer than 100 permissible prescriptions during the performance period.
e-Prescribing: Generate and transmit permissible prescriptions electronically.	Query of PDMP (bonus): For at least one Schedule II opioid electronically prescribed using CEHRT during the performance period, the MIPS eligible clinician uses data from CEHRT to conduct a query of a PDMP for prescription drug history, except where prohibited and in accordance with applicable law.	N/A (measure is Y/N)	N/A (measure is Y/N)	N/A
Health Information Exchange: The MIPS eligible clinician provides a summary of care record when transitioning or referring their patient to another setting of care, receives or retrieves a summary of care record upon the receipt of a transition or referral or upon the first patient encounter with a new patient, and reconciles summary of care information from other health care	Support Electronic Referral Loops by Sending Health Information: For at least one transition of care or referral, the MIPS eligible clinician that transitions or refers their patient to another setting of care or health care provider (1) creates a summary of care using CEHRT; and (2) electronically exchanges the summary of care record.	Number of transitions of care and referrals in the denominator where the summary of care record was created using CEHRT and exchanged electronically	Number of transitions of care and referrals during the performance period for which the MIPS eligible clinician was the transferring or referring clinician	Any MIPS eligible clinician who transfers a patient to another setting or refers a patient fewer than 100 times during the performance period.

Objective	Measure	Numerator	Denominator	Exclusion
providers into their EHR using the functions of CEHRT.				
Health Information Exchange: The MIPS eligible clinician provides a summary of care record when transitioning or referring their patient to another setting of care, receives or retrieves a summary of care record upon the receipt of a transition or referral or upon the first patient encounter with a new patient, and reconciles summary of care information from other health care providers into their EHR using the functions of CEHRT.	Support Electronic Referral Loops by Receiving and Reconciling Health Information: For at least one electronic summary of care record received for patient encounters during the performance period for which a MIPS eligible clinician was the receiving party of a transition of care or referral, or for patient encounters during the performance period in which the MIPS eligible clinician has never before encountered the patient, the MIPS eligible clinician conducts clinical information reconciliation for medication, mediation allergy, and current problem list.	Number of electronic summary of care records in the denominator for which clinical information reconciliation is completed using CEHRT for the following three clinical information sets: (1) Medication – Review of the patient's medication, including the name, dosage, frequency, and route of each medication; (2) Medication allergy – Review of the patient's known medication allergies; and (3) Current Problem List – Review of the patient's current and active diagnoses.	Number of electronic summary of care records received using CEHRT for patient encounters during the performance period for which a MIPS eligible clinician was the receiving party of a transition of care or referral, and for patient encounters during the performance period in which the MIPS eligible clinician has never before encountered the patient.	Any MIPS eligible clinician who receives transitions of care or referrals or has patient encounters in which the MIPS eligible clinician has never before encountered the patient fewer than 100 times during the performance period.
Health Information Exchange: The MIPS eligible clinician provides a summary of care record when transitioning or referring their patient to another setting of care, receives or retrieves a summary of care record upon the receipt of a transition or referral or upon the first patient encounter with a new patient, and reconciles summary of care information from	HIE Bi-Directional Exchange	N/A (measure is Y/N)	N/A (measure is Y/N)	N/A

Protect Patient Health Information	Safety Assurance Factors for EHR Resilience Guide (SAFER Guide)	None

Table 46 reflects the scoring methodology for the Promoting Interoperability performance category for the performance period in CY 2022, if the proposed changes discussed earlier in this section are adopted as final, including the continuation of the optional Query of PDMP measure worth 10 bonus points for CY 2022, changes to the Provide Patients Electronic

Access to Their Health Information Measure under the Provider to Patient Exchange objective, the adoption of a SAFER Guides measure, and modified requirements for the Public Health and Clinical Data Exchange objective.

TABLE 46: Scoring Methodology for the Performance Period in CY 2022

Objective	Measure	Maximum Points
Electronic Prescribing	e-Prescribing	10 points
	Bonus: Query of PDMP	10 points (*bonus*)*
Health Information Exchange -OR-	Support Electronic Referral Loops by Sending Health Information	20 points
	Support Electronic Referral Loops by Receiving and Reconciling Health Information	20 points
Health Information Exchange (alternative)	Health Information Exchange Bi-Directional Exchange	40 points
Provider to Patient Exchange	Provide Patients Electronic Access to Their Health Information*	40 points
Public Health and Clinical Data Exchange	Report the following 2 measures:* • Immunization Registry Reporting • Electronic Case Reporting	10 Points
	• Public Health Registry Reporting OR • Clinical Data Registry Reporting OR • Syndromic Surveillance Reporting	5 points (*bonus*)*

Notes: The Security Risk Analysis measure and the SAFER Guides measure are required, but will not be scored.
* Signifies a proposal made in this CY 2022 PFS proposed rule.

We also refer readers to section IV.A.3.e. of this proposed rule, where we are proposing changes to the regulatory text for scoring the Promoting Interoperability performance category at § 414.1380(b)(4)(ii).

(g) Actions to Limit or Restrict the Compatibility or Interoperability of CEHRT

(i) Background

Section 106(b)(2) of the Medicare Access and CHIP Reauthorization Act of 2015 (Pub. L.114-10) (MACRA) includes the heading "Preventing Blocking The Sharing Of Information." Section 106(b)(2)(A) amended section 1848(o)(2)(A)(ii) of the Act to require that, to be a meaningful EHR user, a clinician demonstrates (through a process specified by the Secretary, such as the use of an attestation) that the clinician has not knowingly and willfully taken action (such as to disable functionality) to limit or restrict the compatibility or interoperability of the certified EHR technology. To implement these provisions, we established and codified at § 414.1375(b)(3)(ii) attestation requirements for the Promoting Interoperability performance category to support the prevention of information blocking, which consist of three

statements containing specific representations about a MIPS eligible clinician's implementation and use of CEHRT. For further discussion on these requirements, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77028 through 77035). The attestation statements finalized for MIPS eligible clinicians at § 414.1375(b)(3)(ii) are:

- Statement A: Did not knowingly and willfully take action (such as to disable functionality) to limit or restrict the compatibility or interoperability of certified EHR technology.

- Statement B: Implemented technologies, standards, policies, practices, and agreements reasonably calculated to ensure, to the greatest extent practicable and permitted by law, that the certified EHR technology was, at all relevant times: (1) Connected in accordance with applicable law; (2) compliant with all standards applicable to the exchange of information, including the standards, implementation specifications, and certification criteria adopted at 45 CFR part 170; (3) Implemented in a manner that allowed for timely access by patients to their electronic health information; and (4) Implemented in a manner that allowed for the timely, secure, and trusted bi-directional exchange of structured electronic health information with other health care providers (as defined by 42 U.S.C. 300jj(3)), including unaffiliated providers, and with disparate certified EHR technology and health IT vendors.

- Statement C: Responded in good faith and in a timely manner to requests to retrieve or exchange electronic health information, including from patients, health care providers (as defined by 42 U.S.C. 300jj(3)), and other persons, regardless of the requestor's affiliation or technology vendor.

Section 4004 of the 21st Century Cures Act added section 3022 to the Public Health Service Act (PHSA) (the "PHSA information blocking provision,"), which describes practices by health care providers, health IT developers, and HIEs and networks, that constitute information blocking, and provides for civil monetary penalties and other disincentives for those who engage in information blocking.

In the ONC 21st Century Cures Act final rule published in the May 1, 2020 **Federal Register**, ONC finalized a definition of information blocking and identified reasonable and necessary activities ("exceptions") that do not constitute information blocking (85 FR 25642). For health care providers (as defined in 42 U.S.C. 300jj), information blocking means a practice that, except as required by law or covered by an exception, is likely to interfere with access, exchange, or use of electronic health information; and if conducted by a health care provider, such provider knows that such practice is unreasonable and is likely to interfere with, prevent, or materially discourage access, exchange, or use of electronic health information (45 CFR 171.103).

The 21st Century Cures Act provides for civil monetary penalties for any individual or entity that is a developer, network, or exchange that has committed information blocking (see section 3022(b)(2)(A) of the PHSA). Regarding health care providers, the 21st Century Cures Act provides that "Any [health care provider] determined by the [HHS] Inspector General to have committed information blocking shall be referred to the appropriate agency to be subject to appropriate disincentives using authorities under applicable federal law, as the Secretary sets forth through notice and comment rulemaking" (section 3022(b)(2)(B) of the PHSA).

(ii) Proposed Changes to the Attestation Statements

Although there could be some degree of overlap between conduct described in the attestation statements under § 414.1375(b)(3)(ii) and conduct that could be considered information blocking under section 3022 of the PHSA and ONC's implementing regulations at 45 CFR 171.103, it is important to note these are separate and distinct authorities. For instance, the ONC 21st Century Cures Act final rule finalized a definition for what constitutes information blocking, and exceptions to information blocking that are not reflected in the previously finalized attestation statements under § 414.1375(b)(3)(ii). While we previously stated in the 2017 QPP final rule that these attestations statements did not impose "unnecessary or unreasonable requirements" on health care providers (81 FR 77029), after careful review of these attestation

statements in light of the information blocking regulations at 45 CFR part 171, we believe that statements B and C are no longer necessary. Thus, beginning with the performance period in CY 2022, we are proposing to no longer require statements B and C. We believe that the similarities between practices described under statements B and C, and the practices that could constitute information blocking under section 3022 of the PHSA and ONC's implementing regulations will create confusion for stakeholders. To this point, the practices that could constitute information blocking under 45 CFR part 171 are much broader than those described in the attestation statements. We discuss specific instances of potential confusion below.

Statement B requires attestation to a series of statements regarding the use of certified technology and a designated manner for implementing certified technology. For instance, attestations to the implementation of technology compliant with the standards for certified health IT at 45 CFR part 170, and use of functionality to support health information exchange with other health care providers. However, as noted above, the definition of information blocking finalized in the ONC 21st Century Cures Act final rule is not specific to, nor limited to the use of certified technology, which is compliant with certain standards or the use of certain functionality. Under the ONC 21st Century Cures Act final rule, a health care provider may still be determined to have engaged in practices likely to interfere with access, exchange, or use of electronic health information (information blocking) regardless of whether they are using certified technology.

Regarding statement C, we stated in the 2017 QPP final rule that "technical, legal, and other practical constraints may prevent a health care provider from responding to some requests to access, exchange, or use electronic health information in a health care provider's certified EHR technology" (81 FR 77033). Subsequently, in the ONC 21st Century Cures Act final rule, ONC established a set of reasonable and necessary activities that are not considered information blocking when responding to a request for EHI. The reasonable and necessary activities established under the ONC 21st Century Cures Act final rule now provide more specific direction to health care providers when responding to a request for EHI than the general

"technical, legal, and other practical constraints," which we described in the CY 2017 QPP final rule. Accordingly, we believe that continuing to require statement C may introduce confusion for those health care providers who are obligated to comply with the regulations finalized in the ONC 21st Century Cures Act final rule when responding to a request for EHI.

In order to distinguish the attestation required by section 106(b)(2)(A) of MACRA from information blocking under section 3022 of the PHSA, we are proposing to modify the headings of §§ 414.1375(b)(3) and (b)(3)(ii), add § 414.1375(b)(3)(iii), and modify the definition of "meaningful EHR user for MIPS" under § 414.1305 to specify that the clinician does not knowingly and willfully take action (such as to disable functionality) to limit or restrict the compatibility or interoperability of CEHRT, which reflects the language used in section 106(b)(2)(A) of MACRA. In addition, as discussed, we are proposing to no longer require attestation statements B and C beginning with the performance period in CY 2022, and we are proposing corresponding regulatory text amendments at § 414.1375(b)(3)(ii) and (iii). We made a similar proposal for the Medicare Promoting Interoperability Program in the FY 2022 IPPS/LTCH PPS proposed rule (86 FR 25639 through 25641).

We invite public comment on our proposal.

(h) Additional Considerations

(i) Reweighting the Promoting Interoperability Performance Category for MIPS Eligible Clinicians in Small Practices

We previously established under § 414.1380(c)(2)(i)(C)(*9*) a significant hardship exception for MIPS eligible clinicians in small practices as defined in § 414.1305. In the CY 2018 Quality Payment Program final rule (82 FR 53682 through 53683), we established that we will reweight the Promoting Interoperability performance category to zero percent of the MIPS final score for MIPS eligible clinicians who qualify for this hardship exception. We established that a MIPS eligible clinician seeking to qualify for this exception must submit an application to us demonstrating that there are overwhelming barriers that prevent them from complying with

the requirements for the Promoting Interoperability performance category, and that the exception is subject to annual renewal. In the CY 2018 Quality Payment Program final rule (82 FR 53579 through 53581), we also established that we will determine the size of small practices by utilizing claims data. This policy was further modified in the CY 2019 PFS final rule (83 FR 59727 through 59730) so that beginning with the 2021 MIPS payment year, a small practice is a TIN consisting of 15 or fewer eligible clinicians during the MIPS determination period.

In the CY 2018 Quality Payment Program proposed rule (82 FR 30076), we stated that we believed that special consideration should be available for MIPS eligible clinicians in small practices based on concerns previously identified by commenters, including small practices not being able to afford the upfront investments (including investments in EHR technology), and small practices not adopting EHRs due to the administrative and financial burden. Although some commenters requested that we automatically apply the proposed hardship exception to clinicians in small practices, at the time we disagreed and stated that we believed that many small practices will be able to successfully report for the Promoting Interoperability performance category (82 FR 53683).

We have been monitoring the submission of data for the Promoting Interoperability performance category by small practices and individual clinicians who are part of a small practice, and the numbers remain low despite the no-cost technical assistance we offered small practices through the Small, Underserved, and Rural Support Initiative. Data from CY 2019 revealed that of the 49,278 clinicians in small practices who were scored as an individual for MIPS, 84 percent of them did not submit Promoting Interoperability performance category data and did not apply for a small practice hardship exception application even though they may have qualified for the exception. Among clinicians who did not qualify for Promoting Interoperability performance category reweighting, only 29 percent of small practices compared to 61 percent of practices with more than 15 clinicians billing under the practice's TIN submitted data for the Promoting Interoperability performance category. Although we had expected many small

practices would be able to successfully report data for the Promoting Interoperability performance category, we are concerned to see such low numbers of them either reporting data or applying for the small practice hardship exception, as such inaction would result in a score of zero for this performance category.

We want to support small practices and help them successfully participate in MIPS. As our analysis of the data suggests that successfully participating in the Promoting Interoperability performance category may be particularly challenging for small practices, we are proposing a modification of our policy. Beginning with the CY 2022 performance period/CY 2024 MIPS payment year, we are proposing to no longer require an application for clinicians and small practices seeking to qualify for the small practice hardship exception and reweighting. We are proposing instead to assign a weight of zero percent to the Promoting Interoperability performance category and redistribute its weight to another performance category or categories (as discussed further in section IV.A.3.e. of this proposed rule) in the event no data is submitted for any of the measures for the Promoting Interoperability performance category by or on behalf of a MIPS eligible clinician in a small practice. We are proposing that if data is submitted for a MIPS eligible clinician in a small practice, they would be scored on the Promoting Interoperability performance category like all other MIPS eligible clinicians, and the performance category would be given the weight prescribed by section 1848(q)(5)(E) of the Act. We are proposing the small practice significant hardship exception still would be subject to annual renewal, and we would verify whether a practice meets the definition of a small practice under § 414.1305 on an annual basis. We are proposing corresponding revisions to § 414.1380(c)(2)(i)(C)(*9*).

While we are proposing this policy at this time, it is not our intention that this policy be in place for the long term, but rather only for a few years, as we would like to increase participation of small practices in the Promoting Interoperability performance category. We would like to facilitate small practices successfully reporting data for the Promoting

Interoperability performance category and are therefore seeking comment on potential options to increase small practice participation in the future. We are also seeking comment on why small practices that have not successfully reported for the Promoting Interoperability performance category not applied for the small practice hardship exception. Are practices choosing not to apply due to the requirement that they must have overwhelming barriers that prevent them from complying with the requirements for the Promoting Interoperability performance category? Is there confusion about what would be considered an overwhelming barrier? Are they aware that the small practice hardship exception is available? We are also interested in hearing about barriers that exist that prevent the adoption of CEHRT and/or the ability to submit Promoting Interoperability performance category measures. Are small practices wanting to adopt CEHRT but lack the resources?

Have practices previously adopted CEHRT but face barriers in upgrading to the edition of certified health IT currently required to meet the CEHRT definition for the Quality Payment Program? Alternatively, have these practices consciously chosen not to adopt CEHRT because of impending retirement or other factors? Are there other policies that we could pursue to remove barriers to or incentivize participation in the Promoting Interoperability performance category by small practices?

We are proposing that in the case of an APM Entity that also meets the definition of a small practice, we would continue applying the Promoting Interoperability performance category reporting and exception requirements at the group level, as described at § 414.1317. However, if the APM Entity is composed of a single TIN which itself meets the definition of a small practice, all TINs within the APM Entity (that is, the single TIN) would be eligible for this exception, and therefore the Promoting Interoperability performance category would be reweighted for the APM Entity and the performance category reweighting described above would be applied.

We are seeking comments on this proposal.

(ii) Nurse Practitioners, Physician Assistants, Clinical Nurse Specialists, and Certified Registered Nurse Anesthetists

We established a policy at § 414.1380(c)(2)(i)(A)(*5*) for the performance periods in 2017 through 2021 under section 1848(q)(5)(F) of the Act to assign a weight of zero to the Promoting Interoperability performance category in the MIPS final score if there are not sufficient measures applicable and available to NPs, PAs, CRNAs, and CNSs. We will assign a weight of zero only in the event that an NP, PA, CRNA, or CNS does not submit any data for any of the measures specified for the Promoting Interoperability performance category, but if they choose to report, they will be scored on the Promoting Interoperability performance category like all other MIPS eligible clinicians and the performance category will be given the weighting prescribed by section 1848(q)(5)(E) of the Act.

As in past years, we intend to use data from prior performance periods to further evaluate the participation of NPs, PAs, CRNAs, and CNSs in the Promoting Interoperability performance category and consider for subsequent years whether the measures specified for this category are applicable and available to these MIPS eligible clinicians. We have analyzed the data submitted for the 2017 performance period for the Promoting Interoperability performance category and have discovered that the vast majority of MIPS eligible clinicians submitted data as part of a group. Although we are pleased that MIPS eligible clinicians utilized the option to submit data as a group, it does limit our ability to analyze data at the individual NPI level. For the 2017 performance period, approximately 4 percent of MIPS eligible clinicians who are NPs, PAs, CRNAs, or CNSs submitted data individually for MIPS, and more than two-thirds of them did not submit data for the Promoting Interoperability performance category. For the 2018 performance period, we reported that of the MIPS eligible clinicians who are NPs, PAs, CRNAs, or CNSs and submitted data individually, approximately 34 percent submitted data for the Promoting Interoperability performance category. However, after further review and the refinement of our analytics it was revealed that the percentage was not 34 percent but was 24

percent of MIPS eligible clinicians who are NPs, PAs, CRNAs, or CNSs that submitted data individually for the Promoting Interoperability performance category. For the 2019 performance period, of the MIPS eligible clinicians who are NPs, PAs, CRNAs, or CNSs and submitted data individually, approximately 30 percent submitted data individually for the Promoting Interoperability performance category, a modest increase from 2018. We continued our reweighting policy in 2020 although we do not yet have data from submissions for the CY 2020 performance period and do not expect it to be available prior to the release of this proposed rule.

We believe that having these clinician types using CEHRT and submitting data for the Promoting Interoperability performance category is important for increased interoperability and data exchange. We are exploring the possibility that these clinician types are able to submit data but are choosing not due to our current reweighting policies. In the future we may use other factors besides the submission data to determine whether to continue to reweight the Promoting Interoperability performance category for these clinicians. We are requesting comments as to whether these clinician types are using CEHRT and are able to submit data on the measures for the Promoting Interoperability performance category.

While we are encouraged by the increasing numbers of NPs, PAs, CRNAs, and CNSs submitting data for the Promoting Interoperability performance category, we believe that the low numbers warrant the continued reweighting the Promoting Interoperability performance category for NPs, PAs, CRNAs, and CNSs for the performance period in 2022. Thus, we are proposing to continue the existing policy for the 2022 performance period/2024 MIPS payment year and are proposing to revise § 414.1380(c)(2)(i)(A)(*5*), which is being redesignated as § 414.1380(c)(2)(i)(A)(*4*)(*ii*), to reflect the proposal.

We request comments on this proposal.

(iii) Physical Therapists, Occupational Therapists, Qualified Speech-Language Pathologists, Qualified Audiologists, Clinical Psychologists, and Registered Dieticians or Nutrition Professionals

In the CY 2020 PFS final rule (84 FR 63003 through 63004), we adopted a policy at § 414.1380(c)(2)(i)(A)(*4*) to apply the same policy we adopted for NPs, PAs, CNSs, and CRNAs to other types of MIPS eligible clinicians who are NPPs (physical therapists, occupational therapists, qualified speech-language pathologist, qualified audiologists, clinical psychologists, and registered dieticians or nutrition professionals) for the performance period in 2020. We stated that because many of these clinician types were or are not eligible to participate in the Medicare or Medicaid Promoting Interoperability Program, we have little evidence as to whether there are sufficient measures applicable and available to them under the Promoting Interoperability performance category. We extended this policy for the performance period in 2021 (85 FR 84895). As these clinicians were first eligible to participate in 2020, we do not have data to rely on to modify our current policy and do not anticipate it being available prior to the release of this proposed rule. Therefore, we are proposing to continue the existing policy of reweighting the Promoting Interoperability performance category for physical therapists, occupational therapists, qualified speech-language pathologist, qualified audiologists, clinical psychologists, and registered dieticians or nutrition professionals for the 2022 performance period/2024 MIPS payment year. We propose to revise § 414.1380(c)(2)(i)(A)(*4*), which is being redesignated as § 414.1380(c)(2)(i)(A)(*4*)(*i*), to reflect this proposal.

We request comments on this proposal.

(iv) Clinical Social Workers and Certified Nurse-Midwives

In section IV.A.3.a. of this proposed rule, we are proposing to add clinical social workers and certified nurse-midwives to the definition of a MIPS eligible clinician. These clinician types were not eligible to participate in the Medicare Promoting Interoperability Program to earn incentive payments for meaningful use of CEHRT or receive reduced Medicare payments for failing to meaningfully use CEHRT. Clinical social workers were not eligible for Medicaid EHR incentive payments and thus may lack experience with the adoption or use of CEHRT. Certified nurse-midwives were eligible for the Medicaid EHR incentive payments, and the majority did

earn incentives. For the CY 2022 performance period/CY 2024 MIPS payment year, we are proposing to apply the same Promoting Interoperability reweighting policy we adopted previously for NPs, PAs, CNSs, CRNAs, and other types of MIPS eligible clinicians to clinical social workers as we believe that there may not be sufficient Promoting Interoperability performance category measures that are applicable and available to clinical social workers. We would assign a weight of zero only in the event that a clinical social worker does not submit data for any of the measures specified for the Promoting Interoperability performance category. We are proposing to add § 414.1380(c)(2)(i)(A)(*4*)(*iii*) to reflect this proposal for clinical social workers.

We believe there are sufficient measures applicable and available to certified nurse-midwives under the Promoting Interoperability performance category because of their experience with the Medicaid Promoting Interoperability Program. Many of them have adopted CEHRT and earned a Medicaid incentive payment, and the measures for the Medicaid Promoting Interoperability Program generally are the same or slightly modified versions of the Promoting Interoperability performance category measures. Thus, we are not proposing to apply the same Promoting Interoperability reweighting policy we adopted previously for NPs, PAs, CNSs, CRNAs, and other types of MIPS eligible clinicians to certified nurse-midwives. However, we are requesting comment on whether there are in fact sufficient measures applicable and available to certified nurse-midwives under the Promoting Interoperability performance category, and whether barriers exist that prevent certified nurse-midwives from complying with the requirements of the Promoting Interoperability performance category and may warrant reweighting. Like other types of MIPS eligible clinicians, a certified nurse-midwife may be able to qualify for a significant hardship exception from and reweighting of the Promoting Interoperability performance category under the existing policies at § 414.1380(c)(2)(i)(C), depending on their circumstances.

We request comments on this proposal.

(i) Technical Corrections to the Regulations

In the CY 2019 PFS final rule (83 FR 59798 through 59817), we adopted objectives and measures for the Promoting Interoperability performance category that would apply beginning with the performance period in 2019. The requirement for MIPS eligible clinicians to report on these objectives and measures can be found under § 414.1375(b)(2). In the CY 2021 PFS rulemaking, we inadvertently neglected to update this provision of the regulation text, although our intention was a continuation of the policy we established for the 2021 and 2022 MIPS payment years. We are proposing a technical correction to § 414.1375(b)(2)(ii) to specify that the reporting requirements apply beginning with the 2021 MIPS payment year. We request comments on this proposal.

(j) Requests for Information

(i) Request for Information on Additional Objectives Adopting FHIR®-based API Standards

Fast Healthcare Interoperability Resources (FHIR®) (http://hl7.org/fhir) is a free and open-source standards framework (in both commercial and government settings) created by Health Level Seven International (HL7®) that establishes a common language and process for all health IT, it allows systems to communicate and information to be shared seamlessly with a lower burden on stakeholders. Through the HL7® FHIR® standard, cost and burden for health care providers and patients are reduced since it simplifies implementation without sacrificing information integrity, establishes fast, efficient, and flexible health data exchange as a stand-alone standard or combined with existing standards. Essentially, HL7®'s FHIR® standard framework provides an interoperable platform for a variety of health care data by defining a standard way to structure this information as 'resources' and allows the developer-friendly automated data-exchange to occur via APIs. The use of APIs utilizing the FHIR® standard has the potential to improve data exchange by providing consistent security, performance, scalability, and structure to all users. Given the progress of such emerging health IT innovation standards to promote interoperability at large, we see increased adoption of approaches utilizing the latest

HL7® FHIR® standard as an opportunity to consider how these approaches can support other program goals

In the CY 2021 PFS final rule, we finalized alignment of the CEHRT definition for the Promoting Interoperability programs with updates to 2015 Edition certification criteria as finalized in the ONC 21st Century Cures Act final rule. As part of the ONC 21st Century Cures Act final rule, ONC finalized a new certification criterion "Standardized API for patient and population services" at 45 CFR 170.315(g)(10) which supports the availability in certified health IT of an API using the FHIR® Release 4 standard and other implementation specifications. We noted that technology certified to this criterion will be used to support the API requirements in the Provide Patients Access to their Health Information objective. Regarding the bi-directional HIE measure finalized for MIPS eligible clinicians in the CY 2021 PFS final rule (85 FR 84888 through 84893), we also noted that the standards-based API criterion at 45 CFR 170.315(g)(10) could be used to support connections to an HIE in order to complete the measure's actions.

We are seeking comments on our intention to align additional Promoting Interoperability performance category objectives with approaches utilizing HL7® FHIR® standard Release 4-based API functionality (or the appropriately evolved standard), specifically targeting the Health Information Exchange as well as the Public Health and Clinical Data Exchange objectives. Throughout this ongoing developmental process, we are partnering with ONC and continuing to strengthen collaboration on the implementation of the 21st Century Cures Act final rule.

We are interested in public comments on how these two program objectives could be furthered through the use of FHIR®-based API solutions. Specifically, we are interested in the following questions:

- To what degree are stakeholders currently using or interested in using APIs to exchange information in support of the numerator/denominator measures under the HIE objective? What revisions to the measures under the HIE objective should CMS explore to

facilitate use of standards-based APIs in health IT modules certified under the 2015 Edition Cures Update?

- How could technical approaches utilizing the FHIR® standard enhance existing data flows required under the public health measures? What are promising FHIR®-based approaches to public health reporting use cases that ONC and CMS should explore for potential future consideration as part of the Promoting Interoperability performance category and the ONC Health IT Certification Program?

- To what degree are PHAs and individual states currently exploring API-based approaches to conducting public health registry reporting? What other factors do stakeholders see as critical factors to adopting FHIR®-based approaches?

- What potential policy and program changes in CMS and other HHS programs could reduce health care provider and health IT developer burden related to measures under the Health Information Exchange and the Public Health and Clinical Data Exchange objectives?

(ii) Request for Information on a Patient Access Outcomes Measures

The evolution of EHRs has created a greater and more seamless flow of information within a digital health care infrastructure which allows for comprehensive records to be made available wherever and whenever they are needed in the clinical setting. These advances have led to: (1) improved patient care; (2) increased patient participation; (3) improved care coordination; (4) greater practice efficiencies and cost savings; and (5) improved diagnostics and patient outcomes[229]. Much research effort has been dedicated to looking at the implementation of health IT in practice settings with its wide array of potential benefits, but equally important to the success of this EHR-advancement is better understanding the patient's role as an active end-user as well.

Several large, nationally representative surveys have been completed annually in order to collect and evaluate the public's access and use of health information. One of these endeavors

[229] https://www.healthit.gov/topic/health-it-basics/benefits-ehrs.

operated by the National Cancer Institute (with support from ONC) is The Health Information National Trends Survey (HINTS[230]) that produces a plethora of key utilization data specifically pertaining to consumers' access and use of their online medical records via patient portals. The HINTS results point to an overall year-over-year rise in the number of Americans who are not only accessing their medical records online (from 51 percent in 2018 to 58 percent in 2019[231]) but are increasingly doing so to perform meaningful actions such as to view lab test results, transmit their data to a third-party, and to securely message their health care provider. While sources like the HINTS survey are revealing preferential trends, habits, and other key utilization points, the data also show some strong barriers associated with patients accessing CEHRT and continue to stress the need for further work in understanding these users' access outcomes.

We believe a strong partnership between EHR vendors, health care providers, and beneficiary users' outcomes is critical to improving the future of health care and furthering interoperability. Therefore, we are seeking comments surrounding changes to the Promoting Interoperability performance category and related efforts which could better target patient access outcomes related to use of patient portals or third-party application(s). This request for information is an opportunity to garner general interest, solicit stakeholder feedback on how to best evaluate issues of patient behavior, and to explore additional key outcome variables to capture for measurement.

Specifically, we are looking for feedback on the following questions:

- What do stakeholders believe would be useful ways to measure patients' access to their electronic health information using health IT methods such as patient portals and/or third-party applications? What actionable figures related to users' medical record behavior, including

[230] https://hints.cancer.gov/.

[231] Patel, V. Johnson, C. (2020). *The Current State of Patients' Access and Use of their Electronic Health Information* [PowerPoint presentation]. The Office of the National Coordinator for Health Information Technology Annual Meeting.

but not limited to, the frequency of logins, number of messages sent, or lab results viewed could be captured?

- How effectively is the Promoting Interoperability performance category currently measuring the use of health IT-enabled processes to improve patient outcomes? What measures in the current performance category are most relevant to patient outcomes?
- Should we consider requiring health care providers to maintain a record of third-party applications which patients have used to access their patient health information through APIs incorporated within certified technology so that this information could be used to assess patient usage of these applications?
- What are specific technologies, capabilities, or system features (beyond those currently addressed in the Promoting Interoperability performance category) that can increase patient utilization of tools to access their health information? How do these technologies and features support improved access or usability within EHR systems and other applications (for instance, alternate authentication technologies that can simplify consumer logon)? How could CMS reward health care providers for higher adoption rates and use of these available technologies?
- What are key administrative processes that could benefit from more efficient electronic workflows? How could CMS measure and reward participating MIPS eligible clinicians for either greater uptake of patient portal access or subsequent health outcomes?

(iii) Request for Information on Clinical Notes

OpenNotes is an international movement aimed to spread and study the effects of transparent communication among patients, families, and clinicians.[232] With more than 50 million patients in the U.S. and Canada having gained access to their clinical notes, the push for patient engagement and transparent communication continues to grow.[233] Alongside this movement, "Clinical notes" have been regarded as highly desirable data necessary for the

[232] https://www.opennotes.org/about/.
[233] https://www.opennotes.org/history/.

interoperable exchange of health information and patient access. Comprised of structured and unstructured data, clinical notes may include the assessment, diagnosis, plan of care and evaluation of plan, patient teaching, and other relevant data (85 FR 25674).

While the ability to share clinical notes has been previously supported for certified health IT in different ways, ONC took additional steps to ensure this important patient information is available as part of the recent ONC 21st Century Cures Act final rule (85 FR 25674 through 25677). In the rule, ONC finalized eight types of "clinical notes" required under the USCDI version 1: (1) Discharge Summary Note; (2) History & Physical; (3) Progress Note; (4) Consultation Note; (5) Imaging Narrative; (6) Laboratory Report Narrative; (7) Pathology Report Narrative; and (8) Procedure Note.[234]

As previously discussed in the CY 2021 PFS final rule (85 FR 84825), we finalized to align the CEHRT definition under the Promoting Interoperability performance category with the timelines established under the ONC 21st Century Cures Act final rule for implementation of the 2015 Edition Cures Update. This alignment includes updates to several certification criteria to refer to the USCDI and the expanded support for clinical notes specified in the USCDI version 1 standard. New and updated certification criteria incorporating the USCDI, include the "view, download, and transmit" criterion at 45 CFR 170.315(e)(1), and the "Standardized API for patient and population services" criterion at 45 CFR 170.315(g)(10). Once EHR developers and MIPS eligible clinicians have completed implementation of these updates, certified health IT required for participation in the Promoting Interoperability performance category will support availability of clinical notes as part of the data set made available to patients under the Provide Patients Access to their Health Information measure. According to the policy finalized in the CY 2021 PFS final rule, MIPS eligible clinicians may begin using updated technology as soon as it is available from their vendors (effective upon the effective date of the CY 2021 PFS final rule), with updated technology being required for performance periods beginning in CY 2023.

---

[234] Link to the Clinical Notes Argonaut Project https://www.healthit.gov/isa/uscdi-data/clinical-notes#uscdi-v1.

Under this RFI, we are seeking stakeholder feedback on changes we can make that will better support the goals of the OpenNotes movement to ensure that clinical notes are widely available to patients. Given the implementation of updates to certified technology described above that support the Provide Patients Access to their Health Information measure, are there additional changes to this measure, or other program guidance, which could further facilitate ensuring clinical notes are available to patients consistent with the goals of the OpenNotes movement? We are also seeking feedback on the development of a required and independently scored measure for the Promoting Interoperability performance category to allocate points for the use of "clinical note" types supported by certified health IT. Finally, we are seeking comment on the types of clinical notes that are commonly sought, but not easily accessible to patients. We included a similar RFI under the Medicare Promoting Interoperability Program in the FY 2022 IPPS/LTCH proposed rule (86 FR 25654).

(5) APM Entity level participation for MIPS Eligible Clinicians Participating in MIPS APMs

(a) Overview

In the CY 2021 PFS final rule (85 FR 84896), we finalized our policy to terminate the APM scoring standard effective January 1, 2021, and to retain certain APM Entity group reporting policies that were established and finalized for reporting and scoring under MIPS beginning with the CY 2021 MIPS performance period. Therefore, we redesignated, in part, the regulation that describes APM Entity group determinations, from § 414.1370(e) to § 414.1317, and titled that section "APM Entity Groups."

(b) APM Entity level reporting of facility-based measures

In the CY 2021 PFS final rule (85 FR 84896), we finalized a policy to allow APM Entities to report to traditional MIPS using the same quality measures available to other groups, according to all applicable MIPS quality scoring policies. It has been brought to our attention that we did not make it clear whether APM Entities may be eligible for facility-based scoring. We would like to clarify that because facility-based measures are not submitted, but rather

collected by CMS using group-level participation scores used for the Hospital Value Based Purchasing Program, it would be impossible for CMS to calculate a score for a facility-based measure that represents the performance of an APM Entity. Therefore, facility-based scoring is not available to APM Entities under MIPS quality scoring rules, as described at § 414.1330. We note that participants in APM Entities that are eligible for facility based scoring at the individual or group level would still be eligible to receive these scores for purposes of individual or group MIPS scoring.

(c) APM Entity performance category weights

In the CY 2021 PFS final rule (85 FR 84896), we finalized a policy to weight the cost performance category at zero percent of the final score for APM Entities in MIPS APMs. We codified the weight of the cost performance category at § 414.1317(b)(2), but we did not discuss in the CY 2021 PFS final rule how the weight that otherwise would have applied to the cost performance category will be redistributed among the other performance categories. For purposes of clarity, we propose to add to § 414.1317(b)(2) that the performance category reweighting scenarios under § 414.1380(c)(2) apply to an APM Entity.

Because APM Entities are participating in traditional MIPS and generally are being scored according to traditional MIPS scoring rules at § 414.1380 unless otherwise specified, the performance category reweighting scenarios under § 414.1380(c)(2) are applicable to APM Entities. Using the 2021 MIPS performance period/2023 MIPS payment year as an example, if the cost performance category is the only performance category weighted at zero percent for an APM Entity, the performance category weights would be as follows under § 414.1380(c)(2)(ii)(E): quality 55 percent, cost zero percent, improvement activities 15 percent, and promoting interoperability 30 percent. If both cost and promoting interoperability are weighted at zero percent, then quality would be 85 percent and improvement activities would be 15 percent. For the remaining reweighting scenarios for the 2021 MIPS performance period/2023 MIPS payment year, we refer readers to Table 6 under § 414.1380(c)(2)(ii)(E). The

reweighting scenarios applicable to APM Entities for the 2022 MIPS performance period/2024 MIPS payment year can be found in Table 7 under § 414.1380(c)(2)(ii)(F). We refer readers to section IV.A.3.e.(2)(a) of this proposed rule where we propose to apply the reweighting policy finalized for the 2022 MIPS performance period/2024 MIPS payment year at § 414.1380(c)(2)(ii)(F) to the 2025 MIPS payment year and each subsequent MIPS payment year. In the event we establish additional reweighting scenarios, they would also apply to APM Entities.

d. MIPS Final Score Methodology

(1) Performance Category Scores

(a) Background

For the CY 2022 performance period/2024 MIPS payment year, we intend to continue to build on the scoring methodology we finalized for prior years. The scoring methodology allows for accountability and alignment across the performance categories and minimizes burden on MIPS eligible clinicians. We are updating many of our scoring policies, focusing on removing transition policies. Specifically, we are proposing to--

- Change certain terminology related to scoring.
- Amend our scoring flexibility policy to include quality measures with omitted or deactivated codes in the finalized measure specifications.
- Implement benchmarking and topped out scoring policies that are responsive to potential low reporting rates for the CY 2020 performance period/2022 MIPS payment year due to the national PHE for COVID-19 and establishing a benchmark when measures are suppressed in the baseline period.
- Amend policies for scoring quality measures based on achievement and measures that do not meet case minimum or have a benchmark and introduce scoring policies for new measures.
- Amend the minimum case requirement policy.

- End the high priority and end to end reporting bonuses in the quality performance category.

- Continue improvement scoring in the quality performance category.

- Implement a scoring flexibility policy for changes that impact cost measures during the performance period.

- Revise certain provisions of the regulation text for the Promoting Interoperability performance category.

We are not proposing changes to scoring policies for the improvement activities performance category.

We have maintained our approach that MIPS eligible clinicians are scored against performance standards for each performance category and receive a final score, comprised of their performance category scores, and calculated according to the final score methodology. We refer readers to § 414.1380 for policies on scoring.

(b) Terminology Updates

We are proposing updates to § 414.1380 in an effort to more clearly and concisely capture previously established policies. These proposed updates are not intended to be substantive in nature, but rather to bring more clarity to the regulatory text. We are proposing to change the term "performance category percent score" to "performance category score" in § 414.1380(b)(1)(vi)(C) and (E) related to improvement scoring, § 414.1380(b)(1)(vii) related to scoring the quality performance category score, § 414.1380(b)(2)(iii) and (v) related to scoring the cost performance category, § 414.1380(c) and (c)(2)(ii)(A) on calculating the final score and final score reweighting, and § 414.1380(e)(6)(iv) and (v) related to facility-based scoring. Again, these changes are not intended to change the underlying policies reflected in the regulation text. Initially, the quality and cost performance categories used the term "performance category percent score" because those categories had improvement scoring and have a slightly different approach to calculation than the Promoting Interoperability and improvement activities

performance category. However, the terms "performance category percent score" and "performance category score" have been used in the same way. For that reason, we are proposing to consolidate our language and use only the latter aforementioned term.

(c) Scoring the Quality Performance Category for the Following Collection Types: Medicare Part B Claims Measures, eCQMs, MIPS CQMs, QCDR Measures, the CAHPS for MIPS Survey Measure and Administrative Claims Measures

We refer readers to § 414.1380(b)(1) for our policies regarding quality measure benchmarks, calculating total measure achievement and measure bonus points, calculating the quality performance category percent score, including achievement and improvement points, and the small practice bonus (81 FR 77276 through 77308, 82 FR 53716 through 53748, 83 FR 59841 through 59855, 84 FR 63011 through 63018, 85 FR 84898 through 84913). We propose to amend policies finalized in prior years to simplify scoring in MIPS as we transition to MVPs.

(i) Scoring Flexibility for Changes that Impact Quality Measures during the Performance Period or Prior to Implementation

We refer readers to CY 2018, CY 2019, and CY 2021 Quality Payment Program final rules (82 FR 53714 through 53716, 83 FR 59845 through 59847, and 85 FR 84898 through 84901 respectively) and § 414.1380(b)(1)(vii)(A) for our previously establish scoring flexibilities policy.

In the CY 2018 Quality Payment Program Final rule (82 FR 53714 through 53716), we finalized that, beginning with the 2018 MIPS performance period, we will assess performance on measures considered significantly impacted by ICD-10 coding changes during the performance period based only on the first 9 months of the 12-month performance period. We noted that we believe that 9 months of data is sufficient to assess performance when 12 months of data is not available. We finalized that we would publish a list of measures requiring 9 months of data on the CMS website by October 1st of the performance period if technically feasible, but no later than the beginning of the data submission period (for example, January 2, 2021 for the 2020

performance period) (82 FR 53716). We refer readers to § 414.1380(b)(1)(viii) for more on our policy for scoring flexibility for ICD-10 changes.

In the CY 2019 Quality Payment Program final rule (83 FR 59845 through 59847), we finalized policies beginning with the 2019 performance period/2021 MIPS payment year to reduce the total available measure achievement points from the quality performance category by 10 points for MIPS eligible clinicians for each measure submitted that is significantly impacted by clinical guideline changes or other changes when we believe adherence to the guidelines in the existing measures could result in patient harm or otherwise no longer be comparable to a historic benchmark. We wanted the flexibility to respond to instances in which the clinical evidence and guidelines change and approved measures no longer reflect the most up-to-date clinical evidence and could even result in a practice that is harmful to patients. We finalized expanding the list of reasons that a quality measure may be impacted during the performance period in addition to revising when we would allow scoring of the measure with a performance period truncation (to 9 months of data) or the complete suppression of the measure if 9 months of data are not available.

In the CY 2021 Quality Payment Program final rule, we finalized a consolidation of the CY 2018 and CY 2019 scoring flexibilities policy that allowed, beginning with the 2021 performance period/2023 MIPS payment year, truncation of the performance period or suppression of a quality measure if CMS determines that revised clinical guidelines, measure specifications or codes impact clinician's ability to submit information on the measure or may lead to potentially misleading results. Based on the timing of the changes to clinical guidelines, measure specifications or codes, we would assess the measure on 9 months of data, and if 9 consecutive months of data are not available, we would suppress the measure by reducing the total available measure achievement points from the quality performance category by 10 points for each measure submitted that is impacted (85 FR 84898 through 84901).

In previous rules, we noted that we believe that there may be instances when there are changes after the final approval of quality measures including changes to the measure specification, or updates to coding that may lead to misleading results (85 FR 84899). Additionally, we believe that there may be instances in which there is an inadvertent omission of codes, or inclusion of deactivated codes in the measure specifications that do not have the correct status. Typically, codes that are contained within the measure specifications either have a reimbursable status or a non-reimbursable status that still allows processing for purposes of quality reporting programs. We have encountered instances where CMS has been alerted that codes have inadvertently received an inactive status which results in the associated codes not being processed and stored in the National Claims History (NCH) database and therefore not available for quality purposes. As the measure specifications are considered technical documents that include several fields such as, but not limited to: the numerator, denominator, measure description, denominator exclusions, clinical guidance statements, and codes relevant to how the measure should be captured. The measure specifications are finalized and published in coordination with the final rule, and prior to the start of the performance period. An inadvertent omission of codes, or inclusion of inactive codes in the measure specifications, may result in misleading results by affecting clinicians who submit the measure. In these instances, implementation errors could lead to misleading performance rates by failure to reflect accurate numerator and/or denominator values for calculation of the measure. These are not changes that occur during the performance period, but errors that would affect the performance period.

It recently came to our attention through Help Desk inquiries that Medicare Administration Carriers (MACs) were rejecting 2021 Part B Claims submissions for Quality Measure ID (QID) 001: Hemoglobin A1c (HbA1c) Poor Control (>9%) and QID 117 Diabetes: Eye Exam due to an inactive status for certain CPT II codes. The omission of these claims from the total denominator population of the measure could skew scores and lead to misleading results. We believe suppression of the measures is consistent with current §

414.1380(b)(1)(vii)(A). Information on the suppression of the Part B claims collection type of these measures for the 2021 MIPS performance period/2023 MIPS payment year was announced via the QPP listserv on July 1st, 2021. For more information please refer to our website qpp.cms.gov.

We propose to amend § 414.1380(b)(1)(vii)(A) to clarify our intended policy on instances in which we become aware of changes to the active or payable status of the codes and/or implementation errors included in the measure specifications as finalized that would lead to misleading results. Accordingly, we propose to revise § 414.1380(b)(1)(vii)(A) to change "significant changes" to "significant changes or errors" and to include the omission of codes or inclusion of inactive or inaccurate codes to provide that for each measure that is submitted, if applicable, and impacted by significant changes or errors prior to the applicable data submission deadline at § 414.1325(e), performance is based on data for 9 consecutive months of the applicable CY performance period. If such data are not available or CMS determines that they may result in patient harm or misleading results, the measure is excluded from a MIPS eligible clinician's total measure achievement points and total available measure achievement points. For purposes of paragraph (b)(1)(vii)(A), "significant changes or errors" means changes to or errors in a measure that are outside the control of the clinician and its agents and that CMS determines may result in patient harm or misleading results. Significant changes or errors include, but are not limited to, changes to codes (such as ICD-10, CPT, or HCPCS codes) or the active status of codes, the inadvertent omission of codes, or inclusion of inactive or inaccurate codes; changes to clinical guidelines; or measure specifications. We will publish on the CMS website a list of all measures scored under paragraph (b)(1)(vii)(A) as soon as technically feasible, but by no later than data submission deadline at § 414.1325(e)(1).

We invite public comments on our proposal to provide scoring flexibilities in response to account for errors included in the finalized measures.

(ii) Quality Measure Benchmarks

We refer readers to the CY 2017, CY 2018, CY 2019, CY 2020, and CY 2021 Quality Payment Program final rules (81 FR 77277 through 77282, 82 FR 53699 through 53718, 83 FR 59841 through 59842, 84 FR 63014 through 63016, and 85 FR 84901 through 84904) for our previously established benchmarking policies.

In the CY 2017 QPP final rule (81 FR 77277 through 77282), we finalized that we would use performance in the baseline period to set benchmarks for the quality performance category, with the exception of new quality measures, quality measures that lack historical data, or where we do not have comparable data from the baseline period, for which we would set the benchmarks using performance in the performance period. We defined the baseline period to be the 12-month CY that is 2 years prior to the performance period for the MIPS payment year. For example, for the CY 2022, the baseline period two performance periods prior would be the CY 2020 performance period (81 FR 77277). Additionally, we further clarified that CMS can establish benchmarks either by the applicable baseline or performance period in the CY 2019 PFS final rule (83 FR 59842), where we finalized the terminology change amending § 414.1380(b)(1)(ii) to remove the mention of each individual benchmark and instead state that benchmarks will be based on collection type, from all available sources, including MIPS eligible clinicians and APMs, to the extent feasible, during the applicable baseline or performance period.

Because of the flexibility provided to MIPS eligible clinicians to allow for no data submission for the 2020 performance period (https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1198/2020%20MIPS%20Automatic%20EUC%20Fact%20Sheet.pdf), we may not have as representative of a sample of data as we would have had without the national PHE for COVID-19. Therefore, we want to revisit our benchmarking policy for the 2022 performance period/2024 MIPS payment year similarly to how we revisited the benchmarking policy for the 2021 performance period/2023 MIPS payment year (85 FR 84901 through 84902). We anticipate that we may have a gap in our data due to receiving fewer

submissions for CY 2020, which could skew the benchmarking results. We believe this gap in data could result in different distributions of scores from what we normally see; thus, skewing the benchmarks when using CY 2020 data as the baseline for the CY 2022 performance period/2024 MIPS payment year. Additionally, we anticipate that only those not experiencing a hardship will submit data, thus skewing benchmarks much higher than normal. We ultimately, did not finalize this proposal for CY 2021 because analysis of the submitted data from the CY 2019 performance period/2021 payment period showed that it was suitable for use in calculating benchmarks. However, as we know from the events of 2020, we anticipate that the effects of the national PHE for COVID-19 may be more significant for the CY 2020 performance period.

For this reason, we consider two benchmarking options for the CY 2022 performance period/2024 MIPS payment year. We propose to use performance period benchmarks for the CY 2022 performance period/2024 MIPS payment year in accordance with § 414.1380(b)(1)(ii). As discussed in the CY 2021 PFS final rule (85 FR 84902), this would mean that benchmarks for the CY 2022 performance period/2024 MIPS payment year are based on the actual data submitted during the CY 2022 performance period. Last year, we received comments supportive of our proposal to use performance period benchmarks citing that the performance period benchmarks would capture any changes in care due to the national PHE for COVID-19 and avoid unfairly penalizing practices for variation in performance compared to data from prior to the national PHE for COVID-19 (85 FR 84902 through 84903). We also received comments that opposed the use of performance period benchmarks, as clinicians would not have advance notice of performance targets. As a result, we are also considering and seeking feedback as an alternative to performance period benchmarks, utilizing the historic benchmarks from the 2021 MIPS performance period (which are based on submissions for CY 2019 MIPS performance period/2021 MIPS payment year) for the CY 2022 performance period/2024 MIPS payment year. We believe that this option would allow clinicians to continue to receive advance notice for quality performance category measures so that MIPS eligible clinicians can set a clear

performance goal for these measures for the CY 2022 performance period/2024 MIPS payment year. However, we remain concerned that utilizing outdated data could also potentially result in distributions of scores used for benchmarks that no longer reflect the standard of care especially as care changes in response to the public health emergency. Additionally, any new or substantively changed measures in the CY 2022 performance period/2024 MIPS payment year will lack a benchmark, as would measures that were suppressed in the CY 2019 performance period/2021 MIPS payment year alternate baseline period. We will analyze the CY 2020 performance period data and compare the distribution of the CY 2020 performance period data to that of previous years to assess if we can in fact use data from the CY 2020 performance period for benchmarks for the CY 2022 performance period/2024 MIPS payment year and if not, evaluate the suitability of the alternatives.

Additionally, we propose to expand the definition of the baseline period. In instances in which a measure is suppressed 2 performance periods prior in the standard baseline period and cannot be used to calculate a benchmark, we propose to use the data from 3 performance periods prior to calculate benchmarks in the event that a performance period benchmark cannot be calculated. This would mean that for the CY 2022 performance period/2024 MIPS payment year, if a measure was suppressed in the 2020 performance period and a performance period benchmark could not be calculated using the 2022 performance period data because it was not reported by 20 different clinicians or groups that met data completeness and case minimum requirements, we would calculate a benchmark from performance period data from CY 2019. If a measure had undergone a substantive change or was also suppressed in the baseline period 3 performance periods prior, we would not use it to calculate benchmarks and the measure would be subject to our scoring policies for class 2 measures. We would not use benchmarks calculated from performance periods that are older than 3 performance periods prior. We believe it is important to continue using the most up-to-date data to drive clinical quality improvement. We

believe that this policy will reduce burden to clinicians and allow them to continue to have performance targets in the event that a measure is suppressed.

We invite public comments on our intent to use performance period benchmarks for the CY 2022 performance period and to expand the baseline period to 3 performance periods prior for measures that are suppressed two performance periods prior. Table 47 reflects a summary of the benchmarking hierarchy as a result of this proposal.

TABLE 47: Quality Performance Category: Proposed Benchmarking Hierarchy

Policy Hierarchy	Baseline period used to calculate Benchmark	Condition
1	Historical Baseline Period: Two Performance Periods prior to the applicable performance period	A benchmark can be calculated from the historical baseline period defined as two performance periods prior to the applicable performance period.
2	Performance Period Benchmark	A benchmark cannot be calculated from the historical baseline period, but 20 or more clinicians report on a measure and meet or exceed the case minimum of 20 cases during the performance period.
3	Alternate Historical Baseline Period: Three Performance periods prior to the applicable performance period	A measure is suppressed in the historical baseline period two years prior to the applicable performance period and a performance period benchmark cannot be calculated, but a benchmark can be calculated from the alternate historical baseline period defined as three performance periods prior to the applicable performance period can be calculated because the measure had not undergone a substantive change in the time since the data was collected or been suppressed in the baseline period.
4	No baseline: Subject to class 2 scoring policy	A benchmark cannot be calculated from the historical baseline period, the performance period, or the alternate baseline period.

(iii) Assigning Quality Measure Achievement Points

We refer readers to § 414.1380(b)(1)(i) for more details on our policies for scoring performance on quality measures (81 FR 77276 through 77307, 82 FR 53694 through 53701, 83 FR 59841 through 59856, 84 FR 63011 through 63019, and 85 FR 84906 through 84907).

(A) Scoring Measures Based on Achievement

We previously established at § 414.1380(b)(1)(i) a global 3-point floor for each scored quality measure, as well as each administrative claims measure. MIPS eligible clinicians receive between 3 and 10 measure achievement points for each submitted measure that can be reliably scored against a benchmark, which requires meeting the case minimum and data completeness requirements. In the CY 2017 Quality Payment Program final rule (81 FR 77282), we

established that measures with a benchmark based on the performance period (rather than on the baseline period) would continue to receive between 3 and 10 measure achievement points for performance periods after the first transition year. For measures with benchmarks based on the baseline period, we stated that we would revisit the 3-point floor in future years. For the 2021 performance period/2023 MIPS payment year, we maintained the application of the 3-point floor for each measure that can be reliably scored against a benchmark.

For the 2022 performance period/2024 MIPS payment year, we propose to remove 3-point floor for each measure that can be reliably scored against the benchmark and score the measure from 1 to 10 points. We are scoring from 1-10 for clinicians with a performance rate greater than 0% for non-inverse measures or lesser than 100 percent for inverse measures in accordance with our original intent outlined in the CY 2017 Quality Payment Program final rule (81 FR 77282). As we move towards the MVP framework discussed the CY 2021 PFS final rule (85 FR 84904), we are moving towards a simplified scoring standard in which we can score quality measures from 1 to 10 for measures in MVPs and as such will amend the MIPS program to begin promoting this alignment. As a result, we previously discussed that we would wait until there is further policy development under the MVP framework before proposing to remove the 3-point floor (85 FR 84904). However, with the delay in the implementation of MVPs, we will begin the transition to MVPs by removing policies established on the transition years of MIPS. We have signaled through rulemaking for several years that we would revisit policies established during the transition years of the program from the legacy programs to MIPS. As the legacy programs have been sunsetted for many years now, we believe that it is appropriate to transition the MIPS program to its mature state. Additionally, we believe that transitioning MIPS to its mature state will serve as a transition period to allow clinicians to adjust to the simplified scoring standard that we will be using in MVPs.

Accordingly, we propose to revise § 414.1380(b)(1)(i) to add beginning the 2022 performance period/2024 MIPS payment year, MIPS eligible clinicians will receive between 1

and 10 measure achievement points (including partial points) for each measure required under § 414.1335 on which data is submitted in accordance with § 414.1325 that has a benchmark at paragraph (b)(1)(ii) of this section, meets the case minimum requirement at paragraph (b)(1)(iii) of this section, and meets the data completeness requirement at § 414.1340.

We invite public comment on our proposal to remove the 3-point floor for each measure that can be reliably scored against a benchmark for the 2022 performance period/2024 MIPS payment year.

(B) Scoring Measures That Do Not Meet Case Minimum, Data Completeness, and Benchmark Requirements

We refer readers to § 414.1380(b)(1)(i)(A) and (B) for more on our scoring policies for a measure that is submitted but is unable to be scored because it does not meet the required case minimum, does not have a benchmark, or does not meet the data completeness requirement (84 FR 63012).

In the 2017 QPP final rule (81 FR 77288) and the 2018 QPP final rule (82 FR 53727), we identified "classes of measures" which were intended to characterize measures for the ease of discussion. Class 1 measures are measures that can be scored based on performance because they have a benchmark, meet the case minimum and data completeness requirements. Class 2 measures are measures that cannot be scored based on performance because they do not have a benchmark or do not meet the case minimum which is generally 20 cases. Class 3 measures are measures that do not meet the data completeness requirement. We also noted that policies for Class 2 and Class 3 measures would not apply to measures submitted with the CMS Web Interface or administrative claims-based measures.

We propose to modify how we score these measures within MIPS, as we consider policies for transitioning to MVPs. For class 2 measures, for the 2022 performance period/2024 MIPS payment year, we propose to remove special scoring policies for measures that meet the data completeness requirement but do not have a benchmark, due to fewer than 20 individual

clinicians or groups adequately reporting the measure, or meet the case minimum requirement except in the case of small practices, for which we will maintain the 3-point floor. Practices of other sizes will now receive zero points.

As we move to MVPs, we are seeking to simplify scoring by removing transition policies. To encourage complete and meaningful reporting, we cannot continue to award measure achievement points for measures that cannot be reliably scored against a benchmark. In a quality measurement program such as MIPS, it is imperative that we are able to reliably measure performance on clinical quality measures to achieve the goals of the program and incentivize clinicians that are providing the high-quality care. However, we remain concerned that it may be harder to reach case minimums for smaller practices and as such are maintaining the three-point floor policy for small practices. We believe that measure selection that is better reflective of the care most commonly provided in a practice will increase the value of the program by allowing us to score for achievement in clinical quality and subsequently drive changes in performance on clinical quality measures.

Measure benchmarks are posted in advance of the MIPS performance period and can be used to drive clinician measure selection. While not all measures relevant to a clinician's practice may have a historic benchmark posted, clinicians have the option to make informed decisions about their participation in the MIPS program. Additionally, we believe that while clinicians do not have control over the case volume and mix that their practices treat, under normal circumstances, they can anticipate which measures would be most reflective of the care generally provided by said practices. Scoring 3 points for class 2 measures was established as a policy during the transition years of the program, when the performance threshold was 3 points and scoring 3 points for quality would help clinicians transitioning to the program without receiving scores for poor performance. The intent of the policy was to provide time for clinicians to acclimate to the scoring standard before being held fully accountable for their participation in the program (81 FR 77287). As we believe we have provided sufficient time for

clinicians to acclimate to our reporting requirements and scoring practices, we believe that we can hold clinicians accountable for their meaningful participation in the program.

We remain concerned about that case minimums and the availability of a benchmark are in some instances out of the control of the clinician, but believe that clinician choice of measure allows us to move forward with this option. We note that we also have policies in place to account for the calculation of a performance period benchmark if a historical benchmark is unavailable. Simulations of the effects of this policy show minimal effects of removing the 3-point floor as described above, with only a 0.4 point decrease in median quality performance category score and 0.2 point decrease in mean performance quality performance category score when compared to a baseline score that maintains the previously finalized class 2 measure scoring policy (section VII.F.18 of this proposed rule). We considered other approaches to address this issue such as a denominator reduction for class 2 measures; however, we remain concerned over the potential for gaming under this approach, such as where a clinician only selects class 2 measures resulting in their quality performance category score being reweighted.

We do not want this policy to discourage the reporting of new measures in the program because they may lack a benchmark or fail to meet the case minimum requirement. For this reason, we are proposing a 5-point floor for new measures in the program for all collection types for their first 2 years in the program, as well as a new class for these measures. Measures in either their first or second performance period in the program will be classified as class 4 measures. Measures that can be reliably scored against a benchmark because they meet data completeness requirement can have a performance period benchmark calculated, and meet case minimum requirements will be considered class 4a and scored from 5 to 10 measure achievement points. In the event that a measure cannot be reliably scored against a benchmark because it lacks a benchmark or does not meet case minimum, but meets the data completeness requirement, it will be considered class 4b and receive a score of 5. Measures that cannot be scored because they do not meet the data completeness requirement will remain subject to the

class 3 measure policy and receive a score of 0 for clinicians other than small practices, while small practices will continue to receive 3 points.

We believe that a 5-point floor for new measures will allow us to introduce new, applicable measures into the program, by reducing the burden to clinicians in selecting them. We believe that this policy is responsive to stakeholder concerns that new measures run the risk of lacking enough data to have a benchmark and clinicians earning only 3 points according to the current policy on measures that cannot be reliably scored against a benchmark. We believe that the possibility of earning 5 points for a measure that lacks a benchmark would not unfairly penalize clinicians who report on new measures. Additionally, clinicians have the possibility of earning up to 10 points with the lowest possible score of 5. The 5-point floor will only be in place for a measure's first 2 years in the program to ease their transition, and will be scored in accordance with policies for standard class 1, 2, and 3 measures thereafter, to maintain a simplified scoring methodology. In the CY 2017 Quality Payment Program final rule, we received comments of support on our proposal to provide a scoring floor for new measures citing that a scoring floor for new measures would encourage clinicians to report new measures and prevent gaming. Commenters were also supportive other approaches to reducing the burden of reporting new measures such as reducing the weight of new measures in the performance category score (81 FR 77281).

Accordingly, we propose to revise § 414.1380(b)(1)(i)(A)(*1*) to provide that except as provided in paragraph (b)(1)(i)(A)(*2*) and (*3*) of this section, for the 2017 through 2021 CY performance periods/2019 through 2023 MIPS payment years, MIPS eligible clinicians receive 3 measure achievement points for each submitted measure that meets the data completeness requirement, but does not have a benchmark or meet the case minimum requirement. Beginning within the CY 2022 performance period/2024 MIPS payment year, MIPS eligible clinicians other than small practices receive 0 measure achievement points for each such submitted measures and small practices receive 3 measure achievement points

We also propose to add the policy for new measures at § 414.1380(b)(1)(i)(C)(*1*) to provide that beginning with the CY 2022 performance period/2024 MIPS payment year, MIPS eligible clinicians receive between 5 and 10 measure achievement points (including partial points) for each measure required under § 414.1335 on which data is submitted in accordance with § 414.1325 that has a benchmark at paragraph (b)(1)(ii) of this section, meets the case minimum requirement at paragraph (b)(1)(iii) of this section, and meets the data completeness requirement at § 414.1340. We also propose to add a policy at § 414.1380(b)(1)(i)(C)(*2*) to provide that for purposes of this section "new measures" means a quality measure this is in its first 2 years in the program.

We invite public comments on our proposal to modify the special scoring policies for measures that meet the data completeness requirement but do not have a benchmark or meet the case minimum requirement for the MIPS 2024 payment year and to introduce a 5-point scoring floor for new measures in for their first 2 years in the program. Table 48 reflects a summary of our proposed policies.

TABLE 48: Quality Performance Category: Scoring Policies for the CY 2022 MIPS Performance Period*

Measure type	Description	Current Scoring Policy for CY 2021	Proposed Scoring Policy for CY 2022
Class 1	Measures that can be scored based on performance. Measures that are submitted or calculated that meet all the following criteria: (1) Has a benchmark; (2) Meets case minimum; and (3) Meets the data completeness standard (generally 70 percent for 2022.)**	3-10 measure achievement points based on performance compared to the benchmark	1 to 10 measure achievement points based on performance compared to the benchmark.
Class 2	Measures that are submitted and meet data completeness, but do not have either of the following: (1) A benchmark; and (2) Meets case minimum.	3 points	MIPS eligible clinicians other than small practices will receive zero points for this measure. Small practices will continue to receive 3 points.
Class 3	Measures that are submitted, but do not meet data completeness threshold, even if they have a measure benchmark and/or meet the case minimum.	MIPS eligible clinicians other than small practices will receive zero points for this measure. Small practices will continue to receive 3 points.	No change
New Measures: Class 4	Measures that are in their first two performance periods in the MIPS program that meet the data completeness requirement, but (1) May lack a benchmark (2) May not meet case minimum	No Policy	(a) For measures that can be reliably scored against a benchmark: 5-10 measure achievement points (b) For measures that cannot be reliably scored against a benchmark because they lack a benchmark or do not meet case minimum: 5 points

*The Class 2 and 3 measure scoring policies are not applicable to Web Interface and administrative claims-based measures.

**We refer readers to § 414.1335(a)(3) for our policy on data completeness.

(iv) Scoring for MIPS Eligible Clinicians That Do Not Meet Quality Performance Category Criteria

In the CY 2018 Quality Payment Program final rule (82 FR 53732), we finalized that, beginning with the 2019 performance period/2021 MIPS payment year, we will validate the availability and applicability of quality measures only with respect to the collection type that a MIPS eligible clinician utilizes for the quality performance category for a performance period, and only if a MIPS eligible clinician collects via claims only, MIPS CQMs only, or a combination of MIPS CQMs and claims collection types. We will not apply the validation process to any data collection type that the MIPS eligible clinician does not utilize for the quality performance category for the performance period. We sought comment on how to modify the

validation process for the 2019 performance period/2021 MIPS payment year when clinicians may submit measures collected via multiple collection types.

In the CY 2019 PFS final rule (83 FR 59847), we finalized a proposal to modify our validation process to provide that it only applies to MIPS CQMs and the claims collection type, regardless of the submitter type chosen. For example, this policy would not apply to eCQMs even if they are submitted by a registry. We noted that a MIPS eligible clinician may not have available and applicable quality measures. If we are unable to score the quality performance category, then we may reweight the clinician's score according to the reweighting policies.

In this year's rule, we are proposing to modify our validation process to provide that it only applies to MIPS CQMs or the Part B claims collection type, but it will not apply in instances when a MIPS eligible clinician submits for both collection types. Currently, very few reporters report for a combination of Part B claims and MIPS CQMs. In CY 2020, of submissions with less than 6 measures, only 0.08 percent of individual submissions and 0.3 percent of group submissions included a combination of Part B claims and other submission types. In CY 2019, of submissions with less than 6 measures, only 0.094 percent of individual submissions and 0.07 percent of group submissions included a combination of Part B claims and other submission types. We see that reporting using both collection types is an option very few clinicians have chosen to utilize, and consequently believe that the associated costs for validation of a combination of the both the Part B claims based and MIPS CQM collection types is too great in these instances. To align with this reality that very few clinicians submit data in this manner, we are proposing to update our policy.

We invite public comments on our proposal to modify our validation process to provide that it only applies to MIPS CQMs or the claims collection type and not a combination of the two.

(v) Assigning Measure Achievement Points for Topped Out Measures

We refer readers to § 414.1380(b)(1)(iv) for our previously finalized policies regarding the identification of topped out measures and § 414.1380(b)(1)(iv)(B) for our finalized policies regarding the scoring of topped out measures. Under § 414.1380(b)(1)(iv), we will identify topped out measures in the benchmarks published for each Quality Payment Program year. Under § 414.1380(b)(1)(iv)(B), beginning with the 2021 MIPS payment year, measure benchmarks (except for measures in the CMS Web Interface) that are identified as topped out for 2 or more consecutive years will receive a maximum of 7 measure achievement points beginning in the second year the measure is identified as topped out (82 FR 53726 through 53727).

We noted in the CY 2021 PFS proposed rule (85 FR 50307) that we intended to use performance period benchmarks for the 2021 performance period/2021 MIPS payment year, which would mean we would not be able to publish measures that are topped out prior to the 2021 MIPS performance period. As discussed in that proposed rule (85 FR 50309), this also means we would not be able to identify those that have been topped-out for 2 or more consecutive years for purposes of the topped out scoring of 7 measure achievement points. As we are intending to use performance period benchmarks again for the 2022 performance period/2024 MIPS payment year, these problems would occur again. We believe it is still important to retain a topped-out scoring cap of 7 measure achievement points so that clinicians have incentives to pick alternate measures that are not topped out. We also believe that if a measure is not topped out in the 2022 performance period benchmark, then it should have the ability to achieve up to 10 measure achievement points.

In this year's proposed rule, we are proposing to use performance period benchmarks again and subsequently need to the topped out measure lifecycle to account for this. Therefore, in the event that we finalize the use of performance period benchmarks for the CY 2022 performance period/2024 MIPS payment year, as an exception from the general rule at § 414.1380(b)(1)(iv)(B), we propose at paragraph (b)(1)(iv)(B)(*1*) to provide that for the CY 2022 MIPS performance period/2024 MIPS payment year, MIPS eligible clinicians receive no

more than 7 measure achievement points for each measure (except for measures in the CMS Web Interface) for which the applicable benchmark is identified as topped out for 2 or more consecutive years based on the historical benchmarks published for the CY 2021 MIPS performance period and continues to be identified as topped out based on the performance period benchmarks published for the CY 2022 MIPS performance period/2024 MIPS payment year.

We believe these two criteria collectively would provide clinicians the information to know prior to the CY 2022 performance period/2024 MIPS payment year which measures would have the topped-out scoring applied but would also account for the scenario where a measure is no longer topped out. We would not limit the number of measure achievement points for measures that have not been topped out for at least 2 years as published in the 2021 MIPS performance period/2023 MIPS payment year historical benchmarks.

We invite public comments on our proposal to apply the 7 measures achievement point cap to measures that meet the two criteria.

(vi) Minimum Case Requirements

We refer readers to § 414.1380(b)(1)(iii) for our previous finalized policies regarding case minimum requirements for the quality performance category, which establishes the case minimum requirement threshold at 20 cases for quality measures, with the exception of administrative claims-based measures in the MIPS final list of quality measures described in § 414.1330(a)(1). As more measures are introduced under MIPS, there may be measures, similar to the administrative claims-based measures, that warrant a different case minimum requirement from the other quality measures. In Table Group A of Appendix 1 of this proposed rule, we are proposing to add the following quality measure starting with the 2022 MIPS performance period: Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM), which uses a comprehensive and parsimonious set of 11 patient-reported items to assess the broad scope of primary care. In order to achieve the appropriate reliability of the measure – the survey results (adequate number of surveys to provide an accurate

representation of the MIPS eligible clinician, group, subgroup, virtual group, and APM Entity), for each MIPS eligible clinician, group, subgroup, virtual group, and APM Entity, a minimum of 30 PCPCM PROM instruments per clinician are needed for submission of this measure. For MIPS eligible groups, subgroups, virtual groups, and APM Entities with 5 or more clinicians, a minimum of 150 PCPCM PROM instruments per TIN for each site/location associated with the clinicians' part of the group, subgroups, virtual groups, and APM Entities are needed for submission of this measure. For TINs with a composition of multiple specialty practices at one site/location, a minimum of 150 PCPCM PROM instruments per specialty practice within a TIN are needed for submission of this measure. If the MIPS eligible group, subgroup, virtual group, and APM Entity with 5 or more clinicians encompasses multiple sites/locations, each site/location would need to meet the PCPCM PROM instruments requirements as noted above. To allow for the reliable implementation of PCPCM PRO-PM under MIPS, such measure requires a case minimum that exceeds 20 cases.

With more measures being introduced under MIPS that warrant differing case minimum requirements (other than administrative claims-based measures), we are proposing to modify our minimum case requirements policy that would broaden the type of measures (to not only include administrative claims-based measures) having an exception for meeting the minimum case requirement threshold of 20 cases and provide for a measure-specific case minimum requirement for measures identified and determined on a case-by-case basis by CMS. For each measure with a measure-specific case minimum, the minimum case requirement is specified in the annual list of MIPS measures. Specifically, we are proposing to amend § 414.1380(b)(1)(iii) to reflect that, except as otherwise specified in the MIPS final list of quality measures described in § 414.1330(a)(1), the minimum case requirement is 20 cases.

We seek public comment on our proposal to modify the minimum case requirement policy that expands the exception to meeting the minimum case requirement threshold of 20

cases to measures with measure-specific case minimum requirements identified and determined by CMS.

We request feedback on our proposal.

(vii) Incentives to Report High-Priority Measures

We refer readers to § 414.1380(b)(1)(v)(A) for our previously finalized policies regarding incentives to report high priority measures. In the CY 2017 Quality Payment Program final rule (81 FR 77293), we established the scoring policies for high priority measure bonus points to encourage the selection of additional high-priority and outcome measures that impact beneficiaries and were closely aligned to our measurement goals. In the CY 2019 PFS final rule (83 FR 59850), we discontinued awarding measure bonus points to CMS Web Interface reporters for reporting high priority measures since CMS Web Interface reporters have no choice in measures.

We stated in the CY 2019 PFS proposed and final rules (83 FR 35950, 59851) that as part of our move towards fully implementing high value measures, we believe that bonus points for high priority measures for all collection types may no longer be needed. We noted in the CY 2019 PFS final rule (83 FR 59851) that measure bonus points were created as transition policies which were not meant to continue through the life of the program. We believe with the finalized framework for transforming MIPS through MVPs (84 FR 62948), we will find ways in the future to emphasize high priority measures without needing to incentivize with bonus points.

In this proposed rule, we propose to end the high-priority measure bonus points. As we move to MVPs we are simplifying our scoring by ending transition policies that were established in the initial years of the program. We have signaled for many years now that this policy was temporary and would be removed from the program. As we transition to a new state, we anticipate that there will no longer be a need to incentivize high-priority measures by usage of bonus points in MIPS and MVPs as we increase the share of high-priority measures in the program.

We propose to end measure points for reporting high priority measures beginning the 2022 performance period/2024 MIPS payment year. Accordingly, we propose to revise § 414.1380(b)(1)(v)(A) to provide that for the 2017 through 2021 performance periods/2019 through 2023 MIPS payment years, MIPS eligible clinicians receive 2 measure bonus points for each outcome and patient experience measure and 1 measure bonus point for each other high priority measure. Beginning with the 2019 performance period/2021 MIPS payment year, MIPS eligible clinicians do not receive such measure bonus points for CMS Web Interface measures. Beginning in the 2022 performance period/2024 MIPS payment year, MIPS eligible clinicians will no longer receive measure bonus points.

We invite public comments on our proposal to end measure points for reporting high priority measures beginning the 2022 performance period/2024 MIPS payment year.

(viii) Incentives to Use CEHRT to Support Quality Performance Category Submissions

Section 1848(q)(5)(B)(ii)(I) of the Act requires the Secretary to encourage MIPS eligible clinicians to report on applicable quality measures through the use of CEHRT and qualified clinical data registries. Section 1848(q)(5)(B)(ii)(II) of the Act requires that the Secretary shall treat such clinicians as satisfying the clinical quality measures reporting requirement described in section 1848(o)(2)(A)(iii) of the Act if they report such measures through the use of such EHR technology for a given performance period. In the CY 2017 Quality Payment Program final rule (81 FR 77297), we established the measure bonus point and bonus cap for using CEHRT for end-to-end electronic reporting. We refer readers to § 414.1380(b)(1)(v)(B) for our previously finalized policies regarding measure bonus points for end-to-end electronic reporting. We believe that with the framework for transforming MIPS through MVPs discussed in the CY 2020 PFS proposed rule (84 FR 40739) and the CY 2021 PFS proposed rule (85 FR 50279 through 50285), we will find ways to encourage the use of CEHRT for reporting quality measures without needing to incentivize the use of CEHRT for end-to-end electronic reporting with bonus points. In the CY 2018 Quality Payment Program final rule (82 FR 53636), we encouraged

stakeholders to consider electronically specifying their quality measures as eCQMs, to encourage clinicians and groups to move towards the utilization of electronic reporting. As noted in the CY 2019 PFS final rule (83 FR 59851), bonus points were created as transition policies which were not meant to continue through the life of the program.

In this proposed rule, we propose to end measure bonus points for end-to-end electronic reporting. As we move to MVPs we are simplifying scoring by removing many of the transition policies that we established in the early years of the program. We believe it is imperative to remove transition policies in order to develop a stronger MVP program and promote alignment between MIPS and MVPs. As stated in previous rulemaking, we are working to develop ways to encourage the use of CEHRT for electronic reporting without offering measure bonus points. Measure bonus points act to introduce scoring inflation into the program and preclude our ability to accurately compare clinicians' clinical quality. As the program works to focus on the quality of care provided to beneficiaries, we intend to score for performance on measures and not for reporting. Additionally, we believe that we can fulfill the statutory requirement at sections 1848(q)(5)(B)(ii)(I) of the Act to encourage the usage of certified electronic health record technology (CEHRT), through other means. As a program and across the Department of Health and Human Services, we are working towards the goal of all measures within MIPS being digital by 2025 through a movement towards the inclusion of more digital quality measures (dQMs), emphasizing approaches to electronic data sharing that utilize the FHIR standard. As part of these approaches we intend to further leverage the use of electronic reporting from CEHRT for all quality measurement completed in the MIPS program including measurement and reporting facilitated by third party intermediaries such as QCDRs and plan to further address this issue through rulemaking in future years. We are also giving preference to dQMs including eCQMs in our annual call for measures. More information on dQMs and the FHIR standard is available in section IV.A. of this proposed rule, information on the call for measures and CMS measurement needs and priorities is available at https://qpp-cm-prod-

content.s3.amazonaws.com/uploads/1313/2021%20Call%20for%20Measures%20and%20Activities%20Toolkit.zip, and https://www.cms.gov/files/document/cms-measurement-priorities-and-needs.pdf, respectively. Furthermore, over the past few years, we have reduced the availability and limited who can submit data for the Medicare Part B claims collection type to only small practices. We note that the Medicare Part B claims collection type is not an electronic means of submission. We invited comments on other methods we can use to encourage the use of CEHRT for electronic reporting.

Accordingly, we proposed to add the policy at § 414.1380(b)(1)(v)(B) to provide that for the 2017 through 2021 performance period/2019 through 2023 MIPS payment years, MIPS eligible clinicians receive 1 measure bonus point for each measure (except claims-based measures) submitted with end-to-end electronic reporting for a quality measure under certain criteria determined by the Secretary. Beginning in the 2022 performance period/2024 MIPS payment year, MIPS eligible clinicians will no longer receive measure bonus points for submitting using end-to-end electronic reporting.

We invite public comments on our proposal to end measure bonus points for end-to-end electronic reporting beginning in the 2022 performance period/2024 MIPS payment year.

(ix) Improvement Scoring for the MIPS Quality Performance Category Score

We refer readers to § 414.1380(b)(1)(vi)(C)(*4*) for more on our policy stating that for the 2020 through 2023 MIPS payment years, for the purpose of improvement scoring, we will assume a quality performance category achievement percent score of 30 percent in the previous year if a MIPS eligible clinician earned a quality performance category score less than or equal to 30 percent in the previous year.

In this proposed rule, we propose to continue our previously established policy for improvement scoring for the 2022 performance period/2024 MIPS payment year and to revise § 414.1380(b)(1)(vi)(C)(*4*) to remove the phrase "2020 through 2023 MIPS payment years" and adding in its place the phrase "beginning the 2018 performance period/2020 MIPS payment

year" to indicate that for each MIPS payment year after 2020, we will assume a quality performance category achievement percent score of 30 percent in the previous year if a MIPS eligible clinician earned a quality performance category score less than or equal to 30 percent in the previous year. Specifically, for the 2022 performance period/2024 MIPS payment year, we would compare the MIPS eligible clinician's quality performance category achievement percent score for the 2022 performance period/2024 MIPS payment year to an assumed quality performance category achievement percent score of 30 percent if the MIPS eligible clinician earned a quality performance score less than or equal to 30 percent for the 2021 performance period/2023 MIPS payment year.

We invite public comments on our proposal to assume a quality performance category achievement percent score of 30 percent in the previous year if a MIPS eligible clinician earned a quality performance category score less than or equal to 30 percent in the previous year for the 2022 performance period/2024 MIPS payment year.

(d) Cost Performance Category

(i) Scoring Flexibility for Changes That Impact Cost Measures During the Performance Period

We refer readers to § 414.1380(b)(2) for our policies regarding scoring for the cost performance category and to previous rules where these policies were finalized, including the CY 2017 Quality Payment Program final rule (81 FR 77308 through 77311), the CY 2018 Quality Payment Program final rule (82 FR 53748 through 53752), the CY 2019 PFS final rule (83 FR 59856), and the CY 2021 PFS final rule (85 FR 84877 through 84880). In § 414.1380(b)(2)(v), we finalized that a cost performance category score is not calculated if a MIPS eligible clinician or group is not attributed any cost measures for the performance period because the clinician or group has not met the minimum case volume specified by CMS for any of the cost measures or a benchmark has not been created for any of the cost measures that would otherwise be attributed to the clinician or group.

We have identified that there is a need for additional flexibility in calculating the scores for cost measures to account for the impact of changing conditions that are beyond the control of MIPS eligible clinicians and groups. This flexibility would allow us to ensure that clinicians are not impacted negatively when performance is affected not due to the care provided, but due to external factors. Thus, beginning with the 2022 MIPS performance period/2024 MIPS payment year, we propose a policy to provide scoring flexibility in instances where changes during a performance period impede the effective measurement of resource use. We believe that there may be instances when there are rapid or unprecedented changes to the delivery of healthcare services that are reflected in administrative claims data used to calculate cost measures. An example of the type of external factor that could affect cost measurement is the PHE for COVID-19. We refer readers to section IV.A.3.e.(2)(b)(ii)(A) of this proposed rule, where we summarize our assessment of the impact of COVID-19 on the calculation of cost measure scores for the 2020 performance period. In this discussion, we conclude that due to the unique and rapid changes to healthcare in the COVID-19 pandemic, which significantly affected service utilization and the underlying data used to calculate cost measures, we cannot reliably calculate scores for the cost measures that adequately capture and reflect clinician performance for 2020. This example demonstrates that the assessment of costs could be impeded by substantial changes to clinical practice and service utilization, and result in misleading or inaccurate results.

We will determine whether such external changes impede the effective measurement of resource use by considering factors including: the extent and duration of the changes, and the conceptual and empirically tested relationship between the changes and each measure's ability to accurately capture clinician cost performance. Empirical testing could include assessing whether there are rapid or unprecedented changes to patient case volume or case mix, and the extent to which this could lead to misleading or inaccurate results. We note that substantial changes in service utilization may not impede our ability to accurately calculate a cost measure score. Consider for example the case of a hypothetical measure that includes the cost of a series of

procedures to treat the condition being measured. Due to advances in clinical knowledge, the procedures are declared to no longer be appropriate to treat the condition during a performance period. This would hypothetically lead to rapid and substantial changes in the services captured in the measure in that performance period; however, these changes would not necessarily lead to misleading or inaccurate results as the measure would be appropriately capturing the costs of care for that condition and appropriately reflecting changes in clinician practice. We would assess this empirically for each measure, as we believe that even widespread external changes to service utilization could have a range of different impacts across measures as they focus on diverse types of care. For example, a hypothetical national shortage of blood products may lead to the suspension of elective surgeries. This may not affect the care patterns for a particular outpatient screening or preventative care procedure, meaning that a hypothetical cost measure focused on that outpatient procedure would still accurately reflect clinician cost performance.

While we can monitor the impact of these changes during the performance period, we note that there is an inherent delay between the time we can identify trends in administrative claims data and when we can test for potential impact on the cost measures, due to the claims run-out period necessary to ensure that data included in our analyses reflect final claims for all services in episodes. To ensure sufficient case volume, we expect that we would not be able to properly test the full impact of external changes on the cost measures until after the end of the performance period in which the changes occurred. Thus, we would not be able to determine whether a cost measure should be suppressed due to changes in the performance period until after the completion of the performance period. To allow sufficient time for claims data query and investigatory work to test for potential impacts on cost measure calculations, we expect that we would reach a conclusion as to whether a cost measure should be suppressed and notify clinicians affected by the suppression no later than when performance feedback is issued for the performance period. We believe this would not put undue burden on clinicians since cost

measures are calculated by CMS using administrative claims data without any additional data submission by clinicians.

Accordingly, we propose to add § 414.1380(b)(2)(v)(A) to provide that beginning with the 2024 MIPS payment year, if data used to calculate a score for a cost measure are impacted by significant changes during the performance period, such that calculating the cost measure score would lead to misleading or inaccurate results, then the affected cost measure is excluded from the MIPS eligible clinician's or group's cost performance category score. For purposes of this paragraph (b)(2)(v)(A), "significant changes" are changes external to the care provided, and that CMS determines may lead to misleading or inaccurate results. Significant changes include, but are not limited to, rapid or unprecedented changes to service utilization, and will be empirically assessed by CMS to determine the extent to which the changes impact the calculation of a cost measure score that reflects clinician performance.

We seek comments on this proposal.

(e) Promoting Interoperability Performance Category

For our previously established policies regarding scoring the Promoting Interoperability performance category, we refer readers to § 414.1380(b)(4), the CY 2017 Quality Payment Program final rule (81 FR 77216 through 77227), the CY 2018 Quality Payment Program final rule (82 FR 53663 through 53670), the CY 2019 PFS final rule (83 FR 59785 through 59796), the CY 2020 PFS final rule (84 FR 63020) and the CY 2021 PFS final rule (85 FR 84893 through 84894). We also refer readers to § 414.1375 and the CY 2017 Quality Payment Program final rule (81 FR 77199 through 77245), the CY 2018 Quality Payment Program final rule (82 FR 53663 through 53688), the CY 2019 PFS final rule (83 FR 59785 through 59820), and the CY 2021 PFS final rule (85 FR 84886 through 84895 for our previously established policies regarding the Promoting Interoperability (formerly the advancing care information) performance category generally.

In the CY 2019 PFS final rule, we established a new performance-based scoring methodology for the Promoting Interoperability performance category that applies beginning with the 2019 performance period/2021 MIPS payment year (83 FR 59787 through 59796). The scoring methodology is codified at § 414.1380(b)(4)(ii); however, the regulation text refers only to the 2021 and 2022 MIPS payment years, and does not mention subsequent years. We are proposing to revise § 414.1380(b)(4)(ii) for consistency with the previously established policy, by indicating that the methodology applies beginning with the 2019 MIPS performance period/2021 MIPS payment year and continuing to subsequent years. We are proposing to revise § 414.1380(b)(4)(ii) to remove "for the 2021 and 2022 payment years" and add in its place "beginning with the 2019 performance period/2021 MIPS payment year" and remove the word "six" to provide that beginning with the 2019 performance period/2021 MIPS payment year, a MIPS eligible clinician's Promoting Interoperability performance category score equals the sum of the scores for each of the required measures and any applicable bonus scores, not to exceed 100 points.

In addition, for the 2020 performance period/2022 MIPS payment year, each optional measure in the Promoting Interoperability performance category was worth five bonus points (84 FR 63003), and for the 2021 performance period/2023 MIPS payment year, each optional measure was worth ten bonus points (85 FR 84894). In section IV.3.d.(4)(c)1.of this proposed rule, we are proposing that the Query of Prescription Drug Monitoring Program measure would be worth 10 bonus points, and in section IV.3.d.(4)(c)3 of this proposed rule, we are proposing that submission of a "yes" for the Public Health Registry Reporting measure or the Clinical Data Registry Reporting measure or the Syndromic Surveillance Reporting measure would be worth 5 bonus points. To reflect these policies, we are proposing a change to § 414.1380(b)(4)(ii)(C) to reflect that the optional measures are worth five or ten bonus points, as specified by CMS.

We invite public comments on our proposal to make these revisions.

(2) Calculating the Final Score

For a description of the statutory basis and our policies for calculating the final score for each MIPS eligible clinician, we refer readers to § 414.1380(c) and the discussion in the CY 2017 and CY 2018 Quality Payment Program final rules, and the CY 2019, CY 2020, and CY 2021 PFS final rules (81 FR 77319 through 77329, 82 FR 53769 through 53785, 83 FR 59868 through 59878, 84 FR 63020 through 63031, 85 FR 84908 through 84917 respectively) on final score calculations, performance category weights, reweighting the performance categories, and the complex patient bonus.

As described in more detail in the following sections, we:

- Propose to continue doubling the complex patient bonus for the CY 2021 MIPS performance period/CY 2023 MIPS payment year, as was previously finalized with a cap of 10 bonus points for the CY 2020 MIPS performance period/CY 2022 MIPS payment year (85 FR 50311).

- Propose to revise the complex patient bonus formula, which currently provides a bonus to all MIPS eligible clinicians, groups, virtual groups, and APM entities who submit data for at least one MIPS performance category, so that beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year the complex patient bonus better target clinicians who treat a higher caseload of more complex and high-risk patients.

- Request comment on potential circumstances where we may not be able to reliably calculate a score for any of the cost measures as described under § 414.1380(c)(2)(i)(A)(*2*). Additionally, we note that we are reweighting the cost performance category for the CY 2020 MIPS performance period/CY 2022 MIPS payment year because we have concluded there are not sufficient measures and activities applicable and available for us to score any clinicians on performance due to the national PHE for COVID-19.

- Propose to continue performance category weight redistribution policies finalized for the CY 2022 MIPS performance period/CY 2024 MIPS payment year.

- Propose policies for redistributing the weight of the performance categories for small practices.

- Clarify how our application-based and automatic extreme and uncontrollable circumstances policies intersect.

- Propose a new policy to determine the MIPS final score for clinicians and groups who are eligible for facility-based measurement.

(a) Complex Patient Bonus

(i) Background

Section 1848(q)(1)(G) of the Act requires us to consider risk factors in our MIPS scoring methodology. Specifically, it provides that the Secretary, on an ongoing basis, shall, as the Secretary determines appropriate and based on an individual's health status and other risk factors, assess appropriate adjustments to quality measures, cost measures, and other measures used under MIPS; and assess and implement appropriate adjustments to payment adjustments, final scores, scores for performance categories, or scores for measures or activities under MIPS. In doing so, the Secretary is required to take into account the relevant studies conducted under section 2(d) of the Improving Medicare Post-Acute Care Transformation Act of 2014 (IMPACT Act) (Pub. L. 113–185, October 6, 2014) and, as appropriate, other information, including information collected before completion of such studies and recommendations. In the CY 2018 Quality Payment Program final rule, under the authority in section 1848(q)(1)(G) of the Act, we established at § 414.1380(c)(3) a complex patient bonus of up to 5 points to be added to the final score for the 2020 MIPS payment year (82 FR 53771 through 53776). In subsequent rulemaking, we continued the complex patient bonus at § 414.1380(c)(3) for the 2021, 2022, and 2023 MIPS payment years (83 FR 59870, 84 FR 63023, and 85 FR 84910, respectively). Additionally, we finalized for the 2022 MIPS payment year at § 414.1380(c)(3)(iv) that the complex patient bonus will be calculated under the existing formulas in paragraphs (c)(3)(i) and (ii), and the resulting numerical value will then be multiplied by 2 (85 FR 84911 through 84913).

We refer readers to these final rules for additional details on the background, statutory authority, policy rationale, and previously finalized calculation of the complex patient bonus.

We intended for this bonus to serve as a short-term strategy to address the impact patient complexity may have on MIPS scoring while we continue to work with stakeholders on methods to account for patient risk factors. The overall goal, when considering a bonus for complex patients, is two-fold: (1) to protect access to care for complex patients and provide them with excellent care; and (2) to avoid placing MIPS eligible clinicians who care for complex patients at a potential disadvantage while we review the completed studies and research to address the underlying issues. We used the term "patient complexity" to consider a multitude of factors that describe and have an impact on patient health outcomes; such factors include the health status and medical conditions of patients, and social risk factors. We believe as the number and intensity of these factors increase for a single patient, the patient may require more services, more clinician focus, and more resources to achieve health outcomes similar to those who have fewer factors. In developing the policy for the complex patient bonus, we assessed whether there was a MIPS performance discrepancy by patient complexity using two well-established indicators in the Medicare program: medical risk as measured through Hierarchical Condition Category (HCC) risk scores, and social risk as measured through the proportion of patients that is dually eligible for Medicare and Medicaid (82 FR 53771 through 53776).

(ii) Complex Patient Bonus for the CY 2021 MIPS Performance Period/CY 2023 MIPS Payment Year

In this section of the proposed rule, we are proposing to modify the complex patient bonus for the CY 2021 MIPS performance period/CY 2023 MIPS payment year in response to the PHE for COVID-19. In the CY 2020 PFS final rule, we finalized a policy to continue the complex patient bonus for the CY 2020 performance period/CY 2022 MIPS payment year (84 FR 63021 through 63023). However, due to the national PHE for COVID-19 during performance period 2020, we noted in the CY 2021 PFS proposed rule that we need to re-

evaluate the previously established policy for the complex patient bonus for the CY 2020 MIPS performance period/2022 MIPS payment year (85 FR 50311). We refer readers to the CY 2021 PFS proposed rule (85 FR 50311 through 50313) for further details on how the PHE for COVID-19 impacts care delivery both directly and indirectly. We acknowledged there are direct effects of COVID-19 for those patients who tested positive for SARS-CoV-2 and indirect effects of COVID-19 for other patients whose care was impacted because of the PHE, including increased complexity and barriers such as postponing care, accessing care in a different way (for example, via telecommunications), and disruptions to lab results and medications, which are not accounted for in our existing final score calculations using these complexity indicators.

Considering both these direct and indirect effects, we finalized § 414.1380(c)(3)(iv) (85 FR 84913), under which the complex patient bonus is calculated for the CY 2022 MIPS payment year pursuant to the existing formulas in paragraphs (c)(3)(i) and (ii), and the resulting numerical value is then multiplied by 2 but cannot exceed 10.0. The doubled numerical value (subject to the 10-point cap) is added to the final score.

We believe we have made significant progress against COVID-19. As noted by the Centers for Disease Control and Prevention (CDC), the number of COVID-19 cases are predicted to decrease through the week of July 17th, 2021 in the United States and territories[235]. As of June 1, 2021, the number of daily new cases in the United States is at a similar level compared to the number of daily new cases during this time last year.[236] While we are encouraged by these results, we believe that there may be some residual direct and indirect effects from the PHE that could affect the CY 2021 MIPS performance period/CY 2023 MIPS payment year. In particular, for the first quarter, we had high COVID cases in multiple regions.[237] Additionally, we cannot quantify the effect of beneficiaries who delayed care because of the PHE and are now seeking care.

---

[235] https://www.cdc.gov/coronavirus/2019-ncov/cases-updates/forecasts-cases.html.
[236] https://www.nytimes.com/interactive/2021/us/covid-cases.html.
[237] Ibid.

Because of the concerns of the direct and indirect effects of the COVID-19 PHE, we propose to continue doubling the complex patient bonus as described at § 414.1380(c)(3)(iv) for the CY 2023 MIPS payment year, and we propose corresponding revisions to the regulation text at § 414.1380(c)(3)(iv). The doubled numerical value (subject to the 10-point cap) would be added to the final score. Since the COVID-19 cases and deaths have decreased throughout the year, we considered applying a smaller multiplier (like 1.5 for a cap of up to 7.5 points) or to not apply a multiplier at all. However, we believe doubling the complex patient bonus is appropriate given the continuation of the national PHE for COVID-19 into the 2021 MIPS performance period, the potential direct and indirect effects of COVID-19 on care delivery and care postponement, and additional uncertainties. We seek comment on this proposal and whether a different multiplier should be applied as we plan to consider the options based on public comment.

(iii) Complex Patient Bonus Beginning with the CY 2022 MIPS Performance Period/CY 2024 MIPS Payment Year

(A) Complex Patient Bonus Background and Analysis

As discussed in the CY 2021 PFS final rule (85 FR 84908), we intended the complex patient bonus as a short-term solution to address the impact patient complexity may have on MIPS scoring. However, during the development of the CY 2021 PFS final rule, we did not have sufficient information available to develop a long-term solution to account for patient risk factors in MIPS that we could include as a finalized policy for the CY 2021 MIPS performance period/CY 2023 MIPS payment year. In the CY 2020 PFS proposed and final rules, we considered whether newly available data from the Quality Payment Program still supported the complex patient bonus at the final score level (84 FR 40793 through 40795). More specifically, within the data analysis, we did not observe a consistent linear relationship for any reporting type or complexity measure, HCC risk score or dual proportion (84 FR 63021 through 63023). However, we only had a few years of data and believed more recent data may bring different

results than the findings we explained in detail in the CY 2020 PFS final rule. We refer readers to the CY 2020 PFS final rule for further details on the methodology and findings (84 FR 63021 through 63023).

Further, section 1848(q)(1)(G) of the Act requires us to consider the relevant studies conducted under section 2(d) of the IMPACT Act and, as appropriate, other information, including information collected before completion of such studies and recommendations. The HHS Assistant Secretary for Planning and Evaluation (ASPE) completed its first report in December 2016, which examined the effect of individuals' socioeconomic status on quality, resource use, and other measures under the Medicare program, and included analyses of the effects of Medicare's current value-based payment programs on clinicians serving socially at-risk beneficiaries and simulations of potential policy options to address these issues. ASPE's second report, Social Risk and Performance in Medicare's Value-Based Purchasing Programs, was -released in June 2020, which builds on the analyses included in the initial report and provides additional insight for addressing risk factors in MIPS and other value-based payment programs.[238] More specifically, the report has a 3-pronged strategy approach to: measure and report quality; set high, fair quality standards; and reward and support better outcomes for beneficiaries with social risk. As a part of this 3-pronged strategy, the report supports use of the complex patient bonus in MIPS, explaining that it is well supported because this policy gives additional points to clinicians with a higher share of medically and socially complex patients and does not lower the standard of care. Further, the report suggested that we should not include the complex patient bonus within the final score that is publicly reported to ensure that patients can see the true clinician performance. Based on the ASPE report's suggestion, in the future we expect to also publicly report the final score without the complex patient bonus included. We noted in the CY 2021 PFS final rule (85 FR 84909) that as we continue to review the findings

[238] ASPE. Second Report to Congress on Social Risk and Medicare's Value-Based Purchasing Programs. June 29 2020. https://aspe.hhs.gov/pdf-report/second-impact-report-to-congress.

from the report, we intend to consider its recommendations, along with any updated data that would become available, for future rulemaking. In the CY 2021 PFS final rule (85 FR 84909), we also noted we plan to continue working with ASPE, the public, and other key stakeholders on this important issue to identify longer term policy solutions that achieve the goals of attaining health equity for all beneficiaries, and minimizing unintended consequences, and would propose modifications to the complex patient bonus in future rulemaking as appropriate.

Under § 414.1380(c)(3), the complex patient bonus is calculated as follows. For MIPS eligible clinicians and groups: [The average HCC risk score assigned to beneficiaries (under the HCC risk adjustment model established by CMS under section 1853(a)(1) of the Act) seen by the MIPS eligible clinician or seen by clinicians in a group] + [the dual eligible ratio × 5]. For APM entities and virtual groups: [The beneficiary weighted average HCC risk score for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation within the APM entity or virtual group, respectively] + [the average dual eligible ratio for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation, within the APM entity or virtual group, respectively, × 5].

For this proposed rule, we continue to explore alternative calculation methodologies to modify the complex patient bonus formula based on several factors including stakeholder feedback, updated data analysis, and implications from ASPE reports to Congress. We also reviewed a series of literature recently published utilizing the 2017 MIPS performance period data. The Johnston KJ, Hockenberry JM et al. article[239] found that the current complex patient bonus formula appears unlikely to mitigate the most regressive effects of MIPS. The article stated this is particularly concerning for future years in MIPS as the performance threshold

[239] Johnston KJ, Hockenberry JM et al (Sept 2020) "Clinicians With High Socially At-Risk Caseloads Received Reduced Merit-Based Incentive Payment System Scores" HEALTH AFFAIRS 39, NO. 9 (2020): 1504–1512. Khullar D, Schpero WL, et al (Sept 2020) "Association between Patient Social Risk and Physician Performance Scores in the First Year of the Merit-based Incentive Payment System" JAMA. 2020; 324 (10):975-983.

increases over time. Additionally, the Johnston KJ, Wiemken TL et al. article[240] indicated that lower composite MIPS scores in the higher-risk quintile reflected lower scores in each of the performance categories rather than one specific performance category. Essentially, both articles concluded that in the first year of the Medicare MIPS program, clinicians with the highest proportion of patients dually eligible for Medicare and Medicaid had significantly lower MIPS scores compared with clinicians with the lowest proportion of dually eligible patients. Two other research studies we considered are related to how risk scores, specifically related to HCCs, differ between both rural and urban areas. The Tyler Malone, Denise Kirk et al. study[241] indicated that Medicare beneficiaries in rural counties have lower average CMS-HCC risk scores compared to urban counties despite previous research suggesting that rural populations are sicker than urban populations. The study also emphasized the differences in average CMS-HCC risk scores may be driven partially by differences in the intensity of types of health care interventions received by rural versus urban beneficiaries. However, further research is needed to account for differences in coding patterns and/or resource limitations between urban versus rural counties. The second study[242] found CMS-HCC risk scores provide utility in predicting which patients are expected to be more costly. However, the results also suggested there are systematic differences in the risk adjustment model's predictive capabilities in rural versus urban populations, as rural beneficiaries in the Tyler Malone, Denise Kirk et al. study generally had greater health care utilization even after controlling for risk scores. In conclusion, both studies suggested Medicare provider payment models using CMS-HCC risks scores may underestimate the costs associated with treatment of rural beneficiaries.

While ASPE's reports to Congress support the use of a complex patient bonus at the final score level, we also acknowledge the findings reported in the published literature by identifying

---

[240] Johnston KJ, Wiemken TL et al (Sept 2020) "Association of Clinician Health System Affiliation with Outpatient Performance Ratings in the Medicare Merit-based Incentive Payment System" JAMA. 2020; 324(10):984-992.
[241] UNC Rural Health Research Program, "CMS Hierarchical Condition Category (HCC) 2014 Risk Scores Are Lower for Rural Medicare Beneficiaries than for Urban Beneficiaries," December 2020.
[242] UNC Rural Health Research Program, "Association of CMS-HCC Risk Scores with Health Care Utilization Among Rural and Urban Medicare Beneficiaries", December 2020.

ways to make the complex patient bonus more targeted for clinicians caring for high risk and complex patients and to mitigate differences in resources that affect MIPS scores. Once it became available, we reviewed the 2018 MIPS actual data to see if we could replicate the findings and identified some structural issues within the current complex patient bonus formula. We describe the findings below. We also note that the analyses reported in the Johnston KJ, Wiemken TL et al. studies include all MIPS eligible clinicians irrespective of whether they submitted data, while our data analyses with 2018 actual scored MIPS data were restricted to MIPS clinicians who submitted data. We restricted our analyses to MIPS eligible clinicians who submit MIPS data because under current policy as established at § 414.1380(c)(3), the MIPS eligible clinician must engage in, that is submit data for, at least one MIPS performance category for the applicable performance period for the MIPS payment year to receive the complex patient bonus. Our analysis of 2018 actual MIPS data was further limited to MIPS eligible clinicians scored as individuals or groups because the HCC and dual proportion individual data elements were not available for virtual groups and APM Entities at the time of our analysis.

For our updated analysis, we used actual 2018 MIPS scored data to evaluate whether the complex patient bonus sufficiently supports MIPS eligible clinicians scored as a group or individual who submit data and treat high risk and medically complex patients. We grouped the MIPS eligible clinicians into quintiles based on the complex patient bonus points they would receive. Quintiles were created by first ranking the actual complex patient bonus scores from lowest to highest for MIPS eligible clinicians who submitted data and were scored as an individual or group. All clinicians who received the same group score had the same complex patient bonus scores. Then, five groupings were created, each containing 20 percent of the MIPS eligible clinicians in our analysis. We found that MIPS final scores, prior to assigning the complex patient bonus points, were substantially lower for clinicians in the top two quintiles for the complex patient bonus compared to clinicians in the lower quintiles for the complex patient

bonus when we refined the analysis by examining the HCC and dual proportion quintiles separately, we observed a similar pattern.

Currently, the complex patient bonus is awarded to all engaged clinicians, meaning those who have submitted data for at least one MIPS performance category or are facility-based, even clinicians serving beneficiaries with below-average dual proportion or HCC scores. Given our updated analysis showed that the MIPS performance of clinicians in the top two quintiles for each risk indicator, HCC and dual proportion, is substantially affected by the complexity of their patients among clinicians who submitted data and were scored as individuals and groups, we compared the respective contributions of the two risk indicators to the total points assigned. We found that approximately 55 percent of the points assigned are for the HCC risk indicator component and 45 percent for the dual proportion risk indicator component. However, we also observed that the additional points attributable to a one standard deviation increase in dual proportion were greater than those attributable to a similar increase in the HCC score.

In summary, our updated analyses using actual 2018 MIPS scored data found that clinicians who have a higher share of complex patients have lower final scores, on average, prior to the assignment of the complex patient bonus than other clinicians. Additionally, our analyses showed that there is little evidence of association between the complex patient risk indicators (HCC and dual proportion) and MIPS final scores among the clinicians with a lower share of complex patients. We also noted, based on the above analysis using actual 2018 MIPS scored data for clinicians scored as individuals and groups examined separately, the median raw final scores for engaged clinicians in the calculated top complex patient bonus quintile were more than 10 points less than the median raw final score of those in the bottom complex patient bonus quintile. Specifically, the median raw final scores for engaged clinicians in the top complex patient bonus quintile were 82.33 for groups and 60.76 for individuals compared to median raw scores of 94.36 for groups and 81.28 for individuals in the lowest quintile. Additionally, when we compared the median raw final scores for engaged clinicians in the calculated middle

complex patient bonus quintile to the highest quintile, we still observed a difference in median raw final scores of greater than 10 points for both individuals and groups. Table 49 shows 2018 median MIPS raw final scores for the engaged individuals and groups within the lowest, middle and highest complex patient bonus (CPB) quintiles.

TABLE 49: 2018 Median MIPS Raw Final Scores for Engaged Individuals and Groups by Complex Patient Bonus Quintile

	Lowest CPB Quintile	Middle CPB Quintile	Highest CPB Quintile
Median MIPS Final Score (Individual)	81.28	77.44	60.76
Median MIPS Final Score (Group)	94.36	94.38	82.33

Furthermore, we found that, while the two risk indictors, dual proportion and HCC risk score, are correlated substantially, each has a different scale. For example, the dual proportion has a natural upper bound of 1 whereas the HCC risk score does not. The distribution of each risk indicator around its mean and median is also different. Given these findings, we have identified areas within the complex patient bonus that can be improved. Most importantly, the current complex patient bonus formula gives bonus points to clinicians not adversely affected by social risk and medical risk of their patients and does not sufficiently account for clinicians who treat patients who are high-risk and/or medically complex.

(B) Proposed Updates to the Complex Patient Bonus Beginning with the CY 2022 MIPS Performance Period/CY 2024 MIPS Payment Year

Based on the ASPE report and our analyses, we are proposing to revise the complex patient bonus by— (1) limiting the bonus to clinicians who have a median or higher value for at least one of the two risk indicators (HCC and dual proportion); (2) standardizing the distribution of the two risk indicators so that the policy can target clinicians who have a higher share of socially and/or medically complex patients; and (3) providing one overall complex patient bonus cap at 10 bonus points. To accomplish this, we include five separate proposals to update our complex patient bonus for the CY 2022 MIPS performance period/CY 2024 MIPS payment years and future MIPS performance periods/MIPS payment years. We note that in section IV.A.3.e.(2)(a)(iii)(B) of this proposed rule, we use the term “clinician(s)” to generally refer to

those individuals and entities that these proposals apply to, including MIPS eligible clinicians, groups, subgroups, APM entities, and virtual groups. First, we propose to add to § 414.1380(c)(3) that, similar to our current policy, beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, provided that a MIPS eligible clinician, group, subgroup, virtual group or APM entity submits data for at least one MIPS performance category for the applicable performance period for the MIPS payment year, a complex patient bonus will be added to the final score for the MIPS payment year, if applicable, as described in paragraph (c)(3)(v) through (c)(3)(viii). Second, we propose at § 414.1380(c)(3)(v) that beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment years, the complex patient bonus is limited to MIPS eligible clinicians, groups, subgroups, APM entities, and virtual groups with a risk indicator at or above the risk indicator calculated median. Third, we propose the revised formulas at § 414.1380(c)(3)(vi). For MIPS eligible clinicians, groups, and subgroups, the complex patient bonus components are calculated as follows for the specific risk indicators: medical complex patient bonus component=1.5+4*associated HCC standardized score calculated with the average HCC risk score assigned to beneficiaries (pursuant to the HCC risk adjustment model established by CMS pursuant to section 1853(a)(1) of the Act) seen by the MIPS eligible clinician or seen by clinicians in a group or subgroup; social complex patient bonus component=1.5+4* associated dual proportion standardized score. The components are added together to calculate one overall complex patient bonus. A standardized score for each risk indicator is determined based on the mean and standard deviation of the raw risk indicator score and provides a standardized measurement of how far each risk score is from the mean: (raw risk indicator score - risk indicator mean)/risk indicator standard deviation. Fourth, we propose the revised formulas at § 414.1380(c)(3)(vii). For APM entities and virtual groups, the complex patient bonus components are calculated as follows for the specific risk indicators: medical complex patient bonus component=1.5+4*the beneficiary weighted average HCC risk standardized score for all MIPS eligible clinicians, and if technically feasible, TINs for models

and virtual groups which rely on complete TIN participation within the APM entity or virtual group, respectively; social complex patient bonus component =1.5+4*the average dual proportion standardized score for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation, within the APM entity or virtual group, respectively. The components are added together to calculate one overall complex patient bonus. A standardized score for each risk indicator is determined based on the mean and standard deviation of the raw risk indicator score and provides a standardized measurement of how far each risk score is from the mean: (raw risk indicator score - risk indicator mean)/risk indicator standard deviation. Finally, we propose at § 414.1380(c)(3)(viii) that beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment years, the complex patient bonus cannot exceed 10.0 and cannot be below 0.0.

(aa) Continuing the Requirement to Submit Data and to use the Same Risk Indicators

Under the first proposal, beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment years, we are proposing to continue the requirement to submit data for at least one MIPS performance category for the applicable performance period for the MIPS payment year for a MIPS eligible clinician, group, subgroup, virtual group or APM entity to receive a complex patient bonus added to the final score for the MIPS payment year, if applicable, as described in paragraphs (c)(3)(v) through (viii).

As discussed below in section IV.A.3.e.(2)(a)(iii)(B)(cc) of this proposed rule, the proposals at § 414.1380(c)(3)(vi) and (vii) include complex patient bonus components within the formulas proposed beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year to account for social and medical risk, while still using our current established risk indicators of dual proportion and HCC risk scores, respectively. We also continue to believe that applying this bonus at the final score is appropriate because caring for complex and vulnerable patients can affect all aspects of a practice and not just specific performance categories.

(bb) Cutoff at the Median for Complex Patient Bonus Beginning with the CY 2022 MIPS Performance Period/CY 2024 MIPS Payment Year

Beginning with the CY 2018 MIPS performance period/CY 2020 MIPS payment year, a complex patient bonus was added to the final score for the MIPS payment year for all MIPS eligible clinicians, groups, virtual groups and APM entities if they submitted data for at least one MIPS performance category for the applicable performance period for the MIPS payment year (§ 414.1380(c)(3)). We did not include any requirement that clinicians had to attain a certain threshold to receive the complex patient bonus. Under the second proposal, we are proposing at § 414.1380(c)(3)(v), beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment, the complex patient bonus is limited to MIPS eligible clinicians, groups, subgroups, APM entities, and virtual groups with a risk indicator at or above the risk indicator calculated median. This proposal limits the component for social risk to clinicians with a dual proportion value at or above the median dual proportion, and it limits the component for medical risk to clinicians with an HCC score value at or above the median HCC score. Those at or above the median for a risk indicator will get complex bonus points for that risk indicator component. To ensure the points are impactful and provided specifically to clinicians treating higher numbers of medically and socially complex patients, we propose to provide bonus points beginning at the respective calculated medians.

Both medical and social factors within the newly proposed methodology, discussed in section IV.A.3.e.(2)(a)(iii)(B)(cc) of this proposed rule, would have separate medians and distributions calculated to provide more transparent bonuses to directly target those clinicians who treat a higher caseload of high-risk and complex patients. Both the dual proportion and the HCC risk indicators attributed to each clinician will be calculated in the same manner as under our current policy (for more information about the current policy, see the CY 2018 Quality Payment Program final rule (82 FR 30135)).

To determine the median for the respective risk indicator (HCC and dual proportion), we propose to use the risk indicators associated with the final score assigned to a clinician from the prior performance period for all engaged MIPS clinicians, which means those who have submitted data for at least one MIPS performance category or are facility-based. We would also use this same final score distribution to determine the standardized score discussed in section IV.A.3.e.(2)(a)(iii)(B)(cc) of this proposed rule. These statistics would be applied to the applicable performance period values of the risk indicators for each clinician to calculate the social and medical risk component scores for the MIPS performance period. For example, the median from the CY 2021 performance period would be compared to the CY 2022 MIPS performance period risk indicator values to determine who would be eligible for a CY 2022 MIPS performance period/CY 2024 MIPS payment year complex patient bonus. We believe we need a prospective determination of the median, and standardized score from a prior performance period where the final scores are already resolved.

In our proposal, only those clinicians with risk indicator scores at or above the median for either one or both risk indicators would receive complex patient bonus points. Based on this proposed rule's regulatory impact analysis (see section VII.F.17 of this proposed rule), we estimate 64 percent of clinicians would receive a complex patient bonus because there is not 100 percent overlap in the clinicians that are at or above the median for both risk indicators. Approximately 36.3 percent of engaged clinicians would not receive any complex patient bonus points, as they are below the median for both the HCC risk score and the dual proportion. We believe this number is appropriate as we would be targeting the complex patient bonus points to clinicians treating a higher caseload of highly complex patients.

Additionally, the complex patient bonus points would be more impactful as the difference in awarded bonus points between those with high caseloads of complex patients and those with low caseloads, would be greater. We believe establishing a cutoff point at the median, as opposed to the mean, is appropriate given the median is less impacted by outlier cases since the

median is simply the middle value. We considered whether to use the mean, instead of the proposed median, but estimated that would result in about 50 percent of clinicians no longer receiving any complex patient bonus points because outliers could increase the mean.

We acknowledge that alternate approaches could be used to target the bonus at clinicians with higher caseloads of complex patients. For example, we could consider using a different distribution of risk indicator scores, such as one from an earlier performance period, so clinicians could know their scores in advance, or through using a distribution that includes individual clinician scores and counts group scores, APM Entity scores, virtual group scores, and, starting in the CY 2023 MIPS performance period/CY 2025 MIPS payment year, subgroup scores only once, so the group, APM Entity, virtual group, or subgroup score is not weighted by the number of clinicians in the group, APM Entity, virtual group, or subgroup. We could also consider building risk benchmarks based on our current quality measure benchmark methodology (81 FR 77282 and 82 FR 53718) to determine the number of complex patient bonus points. Under that methodology, risk indicator scores higher than the decile in which the median risk factor lies would receive complex patient bonus points and all of the clinicians in the top decile would receive 5 points for each risk indicator. We request comments on alternate approaches for calculating the complex patient bonus.

(cc) Revised Complex Patient Bonus Formulas Beginning with the CY 2022 MIPS Performance Period/CY 2024 MIPS Payment Year

Under the third proposal, we propose at § 414.1380(c)(3)(vi) that beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment, for MIPS eligible clinicians, groups, and subgroups, the complex patient bonus components are calculated as follows for the specific risk indicators: medical complex patient bonus component=1.5+4*associated HCC standardized score calculated with the average HCC risk score assigned to beneficiaries (pursuant to the HCC risk adjustment model established by CMS under section 1853(a)(1) of the Act) seen by the MIPS eligible clinician or seen by clinicians in a group or subgroup; social complex patient

bonus component=1.5+4* associated dual proportion standardized score. The components are added together to calculate one overall complex patient bonus. A standardized score for each risk indicator is determined based on the mean and standard deviation of the raw risk indicator score and provides a standardized measurement of how far each risk score is from the mean: (raw risk indicator score - risk indicator mean)/risk indicator standard deviation. For example, we would use the mean and standard deviation from the CY 2021 MIPS performance period and the indicator assigned in the CY 2022 MIPS performance period to determine the clinician's standard score for the CY 2022 MIPS performance period/CY 2024 MIPS payment year.

Under the fourth proposal, we also propose at § 414.1380(c)(3)(vii), beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment years, for APM entities and virtual groups, the complex patient bonus components are calculated as follows for the specific risk indicators: medical complex patient bonus component=1.5+4*the beneficiary weighted average HCC risk standardized score for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation within the APM entity or virtual group, respectively; social complex patient bonus component =1.5+4*the average dual proportion standardized score for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation, within the APM entity or virtual group, respectively. The components are added together to calculate one overall complex patient bonus. A standardized score for each risk indicator is determined based on the mean and standard deviation of the raw risk indicator score and provides a standardized measurement of how far each risk score is from the mean: (raw risk indicator score - risk indicator mean)/risk indicator standard deviation.

The mean and standard deviation statistics will be used along with the performance period values of the risk indicators for each clinician to calculate the standardized score used to calculate the social and medical risk component scores for the MIPS payment year. For example, if the raw dual proportion score calculated for a clinician is 0.25, the dual proportion

mean (from the prior performance period) is 0.23, and the dual proportion standard deviation (from the prior performance period) is 0.15, the clinician's standardized score would be (0.25-0.23)/0.15= 0.13. We believe that the standardized score calculation is appropriate as it is typically used to understand how far the raw risk indicator scores fall from the mean. We note that those with a mean score would have a standardized score of zero, and those with a standardized score of 1 are one standard deviation above the mean. Those below the mean would have a negative standardized score. The proposed formulas would also provide bonus points to clinicians who have a negative risk indicator standardized score and fall between the calculated median and mean for the respective risk indicator and to those who fall at or above the mean and thus have a positive risk indicator standardized score. As noted in section IV.A.3.e.(2)(a)(iii)(B)(cc) of the proposed rule, at § 414.1380(c)(3)(vi) and (vii), the new bonus components would use respective means to calculate standardized scores to then calculate and provide bonus points for clinicians with risk indicators, HCC and dual proportion, at or above the median, to capture medical and social risk, separately. For each of the two component calculations, higher standardized scores above the mean would be associated with more bonus points. For example, a clinician with a standardized score of zero (the mean value) for each risk indicator, HCC and dual proportion, would receive bonus points for each component that is equivalent to the constant, additive factor within the new formula, 1.5. The proposed formulas acknowledge complexity without creating a large cliff between those who are just below the median and those who have a marginally higher caseload of complex patients. The bonus, as proposed, would increase proportionally with the increased number of complex patients a clinician is treating and/or the degree of patient complexity. For example, we would not want to provide those who fall at the mean 1.5 bonus points, and then provide 10 bonus points to those who only have only a slightly higher caseload. Hence, we intend to incorporate a standardized score multiplied by 4 to ensure the score gets proportionally higher as complexity increases.

The additive factor of 1.5 ensures that all clinicians at or above the mean for the social complex patient bonus calculation, based on dual proportion, would receive at least 1.5 complex patient bonus points and all clinicians at or above the mean for the medical complex patient bonus calculation, based on HCC risk score, would receive at least 1.5 complex patient bonus points. Further, the additive factor of 1.5 would allow clinicians between the median and mean to still receive complex patient bonus points. For example, if the dual proportion risk indicator median is 0.2 and the dual proportion risk indicator mean is 0.23, a clinician with an associated standardized score of -0.1 (0.1 standard deviations below the mean, but still above the median), the clinician would receive a complex patient bonus equal to 1.5 + 4 * (-0.1) which equals 1.1 for the dual proportion component. If the dual proportion risk indicator calculated for a clinician falls below the median, they would receive zero complex patient bonus points for the dual proportion component. Based on the standardized score calculation, if the dual proportion risk indicator calculated for a clinician falls above the mean, they would receive complex patient bonus component points greater than the additive factor of 1.5 for the dual proportion component.

We believe this formula avoids a major complex patient bonus points cliff created by providing the clinicians right *above* the cutoff point significant bonus points compared to the clinicians right *below* the cutoff point (who do not receive any complex patient bonus points). We acknowledge those who fall below the median will no longer receive any complex patient bonus points, per proposal at § 414.1380(c)(3)(v) that for the CY 2022 MIPS performance period/CY 2024 MIPS payment years and future MIPS performance periods/MIPS payment years, the complex patient bonus is limited to MIPS eligible clinicians, groups, subgroups, APM entities, and virtual groups with a risk indicator at or above the risk indicator calculated median.

(dd) Cap for the Complex Patient Bonus Beginning with the CY 2022 MIPS Performance Period/CY 2024 MIPS Payment Year

When we originally established the complex patient bonus policy in the CY 2018 Quality Payment Program final rule (82 FR 53774), we finalized at § 414.1380(c)(3)(iii) that the complex patient bonus cannot exceed 5.0. At that time, our data analysis estimated a decrease in simulated scores of 5.4 points (for individuals who report 6 or more quality measures) and 4.5 points (for groups) from the top quartile to the bottom quartile for the average patient HCC risk scores and 4.8 points (for individuals who report 6 or more quality measures) and 4.5 points (for groups) from the top quartile to the bottom quartile for the dual proportion. Therefore, we believed a cap for the complex patient bonus of 5 points was supported by the data and was sufficient to compensate for the estimated differences in performance based on HCC risk scores and dual proportion (82 FR 53773). In CY 2019, CY 2020, and CY 2021 PFS final rules, we continued to believe that the 5-point cap was appropriate given that we had not updated our prior analyses (83 FR 58769 through 59870, 84 FR 63021 through 63023, 85 FR 84908 through 84913, respectively). However, based on our updated analyses using actual 2018 MIPS scored data, described above, about 5 percent of clinicians scored as group or individual had a complex patient bonus that would have been more than 5-points had the cap not been in place. The complex patient bonus cap of 5-points (82 FR 53773 through 53776) affects clinicians who are most likely carrying higher caseloads for patient complexity, which is inconsistent with the intent of the policy, and we no longer believe we should maintain the overall cap of 5-points. As discussed in section IV.A.3.e.(2)(a)(iii)(A), our updated analyses using actual 2018 MIPS scored data also found that clinicians with a higher caseload of complex patients have lower final scores, by more than 10 points on average, prior to the assignment of the complex patient bonus than clinicians with lower caseloads of complex patients. We believe, with a cap of 10 bonus points, we are targeting the bonus to address the differences in final scores these clinicians face more appropriately without capping at a larger number, such as 15 or 20 bonus points, which could result in inappropriate score inflation and masking of poor performance. A cap of fewer than 10 bonus points would not address the differences in the observed raw final scores and

would not adequately address the need to provide more equity within our scoring system for those clinicians treating higher caseloads of socially and/or medically complex patients. We did consider lower caps, such as 5 or 7 bonus points, or higher caps, such as 20 bonus points, but, for the reasons described above, have proposed the cap of 10 bonus points. However, if future analyses and more recent data show differences in raw final scores that differ from our previous findings, we would consider proposing in future rulemaking the use of a cap that aligns with new findings.

As discussed in section IV.A.3.e.(2)(a)(iii)(B)(cc) of this proposed rule, we are proposing the formulas as: risk indicator complex patient bonus component=1.5+4*associated risk indicator standardized score. The formula, as proposed, has a multiplier of 4. We also considered a multiplier of 2 with a cap of 5 bonus points which results in a lower final score mean and median but does not change the number of clinicians receiving a complex patient bonus when compared to the proposed policy. We do not believe that this alternate approach would produce a bonus impactful enough to overcome the differences seen at the final score level when comparing complex patient bonus quintiles. We request feedback on this alternate approach and additional alternate approaches we should consider.

Under the fifth proposal, we are proposing at § 414.1380(c)(3)(viii) that beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, the complex patient bonus cannot exceed 10.0 and cannot be below 0.0. Based on the proposed formulas at § 414.1380(c)(3)(vi) and (vii), the social complex patient bonus component (using dual proportion standardized score) and the medical complex patient bonus component (using HCC risk score standardized score) will be added together to calculate one overall complex patient bonus. Then, based on the proposal at § 414.1380(c)(3)(viii) the complex patient bonus would then be capped at the 10 points overall. The benefit would be targeted toward those clinicians treating medically and socially complex patients.

For example, if a clinician's dual proportion standardized score is 1.5, their complex patient bonus social risk component is 1.5 + 4* 1.25= 6.5. If their HCC risk score standardized score is 0.25, their complex patient bonus medical risk component is 1.5 + 4* 0.25= 2.5. The two complex patient bonus components are then added together to total 9 complex patient bonus points for this clinician. Had the total been above 10 bonus points, the 10-point cap would have applied and the clinician would have received 10 complex patient bonus points added to their final MIPS score.

We seek feedback on whether we should use the multiplier of 4 and cap of 10 bonus points as proposed, a multiplier of 2 and cap of 5 bonus points as discussed as an alternative, or if we should consider additional options and rationale for the complex patient bonus formula and bonus cap, such as a cap of 7 or 20 bonus points.

In summary, we propose the five separate proposals for the CY 2022 MIPS performance period/CY 2024 MIPS payment year and future MIPS performance periods/MIPS payment years as follows:

- To revise § 414.1380(c)(3), by adding, beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, provided that a MIPS eligible clinician, group, subgroup, virtual group or APM entity submits data for at least one MIPS performance category for the applicable performance period for the MIPS payment year, a complex patient bonus will be added to the final score for the MIPS payment year, if applicable, as described in paragraphs (c)(3)(v) through (viii).

- At § 414.1380(c)(3)(v), beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, we propose the complex patient bonus is limited to MIPS eligible clinicians, groups, subgroups, APM entities, and virtual groups with a risk indicator at or above the risk indicator calculated median.

- At § 414.1380(c)(3)(vi), beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, we proposed for MIPS eligible clinicians, groups, and subgroups, the

complex patient bonus components are calculated as follows for the specific risk indicators: medical complex patient bonus component=1.5+4*associated HCC standardized score calculated with the average HCC risk score assigned to beneficiaries (under the HCC risk adjustment model established by CMS pursuant to section 1853(a)(1) of the Act) seen by the MIPS eligible clinician or seen by clinicians in a group or subgroups; social complex patient bonus component=1.5+4* associated dual proportion standardized score. The components are added together to calculate one overall complex patient bonus. A standardized score for each risk indicator is determined based on the mean and standard deviation of the raw risk indicator score and provides a standardized measurement of how far each risk score is from the mean: (raw risk indicator score - risk indicator mean)/risk indicator standard deviation.

- At § 414.1380(c)(3)(vii), we propose that beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, for APM entities and virtual groups, the complex patient bonus components are calculated as follows for the specific risk indicators: medical complex patient bonus component=1.5+4*the beneficiary weighted average HCC risk standardized score for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation within the APM entity or virtual group, respectively; social complex patient bonus component =1.5+4*the average dual proportion standardized score for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation, within the APM entity or virtual group, respectively. The components are added together to calculate one overall complex patient bonus. A standardized score for each risk indicator is determined based on the mean and standard deviation of the raw risk indicator score and provides a standardized measurement of how far each risk score is from the mean: (raw risk indicator score - risk indicator mean)/risk indicator standard deviation.

● At § 414.1380(c)(3)(viii), beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, we propose the complex patient bonus cannot exceed 10.0 and cannot be below 0.0.

We seek comments on these proposals including the different aspects of the updated complex patient bonus formulas, such as the additive and multiplicative components, the cutoff point (the median), and the 10-point overall cap. For all of the reasons described above in sections IV.A.3.e.(2)(a)(iii), IV.A.3.e.(2)(a)(iii)(A) and (B), and IV.A.3.e.(2)(a)(iii)(B)(aa) through (dd) of this rule, we have proposed such policies. However, we did also consider the alternative of continuing the use of the complex patient bonus formulas, as previously finalized at § 414.1380(c)(3)(i) and (ii), along with the 5.0 point cap as previously finalized at § 414.1380(c)(3)(iii) for the CY 2022 MIPS performance period/CY 2024 MIPS payment year. We also seek comment on that alternative.

(b) Final Score Performance Category Weights

(i) General Weights

Section 1848(q)(5)(E)(i) of the Act specifies weights for the performance categories included in the MIPS final score: in general, 30 percent for the quality performance category; 30 percent for the cost performance category; 25 percent for the Promoting Interoperability performance category; and 15 percent for the improvement activities performance category. For more of the statutory background and descriptions of our current policies, we refer readers to the CY 2017 through CY 2018 Quality Payment Program final rules, and CY 2019 through CY 2021 PFS final rules (81 FR 77320 through 77329, 82 FR 53779 through 53785, 83 FR 59870 through 59878, and 84 FR 62950 through 62959, 85 FR 84898 through 84908, respectively). Table 50 summarizes the weights established in prior rulemaking (85 FR 84913) for each performance category for the CY 2022 MIPS performance period/CY 2024 MIPS payment year and each subsequent MIPS payment year.

TABLE 50: Weights by MIPS Performance Category for the CY 2022 MIPS Performance Period/CY 2024 and each Subsequent MIPS Payment Year

Performance Category	2024 and Future MIPS Payment Years
Quality	30%
Cost	30%
Improvement Activities	15%
Promoting Interoperability	25%

(ii) Flexibility for Weighting Performance Categories

Under section 1848(q)(5)(F) of the Act, if there are not sufficient measures and activities applicable and available to each type of MIPS eligible clinician involved, the Secretary shall assign different scoring weights (including a weight of zero) for each performance category based on the extent to which the category is applicable to the type of MIPS eligible clinician involved and for each measure and activity with respect to each performance category based on the extent to which the measure or activity is applicable and available to the type of MIPS eligible clinician involved.

Under section 1848(q)(5)(B)(i) of the Act, in the case of a MIPS eligible clinician who fails to report on an applicable measure or activity that is required to be reported by the clinician, the clinician must be treated as achieving the lowest potential score applicable to such measure or activity. In this scenario of failing to report, the MIPS eligible clinician generally would receive a score of zero for the measure or activity, which would contribute to the final score for that MIPS eligible clinician. Under certain circumstances, however, a MIPS eligible clinician who fails to report could be eligible for an assigned scoring weight of zero percent and a redistribution of the performance category weights. For a description of our existing policies for reweighting performance categories, please refer to § 414.1380(c)(2) and the CY 2021 PFS final rule (85 FR 84914 through 84916).

(A) Reweighting the Cost Performance Category

Under § 414.1380(c)(2)(i)(A), we will assign a different weight to a performance category and redistribute its prescribed weight to another performance category or categories in

certain circumstances where we determine there are not sufficient measures and activities applicable and available under section 1848(q)(5)(F) of the Act. For the cost performance category, this includes circumstances where we cannot reliably calculate a score for the cost measures which adequately captures and reflects the performance of a MIPS eligible clinician (*see* § 414.1380(c)(2)(i)(A)(*2*)). In the CY 2018 Quality Payment Program final rule (82 FR 53780), for the cost performance category, we noted in the proposed rule we had stated that we continue to believe having sufficient measures applicable and available means that we can reliably calculate a score for the cost measures which adequately captures and reflects the performance of a MIPS eligible clinician, and that MIPS eligible clinicians who are not attributed enough cases to be reliably measured should not be scored for the cost performance category. We noted (82 FR 53780) we had established a policy in the CY 2017 Quality Payment Program final rule that if a MIPS eligible clinician is not attributed enough cases for a measure (in other words, has not met the required case minimum for the measure), or if a measure does not have a benchmark, then the measure will not be scored for that clinician (81 FR 77323). We stated (82 FR 53780) if we do not score any cost measures for a MIPS eligible clinician in accordance with this policy, then the clinician would not receive a cost performance category percent score. In this section of the proposed rule, we are requesting comments on potential circumstances where we may not be able to reliably calculate a score for any of the cost measures which adequately captures and reflects the performance of a MIPS eligible clinician, and may assign a different weight to the cost performance category and redistribute its prescribed weight to another performance category or categories. We are interested in comments on circumstances that could affect all MIPS eligible clinicians, as well as those that could affect a subset of MIPS eligible clinicians or individual MIPS eligible clinicians. The cost performance category reweighting provision at § 414.1380(c)(2)(i)(A)(*2*) is distinct from the measure suppression policy proposed in section IV.A.3.e.(1)(d)(i) of this proposed rule, as it applies to the performance category as a whole and not on a measure-by-measure basis.

In the CY 2021 PFS final rule (85 FR 84880), we responded to commenters' concerns regarding the potential for COVID-19 to impact cost measures, noting various features of the cost measures could allow us to calculate cost measures without penalizing practices in COVID-19 hotspots, and policies were in place to account for circumstances when a cost measure cannot be reliably calculated to adequately capture and reflect clinician performance. First, we noted service assignment allows the episode-based measures to capture the cost of services clinically related to the triggering event for the episode, reducing the likelihood of the measures to capture costs resulting from high volumes of COVID-19 treatment services. Then, we noted the measures are adjusted for clinical risk to account for different levels of care beneficiaries may require due to comorbidities, disability, age, and other risk factors (including clinical characteristics based on the beneficiary's recent medical history) to ensure attributed clinicians are not penalized for factors beyond their influence. Finally, we noted the cost measures use standardized claims to account for differences in Medicare payments for the same services across health care providers, removing the effect of regional differences in health care costs and the payment standardization process removes the 20 percent increase in the IPPS relative weight under the CARES Act for individuals diagnosed with COVID-19.

After the publication of the CY 2021 PFS final rule, we continued to monitor the cost measures to determine whether we could reliably calculate the cost measures for the 2020 performance period. Due to the claims run-out period, there is an inherent delay between the time at which we can observe trends in claims and when we can test for potential impact on cost measures, to ensure that the data included in our analyses reflect final claims for all services in episodes. In addition, a drop-in service utilization early in 2020 would only affect the amount of information available to risk adjust for patient clinical factors for episodes beginning in the second half of the year as the episode-based measures use a 120-day look back period during which we look for HCC indicators. When considering these factors, along with the length of the episode windows for the measures and the need to include as many episodes in our study as

possible, we had to complete our monitoring and assessment after the end of the CY 2020 MIPS performance period.

Based on our analyses using the full year of data from 2020, we considered many factors and concluded we cannot reliably calculate scores for the cost measures that adequately capture and reflect clinician performance due to the unique changes to healthcare in the COVID-19 pandemic. Our analyses showed substantial decreases in service utilization in 2020 compared to 2019 across all care settings. This can affect risk adjustment and the ability to adequately reflect clinician performance on cost measures. Since we look for diagnosis information in a beneficiary's claims history during a lookback period before the start of the episode to capture HCC indicators and other clinical risk factors used in risk adjustment, a decrease in service utilization means that there are fewer claims from which we can identify risk adjustors. There was a systematic decrease in the ratio of the number of HCCs identified for risk adjustment in 2020 compared to 2019 in the second half of the year across all the measures. We note this finding coincides with when we observed the steepest drops in service utilization due to the length of the lookback period. There was also a systematic decrease in the ratio of the number of episodes in 2020 compared to 2019. This indicates the overall decrease in service utilization is indeed reflected in fewer episodes being triggered and demonstrates the wide-ranging impact of COVID-19 across the range of care that the cost measures capture. Separately from the decrease in service utilization, our analyses demonstrate that episodes with COVID-19 diagnoses generally have higher observed, payment-standardized costs than episodes without COVID-19 diagnoses. These differences are also present when comparing risk-adjusted costs for episodes with and without COVID-19 diagnoses. This shows despite service assignment rules for episode-based measures, beneficiaries diagnosed with COVID-19 had higher payment-standardized costs of care which was not sufficiently accounted for through risk adjustment or other features of cost measures.

Because we determined we cannot reliably calculate scores for the cost measures that

adequately capture and reflect the performance of MIPS eligible clinicians, we announced via email communication (subject: *CMS Reweighting 2020 MIPS Cost Performance Category*) on May 20, 2021, in accordance with § 414.1380(c)(2)(i)(A)(*2*), we will assign a weight of 0 percent to the cost performance category for the CY 2020 MIPS performance period/CY 2022 payment year and redistribute the prescribed weight of 15 percent to another performance category or categories, as established at § 414.1380(c)(2)(ii)(D). We note as with all measures, we continue to monitor the evolving impact of COVID-19.

We recognize there may be additional circumstances where we may not be able to reliably calculate a score for any of the cost measures within the cost performance category that adequately captures and reflects the performance of a MIPS eligible clinician, which could include external factors beyond the control of clinicians. Similar to the Measure Suppression Factors discussed in the FY 2022 IPPS/LTCH PPS proposed rule (86 FR 25473), such external factors may include significant national shortages or rapid or unprecedented changes in: (1) healthcare personnel; (2) medical supplies, equipment, or diagnostic tools or materials; or (3) patient case volumes or patient case mix. We request comment on whether these external factors should inform our future decision-making on whether to reweight the cost performance category under § 414.1380(c)(2)(i)(A)(*2*). We also request comment on whether there are other external factors we should consider, or other circumstances in general that could affect our ability to reliably calculate a score for the cost performance category as described under § 414.1380(c)(2)(i)(A)(*2*).

(iii) Redistributing Performance Category Weights

In the CY 2017 through CY 2018 Quality Payment Program final rules, and CY 2019 through CY 2021 PFS final rules (81 FR 77325 through 77329, 82 FR 53783 through 53785, 83 FR 59876 through 59878, 84 FR 63027 through 63031, and 85 FR 84914 through 84916), and at § 414.1380(c)(2)(ii), we established policies for redistributing the weights of the performance

categories in the event that a scoring weight different from the generally applicable weight is assigned to a category or categories.

In CY 2021 PFS final rule, we finalized a policy for redistributing the performance category weights for the CY 2022 MIPS performance period/CY 2024 MIPS payment year and noted that we planned to revisit our redistribution policies in future rulemaking and may consider redistributing more weight to the cost performance category after clinicians have more experience with cost being weighted at 30 percent (85 FR 84914). While we still intend to redistribute more weight to the cost performance category in future years, we believe it would be beneficial to establish the redistribution policies for the CY 2023 MIPS performance period/CY 2025 MIPS payment year and future years to provide as much notice as possible to clinicians and other stakeholders. Hence, we propose to apply the redistribution policy finalized for the 2022 MIPS performance period/2024 MIPS payment year at § 414.1380(c)(2)(ii)(F) to the 2025 MIPS payment year and each subsequent MIPS payment year, and we propose corresponding revisions to § 414.1380(c)(2)(ii)(F). We still plan to revisit our redistribution policies in future rulemaking after clinicians have more experience with cost being weighted at 30 percent and gain more experience with our newly proposed MVPs. Our proposed redistribution policies for the 2025 MIPS payment year and each subsequent MIPS payment year are included in Table 51. We note that not all the redistribution scenarios described in Table 51 would apply to MIPS eligible clinicians in small practices, so we also propose at § 414.1380(c)(2)(ii)(F) an exception for a new paragraph (G) which applies to small practices. Please refer to Table 52 for the proposed redistribution policy for small practices.

We request public comment on this proposal.

TABLE 51: Performance Category Redistribution Policies Finalized for the CY 2022 MIPS Performance Period/2024 MIPS Payment Year and Proposed for Future MIPS Performance Periods/MIPS Payment Years

Reweighting Scenario	Quality	Cost	Improvement Activities	Promoting Interoperability
No Reweighting Needed				
- Scores for all four performance categories	30%	30%	15%	25%
Reweight One Performance Category				
-No Cost	55%	0%	15%	30%
-No Promoting Interoperability	55%	30%	15%	0%
-No Quality	0%	30%	15%	55%
-No Improvement Activities	45%	30%	0%	25%
Reweight Two Performance Categories				
-No Cost and no Promoting Interoperability	85%	0%	15%	0%
-No Cost and no Quality	0%	0%	15%	85%
-No Cost and no Improvement Activities	70%	0%	0%	30%
-No Promoting Interoperability and no Quality	0%	50%	50%	0%
-No Promoting Interoperability and no Improvement Activities	70%	30%	0%	0%
-No Quality and no Improvement Activities	0%	30%	0%	70%

(A) Redistributing Performance Category Weight for Small Practices

Clinicians and groups who work in small practices are a crucial part of the health care system. The Quality Payment Program provides options designed to make it easier for these clinicians and groups to report on performance and quality and participate in advanced alternative payment models for incentives. We have heard directly from clinicians in small practices that they face unique challenges related to financial and other resources, environmental factors, and access to health information technology. We heard from many commenters that the Quality Payment Program gives an advantage to large organizations because such organizations have more resources invested in the infrastructure required to track and report measures to MIPS (82 FR 53776). In response to the feedback on the potential burden on small practices, we have established special policies available for small practices including the small practice bonus and special scoring policies. For example, in the CY 2018 QPP final rule (82 FR 53682 through 53683), we established a significant hardship exception for small practices for the Promoting Interoperability performance category.

In this section of the proposed rule, we discuss how we would redistribute the Promoting Interoperability performance category weight for small practices. Within the reweighting policy

for the CY 2022 MIPS performance period/CY 2024 MIPS payment year, the Promoting Interoperability performance category weight is redistributed fully to the quality performance category, unless the quality performance category is weighted at zero percent. In general, our reweighting policies have emphasized the quality performance category over the improvement activities performance category. We have noted it is important to prioritize performance on measures that show a variation in performance such as quality measures, rather than the activities under the improvement activities performance category, which are based on attestation of completion (85 FR 84914). We believe this helps reduce incentives to not report measures for the quality performance category in circumstances when a clinician may be able to report but chooses not to do so. However, given stakeholder input and recently published literature, we believe there could be other reasons why a small practice would not report quality measures. One recent article[243] stated that physicians in larger group practices, multispecialty practices, or participating through alternative payment models had higher MIPS scores, possibly reflecting such practices' greater infrastructure and resources to collect, analyze, and report measures to CMS. We have also heard directly from clinicians in small practices that they face unique challenges related to financial and other resources and access to health information technology. Many commenters have shared their belief that the Quality Payment Program gives an advantage to large organizations because such organizations have more resources invested in the infrastructure required to track and report measures to MIPS (82 FR 53776). Indeed, 85 percent of clinicians who are not engaged with MIPS (who do not submit data) are clinicians in small practices (85 FR 85018), which we believe may be due to their limited resources. Given infrastructure and resource limitations within small practices, we believe it is appropriate to place more emphasis on a performance category that poses a reduced reporting burden such as the improvement activities performance category. We propose that for small practices, as

[243] Johnston KJ, Wiemken TL et al (Sept 2020) "Association of Clinician Health System Affiliation with Outpatient Performance Ratings in the Medicare Merit-based Incentive Payment System" JAMA. 2020; 324(10):984-992.

defined at § 414.1305, when the Promoting Interoperability performance category is reweighted, the quality performance category will be weighted at 40 percent, the cost performance category will be weighted at 30 percent, and the improvement activities performance category will be weighted at 30 percent. When both the cost performance category and the Promoting Interoperability performance category are reweighted, the quality performance category will be weighted at 50 percent and the improvement activities performance category will be weighted at 50 percent. We plan to revisit this redistribution policy in future rulemaking and may consider redistributing more weight to the cost performance category after clinicians have more experience with cost being weighted at 30 percent.

We anticipate that our proposal noted in the two rows in Table 52 will greatly assist small practices by providing further flexibilities to help with our goal of increasing engagement across the MIPS program and to be able to meet the MIPS requirements. Beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, we propose at § 414.1380(c)(2)(ii)(G) redistribution policies for small practices, as shown in Table 52.

We request public comment on this proposal.

TABLE 52: Performance Category Redistribution Policies for Small Practices Proposed for the CY 2022 MIPS Performance Period/CY 2024 MIPS Payment Year and Future MIPS Performance Periods/MIPS Payment Years

Reweighting Scenario	Quality	Cost	Improvement Activities	Promoting Interoperability
No Reweighting Needed				
- Scores for all four performance categories	30%	30%	15%	25%
Reweight One Performance Category				
-No Cost	55%	0%	15%	30%
-No Promoting Interoperability*	40%	30%	30%	0%
-No Quality	0%	30%	15%	55%
-No Improvement Activities	45%	30%	0%	25%
Reweight Two Performance Categories				
-No Cost and no Promoting Interoperability*	50%	0%	50%	0%
-No Cost and no Quality	0%	0%	15%	85%
-No Cost and no Improvement Activities	70%	0%	0%	30%
-No Promoting Interoperability and no Quality	0%	50%	50%	0%
-No Promoting Interoperability and no Improvement Activities	70%	30%	0%	0%
-No Quality and no Improvement Activities	0%	30%	0%	70%

*the proposed redistribution policy specifically for MIPS eligible clinicians in small practices.

(iv) MIPS Reweighting Based on Extreme and Uncontrollable Circumstances

(A) MIPS Applications for Reweighting for the CY 2021 MIPS Performance Period/CY 2023 MIPS Payment Year Based on Extreme and Uncontrollable Circumstances

We anticipate that the national PHE for COVID-19 will continue through CY 2021. Therefore, we remind clinicians that the application-based extreme and uncontrollable circumstances policy, as described in § 414.1380(c)(2)(i)(A)(*6*) and (c)(2)(i)(C)(*2*), will be available for the CY 2021 performance period/CY 2023 MIPS payment year (85 FR 84916 through 84917). Please refer to https://qpp.cms.gov/about/covid19?py=2021 for details. The application allows clinicians, groups, and virtual groups significantly impacted by the PHE for COVID-19 to request reweighting for any or all MIPS performance categories. Under this policy, if a clinician, group, or virtual group submits a reweighting application and also submits data for a performance category for which an application was submitted, the data submission will override the application, and the clinician, group, or virtual group will be scored on the data submitted.

Additionally, if an application is submitted for one performance category only, and data is submitted for the other 2 performance categories, only the performance category for which the application was submitted will be reweighted and the other performance categories will be scored. We believe this approach maintains a balance of encouraging participation in the Quality Payment Program while still providing for flexibility in weighting the performance categories for those who have been affected by the national PHE for COVID-19. Please refer to https://qpp.cms.gov/about/covid19?py=2021 for more information.

(B) MIPS Reweighting Based on Extreme and Uncontrollable Circumstances; Automatic and Application-based Policies Clarification

Under the application-based extreme and uncontrollable circumstances policy codified at § 414.1380(c)(2)(i)(A)(*6*) for the quality, cost, and improvement activities performance categories and at § 414.1380(c)(2)(i)(C)(*2*) for the promoting interoperability performance category, clinicians who are subject to extreme and uncontrollable circumstances may submit an

application to CMS to request reweighting of a performance category or categories. We also established an automatic extreme and uncontrollable circumstances policy at § 414.1380(c)(2)(i)(A)(*8*) for the quality, cost, and improvement activities performance categories and at § 414.1380(c)(2)(i)(C)(*3*) for the promoting interoperability performance category, under which we automatically reweight the performance categories for clinicians who are located in an area affected by extreme and uncontrollable circumstances as identified by us.

Based on stakeholder inquiries, we recognize not all stakeholders understand how individual MIPS eligible clinicians who are eligible for reweighting under the automatic extreme and uncontrollable circumstances policy and who also submit an application for reweighting based on extreme and uncontrollable circumstances are affected by the intersection of these policies. Currently, under both the application-based and automatic extreme and uncontrollable circumstances policies, if a MIPS eligible clinician who is located in an area affected by extreme and uncontrollable circumstances as identified by CMS submits data for any of the MIPS performance categories by the applicable submission deadline for the MIPS performance period, they will be scored on each performance category for which they submit data, and the performance category will not be reweighted to zero percent in the final score. Under the automatic extreme and uncontrollable circumstances policy, the other performance categories for which data was not submitted will remain reweighted to zero percent (82 FR 53898, 83 FR 59874). Additionally, as described in the CY 2019 PFS final rule (83 FR 59874), under the automatic extreme and uncontrollable circumstances policy, a MIPS eligible clinician who is located in an area affected by extreme and uncontrollable circumstances as identified by CMS will not be scored on the cost performance category. As we stated in the CY 2019 PFS final rule (83 FR 59874), if a MIPS eligible clinician is located in an affected area, we would assume the clinician does not have sufficient cost measures applicable to him or her and assign a weight of zero percent to that category in the final score, even if we receive administrative claims data that would enable us to calculate the cost measures for that clinician.

The following example is intended to illustrate the intersection of the automatic and application-based extreme and uncontrollable circumstances policies. A MIPS eligible clinician who is located in an area affected by extreme and uncontrollable circumstances as identified by CMS and eligible for the automatic extreme and uncontrollable circumstances policy submits an application for reweighting based on extreme and uncontrollable circumstances. The application requests reweighting for the Promoting Interoperability performance category, and the clinician submits data for the quality and improvement activities performance categories. The clinician will be scored on the quality and improvement activities performance categories because they submitted data for those categories; the cost performance category is reweighted to zero percent under the automatic extreme and uncontrollable circumstances policy, as discussed above; and the Promoting Interoperability performance category is also reweighted to zero percent under the automatic extreme and uncontrollable circumstances policy. The application for reweighting was not needed in this example to reweight the Promoting Interoperability performance category.

Please refer to https://qpp.cms.gov/about/covid19?py=2021 for more information.

(v) Redistributing Performance Category Weights for Facility-Based Measurement

(A) Background

In the CY 2018 Quality Payment Program final rule, we established facility-based measurement under section 1848(q)(2)(C)(ii) of the Act which provides that the Secretary may use measures used for payment systems other than for physicians, such as measures for inpatient hospitals, for purposes of the quality and cost performance categories (82 FR 53752 through 53767). Scoring under facility-based measurement was available for clinicians beginning with the CY 2019 MIPS performance period/CY 2021 MIPS payment year. We established facility-based measurement to better align incentives between facilities and the MIPS eligible clinicians who provide services there (82 FR 53753). For more background on facility-based measurement, we refer readers to both the CY 2018 Quality Payment Program final rule (82 FR 53752 through 53767) and the CY 2019 PFS final rule (83 FR 59856 through 59867).

(B) Redistribution of Performance Category Weights Under Facility-based Measurement

In the CY 2019 PFS final rule, we established that clinicians and groups would not need to elect or opt-in to facility-based measurement, but instead we would automatically apply facility-based measurement to MIPS eligible clinicians and groups who are eligible for facility-based measurement and who would benefit by having a higher combined quality and cost performance category score (83 FR 59863). In this same final rule, we finalized policies for redistributing weight among the performance categories for the 2019 MIPS performance period/2021 MIPS payment year under § 414.1380(c)(2)(ii)(C). Under those redistribution policies, if the cost performance category is reweighted to zero percent of the final score, its weight is redistributed entirely to the quality performance category, unless the quality performance category is reweighted to zero percent, in which case the quality and cost performance category weights would be redistributed to the improvement activities and Promoting Interoperability performance categories. A clinician or group could have the weight of the cost performance category redistributed because they did not meet the case minimum for any of the measures in the cost performance category. Because facility-based measurement always includes both the quality and cost performance categories, it is possible a clinician or group would be scored on the cost performance category under facility-based measurement but not outside of facility-based measurement. There are two common scenarios for a facility-based clinician or group which could occur in the 2019 MIPS performance period/2021 MIPS payment year. In the first scenario, a facility-based clinician or group meets the case minimum for at least one cost performance category measure and receives a cost performance category percent score as defined at § 414.1380(b)(2). The respective quality and cost scores would be multiplied by the available points in the quality performance category (45 points) and the available points in the cost performance category (15 points) to determine the combined contribution of the quality performance category and the cost performance category to the final score out of the available 60 points. In the second scenario, a facility-based clinician or group does not meet the case

minimum for any cost performance category measure and the cost performance category weight is redistributed to the quality performance category so the quality performance category score alone determines the score out of the available 60 points. Table 53 shows these two scenarios.

TABLE 53: Two Scenarios for a Facility-based Clinician or Group which Could occur under current policy

Quality Performance Category Percent Score	Cost Performance Category Percent Score	Combined Quality and Cost Performance Category Scores (out of 60 available points)
75%	50%	(45 points x 0.75) + (15 points x 0.5) = 41.25
75%	N/A (no cost measures met case minimum)	(60 points x 0.75) = 45

In the CY 2020 PFS final rule, we established a redistribution policy for the CY 2020 MIPS performance period/CY 2022 MIPS payment year at § 414.1380(c)(2)(ii)(D), for scenarios when the cost performance category weight is redistributed to the Promoting Interoperability performance category, as well as to the quality performance category (84 FR 63028). Under this policy, the weights of the combined quality and cost performance categories could be different for a clinician or group under facility-based measurement and outside of facility-based measurement in circumstances in which the clinician or group was not scored on the cost performance category outside of facility-based measurement but was scored on all other performance categories. Table 54 shows the scenario in which the combined weights of the quality and cost performance categories differ if cost is included, which occurs when the cost performance category is redistributed and all other categories are scored.

TABLE 54: Scenario in which the Combined Weights of the Quality and Cost Performance Categories Differ if Cost is Included

Scenario	Quality	Cost	Improvement Activities	Promoting Interoperability	Combined Quality and Cost
Scores for all four performance categories	45	15	15	25	60
No cost	55	0	15	30	55

We established similar redistribution policies for CY 2021 MIPS performance period/CY 2023 MIPS payment year and CY 2022 MIPS performance period/CY 2024 MIPS payment year at § 414.1380(c)(2)(ii)(E) and (F) in that same rule (84 FR 63029 through 63031), which also

described situations where the combined weight of the cost and quality performance categories was not always consistent. For more on the background and proposed policies related to redistribution of performance categories, please see section IV.A.3.e.(2)(b)(iii) of this proposed rule.

Based on inquires we received from clinicians who were eligible for facility-based measurement, we believe our policy for determining the combined quality and cost performance category scores via facility-based measurement and outside of facility-based measurement is not ideal because it could result in a facility-based clinician or group receiving a lower final score than they would otherwise receive outside of facility-based measurement. We considered whether this more complex consideration of the scores and the weights in the performance categories necessitated a reconsideration of an opt-in requirement for facility-based measurement. However, we believe that establishing such a requirement would create administrative burden for clinicians and groups.

Instead of adding an opt-in requirement, we propose a new policy to determine the MIPS final score for clinicians and groups who are eligible for facility-based measurement. We propose at § 414.1380(e)(6)(vi)(B) that beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, the MIPS quality and cost performance category scores will be based on the facility-based measurement scoring methodology unless a clinician or group receives a higher MIPS final score through another MIPS submission. Under this proposed policy, we would calculate two final scores for clinicians and groups who are facility-based. One score would be based on the clinician or group's performance and the weights of the performance categories if facility-based measurement did not apply, and the other would be based on the application of facility-based measurement. The example below shows how this proposed policy would apply for a facility-based group that did not meet the case minimum for any of the cost measures but was scored on all other performance categories.

TABLE 55: Application of Proposed Policy for a Facility-based Group that Did Not Meet the Case Minimum for any of the Cost Measures but was Scored on All Other Performance Categories

Scenario	Quality Points/available points	Cost points/available points	Improvement Activities points/available points	Promoting Interoperability points/ available points	Final Score
Facility-based	26/30	27/30	15/15	20/25	88/100
Not facility-based	52/55	0/0	15/15	24/30	91/100

As a result of this proposed policy, the group in this example would receive a final score on the basis of their performance outside of facility-based measurement because they have obtained a higher final score through the combination of their submitted quality measures, submitted improvement activities and submitted promoting interoperability measures.

We request comments on this proposal.

f. MIPS Payment Adjustments

(1) Background

For our previously established policies regarding the final score used to determine MIPS payment adjustments, we refer readers to the CY 2021 PFS final rule (85 FR 84917 through 84926), CY 2020 PFS final rule (84 FR 63031 through 63045), CY 2019 PFS final rule (83 FR 59878 through 59894), CY 2018 Quality Payment Program final rule (82 FR 53785 through 53799) and CY 2017 Quality Payment Program final rule (81 FR 77329 through 77343). In this proposed rule, we are proposing: (1) to select the mean as our methodology for calculating the performance threshold; (2) to establish the performance threshold for the 2024 MIPS payment year using 2019 MIPS payment year data; (3) to establish the additional performance threshold for exceptional performance for the 2024 MIPS payment year; and (4) to update the scoring hierarchy to include subgroups. In addition, we are including information about our expected timeframe for providing MIPS performance feedback to clinicians for the performance period in 2020.

(2) Establishing the Performance Threshold

Under section 1848(q)(6)(D)(i) of the Act, for each year of MIPS, the Secretary shall compute a performance threshold with respect to which the final scores of MIPS eligible clinicians are compared for purposes of determining the MIPS payment adjustment factors under section 1848(q)(6)(A) of the Act for a year. The performance threshold for a year must be either the mean or median (as selected by the Secretary, and which may be reassessed every 3 years) of the final scores for all MIPS eligible clinicians for a prior period specified by the Secretary.

Section 1848(q)(6)(D)(iii) of the Act included a special rule for the initial 2 years of MIPS, which requires the Secretary, prior to the performance period for such years, to establish a performance threshold for purposes of determining the MIPS payment adjustment factors under section 1848(q)(6)(A) of the Act and an additional performance threshold for purposes of determining the additional MIPS payment adjustment factors under section 1848(q)(6)(C) of the Act, each of which shall be based on a period prior to the performance period and take into account data available for performance on measures and activities that may be used under the performance categories and other factors determined appropriate by the Secretary. Section 51003(a)(1)(D) of the Bipartisan Budget Act of 2018 (Pub. L. 115–123, February 9, 2018) amended section 1848(q)(6)(D)(iii) of the Act to extend the special rule to apply for the initial 5 years of MIPS instead of only the initial 2 years of MIPS.

In addition, section 51003(a)(1)(D) of the Bipartisan Budget Act of 2018 added a new clause (iv) to section 1848(q)(6)(D) of the Act, which includes an additional special rule for the third, fourth, and fifth years of MIPS (the 2021 through 2023 MIPS payment years). This additional special rule provides, for purposes of determining the MIPS payment adjustment factors under section 1848(q)(6)(A) of the Act, in addition to the requirements specified in section 1848(q)(6)(D)(iii) of the Act, the Secretary shall increase the performance threshold for each of the third, fourth, and fifth years to ensure a gradual and incremental transition to the performance threshold described in section 1848(q)(6)(D)(i) of the Act (as estimated by the

Secretary) with respect to the sixth year (the 2024 MIPS payment year) to which the MIPS applies.

We have applied these special rules for the past 5 years to provide for a gradual and incremental transition to the year 6 performance threshold. For further information on established performance threshold policies we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77333 through 77338), CY 2018 Quality Payment Program (82 FR 53787 through 53794), CY 2019 PFS final rule (83 FR 59880 through 59883), the CY 2020 PFS final rule (84 FR 63031 through 63037), and the CY 2021 PFS final rule (85 FR 84919 through 84923). We codified the performance thresholds for each of the first 5 years of MIPS at § 414.1405(b)(4), (5), (6), (7), and (8) as presented in Table 56.

TABLE 56: Performance Thresholds for the 2019 MIPS Payment Year through 2023 MIPS Payment Year

	2019 MIPS Payment Year	2020 MIPS Payment Year	2021 MIPS Payment Year	2022 MIPS Payment Year	2023 MIPS Payment Year
	Year 1	Year 2	Year 3	Year 4	Year 5
Performance Threshold	3 points	15 points	30 points	45 points	60 points
Difference in PT (year n minus (year n-1))	N/A	12 points	15 points	15 points	15 points

In the CY 2020 PFS final rule (84 FR 63031 through 63037) at § 414.1405(b)(7) and (8), we finalized the performance thresholds for the 2022 and 2023 MIPS payment years at 45 and 60 points, respectively, an increase of 15 points each year until the 2024 MIPS payment year, for which we estimated that the performance threshold would be 74.01 points. We believe that this approach effectively provided for a gradual and incremental transition to the performance threshold we had estimated for the 2024 MIPS payment year, as required by the statute.

Beginning with the 2024 MIPS payment year, section 1848(q)(6)(D)(i) of the Act requires the performance threshold to be the mean or median (as selected by the Secretary) of the final scores for all MIPS eligible clinicians with respect to a prior period specified by the Secretary. That section also provides that the Secretary may reassess the selection of the mean

or median every three years. Thus, we considered whether to use the mean or median as the methodology for determining the performance threshold. We would use this methodology to determine a performance threshold for each of the following three years: the 2024 MIPS payment year, 2025 MIPS payment year, and 2026 MIPS payment year. We would then reassess and establish the methodology (mean or median) that we would use for each of the next 3 years (2027 MIPS payment year, 2028 MIPS payment year, and 2029 MIPS payment year). At the time of publication of this proposed rule, we have final score data from the 2017 MIPS performance period/ 2019 MIPS payment year through the 2019 MIPS performance period/ 2021 MIPS payment year to use in our assessment of whether to use the mean or median as our methodology for the next 3 years.

From our review of the available data, we have identified the mean and median final scores for each of the 2019 through 2021 MIPS payment years, as shown in Table 57. These six values represent all available prior year mean and median final scores that could be utilized for the 2024 MIPS payment year performance threshold.

TABLE 57: Possible Values for the 2024 MIPS Payment Year Performance Threshold

	2019 MIPS Payment Year	2020 MIPS Payment Year	2021 MIPS Payment Year
Mean	74.65 Points	87 Points	85.61 Points
Median	89.71 Points	99.63 Points	92.30 Points

As shown in Table 57, using the median final score gives a possible range of performance thresholds from 89.71 points to 99.63 points. Given our performance threshold of 60 points in year 5, these values would result in an increase of 29.71 points to 39.63 points for year 6. Selecting the median of final scores as our methodology would, at a minimum, nearly double the annual increase in the performance threshold of 15 points that we had from year 2 to year 5 of the program. Section 1848(q)(6)(D)(iv) of the Act required that we increase the performance threshold for each of the third, fourth, and fifth years of MIPS to ensure a gradual and incremental transition to the performance threshold we estimated with respect to the sixth year of

MIPS. In prior rules we estimated the year six performance threshold to be 74.01 points and used this estimate to determine how to gradually raise the performance threshold (83 FR 59881, 84 FR 63032, 84 FR 40802). Although section 1848(q)(6)(D)(iv) of the Act does not require this approach for the sixth year and subsequent years of MIPS, we believe that it is appropriate to set the performance threshold at a level that is in line with our previous estimates for year 6. We believe that continuing the gradual and incremental increase into year 6 would provide consistency to our stakeholders. After evaluating the possible values shown in Table 57, we believe that using the mean as our methodology would continue this approach.

Using the mean final score as the methodology would yield a possible range of performance thresholds from 74.65 points to 85.61 points (rounded to 75 points and 86 points respectively). Given our performance threshold of 60 points in year 5, these values would result in an increase of 15 points to 26 points for year 6. Given these values and our annual performance threshold increases of 15 points for years 2 to 5 of the program, 75 is the value that is most consistent with the gradual and incremental approach that we have elected to continue. Therefore, we are proposing at § 414.1405(g) that for each of the 2024, 2025, and 2026 MIPS payment years, the performance threshold is the mean of the final scores for all MIPS eligible clinicians from a prior period as specified under § 414.1405(b). This methodology will be used for MIPS payment years 2024 through 2026 of the program after which we will reassess the methodology for MIPS payment years 2027 through 2029.

In addition to selecting the methodology (mean or median), section 1848(q)(6)(D)(i) of the Act also requires us to specify a prior period from which we would use the final scores for all MIPS eligible clinicians to calculate the mean or median. As shown in Table 57, the mean final scores are 74.65, 87, and 85.61 points for MIPS payment years 2019 through 2021 respectively. In previous rules (83 FR 59881, 84 FR 63032), we used the MIPS payment year 2019 mean final score to estimate a performance threshold of 74.01 points for year 6 of the program. Our data have been updated to reflect completed targeted reviews since the time we made this estimate,

and the mean final score for the 2019 MIPS payment year is now 74.65 points (see Table 57). This value would be an increase of almost exactly15 points from the MIPS payment year 2023 performance threshold of 60 points, which is identical to the increases of the previous three years and consistent with our intention to continue the gradual and incremental approach that has been utilized in prior years. After reviewing the available final score data, we are proposing at § 414.1405(b)(9) to use the MIPS payment year 2019 as the prior period and the rounded mean final score of 75 points as the year 6 performance threshold. When we establish the performance threshold for future MIPS payment years in future rulemaking, we will reassess using the mean final score for MIPS payment year 2019 as mean final scores for subsequent years become available.

We request comments on these proposals, as well as the alternative methodology of the median that we considered but did not propose. Additionally, we request comments on calculating the performance threshold using an alternative year's final scores that we considered but did not propose.

(3) Additional Performance Threshold for Exceptional Performance

Section 1848(q)(6)(D)(ii) of the Act requires the Secretary to compute, for each year of the MIPS (beginning with the 2019 MIPS payment year and ending with the 2024 MIPS payment year), an additional performance threshold for purposes of determining the additional MIPS payment adjustment factors for exceptional performance under section 1848(q)(6)(C) of the Act. For each such year, the Secretary shall apply either of the following methods for computing the additional performance threshold: (1) the threshold shall be the score that is equal to the 25th percentile of the range of possible final scores above the performance threshold determined under section 1848(q)(6)(D)(i) of the Act; or (2) the threshold shall be the score that is equal to the 25th percentile of the actual final scores for MIPS eligible clinicians with final scores at or above the performance threshold with respect to the prior period described in section 1848(q)(6)(D)(i) of the Act. Under section 1848(q)(6)(C) of the

Act, a MIPS eligible clinician with a final score at or above the additional performance threshold will receive an additional MIPS payment adjustment factor and may share in the $500 million of funding available for the year under section 1848(q)(6)(F)(iv) of the Act. We note that under section 1848(q)(6)(F)(iv) of the Act, funding is available for additional MIPS payment adjustment factors under section 1848(q)(6)(C) of the Act only through the 2024 MIPS payment year, which is the sixth year of the MIPS program.

In the CY 2020 PFS final rule (84 FR 63037 through 63040), we used the special rule under section 1848(q)(6)(D)(iii) of the Act to set the additional performance threshold at 85 points for the 2022 and 2023 MIPS payment years. We note that the special rule under section 1848(q)(6)(D)(iii) of the Act applies only to the initial 5 years of MIPS, so we cannot use that rule to establish the additional performance threshold for the 2024 MIPS payment year. As noted above, under section 1848(q)(6)(D)(ii) of the Act, we may set the additional performance threshold at either: (1) the 25th percentile of the range of possible final scores above the performance threshold, or (2) the 25th percentile of the actual final scores for MIPS eligible clinicians with final scores at or above the performance threshold with respect to the prior period described in section 1848(q)(6)(D)(i) of the Act.

TABLE 58: Possible Values for the 2024 Payment Year Additional Performance Threshold

	2019 MIPS Payment Year Mean	2019 MIPS Payment Year Median	2020 MIPS Payment Year Mean	2020 MIPS Payment Year Median	2021 MIPS Payment Year Mean	2021 MIPS Payment Year Median
25th Percentile of Possible Scores	81.26	92.51	90.26	100	89.51	94.01
25th Percentile of Actual Scores	88.94	94.84	98.33	100.00	91.83	94.70

For illustrative purposes, the possible additional performance thresholds are shown in Table 58. Note that mean or median refers to the methodology for calculation of the performance threshold. As can be seen in Table 58, the potential values for the additional performance threshold range from a low of 81.26 to a high of 100. However, to remain consistent with our gradual and incremental approach, we have proposed to use the mean as

our methodology for setting the performance threshold during the next 3 years and we have proposed to use the final score data from MIPS payment year 2019. The selection of the mean for the methodology and final score data from the 2019 MIPS payment year leaves us with the options in the first column of Table 58 for where we can set the additional performance threshold.

As stated above, with a proposed performance threshold of 75 points for the 2024 MIPS payment year based on final scores for the 2019 MIPS payment year, the calculation methods in section 1848(q)(6)(D)(ii) of the Act give us two possible options for where we can set the additional performance threshold for MIPS payment year 2024. The first calculation method (described in section 1848(q)(6)(D)(ii)(I) of the Act), using the range of possible final scores above the proposed performance threshold for the 2024 MIPS payment year, yields a value of 81.26 points (the 25th percentile of the range of 75.01 to 100). The calculation is as follows: 75.01 + [(100-75.01) * 0.25] = 81.26. The second calculation method (described in section 1848(q)(6)(D)(ii)(II) of the Act), the 25th percentile of the actual final scores for the 2019 MIPS payment year at or above the proposed performance threshold for the 2024 MIPS payment year, yields a value of 88.94. For the second calculation method, we would apply the 25th percentile calculation of (n+1)p/100 to the 2019 MIPS payment year final score data that are at or above 75.

We considered using each of these methods, but we do not believe that it would be appropriate to lower the additional performance threshold to 81.26 points from its present value of 85 points. Maintaining or increasing the additional performance threshold likely would serve as a greater incentive to clinicians to continue to improve their performance on the MIPS measures and activities and to achieve exceptional performance. We believe that an additional performance threshold of 88.94 points rounded to 89 points is appropriate. This is an increase of 4 points from the prior year, which we believe would be a gradual increase. Therefore, using the second calculation method described above, we are proposing at

§ 414.1405(d)(7) to set the additional performance threshold for the 2024 MIPS payment year at 89 points.

We request comments on these proposals as well as the alternative additional performance thresholds listed that we considered but did not propose.

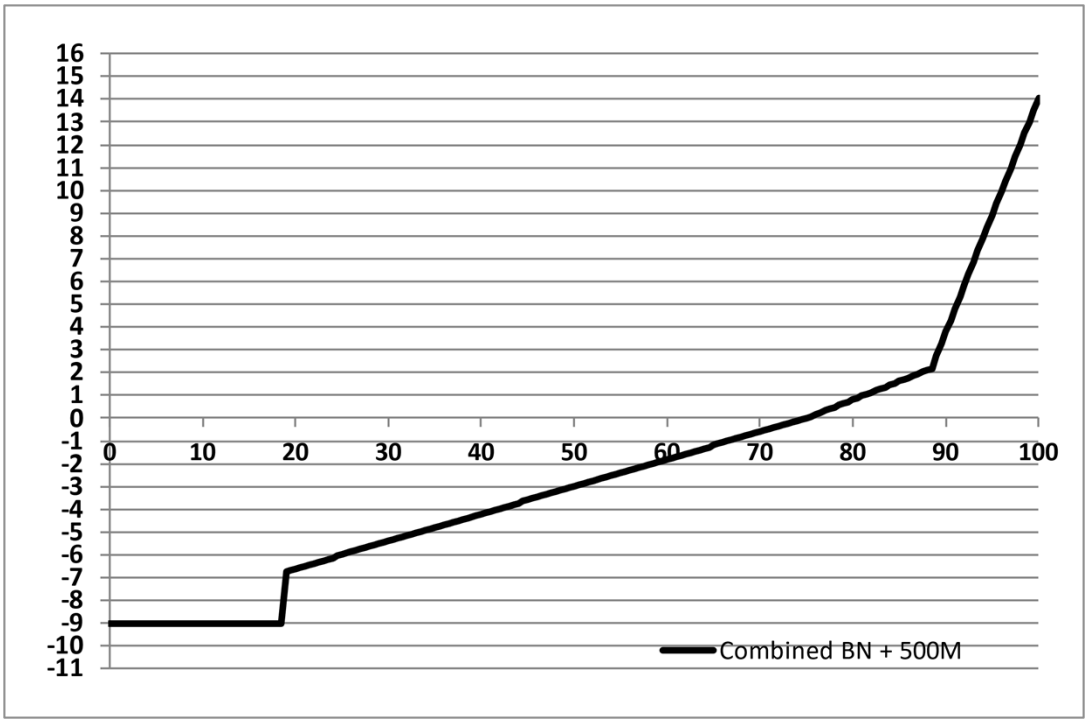
(4) Example of Adjustment Factors

Figure A provides an illustrative example of how various final scores would be converted to a MIPS payment adjustment factor and potentially an additional MIPS payment adjustment factor, using the statutory formula and based on our proposed policies for the 2024 MIPS payment year. In Figure A, the performance threshold is set at 75 points. The applicable percentage is 9 percent for the 2024 MIPS payment year. The MIPS payment adjustment factor is determined on a linear sliding scale from zero to 100, with zero being the lowest possible score which receives the negative applicable percentage (negative 9 percent for the 2024 MIPS payment year) and resulting in the lowest payment adjustment, and 100 being the highest possible score which receives the highest positive applicable percentage and resulting in the highest payment adjustment. However, there are two modifications to this linear sliding scale. First there is an exception for a final score between zero and one-fourth of the performance threshold (zero and 18.75 points based on the proposed performance threshold of 75 points for the 2024 MIPS payment year). All MIPS eligible clinicians with a final score in this range would receive the lowest negative applicable percentage (negative 9 percent for the 2024 MIPS payment year). Second, the linear sliding scale line for the positive MIPS payment adjustment factor is adjusted by the scaling factor, which cannot be higher than 3.0.

If the scaling factor is greater than zero and less than or equal to 1.0, then the MIPS payment adjustment factor for a final score of 100 would be less than or equal to 9 percent. If the scaling factor is above 1.0 but is less than or equal to 3.0, then the MIPS payment adjustment factor for a final score of 100 would be greater than 9 percent.

Only those MIPS eligible clinicians with a final score equal to 75 points (which is the proposed performance threshold) would receive a neutral MIPS payment adjustment. Because the performance threshold is 75 points, we anticipate that more clinicians will receive a positive adjustment than a negative adjustment and that the scaling factor would be less than 1 and the MIPS payment adjustment factor for each MIPS eligible clinician with a final score of 100 points would be less than 9 percent.

Figure A: Illustrative Example of MIPS Payment Adjustment Factors Based on Final Scores and Performance Threshold and Additional Performance Threshold for the 2024 MIPS Payment Year



Note: The adjustment factor for final score values above the performance threshold is illustartive. For MIPS eligible clinicians with a final score of 100, the adjustment factor would be 9 percent times a scaling factor greater than zero and less than or equal to 3.0. The scaling factor is inteded to ensure budget neutrality, but cannot be higher than 3.0. MIPS eligible clinicians with a final score of at least 89 points would also receive an additional adjustment factor for expectional performance. The additional adjustment factor starts at 0.5 percent, cannot exceed 10 percent, and is also mulitiplied by a scaling factor that is greather than zero and less than or equal to 1. MIPS eligible clinicians at or above the additional performance threshold will receive the amount of the adjustment factor plus the additional adjustment factor. This example is illustartive as the actual payment adjustments may vary based on the distribution of final scores for MIPS eligible clinicians.

Table 59 illustrates the changes in payment adjustment based on the final policies from the CY 2021 PFS final rule (85 FR 84923 through 84925) for the 2023 MIPS payment year and the proposed policies for the 2024 MIPS payment year, as well as the applicable percent required

by section 1848(q)(6)(B) of the Act.

TABLE 59: Illustration of Point System and Associated Adjustments Comparison between the Finalized 2023 MIPS Payment Year and the Proposed 2024 MIPS Payment Year

2023 MIPS Payment Year		2024 MIPS Payment Year	
Final Score Points	**MIPS Adjustment**	**Final Score Points**	**MIPS Adjustment**
0.0-15.0	Negative 9%	0.0-18.75	Negative 9%
15.01-59.99	Negative MIPS payment adjustment greater than negative 9% and less than 0% on a linear sliding scale	18.76-74.99	Negative MIPS payment adjustment greater than negative 9% and less than 0% on a linear sliding scale
60.0	0% adjustment	75.0	0% adjustment
60.01-84.99	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 9% for scores from 60.00 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality	75.01-88.99	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 9% for scores from 75.00 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality
85.0-100	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 9% for final scores from 60.00 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality. PLUS An additional MIPS payment adjustment for exceptional performance. The additional MIPS payment adjustment starts at 0.5% and increases on a linear sliding scale. The linear sliding scale ranges from 0.5 to 10% for scores from 85.00 to 100.00. This sliding scale is multiplied by a scaling factor not greater than 1.0 in order to proportionately distribute the available funds for exceptional performance	89.0-100	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from 0 to 9% for final scores from 75.00 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.0 to preserve budget neutrality. PLUS An additional MIPS payment adjustment for exceptional performance. The additional MIPS payment adjustment starts at 0.5% and increases on a linear sliding scale. The linear sliding scale ranges from 0.5 to 10% for scores from 89.00 to 100.00. This sliding scale is multiplied by a scaling factor not greater than 1.0 in order to proportionately distribute the available funds for exceptional performance

(5) Final Score Hierarchy Used in Payment Adjustment Calculation

In the CY 2021 PFS final rule (85 FR 84917 through 84919), we modified the final score hierarchy that applies when more than one final score is associated with a TIN/NPI, as displayed in Table 60. Beginning with the 2021 performance period/2023 MIPS payment year, if a TIN/NPI has a virtual group final score associated with it, we use the virtual group final score to determine the MIPS payment adjustment. If a TIN/NPI does not have a virtual group final score associated with it, we use the highest available final score associated with the TIN/NPI to determine the MIPS payment adjustment.

TABLE 60: Hierarchy for Final Score When More than One Final Score Is Associated with a TIN/NPI

Scenario	Final Score Used to Determine Payment Adjustments
TIN/NPI has a virtual group final score, an APM Entity final score, an APP final score, a group final score, and/or an individual final score.	Virtual group final score.
TIN/NPI has an APM Entity final score, an APP final score, a group final score, and/or an individual final score, but is not in a virtual group.	The highest of the available final scores.

In section IV.A.3.b.(3) of this proposed rule, we are proposing policies applicable to subgroups, including a definition of a subgroup at § 414.1305 as a subset of a group which contains at least one MIPS eligible clinician and is identified by a combination of the group TIN, subgroup identifier, and each eligible clinician's NPI. Each clinician in a subgroup would be identifiable by a unique TIN/NPI combination just as in any MIPS group or APM Entity. In addition, a clinician, group, subgroup, or APM Entity could choose more than one MIPS reporting option for a performance period. A clinician, group, subgroup, or APM Entity could choose to report through MVPs, traditional MIPS, and/or the APP (assuming they are eligible for each of these reporting options) for a performance period. As a result, there could be more than one final score for a clinician, group, subgroup, or APM Entity for a performance period from MVPs, traditional MIPS, and/or the APP. Therefore, we propose to update the scoring hierarchy to include subgroups and to specify that the scoring hierarchy would apply with respect to any available final score that is associated with a TIN/NPI from MVPs, traditional MIPS, and/or the APP. The proposed updated scoring hierarchy can be seen in Table 61. We are seeking comment on this proposal.

TABLE 61: Proposed Hierarchy for Final Score When More than One Final Score Is Associated with a TIN/NPI

Scenario	Final Score Used to Determine Payment Adjustments
TIN/NPI has a virtual group final score, an APM Entity final score, a group final score, a subgroup final score, and/or an individual final score, from MVPs, traditional MIPS, and/or the APP.	Virtual group final score.
TIN/NPI has an APM Entity final score, a group final score, a subgroup final score, and/or an individual final score, from MVPs, traditional MIPS, and/or the APP. The TIN/NPI is not in a virtual group.	The highest of the available final scores.

g. Review and Correction of MIPS Final Score

(1) Feedback and Information to Improve Performance

Under section 1848(q)(12)(A)(i) of the Act, we are at a minimum required to provide MIPS eligible clinicians with timely (such as quarterly) confidential feedback on their performance under the quality and cost performance categories beginning July 1, 2017, and we have discretion to provide such feedback regarding the improvement activities and Promoting Interoperability performance categories. In the CY 2018 Quality Payment Program final rule (82 FR 53799 through 53801), we finalized that on an annual basis, beginning July 1, 2018, performance feedback will be provided to MIPS eligible clinicians and groups for the quality and cost performance categories, and if technically feasible, for the improvement activities and advancing care information (now called the Promoting Interoperability) performance categories.

On July 1, 2018, we provided the first performance feedback for the Quality Payment Program. The second performance feedback was provided on July 1, 2019. In the CY 2021 PFS proposed rule (85 FR 50321), we noted that we aim to provide performance feedback on or around July 1 of each year, but due to the Public Health Emergency (PHE) and COVID-19, we estimated that we would provide performance feedback for the performance period in 2019 in late July or early August of 2020. The third performance feedback (for the 2019 performance period) was provided on August 5, 2020. We note that similar to the 2019 performance period, due to the PHE for COVID-19, we may provide performance feedback for the 2020 performance period after July 1, 2021. Although we aim to provide performance feedback on or around July

1 of each year, it is possible that the release date could be later than July 1 depending on the circumstances. We estimate that we will provide performance feedback for the performance period in 2020 in early August of 2021, although this timeframe could be subject to change. We direct readers to qpp.cms.gov for more information.

h. Third Party Intermediaries

We refer readers to §§ 414.1305 and 414.1400, the CY 2017 Quality Payment Program final rule (81 FR 77362 through 77390), the CY 2018 Quality Payment Program final rule (82 FR 53806 through 53819), the CY 2019 PFS final rule (83 FR 59894 through 59910), the CY 2020 PFS final rule (84 FR 63049 through 63080), the May 8th COVID-19 IFC (85 FR 27594 through 27595), and the CY 2021 PFS final rule (85 FR 84926 through 84947) for our previously established policies regarding third party intermediaries.

In the CY 2022 PFS proposed rule, we propose to make several changes: (1) reorganization and consolidation of § 414.1400 generally; (2) new third party intermediaries general requirements; (3) new requirements specific to both QCDR and qualified registries; (4) new requirements specific to only QCDRs; and (5) remedial action and termination of third parties.

(1) Proposed Reorganization and Consolidation of § 414.1400 Generally

We recognize that many of our policies for third party intermediaries are similar or verbatim, and yet in prior rules, we have described them separately. To minimize the lengthiness and burden of reading our policies, we are proposing to consolidate our regulatory text under § 414.1400. To be clear, our proposed updates would not change previously finalized requirements for third party intermediaries, but would bring more clarity and simplicity to the regulatory text. These proposed changes are discussed by topic in more detail below. We also note that in several places at § 414.1400 the regulation text was only updated to reflect both the applicable MIPS performance period/MIPS payment year.

(a) Proposed Reorganization for Requirements Related to MIPS Performance Categories that Must be Supported by Third Party Intermediaries

We previously established in the CY 2017 Quality Payment Program final rule (81 FR 77363 through 77364), and further revised in the Quality Payment Program provisions in the CY 2019 and CY 2020 PFS final rules ((83 FR 60088 and 84 FR 63049 through 63052, respectively), and further clarified our requirements of QCDRs, qualified registries, and health IT vendors with regards to submitting data for purposes of the MIPS program in the Quality Payment Program provisions in the CY 2021 PFS final rule, at § 414.1400(a)(2), for our current policy regarding the types of MIPS data that third party intermediaries may submit. Our current requirements at § 414.1400(a)(2) state, beginning with the CY 2021 MIPS performance period/2023 MIPS payment year, QCDRs and qualified registries must be able to submit data for all of the following MIPS performance categories, and Health IT vendors must be able to submit data for at least one of the following MIPS performance categories: except as provided under (a)(2)(ii), QCDRs, qualified registries, and health IT vendors must be able to submit data for all of the following MIPS performance categories:

- Quality, except:

++ The CAHPS for MIPS survey; and

++ For qualified registries and Health IT vendors, QCDR measures;

- Improvement activities; and

- Promoting Interoperability, if the eligible clinician, group, or virtual group is using CEHRT; however, a third party intermediary may be excepted from this requirement if its MIPS eligible clinicians, groups or virtual groups fall under the reweighting policies at § 414.1380(c)(2)(i)(A)(*4*) or (*5*) or (c)(2)(i)(C)(*1*) through (*7*) or (c)(2)(i)(C)(*9*)).

++ Health IT vendors that do not support MIPS Value Pathways must be able to submit data for at least one of the MIPS performance categories described in paragraphs (a)(2)(i)(A) through (C) of this section.

++ Promoting Interoperability, if the eligible clinician, group, or virtual group is using CEHRT; however, a third party intermediary may be excepted from this requirement if its MIPS eligible clinicians, groups or virtual groups fall under the reweighting policies at § 414.1380(c)(2)(i)(A)(*4*) or (*5*) or § 414.1380(c)(2)(i)(C)(*1*) through (*7*) or § 414.1380(c)(2)(i)(C)(*9*)).

In an effort to simplify, we propose reorganizing existing language at§ 414.1400(a)(2). Specifically, we propose providing updates to separately identify and provide clarity to data submission requirements since data requirements vary based on third party intermediary type and to provide clarification to exceptions to Promoting Interoperability for virtual groups and subgroups. We propose the following updates:

- To revise and redesignate existing paragraph at § 414.1400(a)(2) through (a)(2)(i) to proposed paragraphs § 414.1400(b)(1)(i) and (c)(1) through (c)(1)(i) to state the following:

- To state at proposed § 414.1400(b)(1)(i), beginning with the CY 2021 MIPS performance period/2023 MIPS payment year, QCDRs and qualified registries must be able to submit data for all of the following MIPS performance categories:

- Quality, except:

++ The CAHPS for MIPS survey; and

++ For qualified registries, QCDR measures.

- Improvement activities; and

- Promoting Interoperability, if the eligible clinician, group, virtual group, or subgroup is using CEHRT, unless:

++The third party intermediary's MIPS eligible clinicians, groups, virtual groups, or subgroups fall under the reweighting policies at § 414.1380(c)(2)(i)(A)(*4*)(*i*) through (*iii*) or (c)(2)(i)(C)(*1*) through (7) or (c)(2)(i)(C)(*9*)).

● To state at proposed § 414.1400(c)(1), beginning with the CY 2021 MIPS performance period/2023 MIPS payment year, health IT vendors must be able to submit data for the MIPS performance categories as follows:

● To state at proposed § 414.1400(c)(1)(i) through (c)(1)(i)(B), health IT vendors that support MVPs must be able to submit data for all of the MIPS performance categories:

● Quality, except:

++ The CAHPS for MIPS survey; and

++ QCDR measures;

● Improvement activities; and

● To revise and redesignate existing paragraph at § 414.1400(a)(2)(iii) to proposed paragraph § 414.1400(c)(1)(i)(C) state, Promoting Interoperability, if the eligible clinician, group, virtual group, or subgroup is using CEHRT, unless:

++ The third party intermediary's MIPS eligible clinicians, groups, virtual groups, or subgroups fall under the reweighting policies at § 414.1380(c)(2)(i)(A)(*4*)(*i*) through (*iii*) or (c)(2)(i)(C)(*1*) through (*7*) or (c)(2)(i)(C)(*9*).

● To revise and redesignate existing paragraph at § 414.1400(a)(2)(ii) to proposed paragraph § 414.1400(c)(1)(ii) to state, health IT vendors that do not support MVPs must be able to submit data for at least one of the MIPS performance categories described in paragraphs (c)(1)(i) through (iii) of this section.

● We propose to create a new requirement at § 414.1400(c)(1)(iii) for health IT vendors to support MVPs. For more information on this proposal, please refer to section "proposed new requirement for third party intermediaries to support MVPs and the APP" below at IV.A.3.h.(2)(b)(i).

● To move the current Health IT vendor requirements from paragraphs § 414.1400 (a)(2)(ii) through (iii) and § 414.1400 (d) to a proposed new section applicable to Health IT

vendor requirements at § 414.1400(c). This will separately identify and provide clarity to data submission requirements specific to Health IT vendors.

- To move the current CMS-approved survey vendor requirements from paragraphs (a)(3) and (e) to a proposed new section applicable to CMS-approved survey vendor requirements at § 414.1400(d). We propose to the redesignate paragraph (a)(3) current requirements to paragraph (d)(1) CMS-approved survey vendors may submit data on the CAHPS for MIPS survey for the MIPS quality performance category. For the current requirements at paragraph (e), we propose to move up those requirements to paragraph (d)(2).
- To redesignate paragraph (a)(4) as paragraph (a)(2).
- To redesignate paragraph (a)(5) as paragraph (a)(3).

We request public comment on our proposals.

(b) Proposed Reorganization for Requirements Related QCDR and Qualified Registries Self-Nomination

We are proposing to consolidate and redesignate the existing language at § 414.1400(b)(1) and (c)(1) to proposed § 414.1400(b)(2) to reference both QCDR and qualified registries. We are proposing this consolidation to provide clarity and alignment with the aforementioned proposals and consolidate the duplicative criteria of QCDRs and qualified registries. As discussed below, we are also proposing to consolidate and redesignate the performance feedback requirements previously at existing § 414.1400(b)(1) and (c)(1) to § 414.1400(b)(3)(iii). We propose to state at § 414.1400 (b)(2), Self-nomination. For the 2018 and 2019 performance periods/2020 and 2021 MIPS payment years, entities seeking to qualify as a QCDR or qualified registry must self-nominate September 1 until November 1 of the CY preceding the applicable performance period. For the 2020 MIPS performance period/2022 MIPS payment year and future years, entities seeking to qualify as a QCDR or qualified registry must self-nominate during a 60-day period during the CY preceding the applicable performance period (beginning no earlier than July 1 and ending no later than September 1). Entities seeking

to qualify as a QCDR or qualified registry for a performance period must provide all information required by CMS at the time of self-nomination and must provide any additional information requested by CMS during the review process. For the 2019 MIPS performance period/2021 MIPS payment year and future years, existing QCDRs and qualified registries that are in good standing may attest that certain aspects of their previous year's approved self-nomination have not changed and will be used for the applicable performance period.

We also propose removing the last two sentences of existing § 414.1400(b)(1), which are duplicative with existing § 414.1400(b)(3)(iii). We propose consolidating this language with existing paragraph (b)(3)(iii). We request public comment on our proposals.

(c) Proposed Reorganization for Requirements Related to QCDR and Qualified Registries Conditions for Approval

We refer readers to existing § 414.1400(b)(2) for QCDR conditions for approval and existing § 414.1400(c)(2) for qualified registries conditions for approval. In this proposed rule, we are proposing the following in order to better organize, consolidate the duplicative criteria of QCDRs and qualified registries, and refer to both "QCDR and qualified registry" instead of one or the other:

- We propose to redesignate existing paragraph (b)(2) to proposed paragraph (b)(3) and revising the paragraph heading as, *Conditions for approval*.

- We also propose updating the reference to both QCDR and qualified registry in proposed paragraph (b)(3).

- We propose to revise to include both QCDR and qualified registry and redesignate existing paragraph (b)(2)(i) to proposed paragraph (b)(3)(i).

- We propose to revise and redesignate existing paragraph (b)(2)(ii) to proposed paragraph (b)(3)(ii). We also propose to extend our policy for collaboration. For more information on this proposal, please refer to section "collaboration of entities to become a QCDR

and proposal to extend policy for collaboration of entities to become a qualified registry" below at section IV.A.3.h.(3)(a)(ii) of this proposed rule.

- As discussed above, we are proposing to consolidate and redesignate the performance feedback requirements previously at existing § 414.1400(b)(1) and (c)(1) to § 414.1400(b)(3)(iii). Furthermore, to consolidate similar performance feedback requirements, we also propose to revise and redesignate existing paragraph (b)(2)(iii) to proposed paragraph (b)(3)(iii) to state, beginning with the 2021 MIPS performance period/2023 MIPS payment year, require the QCDR or qualified registry must to provide performance feedback to their clinicians and groups at least 4 times a year, and provide specific feedback to their clinicians and groups on how they compare to other clinicians who have submitted data on a given measure within the QCDR or qualified registry. Exceptions to this requirement may occur if the QCDR or qualified registry submits notification to CMS within the reporting period promptly within the month of realization of the impending deficiency and provides sufficient rationale as to why they do not believe they would be able to meet this requirement (for example, if the QCDR does not receive the data from their clinician until the end of the performance period).

- We propose to consolidate and redesignate paragraphs (b)(2)(iv) and (c)(2)(iii) in their entirety, into a new paragraph (b)(3)(v), and to correct a typographical error in which the word "MIPS" was omitted in the first sentence.

- We propose to consolidate and redesignate paragraphs (b)(2)(v) and (c)(3)(iv), in their entirety, into a new paragraph (b)(3)(vi).

We invite public comment on our proposals.

(d) Proposed Reorganization for Requirements Related to QCDR Measures

(i) Proposed Reorganization for Requirements Related to QCDR Measures for the Quality Performance Category

We refer readers to existing language at § 414.1400(b)(3) for QCDR measures for the quality performance category. We currently define "QCDR measure" at existing

§ 414.1400(b)(3). We recognize that the QCDR measure definition is referred to throughout our policies and that it is not specific to § 414.1400(b)(3) or third party intermediaries. Therefore, to provide further clarity and to better align with the current policy, we propose moving the QCDR measure definition to the definitions section at § 414.1305. We are also proposing the following revisions to better organize regulation text at § 414.1400(b)(4) and to update cross-references to correspond to the new section numbers as reflected in this proposed rule:

- We propose to redesignate paragraphs (b)(3)(i), (b)(3)(i)(A), and (b)(3)(i)(B) to definitions at § 414.1305.

- We propose to revise and redesignate existing paragraphs at (b)(3)(ii) to proposed paragraphs (b)(4)(i) to state, for the 2018 MIPS performance period/2020 MIPS payment year and future years, at the time of self-nomination an entity seeking to become a QCDR must submit the following information for any measure it intends to submit for the payment year:

++ For MIPS quality measures, the entity must submit specifications including the MIPS measure IDs and specialty-specific measure sets, as applicable.

+ For QCDR measures, the entity must submit for CMS-approval measure specifications including: Name/title of measures, NQF number (if NQF- endorsed), descriptions of the denominator, numerator, and when applicable, denominator exceptions, denominator exclusions, risk adjustment variables, and risk adjustment algorithms. In addition, no later than 15 calendar days following CMS approval of any QCDR measure specifications, the entity must publicly post the measure specifications for that QCDR measure (including the CMS- assigned QCDR measure ID) and provide CMS with a link to where this information is posted.

- We also propose adding a header to state, "QCDR measure self-nomination requirements". We believe adding a heading will help readers clearly distinguish QCDR measure self-nomination requirements.

- We propose moving existing paragraph at (b)(3)(iii) in its entirety to proposed paragraph (b)(4)(ii) and adding a header to state, "QCDR measure submission requirements".

We believe adding a heading will help readers clearly distinguish QCDR measure submission requirements.

- We propose moving existing paragraphs at (b)(3)(v) through (v)(C)(*1*) in its entirety, to proposed paragraph (b)(4)(iii) through (b)(4)(iii)(A)(*3*).

- We propose to revise and redesignate existing paragraph at (b)(3)(v)(C)(*2*) to proposed paragraph (b)(4)(iii)(A)(*3*)(*i*) to state, to be included in an MVP for the 2022 MIPS performance period/2024 MIPS payment year and future years, a QCDR measure must be fully tested.

- We propose moving existing paragraph at (b)(3)(vii) in its entirety, to proposed paragraph (b)(4)(iv).

(ii) Proposed Reorganization for Requirements Related to QCDR Measure Approval Criteria

We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77374 through 77375) and the Quality Payment Program provisions in the CY 2020 PFS final rule (84 FR 63059), where we finalized existing § 414.1400(b)(3)(v).

We propose to reorganize and make minor updates to the existing requirements at § 414.1400(b)(3)(v) to proposed § 414.1400(b)(4)(iii). We propose to reorganize the existing requirements so that QCDR measure approval at § 414.1400(b)(3)(v) is discussed before QCDR measure considerations at § 414.1400(b)(3)(iv). Therefore, we propose the following revisions:

- To revise and redesignate existing paragraph (b)(3)(v) "QCDR measure requirement for approval include" to proposed paragraph (b)(4)(iii) and add a heading to state, "QCDR measure approval criteria". We believe adding a heading will help readers clearly distinguish QCDR measure approval criteria. We also propose to include the following updates:

++ Move existing (b)(3)(v) to proposed revised paragraph (b)(4)(iii)(A) to state, QCDR measure requirements for approval are.

++ Move existing paragraph (b)(3)(v)(A) in its entirety to proposed paragraph (b)(4)(iii)(A)(*1*).

++ Move existing paragraph (b)(3)(v)(B) in its entirety to proposed paragraph (b)(4)(iii)(A)(*2*).

++ Revise existing paragraphs (b)(3)(v)(C) and (b)(3)(v)(C)(*1*) to proposed paragraph (b)(4)(iii)(A)(*3*) to state, beginning with the 2022 MIPS performance period/2024 MIPS payment year, all QCDR measures must meet face validity. To be approved for the 2023 MIPS performance period/2025 MIPS payment year, all QCDR measures must be must meet face validity for the initial MIPS payment year for which it is approved. For subsequent years, all QCDR measures must be fully developed and tested, with complete testing results at the clinician level, prior to submitting the QCDR measure at the time of self-nomination.

++ Move existing paragraph (b)(3)(v)(C)(*2*) in its entirety to proposed paragraph (b)(4)(iii)(A)(*3*)(*i*).

++ Move existing paragraph (b)(3)(v)(D) in its entirety to proposed paragraph (b)(4)(iii)(A)(*4*).

++ Move existing paragraph (b)(3)(v)(E) in its entirety to proposed paragraph (b)(4)(iii)(A)(*5*).

We invite public comment on our proposals.

(iii) Proposed Reorganization for Requirements Related to QCDR Measure Considerations for Approval

We refer readers to the Quality Payment Program provisions in the CY 2019 PFS final rule (84 FR 63198 through 63199), where we finalized existing § 414.1400(b)(3)(iv) "QCDR measure considerations for approval". We propose to reorganize and make minor updates to the language at existing § 414.1400(b)(3)(iv) to proposed § 414.1400(b)(4)(iii)(B). We propose to reorganize the existing requirements so that QCDR measure approval at § 414.1400(b)(3)(v) is discussed before QCDR measure considerations at § 414.1400(b)(3)(iv).

We also propose to redesignate existing § 414.1400(b)(3)(vi) to proposed § 414.1400(b)(4)(iii)(C). Specifically, we propose the following revisions:

- To revise and redesignate existing paragraph (b)(3)(iv) "QCDR measure considerations for approval include" to proposed paragraph (b)(4)(iii)(B) "QCDR measure considerations for approval include, but are not limited to".

- Move existing paragraph (b)(3)(iv)(A) in its entirety to proposed paragraph (b)(4)(iii)(B)(*1*).

- Move existing paragraph (b)(3)(iv)(B) in its entirety to proposed paragraph (b)(4)(iii)(B)(*2*).

- Move existing paragraph (b)(3)(iv)(C) in its entirety to proposed paragraph (b)(4)(iii)(B)(*3*).

- Move existing paragraph (b)(3)(iv)(D) in its entirety to proposed paragraph (b)(4)(iii)(B)(*4*).

- Move existing paragraph (b)(3)(iv)(E) in its entirety to proposed paragraph (b)(4)(iii)(B)(*5*).

- Move existing paragraph (b)(3)(iv)(F) in its entirety to proposed paragraph (b)(4)(iii)(B)(*6*).

- Move existing paragraph (b)(3)(iv)(G) in its entirety to proposed paragraph (b)(4)(iii)(B)(*7*).

- Revise and consolidate existing paragraph (b)(3)(iv)(G)(*1*) to proposed paragraph (b)(4)(iii)(B)(*7*)(*i*) to state that QCDR link their QCDR measures as feasible to at least one cost measure, improvement activity, or an MVP at the time of self-nomination.

- Move existing paragraph (b)(3)(iv)(G)(*2*) in its entirety to proposed paragraph (b)(4)(iii)(B)(*7*)(*ii*).

- Move existing paragraph (b)(3)(iv)(H) in its entirety to proposed paragraph (b)(4)(iii)(B)(*8*).

- Move existing paragraph (b)(3)(iv)(I) in its entirety to proposed paragraph (b)(4)(iii)(B)(*9*).

- Move existing paragraph (b)(3)(iv)(J) in its entirety to proposed paragraph (b)(4)(iii)(B)(*10*).

- Move existing paragraph (b)(3)(iv)(J)(*2*) to proposed paragraph Reserve (b)(4)(iii)(B)(*10*)(*ii*).

- Move existing paragraph (b)(3)(vi) in its entirety to proposed paragraph (b)(4)(iii)(C).

We invite public comment on our proposals.

(iv) QCDR Measure Rejection Criteria

We refer readers to the existing requirements at § 414.1400(b)(3)(vii). We propose reorganizing existing requirements at § 414.1400(b)(3)(vii) to proposed § 414.1400(b)(4)(iv). Therefore, we propose the following revisions:

- To revise and redesignate existing paragraph (b)(3)(vii) "QCDR measure rejection criteria" to proposed paragraph (b)(4)(iv) and add a heading to state, *QCDR measure rejection criteria*. We believe adding a heading will help readers clearly distinguish measure rejection criteria.

We also propose to include the following updates:

- To move existing paragraph (b)(3)(vii) to proposed paragraph (b)(4)(iv) to state, *QCDR measure rejection criteria*. Beginning with the 2020 MIPS performance period/2022 MIPS payment year, QCDR measure rejection considerations include, but are not limited to.

- Move existing paragraphs (b)(3)(vii)(A) through (L) in their entirety to proposed (b)(4)(iv)(A) through (L).

We invite public comment on our proposals.

(e) Proposed Reorganization for Requirements Related to Remedial Action and Termination of Third Party Intermediaries

We refer readers to § 414.1400(f), the CY 2017 Quality Payment Program final rule (81 FR 77548), CY 2019 PFS final rule (83 FR 59908 through 59910), the CY 2020 PFS final rule (84 FR 63077 through 63080), and the CY 2021 PFS final rule (85 FR 84930 through

84937) for previously finalized policies for remedial action and termination of third party intermediaries. With the proposed updates being made at § 414.1400, we propose to redesignate the following sections:

- We propose to redesignate current paragraph (f) as paragraph (e) and to update cross-references to correspond to the new section numbers as reflected in this proposed rule.
- We also propose to redesignate current paragraph (g) as paragraph (f) and to update cross-references to correspond to the new section numbers as reflected in this proposed rule.

We invite public comment on our proposals.

(2) Third Party Intermediaries General Requirements

We refer readers to previously established § 414.1400(a) and the CY 2017 Quality Payment Program final rule (81 FR 77363 through 77364), and as further revised in the CY 2019 PFS final rule (83 FR 60088), CY 2020 PFS final rule (84 FR 63049 through 63052), CY 2021 PFS final rule (85 FR 84926 through 84947) for our established policy regarding third party intermediaries general requirements.

In this proposed rule, we propose a couple changes for third party intermediaries: (1) third party intermediary submissions for APM Entities; and (2) MIPS performance categories that must be supported by third party intermediaries. We are also requesting comment on third party intermediaries that derive data from CEHRT. These proposals and request for comment are discussed in more detail below.

(a) Third Party Intermediary Submissions for APM Entities

As finalized in the Quality Payment Program provisions in the CY 2021 PFS final rule (85 FR 84895), APM Entities now have the option of reporting to MIPS on behalf of the MIPS eligible clinicians participating in their APM Entity. They have the option of reporting to traditional MIPS or via the APP (85 FR 84859). APM Entities have historically used Third Party Intermediaries for submitting their quality measures to their APMs, rather than to MIPS,

however, these third party intermediaries now have the opportunity to submit these data for purposes of MIPS.

In this proposed rule, we are proposing to add APM Entities to § 414.1400(a)(1), expanding the general participation requirements of third party intermediaries to third party intermediaries reporting to MIPS on behalf of APM Entities in order to align reporting requirements for all participants in MIPS.

We note that the Promoting Interoperability performance category is scored for APM Entities based on data submitted by the participant MIPS eligible clinicians and groups as described at § 414.1317(b)(1), and therefore would not be required to be submitted by the third party intermediary on behalf of the APM Entity.

We request comment on this proposal.

(b) MIPS Performance Categories That Must Be Supported by Third Party Intermediaries

We refer readers to previously established § 414.1400(a)(2) and the CY 2017 Quality Payment Program final rule (81 FR 77363 through 77364), and as further revised in the CY 2019 PFS final rule (83 FR 60088), CY 2020 PFS final rule (84 FR 63049 through 63052), CY 2021 PFS final rule (85 FR 84926 through 84947) for our established policy regarding the types of MIPS data that third party intermediaries may submit.

In this proposed rule, we are proposing new requirements in alignment with our proposals in section IV.A.3.b. of this proposed rule to adopt MVPs and subgroups.

(i) Proposed New Requirement for Third Party Intermediaries to Support MVPs and the APP

As described in the Quality Payment Program provisions finalized in the CY 2021 PFS final rule (85 FR 84849), MVPs should include measures and activities from the quality, cost, improvement activities, and Promoting Interoperability performance categories. As described in section IV.A.3.b. of this proposed rule, we discuss our proposals related to furthering our transition to MIPS Value Pathways (MVPs). As MVPs are implemented, proposed beginning with the 2023 MIPS performance period/2025 MIPS payment year, we believe it is important to

also propose the methods in which an MVP participant may report on an MVP or the APP. Since QCDRs, qualified registries, and health IT vendors are required under existing § 414.1400(a)(1) to submit data for quality, improvement activities, and promoting interoperability, we believe they would have the experience needed to support MVP and APP reporting.

Therefore, we propose to create a new requirement at § 414.1400(b)(1)(ii) to state that, beginning with the 2023 MIPS performance period/2025 MIPS payment year, QCDRs and qualified registries must support MVPs that are applicable to the MVP participants on whose behalf they submit MIPS data. QCDRs and qualified registries may also support the APP. Additionally, we propose to create a new requirement at paragraph § 414.1400(c)(1)(iii) to state that beginning with the 2023 MIPS performance period/2025 MIPS payment year, Health IT vendors must support MVPs that are applicable to the MVP participants on whose behalf they submit MIPS data. Health IT vendors may also support the APP.

Based off historical participation, we are aware that some third party intermediaries (QCDRs and qualified registries) support a single specialty or subspecialty, while others support multiple specialties. Therefore, we believe that it is not appropriate to expect that all third party intermediaries are able to support all MVPs that are implemented in the program. Rather, the third party intermediaries should identify and support MVPs that are relevant to the clinicians and groups they support. We do not believe that CMS- approved survey vendors will be able to support MVP reporting, because they are historically limited, in that they only support the CAHPS for MIPS Survey Measure.

As proposed in section IV.A.3.b of this proposed rule, MVPs would start with the 2023 MIPS performance period/2025 MIPS payment year. We believe this delay in implementation would allow third party intermediaries sufficient time for programming and system preparation for MVP reporting success. We request comment on our proposals.

(ii) Proposed Requirements for All Third Party Intermediaries to Support Subgroup Reporting

As proposed in section IV.A.3.b.(3) of this proposed rule, subgroup reporting would allow clinicians in multispecialty practices to participate in MIPS more meaningfully. Since subgroups would be implemented concurrently with MVPs, it is important that third party intermediaries have the capability to support subgroup reporting of MVPs. As described above, we believe QCDRs, qualified registries, and health IT vendors would have the capacity to support MVP and APP reporting.

In this proposed rule, we propose to require QCDRs, qualified registries, health IT vendors, and CAHPS for MIPS survey vendors to support subgroup reporting, beginning with the 2023 MIPS performance period/2025 MIPS payment year. Therefore, we propose to revise § 414.1400(a)(1) to state that MIPS data may be submitted on behalf of a MIPS eligible clinician, group, virtual group, subgroup or APM Entity by any of the following third party intermediaries: QCDR; qualified registry; health IT vendor; or CMS-approved survey vendor. We believe it is imperative for all third party intermediaries to be able to support subgroup reporting as we envision that to be the future of the program.

While the CAHPS for MIPS survey vendors cannot support MVPs or the APP, we believe they can support the reporting of the CAHPS for MIPS measure within an MVP and the APP, if a subgroup decides to report on that measure. Due to the limited experience, CAHPS for MIPS survey vendors have in quality reporting, we do not believe it is feasible for them to support MVP reporting since MVP reporting would require experience with reporting across the performance categories and the use of several collection types for quality reporting. However, there may be instances where the CAHPS for MIPS survey measure may be included in an MVP. For example, in the Optimizing Chronic Conditions Management MVP, as described in Appendix 3: MVP Inventory, of this proposed rule. In such instances, if groups or subgroups would like to report this measure, they should be able to utilize a CAHPS for MIPS survey vendor to do so. We believe it is important that all third party intermediaries support subgroup reporting in order to support meaningful quality reporting. We understand that there may be a

level of burden to third party intermediaries that are required in supporting subgroup reporting by requiring them to support another clinician type. However, we believe that requiring third party intermediaries to support subgroup reporting will allow for clinicians to participate in a manner that is more meaningful. We note that as proposed in section IV.A.3.b.(4)(f) of this proposed rule, subgroups would have to register through the MVP participant registration process. Third party intermediaries would need to be able to track the subgroup identifiers and support the data submission process accordingly.

We request comments on our proposal.

(c) Request for Comment on Third Party Intermediaries that Derive Data from CEHRT

For third party intermediaries that will be submitting quality measure data on behalf of MIPS eligible clinicians, we believe that EHR systems will be able to provide measure results for a set of providers that are part of a subgroup where required for subgroup reporting. We note that the existing CEHRT definition for eligible clinicians at § 414.1305 includes the 45 CFR 170.315(c)(4) "Clinical quality measures—filter" as an optional element. This criterion requires health IT to be able to filter CQM results at both patient and aggregate levels. Moreover, a Health IT Module must be able to filter by a single proposed data element (for example, provider type) or a combination of any of the data elements). Historically, the "Clinical quality measures—filter" at 45 CFR 170.315(c)(4)" (CQM-filter) criterion has been applicable for certified health IT modules supporting quality measurement for participants in certain APMs.

We believe technology certified to this optional criterion could support subgroup reporting via third party intermediaries that derive data from CEHRT by ensuring that an EHR can produce CQM results filtered for a specific group of provider NPIs that are part of a subgroup. These filtered CQM results could then be shared with a third party intermediary, which provides this data for reporting to CMS. However, we also believe health IT developers are offering non-certified functionality that can effectively support reporting of measure results for a subgroup. As a result, we are not proposing any changes at this time to the language in the

CEHRT definition for eligible clinicians regarding the "optional" status of technology certified to the CQM-filter criterion.

We are interested in general feedback from stakeholders on the current capabilities of third party intermediaries that derive data from CEHRT to successfully receive and transmit data to CMS for CQMs based on subgroups; capabilities of EHR systems to support subgroup reporting, including reporting facilitated by third party intermediaries, and whether requiring the adoption of technology certified to the CQM-filter criterion would help to support subgroup reporting; and challenges which entities may face in meeting requirements to report on subgroups when deriving data from CEHRT. We request feedback on this topic.

(3) New Requirements for Both Qualified Clinical Data Registries (QCDRs) and Qualified Registries

(a) Background

We refer readers to §§ 414.1305 and 414.1400, the CY 2017 Quality Payment Program final rule (81 FR 77362 through 77390), the CY 2018 Quality Payment Program final rule (82 FR 53806 through 53819), the CY 2019 PFS final rule (83 FR 59894 through 59910), the CY 2020 PFS final rule (84 FR 63049 through 63080), the May 8th COVID-19 IFC (85 FR 27594 through 27595), and the CY 2021 PFS final rule (85 FR 84926 through 84947) for our previously established policies regarding QCDRs and qualified registries.

In this proposed rule, we propose several changes for both QCDRs and qualified registries: (1) new requirement for approved QCDRs and qualified registries that have not submitted performance data; (2) collaboration of entities to become a QCDR and qualified registry; and (3) data validation audit and targeted audit requirements. These proposals are discussed in more detail below.

(i) Proposed New Requirement for Approved QCDRs and Qualified Registries That Have Not Submitted Performance Data

We require that both QCDRs and qualified registries must have a minimum of 25 participants signed up by the prior performance period at existing § 414.1400(b)(2) and (c)(2). We refer readers to CY 2017 Quality Payment Program final rule (81 FR 77362 through 77390), the CY 2018 Quality Payment Program final rule (82 FR 53806 through 53819), the CY 2019 PFS final rule (83 FR 59894 through 59910), the CY 2020 PFS final rule (84 FR 63049 through 63080), the May 8th COVID-19 IFC (85 FR 27594 through 27595), and the CY 2021 PFS final rule (85 FR 84926 through 84947). We identified a number of QCDRs and qualified registries that have continued to self-nominate to become a third party intermediary for the MIPS program, but have not submitted clinician, group or virtual group data to CMS. As the MIPS program continues to mature, we wish to reduce the number of vendors that self-nominate to become a qualified vendor, but do not actively participate in the MIPS program. We believe that maintaining these vendors who do not actively participate does not provide a benefit to the MIPS program, rather it creates stakeholder confusion by including these vendors in our qualified postings.

We are proposing a two-tiered approach to solve this issue. First, we propose to create a new requirement at § 414.1400(b)(3)(vii) to require QCDRs and qualified registries that have never submitted data since the inception of MIPS (2017 MIPS performance period/2019 MIPS payment year) through the 2020 MIPS performance period/2022 MIPS payment year, to submit a participation plan as part of their self-nomination for CY 2023. Exceptions to this requirement may occur if data is received for the 2021 MIPS performance period/2023 MIPS payment year. Under this scenario, QCDRs and qualified registries would not need to submit a participation plan for CY 2023 of the self-nomination period. If they do not submit data, their participation plan must be submitted as part of self-nomination for CY 2023 and must be accepted by CMS to continue to be an approved QCDR or qualified registry.

Secondly, we propose to codify a new requirement at paragraph (b)(3)(viii) to state, beginning with the 2024 MIPS performance period/2026 MIPS payment year, a QCDR or

qualified registry that was approved but did not submit any MIPS data for either of the 2 years preceding the applicable self-nomination period must submit a participation plan for CMS's approval. For example, for the 2024 MIPS performance period/2026 MIPS payment year, vendors will be required to have submitted performance data for the 2021 and 2022 MIPS performance periods/2023 and 2024 MIPS payment years. Under this proposal, the participation plan must explain the QCDR's or qualified registry's detailed plans about how the vendor intends to encourage clinicians to submit MIPS data to CMS through the third party intermediary on behalf of clinicians or groups. The vendor must also explain why they should still be allowed to participate as a qualified vendor. We note that this proposed participation plan was modeled off of the current requirement for QCDR measure participation at existing § 414.1400(b)(3)(iv)(J)(*1*) (redesignated to proposed § 414.1400(b)(4)(iii)(B)(*10*)(*i*)). We request comments on this proposal.

(ii) Collaboration of Entities to Become a QCDR and Proposal to Extend Policy for Collaboration of Entities to Become a Qualified Registry

(A) Background

In the CY 2017 Quality Payment Program final rule (81 FR 77377), we finalized to allow collaboration of entities to become a QCDR based on our experience with the qualifying entities wishing to become QCDRs for performance periods. We stated that we believed our previously finalized policy supporting entity collaboration should be continued under MIPS. Therefore, we discussed that an entity that may not meet the criteria of a QCDR solely on its own, but could do so in conjunction with another entity and would be eligible for qualification through collaboration with another entity. Additionally, we finalized at § 414.1400(b)(2)(ii), specifically for QCDRs, that if the entity uses an external organization for purposes of data collection, calculation, or transmission, it must have a signed, written agreement with the external organization that specifically details the responsibilities of the entity and the external

organization. The written agreement must be effective as of September 1 of the year preceding the applicable performance period.

For example, an entity, such as a specialty society, that needs technical support may partner with an outside entity such as a health IT vendor to qualify as a QCDR. While entities, such as QCDRs, Health IT vendors, and qualified registries, can collaborate with external organizations, those entities could only do so to meet requirements to be a QCDR. We did not explicitly create a policy for entities to collaborate to meet the requirements to be a qualified registry.

(B) Proposal to Extend to Qualified Registries

We believe we should extend the previously finalized policy to apply to entities who wish to collaborate to become a qualified registry, as well because extending this policy to qualified registries would also help smaller societies that may not have the resources on their own to become a qualified registry. This will allow those societies to be able to partner with other entities to meet the definition of a qualified registry. Therefore, in this proposed rule, we propose to revise and redesignate existing paragraph (b)(2)(ii) to new paragraph (b)(3)(ii) to state, if the entity seeking to qualify as a QCDR or qualified registry uses an external organization for purposes of data collection, calculation, or transmission, it must have a signed, written agreement with the external organization that specifically details the responsibilities of the entity and the external organization. The written agreement must be effective as of September 1 of the year preceding the applicable performance period. For example, an entity, such as a specialty society, that needs technical support may partner with an outside entity such as a health IT vendor to qualify as a qualified registry. We request comments on this proposal.

(iii) Data Validation Audit and Targeted Audit Requirements

(A) Information Required at the Time of Self-Nomination

In the CY 2017 Quality Payment Program final rule (81 FR 77366 through 77367; 81 FR 77383 through 77384) we discussed our expectation for QCDRs and qualified registries to

conduct validation on the data they intend to submit for the MIPS performance period. We also discussed that the full self-nomination process would require the following: a submission of basic information, a description of the process the QCDR and qualified registry will use for completion of a targeted audit of a subset of data prior to submission, the provision of a data validation plan along with the results of the executed data validation plan by May 31 of the year following the performance period. Additionally, in the Quality Payment Program provisions in the CY 2021 PFS final rule (85 FR 84930 through 84937; 85 FR 84944 through 84947) at existing § 414.1400(b)(2)(iv) and (v) and § 414.1400(c)(2)(iii) and (iv), we finalized the data validation audit requirements as condition for approval. While we did finalize the requirements for the data validation audits as condition for approval, we did not codify the requirements for QCDR and qualified registries to submit data validation plan during self-nomination along with the results of the executed data validation plan by May 31 of the year following the performance period.

In order to provide clarification and to better align with the previously finalized policy (81 FR 77366 through 77367; 81 FR 77383 through 77384), we propose to codify the following revisions. As stated in previous polices (81 FR 77366 through 77367;81 FR 77383 through 77384), QCDRs and qualified registries are required to submit the results of their data validation plan to CMS by May 31 of the year following the performance period. Therefore, we propose to codify at § 414.1400(b)(3)(v)(G)(*1*) to state that QCDRs and qualified registries must conduct validation on the data they intend to submit for the applicable MIPS performance period, and provide the results of the executed data validation plan by May 31st of the year following the performance period.

Furthermore, QCDRs and qualified registries are required to submit their data validation plan explaining their process of data validation submission annually during self-nomination, and it must be approved by CMS for before use. To provide further clarity and to better align with the existing policy (81 FR 77366 through 77367; 81 FR 77383 through 77384), we also propose

to codify a new requirement at § 414.1400(b)(3)(iv) to state that, beginning with the CY 2023 MIPS performance period/2025 MIPS payment year, the QCDR or qualified registry must submit a data validation plan annually, at the time of self-nomination, for CMS' approval, and may not change the plan once approved, without the prior approval of the agency.

As discussed above we propose to codify at § 414.1400(b)(3)(iv) to provide further clarity to better align with previous policies. Therefore, we propose to reorganize at § 414.1400(b)(2)(iv) though (viii) to better align with the above changes. We propose with the following revisions:

- We propose to revise and redesignate existing paragraph (b)(2)(iv) to proposed paragraph (b)(3)(v) to state, that beginning with the 2021 MIPS performance period/2023 MIPS payment year, the QCDR or qualified registry must conduct annual data validation audits in accordance with this paragraph (b)(3)(v).

- We propose to revise and redesignate existing paragraph (b)(2)(iv)(A) to proposed paragraph (b)(3)(vi)(A) to state that, if a data validation audit under paragraph (b)(3)(v) identifies one or more deficiency or data error, the QCDR or qualified registry must conduct a targeted audit into the impact and root cause of each such deficiency or data error for that MIPS payment year.

- We propose to revise and redesignate existing paragraph (b)(2)(v) to proposed paragraph (b)(3)(vi) to state that beginning with the 2021 MIPS performance period/2023 MIPS payment year, the QCDR or qualified registry must conduct targeted audits in accordance with this paragraph (b)(3)(vi).

- We propose to revise and redesignate paragraph (b)(2)(vi) to proposed paragraph (b)(3)(vii), to state for the 2023 MIPS performance period/2025 MIPS payment year, a QCDR or qualified registry that was approved but did not submit any MIPS data for any of the 2017 through 2021 MIPS performance periods/2019 through 2023 MIPS payment years must submit a participation plan for CMS's approval. This participation plan must include the QCDR's detailed

plans and changes to encourage eligible clinicians and groups to submit data on the low-reported QCDR measure for purposes of the MIPS program.

- We propose to revise and redesignate existing paragraph (b)(2)(vii) to proposed paragraph (b)(4)(viii) to state that beginning with the 2024 MIPS performance period/2026 MIPS payment year, a QCDR or qualified registry that was approved but did not submit any MIPS data for either of the 2 years preceding the applicable self-nomination period must submit a participation plan for CMS's approval.

(4) New Requirements Specific to QCDRs

(a) Background

We refer readers to § 414.1400(b), the CY 2017 Quality Payment Program final rule (81 FR 77374 through 77375), the CY 2018 Quality Payment Program final rule (82 FR 53813 through 53814), the CY 2019 PFS final rule (83 FR 59900 through 59906), the CY 2020 PFS final rule (84 FR 63058 through 63074), the May 8th COVID–19 IFC (85 FR 27594 through 27595), and the CY 2021 PFS final rule (84937 through 84944) for where we previously finalized standards and criteria for QCDRs, specifically QCDR measure requirements. In this section, we propose to update policies related to QCDR measure rejections.

(b) QCDR Measures

(i) QCDR Measure Rejections

(A) Proposed New QCDR Measure Rejection Criteria

We refer readers to the Quality Payment Program provisions in the CY 2020 PFS final rule (84 FR 63070 through 63073) at § 414.1400(b)(3)(vii) where we have previously adopted QCDR measure rejection criteria. In this proposed rule, we are proposing to add two new criteria: (1) QCDR does not have permission to use a QCDR measure; and (2) QCDR not approved or not in good standing. These are discussed in more detail below.

(aa) QCDR Does Not Have Permission to Use a QCDR Measure

In the CY 2018 Quality Payment Program final rule (82 FR 53813 through 53814), we discussed that beginning with the 2018 performance period and for future program years, QCDR vendors may seek permission from another QCDR to use an existing measure that is owned by the other QCDR. We noted that the QCDR measure owner (QCDR vendor) would still own and maintain the QCDR measure, but would allow other QCDRs to utilize their measure with proper notification. We intended for this policy to help reduce the number of QCDR measures that are similar in concept or clinical topic, or duplicative of other QCDR measures that are being approved. Additionally, in the Quality Payment Program provisions in the CY 2020 PFS final rule (84 FR 63070 through 63073) at § 414.1400(b)(3)(vii), we finalized the QCDR measure rejection criteria considerations. We noted that these considerations would help to ensure that QCDR measures are meaningful and measurable. Although we finalized the QCDR measure rejection criteria, we did not codify that QCDRs may seek permission from another QCDR to use an existing measure that is owned by another QCDR. In order to provide further clarity to the existing policies (82 FR 53813 through 53814; 84 FR 63070 through 63073), we propose to codify a new requirement and add a rejection criterion at § 414.1400(b)(4)(iv)(M) to state, a QCDR does not have permission to use a QCDR measure owned by another QCDR for the applicable performance period. We request comment on this proposal.

(bb) QCDR Not Approved or Not in Good Standing

Additionally, if a QCDR measure owner is not approved or is not in good standing, any QCDR measures associated with that QCDR would also not be approved. We believe it is important to have an approved QCDR measure owner for all approved QCDR measures. This would ensure that there is active involvement by the QCDR measure owner so that any potential measure issues can be mitigated during the specified MIPS performance period. For example, any mid-year guideline changes or measure questions would need to be immediately clarified to avoid negative impacts to clinicians such as the inability to construct a benchmark due to an error in the measure specifications. Therefore, we propose to codify another rejection criterion at

§ 414.1400(b)(4)(iv)(N) to state that, if a QCDR measure owner is not approved during a given self-nomination period, any associated QCDR measures with that QCDR would also not be approved. We request comment on this proposal.

We have received inquiries from stakeholders on what can be done in circumstances when an active QCDR wishes to use an inactive QCDR's measure. We are interested in feedback from stakeholders on what should be done in such circumstances. For example, what should happen if "QCDR A" is using "QCDR B's" measures in a given performance period and "QCDR B" is terminated mid performance period? Alternatively, what if "QCDR A" is using a measure from "QCDR B" and "QCDR B" decides not to self-nominate for the subsequent performance period? While "QCDR A" could partner with "QCDR B" as described at § 414.1400(b)(3)(ii), are there other policy options we should consider to minimize impact to the MIPS eligible clinician who has selected the QCDR measure for reporting?

We seek comment on the above circumstances.

(5) Remedial Action and Termination of Third Party Intermediaries

We refer readers to § 414.1400(f), the CY 2017 Quality Payment Program final rule (81 FR 77548), CY 2019 PFS final rule (83 FR 59908 through 59910), the CY 2020 PFS final rule (84 FR 63077 through 63080), and the CY 2021 PFS final rule (85 FR 84930 through 84937) for previously finalized policies for remedial action and termination of third party intermediaries.

In the Quality Payment Program provisions in the CY 2019 PFS final rule (83 FR 59908 through 59910), we discussed that the threshold for "inaccurate, unusable or otherwise compromised" may be met if the submitted data includes TIN/NPI mismatches, formatting issues, calculation errors, or data audit discrepancies that affect more 3 percent of the total number of MIPS eligible clinicians or groups for which data was submitted by the third party intermediary. We are proposing to update the existing language at § 414.1400(f)(3)(ii) to broadly explain that it is up CMS's discretion on whether third party intermediaries' inaccuracies

may lead to possible remedial action or termination. As discussed earlier, we propose consolidating and redesignating the existing language at § 414.1400(f) as § 414.1400(e) and § 414.1400(g) as § 414.1400(f) to provide clarity and alignment with the aforementioned proposals to consolidate the duplicative criteria of QCDRs and qualified registries. Therefore, we propose to revise and redesignate existing language at § 414.1400(f)(3)(ii) to proposed § 414.1400(e)(3) to state, contains data inaccuracies affecting the third party intermediary's total clinicians may lead to remedial action/termination of the third party intermediary for future program year(s) based on CMS discretion.

i. Public Reporting on the Compare Tools hosted by the U.S. Department of Health & Human Services (HHS)

In this section of the proposed rule, we propose to amend § 414.1395(c) to add a 1-year delay of publicly reporting new improvement activities and Promoting Interoperability measures and attestations reported via MVP. We also propose a one-time, 1-year delay to subgroup-level public reporting, such that subgroup-level public reporting will begin with CY 2024 performance information available in 2025, and each year thereafter, on the Compare Tools hosted by the U.S. Department of Health and Human Services (HHS), referred to as "compare tool" throughout this proposed rule, available at https://www.medicare.gov/care-compare/ and data.medicare.gov, as technically feasible. We are proposing to add facility affiliations, beyond the hospital affiliations currently displayed on individual profile pages. Additional facility affiliations would include: inpatient rehabilitation facilities (IRFs); long-term care hospitals (LTCHs); skilled nursing facilities (SNFs); inpatient psychiatric facilities (IPFs); home health agencies (HHAs); hospices; and dialysis facilities. Finally, we seek comment on publicly reporting utilization data on clinician and group profile pages.

For previous discussions on public reporting, we refer readers to the CY 2016 PFS final rule (80 FR 71116 through 71123), the CY 2017 Quality Payment Program final rule (81 FR 77390 through 77399), the CY 2018 Quality Payment Program final rule (82 FR 53819 through

53832), the CY 2019 PFS final rule (83 FR 59910 through 59915), the CY 2020 PFS final rule (84 FR 63080 through 63083), the CY 2021 PFS final rule (85 FR 84947 through 85 FR 84948) and the Care Compare: Doctors and Clinicians Initiative Page at https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Compare-DAC.

(1) MVP and Subgroup Public Reporting

The introduction of MVPs and subgroup reporting provides for new types of performance information that are available for public reporting, provided they meet the established public reporting standards at § 414.1395(b). In consideration of our MVP and subgroup performance information public reporting proposals, we wish to remind readers that all submitted MIPS performance information is available for public reporting (81 FR 77395 through 77397). Additionally, we previously finalized at § 414.1395(c) that, for each program year, CMS does not publicly report any first year measures for the first 2 years, meaning any measure in its first 2 years of use in the quality and cost performance categories. We also note that MIPS performance category and composite final scores for MIPS eligible clinicians participating in MVPs will continue to be publicly reported as required under section 1848(q)(A)(i)(I) of the Act and finalized at § 414.1395(a)(1)(i).

We believe delaying public reporting of certain MVP and subgroup performance information provides a catalyst to encourage clinician participation in MVPs and subgroups while they familiarize themselves with these options. For this reason, we propose, for individuals, groups, and subgroups reporting via MVP, to add a 1-year delay for new improvement activities and Promoting Interoperability measures and attestations, as technically feasible. This means that new improvement activities and Promoting Interoperability measures and attestations would be available for public reporting at their inception in traditional MIPS, but we would delay public reporting of new improvement activities and Promoting Interoperability measures and attestations by 1 year after inception for those reporting via MVP. We note that

improvement activities and Promoting Interoperability measures and attestations that have already been in MIPS for more than 1 year and become newly available as part of an MVP would be available for public reporting in the first year the MVP is in the program. That is, non-first year improvement activities and Promoting Interoperability measures and attestations that are newly part of an MVP would be available for public reporting in the first year the MVP is in the program. Table 62 further clarifies when this 1-year delay would apply.

TABLE 62: MVP vs Traditional MIPS: Performance Information Delay Amount

New Improvement Activities and Promoting Interoperability measures and attestations	Delay Amount
Reported via traditional MIPS	No delay; CMS publicly reports new improvement activities and Promoting Interoperability measures and attestations at their inception.
Reported via MVP	CMS does not publicly report the new improvement activities and Promoting Interoperability measures and attestations for the first year.

We recognize that under this proposal, we would be further delaying the release of performance information for improvement activities and Promoting Interoperability measures and attestations reported via MVP. Because of this, as a potential incentive, we also considered whether to delay public reporting of quality and cost measure information reported via MVP by 1 additional year, for a total of 3 years. We request comments on our proposal to delay public reporting of new improvement activities and Promoting Interoperability measures and attestations reported via MVP by 1 year, as well as any feedback on alternate approaches we should consider spurring clinicians to report performance data on MVPs while making performance data available for patients on the compare tool. We propose to amend this MVP public reporting policy at § 414.1395(c)(2) to state CMS does not publicly report any MVP data on new improvement activities or Promoting Interoperability measure, objective, or activity included in an MVP for the first year in which it is included in the MVP. We also propose to amend § 414.1395(c)(1) to state that CMS does not publicly report any data on new quality or cost measure for the first 2 years in which it is in the program, after which CMS evaluates the measure to determine whether it is suitable for public reporting under § 414.1395(b). Currently,

§ 414.1395(c) refers to these quality and cost measures as "first year measures". We are proposing to change "first year measures" to "new measures".

The introduction of MVPs and subgroup reporting in MIPS, provides for new types of performance information that are available for public reporting, provided they meet the public reporting standards. Currently, we display information on profile pages at the individual clinician and group level, since this is the level of information we provide for and at which patients and caregivers search for on the compare tool. To ensure that patients and caregivers have access to subgroup performance information, we propose creating a separate workflow from the established ones for individuals and groups, since we only display information at the level at which it was publicly reported. That is, we only publicly report individual-level performance information on individual clinician profile pages and group-level performance information on group profile pages. We do not publicly report group-level performance information on individual profile pages or individual-level information on group profile pages, as doing so would not be truly representative of either the group's or individual's own performance, and we do not want to mislead website users. Instead, we would link from the individual or group profile page to the corresponding subgroup performance information. That is, we propose to create a subgroup public reporting workflow, in which we would indicate with plain language on an individual profile page that the clinician reports performance information as part of a subgroup or on a group profile page that the group has subgroups for purposes of performance information and then link to that subgroup's performance information. Future user testing would determine how to best display and put in plain language subgroup performance information. Subgroup performance information would also be available on http://data.medicare.gov/.

Subgroups represent a new type of reporting for MIPS, that is available for clinicians reporting on MVPs or via the APP. For this reason, we also propose to delay all subgroup-level public reporting for 1 year, including measures, activities and attestations across the quality, cost, improvement activities, and Promoting Interoperability performance categories in order to

encourage clinician participation in subgroups without the risk of displaying subgroup performance information as clinicians familiarize themselves with the option of subgroup reporting. This would only be a one-time delay in public reporting of subgroup-level information. That is, we would not publicly report any CY 2023 subgroup-level measure, attestation, or activity performance information; this information would be available for public reporting beginning with CY 2024 performance period. We would publicly report PY 2024 subgroup performance information and for each performance year thereafter if the information meets our established public reporting standards. Since we are moving toward more granular level performance information, we believe delaying subgroup public reporting by 1 year provides an incentive for subgroup participation and experience. As an alternative, we also considered a 1-year public reporting delay of performance information for all new subgroups each performance year, as technically feasible. For example, subgroups that begin in CY 2023 are not eligible for public reporting until CY 2024, subgroups that begin in CY 2024 are not eligible for public reporting until CY 2025, and so on for each subsequent year. Another alternative we considered was to publicly report all subgroup performance information without delay and provide new subgroups the opportunity to opt-out, during the preview period, of having their performance information publicly reported for their first year. Some subgroups may want to have their performance information publicly reported and having an overall 1-year delay may be a disincentive to subgroup participation. We seek comment on these considerations. We note that MIPS performance category and composite final scores for MIPS eligible clinicians participating in MVPs will continue to be publicly reported for those participating in subgroups, as required under section 1848(q)(A)(i)(I) of the Act and finalized at § 414.1395(a)(1)(i), and will not be delayed by 1 year for public reporting.

We also seek comment on additional factors that we should consider as we look to expand the availability of MVP and subgroup data on the compare tools. For example, should there be a certain threshold of MVPs available, or clinicians participating in MVPs prior to

public reporting? For public reporting of subgroups, are there factors we should consider to make this information usable to the patient but reflective of the subgroups characteristics and composition? Should we test an indicator of MVP participation for compare tool profile pages to see if this is useful information for patients making healthcare decisions? We seek comment on this proposal and additional ways public reporting may encourage MVP participation.

(2) Publicly Reporting APM Performance Pathway Information

In the CY 2021 Quality Payment Program final rule, we finalized to establish an APM performance pathway (APP) beginning in the 2021 MIPS performance year. This is an optional MIPS reporting and scoring pathway for MIPS eligible clinicians who participate in MIPS APMs. We also note that since APP participants are MIPS eligible clinicians, their MIPS performance category and composite final scores will be publicly reported as required under section 1848(q)(A)(i)(I) of the Act and finalized at § 414.1395(a)(1)(i).

In the CY 2017 Quality Payment Program final rule, we finalized, as technically feasible, to use ACO profile pages as a guide to publicly reporting more APM data (81 FR 77398). Currently, groups who participate in an ACO have an indicator showing their participation as well as a link to the ACO profile page with available performance information. User testing has shown that website users find the ACO information meaningful and displayed in a user-friendly way. For this reason, we plan to continue this approach for APM performance information, including that which comes in via the APP, as technically feasible. We also seek comment on alternative ways to publicly report performance information reporting via APPs and additional considerations to publicly reporting this information.

(3) Facility Affiliations

Compare tool profile pages for clinicians currently provide demographic information, including names, addresses, phone numbers, medical specialties, APM affiliations, Medicare assignment status, board certifications, education and residency, gender, and group and hospital affiliations. User testing consistently shows that Medicare patients and caregivers find value in

these types of information. For hospital affiliations, website users have consistently noted the importance of understanding up front the relationships clinicians may have with facilities where they perform services when searching for a clinician. Specifically, patients and caregivers have noted during user testing that hospital affiliation is important to them, since they may be looking for a clinician to perform a procedure at a hospital or want to know the hospitals a clinician could potentially admit them if needed. Linking from the clinician profile page to their affiliated hospital page has provided a seamless experience for patients and caregivers, as they do not need to separately search for clinicians and hospitals; rather, they can navigate to a hospital profile page directly from the clinician's profile page.

With these user testing findings in mind, and because the Compare Tools include information on a number of other types of facilities beyond hospitals, we believe it would benefit patients and caregivers to also be able to navigate from clinician profile pages to profile pages for other types of facilities such as: IRFs; LTCHs; SNFs; IPFs; HHAs; hospices; and dialysis facilities.

Expanding the types of clinician-facility affiliations, beyond hospital affiliation, publicly reported would allow us to provide additional information about clinicians with or without any hospital affiliation but who are affiliated with other types of facilities. User testing with patients and caregivers has shown that facility affiliations not only for hospitals but also for IRFs, LTCHs, SNFs, IPFs, HHAs, hospices, and dialysis facilities would be helpful to their healthcare decision-making. Specifically, we propose adding affiliations to clinician profile pages for each of the following types of facilities, pending the results of user testing, as applicable and technically feasible: IRFs; LTCHs; SNFs; IPFs; HHAs; hospices; and dialysis facilities. User testing will determine how to best display these affiliations on compare tool clinician profile pages. To determine clinician affiliations to these facilities, we would use claims data the same way we do to display the hospital affiliations currently available on clinician profile pages (77 FR 69165). We build the clinician-hospital affiliations based on observing a clinician practicing

at a given hospital caring for at least three different Medicare patients on three different dates of service in the preceding 6 months, as documented in Medicare claims. We would use similar criteria for determining additional facility affiliations. Clinicians can email the Quality Payment Program Service Center at QPP@cms.hhs.gov if they believe their facility affiliations are displayed incorrectly. We seek comment on the proposal to add affiliations to clinician profile pages for each of the following types of facilities and link to the specific facility's page on the compare tool: IRFs; LTCHs; SNFs; IPFs; HHAs; hospices; and dialysis facilities. Further, we also seek comment on whether there should be a limit on the number of procedures done or conditions treated at a given facility to determine clinician-facility affiliations.

(4) Utilization Data Request for Information

Under section 104(e) of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA), beginning with 2016, the Secretary is required to integrate utilization data information on Physician Compare[244]. To satisfy section 104(e) of the MACRA, we previously implemented a policy to begin to include utilization data in a downloadable format in late 2017 using the most currently available data, and previously finalized that the specific codes to be included would be determined via data analysis and reported at the eligible clinician level (80 FR 71130). We finalized to continue to include utilization data in the downloadable database (81 FR 77398). This information continues to be available today on www.data.cms.gov/provider-data.

To date, we have gathered utilization data for procedures from physician/supplier Medicare Part B non-institutional claims on certain services and procedures and published it in the public use file (PUF) file entitled "Physician and Other Supplier Data." These data are useful to the healthcare industry, healthcare researchers, and other stakeholders who can accurately interpret these data and use them in meaningful analyses. However, this information is presented in a technical way that is not easily accessible or usable by patients, who do not frequently visit data.cms.gov or understand medical procedure coding. This information also does not provide

[244] Physician Compare is defined at § 414.1305 as Physician Compare internet website of CMS (or a successor website).

detail on the specific conditions clinicians treat, though in select cases it may be inferred by the clinicians and researchers reviewing this information.

Section 10331(b)(3) of the Affordable Care Act requires that for public reporting, to the extent practicable, to include processes to assure that the data made available provides a robust and accurate portrayal of a clinician's performance. In our efforts to continue to provide patients and caregivers with meaningful information to make informed healthcare decisions, we believe utilization data may also have a place on clinician and group profile pages, if presented in a consumer-friendly way. We envision utilization data on patient-facing profile pages providing two main areas of benefit. The first is allowing for more granular clinician searches, so that patients not only find specific types of clinicians but also those clinicians experienced in performing specific types of procedures and/or treating specific conditions. The second is providing categories of utilization data in a more plain language display that is usable to patients and their caregivers. In summary, utilization data could provide information to Medicare patients and their caregivers on the specific diagnoses clinicians treat and the frequency with which certain services or procedures are performed by a clinician or group and/or which types of clinicians do not provide certain services.

For example, someone with severe arthritis of the knee may want to search for an orthopedic surgeon who specifically does knee replacements. The way the clinician search works currently would only show results for "orthopedic surgeons" generally. That is, the patient would not see which of these clinicians specialize in this procedure, and likely would need to spend time calling clinicians to ascertain more detail. This could similarly be the case for finding a clinician who focuses on treatment of a certain condition. We believe indicating which clinicians focus on certain procedures or conditions would relieve some of this patient burden, as it would yield more specific search results. There are a number of factors that could influence how procedure- and condition-specific information is determined, which is why we are seeking comment on this topic in several areas.

For display purposes, we may wish to apply a minimum experience level, such as the number of times a clinician performed a procedure or treated a condition, before a clinician profile is annotated to indicate experience with the condition or procedure. Regarding the methods in which we would identify clinician volume of procedures conducted or treat specific conditions, we would need to set a threshold for making these assertions. We have considered several options. The threshold could be based on the number of times a clinician has performed a procedure or treated a condition within a certain time-period, or the proportion of the clinician's practice that is represented by the procedure or condition. Alternatively, thresholds may be devised based on ranking clinicians compared to their peers (specialty and geography may be considered when defining peers) in volume of procedures performed or frequency with which they treat each condition.

We note too that these approaches utilize Medicare claims data only. That is, these data would not include procedures performed or conditions treated for patients who have other types of insurance, since this information is not available. We also acknowledge that this utilization data only represents the care provided to Medicare beneficiaries and clinicians offer care to those with other forms of insurance. This disclaimer could be added to any data that may be publicly reported. We seek comment on these approaches and whether there are any additional ones we should consider.

Additionally, because the Compare Tools utilize a location-based search, national or local thresholds may be appropriate. For example, clinicians in urban centers may specialize in a small number of procedures that they perform on a weekly basis, while a clinician in a rural area might be the most experienced at a given procedure, but not have comparable volume to the urban clinician who practices a very narrow scope. We seek comment on these considerations as well as if there are others.

We also seek comment on the potential types of utilization data that, if publicly reported, could help Medicare patients and their caregivers make informed healthcare decisions, as well as

on technical considerations for presenting a specific affiliation between clinicians and diagnoses and/or procedures. Specifically, we seek comment on:

- The types of conditions and procedures that would most benefit patients' clinician searches;
- Important features and considerations for clinician searches by conditions or procedures;
- The lookback period for Medicare claims in order to identify a clinician's volume of procedures balancing frequency with recent experience (for example, 6 months, 1 year, 2 years);
- Clinician specialties or conditions with special considerations (for example, non-patient facing clinicians);
- The maximum number of conditions treated or procedures performed to display on a given clinicians profile page; and
- Methods to set a threshold of treatment volume to display that a clinician commonly performs a procedure or treats a condition. For example, the threshold could be: (1) the number of times a clinician treated a condition or performed a procedure; (2) the total scope that a condition or treatment represents in a clinician's practice; or (3) the clinician's rank – either overall among all clinicians or among a subset of clinicians – in the number of times that clinician treated a condition or performed a procedure.
- Any other factors or considerations not listed above.

4. Overview of the APM Incentive

(a) Overview

Under the Quality Payment Program, eligible clinicians who are Qualifying APM Participants (QPs) for a year are eligible to receive an APM Incentive Payment in the corresponding payment year for payment years 2019 through 2024. In the CY 2017 Quality Payment Program final rule (81 FR 77480 through 77489), we finalized at § 414.1450(d) that this payment is made based on the clinician's QP status in the QP Performance Period that is 2

years prior (for example, the 2021 payment will correspond to the 2019 performance year), and at § 414.1450(b)(1) that the payment is equal to 5 percent of the estimated aggregate payments for covered professional services in the base period (the year between the QP performance and payment years).

We also finalized at § 414.1450(c)(1) (82 FR 31729) that the APM Incentive Payment would go to the TIN associated with the Advanced APM Entity through which an eligible clinician becomes a QP during the QP Performance Period. In 2019, our first year of making APM Incentive Payments, we learned that the amount of time between the QP Performance Period (during which QP status is attained) and the QP payment year (during which APM Incentive Payments are issued) creates challenges to disbursing the payment for some QPs in a routine and efficient manner. Consistent with section 1833(z) of the Act, QP status is determined for, and connected to, an eligible clinician (identified by their NPI) for the QP payment year based on their Advanced APM participation during the QP Performance Period. We do not believe that changes in a QP's practice or TIN in the interim year between the QP determination and the QP payment year should affect a QP's ability to receive the APM Incentive Payment. To address some of the unanticipated challenges we encountered in disbursing the APM Incentive Payments, in the CY 2021 PFS final rule, we finalized a hierarchy, codified at § 414.1450, that, based on our experience and lessons learned in making payments in 2019, would provide more ways to identify an appropriate TIN to which we can make the APM Incentive Payment when a QP has experienced changes in their practice or TIN since the performance year in which they attained QP status.

(c) APM Incentive Payment recipient

In the 2021 PFS final rule (85 FR 84472), we revised our approach to identifying the TIN or TINs to which we make the APM Incentive Payment, and established a process that enables QPs to provide CMS with updated enrollment information that could be used to complete the payment in the event our approach does not yield an appropriate TIN or TINs. The process for

those QPs to update their information, as well as a preliminary list of NPIs to whom it may be applicable, is included in a Public Notice published annually in the **Federal Register**. We explained in the CY 2021 PFS final rule that the revised approach would involve looking at a QP's relationship with TINs at different, specified periods in time, as well as considering the relationships such TINs have with certain APM Entities and Advanced APMs. We stated that we believe this revised approach enables us to more appropriately identify TINs with which QPs currently have relationships to receive other Medicare payments, and through which the QPs likely would anticipate receiving their APM Incentive Payments. We noted that, when the QP is no longer affiliated with the TIN through which they achieved QP status, this approach would prioritize identifying an alternate TIN with which the QP is affiliated at the time the APM Incentive Payment is made, and to which it would be appropriate to make the payment. The approach we adopted also serves to reduce uncertainty for QPs as they anticipate their APM Incentive Payments, as well as potential delays in our ability to make their payments.

To improve and expand the ways we identify the TIN(s) to which we make the APM Incentive Payment for a QP in a timely and efficient manner, we finalized a policy to sequentially apply a decision hierarchy and codified the hierarchy in § 414.1450(c). We apply the hierarchy by beginning at the first step, and if we are unable to identify one or more TINs with which the QP has a current affiliation at this step, we move to the next and successive steps of the hierarchy until we do identify one or more TINs with which the QP is affiliated.

As discussed in the CY 2021 PFS final rule, if we identify more than one TIN at the applicable step in the hierarchy, we divide the APM Incentive Payment proportionally between the QP's TINs based on the relative paid amount for Part B covered professional services that are billed through each of the TINs. We propose to clarify that, when we divide the APM incentive payment between two or more TINs, we apportion the APM incentive payment among TINs based on the share of total payments for covered professional services made to each TIN in the same base year that we use to calculate the APM incentive payment for the year. To calculate

the APM incentive payment, we sum the total estimated aggregate payments for covered professional services for a QP for the base year, which is based on claims submitted for covered professional services, as codified at § 414.1450(b)(1) through (3). We propose to codify this policy at § 414.1450(c).

In the course of making APM Incentive Payments during CY 2020 PFS final rule, we explored the possibility of expanding our search at each step of the hierarchy at § 414.450(c) to identify potential payee TINs that are associated with the QP during the QP payment year. Based on our findings, we believe expanding our search in this way would enable us to make payments earlier in the calendar year and reduce the number of QP NPIs for whom we cannot identify a payee TIN using our hierarchy, and thus, rely on our Public Notice to request additional information. Therefore, we now propose to revise the hierarchy at § 414.1450(c) so that, using the criterion described in each step of our current regulation, we would first seek to identify a TIN associated with the QP during the base year, and if no such TIN is identified in the base year, we would then seek to identify a TIN associated with the QP during the payment year. We have found in many instances that there are changes in enrollment information in PECOS for a QP over the span of 2 years between the QP performance period and payment year. By using enrollment information for the QP during the payment year, we are more likely to identify an appropriate TIN to which to make the APM incentive payment hierarchy. Under the proposal, applying the steps in the APM incentive payment hierarchy, we would make the APM Incentive Payment to one or more solvent TINs associated with the QP, identified by paid Medicare Part B claims for covered professional services and associated PECOS enrollment information during the base period, and if no such TIN is identified, we would make the payment to such TINs associated with QP during the payment year, according to this section. If no such TIN or TINs can be identified at a particular step, we would move to the next and successive steps listed in § 414.1450(c)(1) through (8) until we identify one or more solvent TIN or TINs with which the QP is associated, and then would make the APM Incentive Payment to any such TIN(s). If more

than one TIN is identified at a step based on paid claims during the applicable year, either the base year or payment year, as we explain earlier and propose to codify in the regulation under § 414.1450(c), we divide the APM Incentive Payment proportionately among such TINs according to the relative total paid amounts for Part B covered professional services to each TIN in same the base year we use to calculate the APM incentive payment.

We propose, for each step in the APM incentive payment decision hierarchy, we would first search for a payment TIN or TINs associated with the QP during the base period., If no such TIN is found during the base year, we would search for any TIN or TINs that are similarly situated with respect to the criterion at that step in the hierarchy and associated with the QP during the payment year. If such a TIN or TINs are found, we would make the APM incentive payment to such TIN or TINs. We would continue at each step in the hierarchy to first attempt to identify the relevant base year TIN or TINs associated with the QP because we believe such TINs are more likely to be associated with the APM Entity through which the QP attained their QP status during the QP performance period. However, if no such TIN is found in the base year, we would proceed at that step to search for a TIN or TINs with which the QP is associated in the payment year.

We believe this approach creates the greatest opportunity to identify and pay an appropriate TIN as efficiently and early as possible during the payment year. The proposed change would maintain the current hierarchy while adding a sub-step at each level in which we would conduct our search based on more current enrollment information. The proposed change would allow for the identification of an appropriate TIN or TINs at each step by first checking the base year, and then checking the payment year before moving on to the next step in the process. We believe that by maintaining the current hierarchy we would continue to incent Advanced APM participation by prioritizing making payments to TINs affiliated with Advanced APMs, even if they are not in the same Advanced APM Entity through which QP status originally was achieved. For example, we anticipate that many eligible clinicians who earned QP

status in 2020 through a practice participating in the CPC+ model would join the new Primary Care First (PCF) model in 2022.

In the event the eligible clinician's CPC+ participant TIN is no longer active, our proposed modification to the hierarchy would enable us to pay the APM Incentive Payment to a TIN participating in the PCF model in 2022. We continue to believe it would be appropriate to first identify the relevant base year TIN or TINs at each step in of the hierarchy because we believe those TINs are more likely to be associated with the APM Entity through which the QP attained their QP status during the QPs performance period. However, if no TIN is found in the base year, we would proceed to identify any TINs associated with the QP in the payment year; and then use the same process for the subsequent steps in the hierarchy until we identify one or more TINs associated with the QP at a particular step for a particular year (base year or payment year). We believe this approach will be a more efficient and expeditious way to identify a TIN or TINs to which to make the APM incentive payment for QPs.

We seek comment on this proposal to amend our APM Incentive Payment decision hierarchy to include an additional attempt to identify and pay, at each step, one or more solvent TINs associated with the QP during the payment year when no such TIN is identified for the QP in the base year.

c. Advanced APMs

1. Qualifying APM Participant Determination

a. General Overview:

In the CY 2017 Quality Payment Program final rule (81 FR 77439 through 77445), we finalized our policy at § 414.1425(b) for Qualifying APM Participant (QP) determinations. For the purposes of making QP determinations, an eligible clinician must be present on the Participation List of an APM Entity in an Advanced APM on one of the "snapshot dates" (March 31, June 30, or August 31) for the QP Performance Period. An eligible clinician included on a Participation List on any one of such dates is included in the APM Entity group

even if that eligible clinician is not included on that Participation List at one of the prior- or later-listed dates. We perform QP determinations for the eligible clinicians in an APM entity group three times during the QP Performance Period using claims data for services furnished from January 1 through each of the respective QP snapshot dates. An eligible clinician can be determined to be a QP only if the eligible clinician appears on the Participation List on a snapshot date that we use to determine the APM Entity group and to make QP determinations at the APM Entity group level based on participation in the Advanced APM. For eligible clinicians who appear on a Participation List in more than one APM Entity, but do not to achieve QP status based on any APM Entity level determinations, we make QP determinations at the individual level as described in § 414.1425(c)(4). Likewise, for eligible clinicians on an Affiliated Practitioner list for an Advanced APM we make QP determinations at the individual level three times during the QP Performance Period using claims data for services furnished from January 1 through each of the respective QP determination snapshot dates as described in § 414.1425(b)(2).

b. QP thresholds and Partial QP thresholds

Section 1833(z)(2)(B) of the Act describes the thresholds for the level of participation in Advanced APMs required for an eligible clinician to become a QP for a year. The Medicare Option, based on Part B payments for covered professional services or counts of patients furnished covered professional services under Part B, is applicable beginning in the payment year 2019. The All-Payer Combination Option, which uses the Medicare Option, as well as an eligible clinician's participation in Other Payer Advanced APMs, is applicable beginning in the payment year 2021. In the CY 2017 Quality Payment Program final rule (81 FR 77433 through 77439) we finalized our policy for the Medicare Option as codified at § 414.1430(a) and the All-Payer Option at § 414.1430(b).

Section 114 of division CC of the CCA amended section 1833(z)(2)(B) of the Act with regard to payment years 2023 and 2024 (which correspond respectively to performance years 2021 and 2022), specifically by freezing for such years the applicable payment amount and

patient count thresholds used to make determine an eligible clinician's QP determinations status. Specifically, the CAA amended section 1833(z)(2)(B) of the Act to continue the QP payment amount thresholds that apply in payment years 2021 and 2022 to payment years 2023 and 2024. Additionally, the CAA, 2021 amended section 1833(z)(2)(D) of the Act to require that, for payment years 2023 and 2024, the Secretary use the same percentage criteria for the QP patient count threshold that are applied in payment year 2022. As such, the Medicare Option QP thresholds payment years 2023 and 2024 (for performance years 2021 and 2022) will remain at 50 percent for the payment amount method and 35 percent for the patient count method. The CAA also amended section 1848(q)(1)(C)(iii) of the Act to extend the Partial QP thresholds that are established for payment years 2021 and 2022 through payment year 2024. Therefore, the Partial QP thresholds for payment years 2023 and 2024 (performance years 2021 and 2022) will remain at 40 percent for the payment amount method and 25 percent for the patient count method. For performance years beginning with 2023 (corresponding to payment years beginning with 2025) the statute prescribes the QP thresholds for the payment amount method, and the QP thresholds we established for the patient count method at § 414.1430 will take effect. Specifically, for performance years beginning with 2023, the Medicare Option QP thresholds will be 75 percent for the payment amount method and 50 percent for the patient count method. The Partial QP thresholds under the Medicare Option will be 50 percent for the payment amount method and 35 percent for the patient count method.

Under the All-Payer Combination Option, the QP thresholds for performance years 2021 and 2022 (corresponding to payment years 2023 and 2024) will be 50 percent for the payment amount method and 35 percent for the patient count method. The Partial QP thresholds for performance years 2021 and 2022 will be 40 percent for the payment amount method and 25 percent for the patient count method. In order to become a QP through the All-Payer Combination Option, eligible clinicians must first meet certain threshold percentages under the Medicare Option. For performance years 2021 and later (corresponding to payment year 2023

and later), the minimum Medicare Option threshold an eligible clinician must meet for the All-Payer Combination Option is 25 percent for the payment amount method or 20 percent under the patient count method.

TABLE 63: QP Threshold Score Updates

Medicare Option - Payment Amount Method			
Performance year / Payment Year	2021/2023 (Percent)	2022/2024 (Percent)	2023/2025 and later (Percent)
QP Payment Amount Threshold	50	50	75
Partial QP Payment Amount Threshold	40	40	50
Medicare Option - Patient Count Method			
Performance year / Payment Year	2021/2023 (Percent)	2022/2024 (Percent)	2023/2025 and later (Percent)
QP Patient Count Threshold	35	35	50
Partial QP Patient Count Threshold	25	25	35

All-Payer Combination Option - Payment Amount Method						
Performance year / Payment Year	2021/2023 (Percent)		2022/2024 (Percent)		2023/2025 and later (Percent)	
QP Patient Count Threshold	50	25	50	25	75	25
Partial QP Patient Count Threshold	40	20	40	20	50	20
	Total	Medicare Minimum	Total	Medicare Minimum	Total	Medicare Minimum
All-Payer Combination Option - Patient Count Method						
Performance year / Payment Year	2021/2023 (Percent)		2022/2024 (Percent)		2023/2025 and later (Percent)	
QP Patient Count Threshold	35	20	35	20	50	20
Partial QP Patient Count Threshold	25	10	25	10	35	10
	Total	Medicare Minimum	Total	Medicare Minimum	Total	Medicare Minimum

V. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501 et seq.), we are required to publish a 60-day notice in the **Federal Register** and solicit public comment before a "collection of information" requirement is submitted to the Office of Management and Budget (OMB) for review and approval. For the purposes of the PRA and this section of the preamble, collection of information is defined under 5 CFR 1320.3(c) of OMB's implementing regulations.

To fairly evaluate whether an information collection should be approved by OMB, PRA section 3506(c)(2)(A) requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.

- The accuracy of our burden estimates.

- The quality, utility, and clarity of the information to be collected.
- Our effort to minimize the information collection burden on the affected public, including the use of automated collection techniques.

We are soliciting public comment on each of the required issues under section 3506(c)(2)(A) of the PRA for the following information collection requirements.

A. Wage Estimates

To derive average costs, we used data from the U.S. Bureau of Labor Statistics' May 2020 National Occupational Employment and Wage Estimates for all salary estimates (http://www.bls.gov/oes/current/oes_nat.htm). In this regard, Table 64 presents the mean hourly wage, the cost of fringe benefits and overhead (calculated at 100 percent of salary), and the adjusted hourly wage.

TABLE 64: National Occupational Employment and Wage Estimates

Occupation title	Occupation code	Mean hourly wage ($/hr)	Fringe benefits and overhead ($/hr)	Adjusted hourly wage ($/hr)
Administrative Support Worker	43-9000	18.41	18.41	36.82
Anesthesiologists	29-1211	130.50	130.50	261.00
Billing and Posting Clerks	43-3021	20.01	20.01	40.02
Bookkeeping, Accounting, and Auditing Clerks	43-3031	21.20	21.20	42.40
Computer System Analysts	15-1211	47.61	47.61	95.22
Family Medicine Physicians	29-1215	103.06	103.06	206.12
General Internal Medicine Physicians	29-1216	101.42	101.42	202.84
Licensed Practical and Licensed Vocational Nurses	29-2061	24.08	24.08	48.16
Medical and Health Services Managers	11-9111	57.12	57.12	114.24
Obstetricians and Gynecologists	29-1218	114.96	114.96	229.92
Office and Administrative Support Workers, All Other	43-9199	18.91	18.91	37.82
Pediatricians, General	29-1221	88.74	88.74	177.48
Physicians, All Other; Ophthalmologists, Except Pediatric	29-1228	105.22	105.22	210.44
Psychiatrists	29-1223	104.38	104.38	208.76
Secretaries and Administrative Assistants	43-6014	19.43	19.43	38.86
Surgeons, Except Ophthalmologists	29-1248	120.99	120.99	241.98

For the CY 2019 and CY 2020 PFS final rules, we used the BLS wage for "Physicians and Surgeons" (occupation code 29-1060) to estimate the cost for Physicians. In BLS' most recent set of occupational wage rates (dated May 2020) they have discontinued this occupation in

their wage data. As a result, in order to estimate the burden for Physicians, we are using a rate of $217.32/hr which is the average of the following BLS occupations and adjusted wage estimates.

TABLE 65: Physician Wage Estimates

Occupation title	Occupation code	Mean hourly wage ($/hr)	Fringe benefits and overhead ($/hr)	Adjusted hourly wage ($/hr)
Anesthesiologists	29-1211	130.50	130.50	261.00
Family Medicine Physicians	29-1215	103.06	103.06	206.12
General Internal Medicine Physicians	29-1216	101.42	101.42	202.84
Obstetricians and Gynecologists	29-1218	114.96	114.96	229.92
Pediatricians, General	29-1221	88.74	88.74	177.48
Physicians, All Other; Ophthalmologists, Except Pediatric	29-1228	105.22	105.22	210.44
Psychiatrists	29-1223	104.38	104.38	208.76
Surgeons, Except Ophthalmologists	29-1248	120.99	120.99	241.98
Total				1,738.54
Average Wage (1,738.54/8)				217.32

As indicated, we BLS' hourly wage estimates by a factor of 100 percent. This is necessarily a rough adjustment, both because fringe benefits and overhead costs vary significantly from employer to employer, and because methods of estimating these costs vary widely from study to study. Nonetheless, we believe that doubling the hourly wage to estimate total cost is a reasonably accurate estimation method.

B. Proposed Information Collection Requirements (ICRs)

1. ICRs Requiring Certain Manufacturers to Report Drug Pricing Information for Part B (§§ 414.802 and 414.806)

Pending our finalization of the following provisions, the proposed changes will be subject to the standard PRA process under OMB control number 0938-0921 (CMS-10110). The standard PRA process includes the publication of 60- and 30-day **Federal Register** notices that will provide the public with opportunities for public review and comment. We expect to publish the 60-day notice shortly after the publication of the CMS-1751-F final rule.

The new provisions at §§ 414.802 and 414.806 would implement new statutory requirements under sections 1847A and 1927 of the Act, as amended by section 401 of Division CC, Title IV of the CAA, 2021 (for the purposes of this section of this proposed rule, hereinafter is referred to as "section 401"), which requires manufacturers without a Medicaid drug rebate

agreement to report ASP information to CMS for calendar quarters beginning on January 1, 2022, for drugs or biologicals payable under Medicare Part B and described in sections 1842(o)(1)(C), (E), or (G) or 1881(b)(14)(B) of the Act, including items, services, supplies, and products that are payable under Part B as a drug or biological. Specifically, to implement the new reporting requirements for manufacturers without Medicaid drug rebate agreements, we are proposing to modify: (1) the definition of drug at § 414.802; and (2) the regulations describing civil money penalties at § 414.806. The new requirements will improve the accuracy of reported payment limits and limit the use of WAC-based pricing.

For the purposes of section 401's new reporting requirements, for manufacturers without Medicaid drug rebate agreements, confidentiality requirements appear in section 1847A(f)(2)(D) of the Act which states that the ASP data are confidential and shall not be disclosed by the Secretary in a form which discloses the identity of a specific manufacturer or wholesaler or prices charged for drugs or biologicals by such manufacturer or wholesaler, except—as the Secretary determines to be necessary to carry out this section (including the determination and implementation of the payment amount), or to carry out section 1847B of the Act; to permit the Comptroller General of the United States to review the information provided; to permit the Director of the Congressional Budget Office to review the information provided; to permit the Medicare Payment Advisory Commission to review the information provided; and to permit the Medicaid and CHIP Payment and Access Commission to review the information provided.

For manufacturers with Medicaid drug rebate agreements, confidentiality requirements appear in section 1927(b)(3)(D) of the Act which states that the ASP data are confidential and shall not be disclosed by the Secretary in a form which discloses the identity of a specific manufacturer or wholesaler, prices charged for drugs by such manufacturer or wholesaler, except—as the Secretary determines to be necessary to carry out this section, to permit the Comptroller General to review the information provided, and to permit the Director of the Congressional Budget Office to review the information provided.

The burden associated with these requirements is the time and effort required by manufacturers of drugs and biologicals payable under Medicare Part B to prepare and submit the required ASP data to CMS. We have previously estimated the burden associated with ASP reporting requirements for manufacturers with Medicaid drug rebate agreements. Because section 401 extends the ASP reporting requirements to manufacturers without Medicaid drug rebate agreements, we are updating our burden estimates to account for the additional manufacturers who will now be required to report ASP data to us.

As described in section III.D.1. of this proposed rule, in considering whether to exclude repackagers from the reporting requirements at section 1847A(f)(2) of the Act, we conducted analyses to estimate: (1) the proportion of repackaged products in our existing ASP data; (2) the number of new ASP submissions we can expect as a result of the new reporting requirements under section 401; and (3) the proportion of those (new) submissions that involve repackaged products.

Based on our existing ASP data, 547 manufacturers (respondents) report ASP data to us. Of these, 331 respondents have products for which they are required to submit ASP data, and 216 respondents have products for which they currently submit ASP data voluntarily, but will now be required to do so under section 1847A(f)(2) of the Act. (331 + 216 = 547)

We also estimate that under the new reporting requirements of section 401, a total of 568 respondents have products for which they will now be required to report ASP data to us. The 568 includes the 216 respondents (above) and 361 respondents who have products (identified by us) for which they will now be required to submit ASP data under section 1847A(f)(2) of the Act and did not previously voluntarily submit these data to us. There were 9 respondents who voluntarily submitted ASP data for some, but not all, of their products identified in our analysis. (216 + 361 – 9 overlap = 568)

We estimate a total of 740 respondents will report ASP data to us. This includes the 547 respondents who currently submit ASP data to us (voluntarily, or as currently required), and the

361 respondents who have products (identified by us) for which they will now be required to submit ASP data under section 1847A(f)(2) of the Act and did not previously voluntarily submit these data to us. However, there were 168 respondents who currently are required to submit ASP data to us, or who voluntarily submit ASP data to us, for whom we identified additional products that they did not previously submit ASP data, and will now be required to submit ASP data for these additional products under the new reporting requirements of section 401. (547 + 361 – 168 overlap = 740)

These respondents submit ASP data four times per year for a total of 2,960 submissions (740 respondents x 4 submissions/year).

Based on our experience with ASP data reporting, we continue to estimate that the time associated with reporting, record keeping, and third-party disclosure for ASP data reporting is 13 hours: 10 hours to review instructions and search existing data resources and 3 hours to gather the data, compile the data, submit via electronic media and upload to the automated system. This estimate includes labor costs for respondents to extract data from their information systems and to compile and submit the ASP data, including signature, to CMS via the internet-based automated system and electronic media. This estimate also includes the cost of the compact disc (CD) and overnight mail service used to report the data, time to review instructions, search existing data resources, gather the data needed, and complete and review the information collection.

Based on these analyses and assumptions, we estimate an annual burden of 38,480 hours (2,960 submissions/yr x 13 hours per response) at a cost of $1,495,332.80 (38,480 hr x $38.86/hr), rounding to $1,495,333.

TABLE 66: Annual Requirements and Burden for Requiring Certain Manufacturers to Report Drug Pricing Information for Part B

Regulation Section(s) Under Title 42 of the CFR	OMB Control Number	Respondents	Total Annual Responses	Burden per Response (hours)	Total Annual Time (hours)	Labor Cost ($/hr)	Total Cost ($)
§§ 414.802, 414.806 (Requiring Certain Manufacturers to Report Drug Pricing Information for Part B)	0938-0921	740	2,960	13	38,480	38.86	1,495,333

We welcome comment on the likely costs or savings manufacturers from this provision.

2. ICRs Regarding the Medicare Shared Savings Program (Sections VII.F.8.a. and b.)

Section 1899(e) of the Act provides that chapter 35 of title 44 U.S.C., which includes such provisions as the PRA, shall not apply to the Shared Savings Program. Accordingly, we are not setting out burden under the authority of the PRA. Please refer to sections VII.F.8.a. and b. of this proposed rule for a discussion of the impacts associated with this rule's proposed changes to the Shared Savings Program's quality reporting requirements, beneficiary assignment methodology, repayment mechanism requirements, requirements for disclosure of prior participation in the Shared Savings Program by the ACO, ACO participants, and ACO providers/suppliers, requirements for ACOs to submit sample ACO participant agreements and executed ACO participant agreements to CMS, and beneficiary notification requirements.

3. ICRs Regarding the Medicare Ground Ambulance Data Collection System (§ 414.626)

Section 1834(l)(17) of the Act requires that the Secretary develop a ground ambulance data collection system that collects cost, revenue, utilization, and other information determined appropriate by the Secretary with respect to providers of services and suppliers of ground ambulance services (ground ambulance organizations). Section 1834(l)(17)(I) of the Act states that the PRA does not apply to the collection of information required under section 1834(l)(17) of the Act. Accordingly, this collection of information section does not set out any burden for the proposed provisions. Please see section VII. of this preamble for a discussion of the estimated impacts.

4. ICRs Regarding the Medicare Diabetes Prevention Program (MDPP) Expanded Model (§§ 410.79, 414.84, 424.205, and 424.502)

In section III.L. of this proposed rule, we propose policies necessary to shorten the Medicare Diabetes Prevention Program (MDPP) services period to one (1) year on a prospective basis, amend and update the amount of the performance payments for the Core Sessions and Core Maintenance Sessions, and make changes to eliminate the ongoing maintenance phase for MDPP beneficiaries who start MDPP set of services on or after January 1, 2022. In addition, we propose to add a provision to waive the provider enrollment Medicare application fee for all organizations enrolling in Medicare as MDPP suppliers during the MDPP expanded model. We expect the proposed policies will increase the number of eligible organizations willing to enroll as MDPP suppliers. We also anticipate that the shortened service period will make MDPP more marketable to beneficiaries in that their time commitment is reduced and less intimidating with a 12-month vs 24-month service period. We anticipate the shortened MDPP services period will reduce the recordkeeping burden for suppliers. Section 1115A(d)(3) of the Act exempts Innovation Center model tests and expansions, which include the MDPP expanded model, from the provisions of the PRA. Accordingly, this collection of information section does not set out any burden for the proposed provisions. Please see section VII. of this preamble for a discussion of the estimated impacts.

5. ICRs for Prepayment and Post-payment Definitions, Documentation Request Timeframes, and Payment Denials for Noncompliance with Documentation Requests (§§ 405.902, 405.903, 405.929, and 405.930)

In section III.N.2. of this proposed rule, we are proposing to: (1) define key terms including “additional documentation,” “additional documentation request,” “post-payment medical review,” and “prepayment medical review;” (2) codify contractors’ authority to request additional documentation for prepayment and post-payment review within established timeframes; (3) codify timeframes for response to requests for documentation; (4) codify result of a failure to comply with prepayment or post-payment documentation request(s) by a provider or supplier, specifically denial of payment.

The codification of contractor authority to request additional documentation for post-payment reviews, associated timeframes, and resulting denials for failure to comply with these requests is not subject to the PRA per 5 CFR 1320.3(h)(9). The request for additional documentation would be on a case-by-case basis using non-standardized follow-up questions.

With regard to the (1) definitions for "additional documentation" and "additional documentation request," "post-payment medical review," and "prepayment medical review;" (2) the codification of contractor authority to request additional documentation for pre-payment reviews; (3) the associated provider and supplier timeframes for providing additional documentation from the pre-payment reviews; and (4) possible denials for failure to comply with these requests, we do not expect that these proposals, if finalized, would affect our information collection burden estimates because these policies do not require providers or suppliers to submit any more documentation to CMS than what is already approved by OMB under control number 0938-0969 (CMS-10417). The proposed regulations simply codify certain requirements by clarifying definitions, timeframes, and results for noncompliance.

6. ICRs Regarding the Requirement for Electronic Prescribing for Controlled Substances for a Covered Part D Drug Under a Prescription Drug Plan or an MA-PD Plan (§ 423.160(a))

Pending our finalization of the following provisions, the proposed changes will be subject to the standard PRA process under OMB control number 0938-1396 (CMS-10755) to give stakeholders optimal opportunity to comment on our proposed burden for this provision, given how dynamic the burden for EPCS is. The standard PRA process includes the publication of 60- and 30-day **Federal Register** notices that will provide the public with opportunities for public review and comment. We expect to publish the 60-day notice shortly after the publication of the final rule.

The purpose of this proposal is to continue to implement section 2003 of the SUPPORT for Patients and Communities Act, which requires that the prescribing of a Schedule II, III, IV, or V controlled substance under Medicare Part D be done electronically in accordance with an

electronic prescription drug program beginning January 1, 2021, subject to any exceptions, which HHS may specify. We refer readers to the CY 2021 PFS final rule (85 FR 84472) for our previously finalized requirements and burden for the first phase of implementing this statutory mandate, which required prescribers to use the NCPDP SCRIPT 2017071 standard for Electronic Prescription for Controlled Substances (EPCS) prescription transmissions. The purpose of this proposed rule is to propose delaying the date for CMS to begin taking compliance actions, proposing certain exceptions to the mandate, and proposing a compliance threshold.

In the CY 2021 PFS final rule, we estimated that the one-time burden to implement this provision would be 828,750 hours (165,750 prescribers * 6 hr) at a cost of $36,418,590 (994,500 hr * $36.62/hr). We arrived at the estimate of 165,750 prescribers having to implement EPCS based on taking the 425,000 Part D prescriber practices, and decreasing that amount by 60 percent to account for the 60 percent of prescriber practices that likely already had EPCS in place by January 1, 2021. Based on our current PDE data, we estimate that 70 percent of Part D prescribers already conduct EPCS,[245] which would leave 30 percent of Part D prescribers that would have to implement EPCS, if we did not propose any exceptions to this mandate. We also propose that long term care facilities will have an extension until January 1, 2025 along with the following exceptions to the EPCS mandate: (1) for prescriptions issued when the prescriber and dispensing pharmacy are the same entity; (2) cases where prescribers issue only a small number of Part D; (3) cases where a prescriber's NCPDP database address is in a geographic service area of an emergency or disaster declared by a federal, state or local government entity; and (4) cases where a prescriber has received a CMS-approved waiver. These exceptions will result in fewer prescribers being required to conduct EPCS.

Based on our PDE data, we believe that these exceptions will substantially decrease the number of prescribers having to implement EPCS as a result of this regulation. We have listed the exceptions and the estimated number of prescribers falling under each exception in the Table

[245] This information is based on PDE data pulled on April 6, 2021.

67.[246] We do not anticipate that our proposal to include a compliance threshold of 70 percent will have any material impact on the impact of this provision. The reason for this is that based on our PDE data and conversations with prescribers, we believe that the 30 percent or less of the time that prescribers are not e-prescribing is because they are unable to e-prescribe, so they would have applied for a waiver. Although there are sometimes scenarios where beneficiaries may request that their prescriptions not be transmitted electronically, it appears as though those circumstances are not enough to make a material impact, since beneficiaries often change their views when they are given countervailing reasons that the prescriptions should be transmitted via EPCS.

TABLE 67: Number of Affected Prescribers by Exception Type

Exception	Estimated Number of Impacted Prescribers*
Cases where the Practitioner and Dispensing Pharmacy Are the Same Entity	75,927
Prescribers who Prescribe fewer than 100 Part D controlled substance prescriptions per year	470,000
Cases where Prescriber is in a Disaster or Emergency Area	30,964
Cases where Prescriber Applies for a Waiver	100
Individuals in Long Term Care Facilities	5,773
Total Number of Impacted Prescribers	582,764

* This information is based on PDE data pulled on April 6, 2021.

Table 67 gives our estimate of the number of prescribers affected by our proposed exceptions broken down by the type of exception. As shown in Table 67, we estimate that our exceptions will exempt approximately 582,664 prescribers from the EPCS requirement, which consistutes approximately 38 percent of prescribers, since there are an estimated 1,548,221 Part D prescribers[247] (582,664/1,548,221). Since the number of exempted prescribers from this mandate far exceeds the number of prescribers who currently do not e-prescribe controlled substances in Part D, we do not expect that the total number of Part D prescribers who electronically prescribe controlled substances will increase following our implementation of this

[246] This information is based on PDE data pulled on April 6, 2021.
[247] This information is based on PDE data pulled on April 6, 2021.

mandate. As a result, we do not believe there will be a measurable impact to the prescriber community as a whole, should this provision be finalized, as proposed.

However, for individual prescribers who have to implement this mandate, we expect that the implementation costs will be the same amounts that we finalized in the CY 2021 PFS final rule. Based on the modeling that we have seen, we have found that EHR companies provide the initial set-up of e-prescribing software free of charge, provided the prescribers pay the per transaction cost of $1.88 mentioned in the CY 2021 PFS final rule. Based on the comments received on our CY2021 PFS proposed rule, we understand that implementing EPCS can lead to technological glitches, and then fixing those issues. We understand that the EHR companies remedy the issues free of charge. However, we also understand that such fixes take time away from the medical office staff. We estimate that such fixes would take the staff approximately 1 extra hour from the estimate given in our CY 2020 PFS proposed rule, when averaged across all prescribers. As a result, we have changed our one-time burden estimate of e-prescribing set-up from 5 hours to 6 hours per provider, which means a total of 994,500 hours (165,750 prescribers * 6 hr) at a cost of $36,617,490 (994,500 hr * $36.82/hr), since we anticipate that this work would be completed by an Administrative Support Worker. In this regard, the impact of this rule is plus 1 hour per response, plus 165,750 hours (165,750 prescribers x 1 hr/response), and $ 6,102,915 (165,750 hr * $36.82/hr).

We have proposed that prescribers have the ability to apply for a waiver from the EPCS requirement, should they be facing circumstances beyond their control that prevent them from e-prescribing, and these circumstances are not the result of a natural disaster or public health emergency. Due to the high prevalence of EPCS, the miniscule compliance actions that we are proposing for non-compliance, and the number of prescribers that we expect to exempt from the mandate, we only expect to receive about 100 attestations per year. Although we proposed certain fields be in this attestation, these were minimal, and there was no accompanying documentation required. (Note, as outlined in section II.Q. of this final rule, to meet the standard

for a waiver, prescribers must provide documentation showing the existence of a circumstance beyond their control and that such a circumstance prevents them from conducting EPCS.) We expect that each attestation would take 10 minutes (0.1667 hr) for a prescriber at $210.44/hr to complete. In aggregate, CMS estimates an annual burden for filling out attestations of 16.67 hours (100 attestations × 0.1667 hr) at a cost of $3,508.04 (16.67 hr × $210.44/hr). In addition, we solicit comment on any other potential information collection implications.

TABLE 68: Burden for Electronic Prescribing of Controlled Substances Requirement

Regulation Section(s) Under Title 42 of the CFR	OMB Control Number	Respondents	Total Annual Responses	Burden per Response (hours)	Total Annual Time (hours)	Labor Cost ($/hr)	Total Cost ($)
§ 423.160(a) (Electronic Prescribing for Controlled Substances for a Covered Part D Drug Under a Prescription Drug Plan or an MA-PD Plan)	0938-1396	100	100	0.1667	16.67 hours	210.44	3,508.04

7. ICRs Regarding Open Payments Proposals included in the CY 2022 PFS (42 CFR part 403)

The following requirement and burden changes will be submitted to OMB for approval under control number 0938-1237 (CMS-10495). The following estimates burden changes to the Open Payments final rule at §§ 403.900 through 403.914 as proposed by this proposed rule.

a. Payment Context Field for Teaching Hospitals

The proposed mandatory context field is a new requirement for reporting entities submitting and attesting to records that are attributed to teaching hospitals only. The field will be freeform text entry. We estimate that for each applicable manufacturer and applicable group purchasing organization (GPO), the inclusion of this field for collection and reporting activities will average an additional 6 total hours. The applicable instrument for these activities in the current PRA package is the "General-Research-Ownership Submission Data Elements". At the support staff cost per FTE of $42.40/hr, this would increase costs by $254.40 (6 hr x $42.40/hr) per applicable manufacturer or applicable GPO submitting teaching hospital records. However, because we anticipate fewer disputes due to this proposed field, we believe it will decrease dispute resolution by 2 total hours for support staff at $42.40/hr respectively, reducing costs by

$84.80 (2 hr x $42.40/hr) per applicable manufacturer and applicable GPO. This results in a net increase in burden for each applicable manufacturer and applicable GPO submitting teaching hospital records of $169.60 ($254.40 - $84.80). In Program Year (PY) 2019, 794 applicable manufacturers and applicable GPOs submitted at least one teaching hospital record, meaning the increase in burden will be a total of 3,176 hours (4 hours x 794 reporting entities) at a cost of $42./40/hr or a total of $134,662.40 (3,176 x $42.40).

In addition, we estimate this proposal would reduce teaching hospital dispute resolution estimates by 2 hours per support staff FTE at $37.82/hr or $75.64 (2 hr x $37.82/hr) per teaching hospital with records attributed to them. In PY 2019, 1,202 hospitals had record attributed to them, so for teaching hospitals we estimate a total burden reduction of 2,404 hours at a cost of $90,919.28 (2,404 x $75.64).

In aggregate, we estimate an annual burden of 772 hours (3,176 - 2,404) at a cost of $43,743.12 ($134,662.40 - $90,919.28).

b. Optional Annual Recertification

The annual recertification is voluntary for applicable manufacturers or applicable group purchasing organizations. We approximate that 15 percent of applicable manufacturers and group purchasing organizations, or 240 reporting entities (0.15 [1,595 applicable manufacturers and applicable GPOs]) will complete and submit the proposed optional annual recertification. We anticipate that it will be a simple check box form to be included in the AM (Attestation) and GPO (Attestation) Annual IC Requirement and the “Attestation and Assumptions Screen Shots” Instrument in the existing PRA package. We estimate that it would take 0.5 hours at $42.40/hr for support staff to complete and submit the recertification. In aggregate, we estimate an added annual burden of 120 hours (240 entities x 0.5 hr/response) at a cost of $5,088 (120 hr x $42.40/hr).

c. Defining a Physician-Owned Distributorship (42 CFR 403.902)

The proposed new definition is not subject to the PRA since it would not revise, add, or

remove any collection of information requirements or burden.

d. Disallowing Record Deletion Without Reason (§ 403.904(a)(3))

This proposal clarifies that entities are not permitted to delete records without reason once their timeliness, completeness, and accuracy has been attested to. In order to ensure compliance with this requirement, a freeform text dialogue box will be added to the system when records are deleted that asks the applicable manufacturer or GPO to input a reason for the deletion. This would be included in the AM (Data collection and submission) and Applicable GPO (Data Collection and Submission) IC requirements and the "Open Payments User Guide" Instrument in the existing PRA package. We anticipate that this would take an average of 2 hours at $42.40/hr to input a reason for the deletion. In aggregate, we estimate an added annual burden of 80 hours (40 applicable manufacturers or GPOs deleting records annually x 2 hr/response) at a cost of $3,392 (80 hr * $42.40/hr).

e. Disallow Publication Delays of General Payments

A very small number of general payments are delayed from publication by reporting entities every year, and these records will simply either be reported as research records instead, or not delayed at all. Therefore, we anticipate a negligible burden for this proposal.

f. Short Term Loans (§ 403.902)

This proposal is merely a clarification of an existing requirement in regulation text. The purpose of this language is to clarify that the exemption for short-term loans from reporting requirements only applies for loans of less than 91 cumulative days per calendar year. In other words, multiple short-term loans in a calendar year would still meet reporting requirements if they add up to 91 days or greater. We do not believe this proposal will change reporting behavior, and therefore do not anticipate an increase in burden.

g. Remove General Ownership Records

Currently the Open Payments system allows for a reporting entity to submit either a general record with a nature of payment category of ownership, or an ownership and investment

interest record. For Program Years 2015-2019, approximately 92 applicable manufacturers and GPOs reported records with the nature of payment category of ownership. Since reporting these general records as ownership records will require the addition of two additional pieces of information, we anticipate that it will take these 92 entities an additional 3 hours at $42.40/hr to report the two extra fields. In aggregate, we estimate an added annual burden of 276 hours (92 entities x 3 hr/response) at a cost of $11,702 (276 hr x $42.40/hr). This would be included in the AM (Data collection and submission) and Applicable GPO (Data Collection and Submission) IC requirements and the "Open Payments User Guide" Instrument in the existing PRA package.

h. Updated Contact Information (§ 403.908(c)(3))

This proposal creates a requirement for reporting entities to keep their contact information up to date with CMS. The ability to communicate with a reporting entity is important because CMS may need to contact the entity in the case of perceived issues with the records. Applicable manufacturers and applicable GPOs will only be required to update their contact information if the two contacts provided become obsolete due to a change in the organization. This will also only apply to entities that do not have records to report for 2 years after a program year in which they reported. Therefore, we anticipate that it will only affect approximately 30 applicable manufacturers and applicable group purchasing organizations. We estimate that it would take 0.5 hours at $42.40/hr to update the contact information. In aggregate, we estimate an added annual burden of 15 hours (30 entities x 0.5 hr/response) at a cost of $636 (15 hr x $42.40/hr). This would be included in the AM (Data collection and submission) and Applicable GPO (Data Collection and Submission) IC requirements and the "Open Payments User Guide" Instrument in the existing PRA package.

i. Summary

TABLE 69: Open Payments Burden Changes

	Total Increase in Burden	Total Decrease in Burden	Total
Teaching Hospital Contact Field	$201,993.60	$158,250.48	$43,743.12
Optional Annual Recertification	$5,088.00	$0.00	$5,088.00
Defining a Physician Owned Distributorship	$0.00	$0.00	$0.00
Disallowing Record Deletion Without Reason	$3,392.00	$0.00	$3,392.00
Disallow Publication Delays of General Payments	$0.00	$0.00	$0.00
Short Term Loans	$0.00	$0.00	$0.00
Remove General Ownership Records	$11,702.00	$0.00	$11,702.00
Updated Contact Information	$636.00	$0.00	$636.00
			$64,561.12

8. The Quality Payment Program (QPP) (42 CFR part 414 and section IV. of this proposed rule)

The following QPP-specific ICRs reflect this rule's proposed policy changes as well as adjustments to the policies that have been finalized in the CY 2017 and 2018 Quality Payment Program final rules (81 FR 77008 and 82 FR 53568, respectively), the CY 2019, CY 2020 and CY 2021 PFS final rules (83 FR 59452, 84 FR 62568 and 85 FR 84472, respectively).

a. Background

(1) ICRs Associated with MIPS and Advanced APMs

There is a series of ICRs associated with the Quality Payment Program, including for MIPS and Advanced APMs. The MIPS ICRs consist of: registration for virtual groups (see section V.B.8.b of this proposed rule); QCDR self-nomination applications and other requirements (see section V.B.8.c.(2) of this proposed rule); qualified registry self-nomination applications and other requirements (see section V.B.8.c.(3) of this proposed rule); CAHPS survey vendor applications (see section V.B.8.c.(4) of this proposed rule); Health IT vendors (see section V.B.8.c.(5) of this proposed rule); Open Authorization credentialing and token request process (see section V.B.8.d of this proposed rule); Quality Payment Program Identity Management Application Process (see section V.B.8.e.(3) of this proposed rule); quality performance category data submission by Medicare Part B claims collection type (see section V.B.8.e.(4) of this proposed rule), QCDR and MIPS CQM collection type (see section

V.B.8.e.(5) of this proposed rule), eCQM collection type (see section V.B.8.e.(6) of this proposed rule), MVP Quality submission (see section V.B.8.e.(7)(a)(iii) of this proposed rule), and CMS Web Interface collection type (see section V.B.8.e.(8) of this proposed rule); CAHPS for MIPS survey beneficiary participation (see section V.B.8.e.(9) of this proposed rule); group registration for CMS Web Interface (see section V.B.8.e.(10) of this proposed rule); group registration for CAHPS for MIPS survey (see section V.B.8.e.(11) of this proposed rule); MVP registration (see section V.B.8.e.(7)(a)(i) of this proposed rule); subgroups registration (see section V.B.8.e.(7)(a)(ii) of this proposed rule); and call for quality measures (see section V.B.8.f of this proposed rule); reweighting applications for Promoting Interoperability and other performance categories (see section V.B.8.g.(2) of this proposed rule); Promoting Interoperability performance category data submission (see section V.B.8.g.(3) of this proposed rule); call for Promoting Interoperability measures (see section V.B.8.h of this proposed rule); improvement activities performance category data submission (see section V.B.8.i of this proposed rule); nomination of improvement activities (see section V.B.8.j of this proposed rule); nomination of MVPs (see section V.B.8.k of this proposed rule); and opt-out of Physician Compare for voluntary participants (see section V.B.8.o of this proposed rule).

The ICRs for Advanced APMs consist of: Partial Qualifying APM Participant (QP) election (section V.B.8.m of this proposed rule); Other Payer Advanced APM identification: Payer Initiated and Eligible Clinician Initiated Processes (sections V.B.8.n.(1) and V.B.8.n.(2) of this proposed rule); and submission of data for QP determinations under the All-Payer Combination Option (section V.B.8.n.(3) of this proposed rule).

(2) Summary of Quality Payment Program Changes: MIPS

The following 10 MIPS ICRs show changes in burden due to the proposed policies in this rule: (1) QCDR self-nomination applications; (2) Qualified Registry self-nomination applications; (3) Quality performance category data submission by Medicare Part B Claims collection type; (4) Quality performance category data submission by QCDR and MIPS CQM

collection type; (5) Quality performance category data submission by eCQM collection type; (6) Group registration for CMS Web Interface; (7) CMS Web Interface submission burden; (8) Reweighting applications for Promoting Interoperability and other performance categories; (9) Promoting Interoperability performance category data submission; and (10) Nomination of improvement activities. In aggregate, we estimate the proposed policies will result in a net decrease in burden of 40,010 hours and $4,053,151 for the CY 2022 MIPS performance period/2024 MIPS payment year and 84,803 hours and $8,577,728 for the CY 2023 MIPS performance period/2025 MIPS payment year. The remaining changes to our currently approved burden estimates are adjustments due to the revised assumptions based on the data available at the time of publication of this proposed rule.

We have also added 3 new ICRs (MVP Registration, MVP Quality Submissions, and Subgroups Registration) for the associated burden related to the proposals for implementation of MVPs and subgroups beginning with the CY 2023 MIPS performance period/2025 MIPS payment year. The MVP and subgroup registration ICRs reflect the burden associated with the proposed MVP and subgroup registration requirements described in section IV.A.3.b(4)(f) of this rule. The MVP quality submission ICR reflects the change in burden associated with the proposed requirements for the quality performance category of MVPs described in section IV.A.3.b(4)(d)(ii) of this rule.

We are not making any changes or adjustments to the following ICRs: Registration for virtual groups; CAHPS survey vendor applications; Quality Payment Program Identity Management Application Process; group registration for CAHPS for MIPS survey; CAHPS for MIPS survey beneficiary participation; Open Authorization (OAuth) Credentialing and Token Request Process; nomination of MVPs; call for Promoting Interoperability measures; and improvement activities performance category data submission. See section V.B.8. of this proposed rule for a summary of the ICRs, the overall burden estimates, and a summary of the assumption and data changes affecting each ICR.

The accuracy of our proposed estimates of the total burden for data submission under the quality, Promoting Interoperability, and improvement activities performance categories may be impacted due to two primary reasons. First, we are unable to predict with absolute certainty who will be a QP for the CY 2022 MIPS performance period/2024 MIPS payment year. New eligible clinician participants in Advanced APMs who become QPs would be excluded from MIPS reporting requirements and payment adjustments, and as such, unlikely to report under MIPS; while some current Advanced APM participants may end participation such that the APM Entity's eligible clinicians would not be QPs for a year based on § 414.1425(c)(5), and thus be required to report under MIPS. Second, it is difficult to predict what Partial QPs, who can elect whether to report to MIPS, will do in the CY 2022 MIPS performance period/2024 MIPS payment year compared to the CY 2019 MIPS performance period/2021 MIPS payment year, and therefore, the actual number of Advanced APM participants and how they elect to submit data may be different than our estimates. However, we believe our estimates are the most appropriate given the available data.

We acknowledge a recent JAMA article (Khullar, et al., 2021)[248] which includes new data on the burden involved in submitting data for the Quality Payment Program. We have chosen not to include this data in our estimates because of the small sample size included (30 TINs, half of which are APM participants, which we do not include in our estimates). In addition, the article does not indicate the time spent per activity involved in submissions for MIPS, so we are unable to determine if the totals in the article represent only the activities relevant for regulatory burden or separate the totals for the individual ICRs. We seek comment on our assumptions for estimating the burden for clinicians submitting data for the Quality Payment Program.

(3) Summary of Quality Payment Program Changes: Advanced APMs

For these ICRs (identified above under, "ICRs Associated with MIPS and Advanced

[248] JAMA Health Forum.2021;2(5):e210527.doi:10.10001/jamahealthforum.2021.527.

APMs"), the changes to currently approved burden estimates are adjustments based on updated projections for the CY 2022 MIPS performance period/2024 MIPS payment year. We are not proposing any changes to the Other Payer Advanced APM identification: Eligible Clinician Initiated Process and submission of Data for QP determinations under the All-Payer Combination Option ICRs.

(4) Framework for Understanding the Burden of MIPS Data Submission

Because of the wide range of information collection requirements under MIPS, Table 70 presents a framework for understanding how the organizations permitted or required to submit data on behalf of clinicians vary across the types of data, and whether the clinician is a MIPS eligible clinician or other eligible clinician voluntarily submitting data, MIPS APM participant, or an Advanced APM participant. As shown in the first row of Table 70, MIPS eligible clinicians and other clinicians voluntarily submitting data will submit data either as individuals, groups, or virtual groups for the quality, Promoting Interoperability, and improvement activities performance categories. Note that virtual groups are subject to the same data submission requirements as groups, and therefore, we will refer only to groups for the remainder of this section unless otherwise noted. We want to note that we have included subgroups to Table 70 due to the proposed introduction of subgroups for clinicians choosing to report MVPs or the APP in the CY 2023 MIPS performance period/2025 MIPS payment year described in section IV.A.3.b.(2)(d)(ii) of this rule. Because MIPS eligible clinicians are not required to submit any additional information for assessment under the cost performance category, the administrative claims data used for the cost performance category is not represented in Table 70.

For MIPS eligible clinicians participating in MIPS APMs, the organizations submitting data on behalf of MIPS eligible clinicians will vary between performance categories and, in some instances, between MIPS APMs. As discussed in section IV.A.3.c. of this proposed rule, for clinicians in APM Entities, the APM Performance Pathway is available for both ACO and non-ACOs to submit quality data. Due to data limitations and our inability to determine who

would use the APM Performance Pathway versus the traditional MIPS submission mechanism for the CY 2022 MIPS performance period/2024 MIPS payment year, we assume ACO APM Entities will submit data through the APM Performance Pathway, using the CMS Web Interface option, and non-ACO APM Entities would participate through traditional MIPS, thereby submitting as an individual or group rather than as an entity.

For the Promoting Interoperability performance category, group TINs may submit data on behalf of eligible clinicians in MIPS APMs, or eligible clinicians in MIPS APMs may submit data individually. For the improvement activities performance category, we will assume no reporting burden for MIPS APM participants. In the CY 2017 PFS final rule, we described that for MIPS APMs, we compare the requirements of the specific MIPS APM with the list of activities in the improvement activities Inventory and score those activities in the same manner that they are otherwise scored for MIPS eligible clinicians (81 FR 77185). Although the policy allows for the submission of additional improvement activities if a MIPS APM receives less than the maximum improvement activities performance category score, to date all MIPS APM have qualified for the maximum improvement activities score. Therefore, we assume that no additional submission will be needed.

Eligible clinicians who attain Partial QP status may incur additional burden if they elect to participate in MIPS, which is discussed in more detail in the CY 2018 PFS final rule (82 FR 53841 through 53844).

TABLE 70: Clinicians or Organizations Submitting MIPS Data on Behalf of Clinicians, by Type of Data and Category of Clinician*

Category of Clinician	Type of Data Submitted			
	Quality Performance Category	**Promoting Interoperability Performance Category**	**Improvement Activities Performance Category**	**Other Data Submitted on Behalf of MIPS Eligible Clinicians**
MIPS Eligible Clinicians and Other Eligible Clinicians Voluntarily Submitting MIPS Data, Participating in Shared Savings Program, and other MIPS APMs that use the APM Performance Pathway for model measures	As virtual group, group, subgroup, individual clinicians, or APM Entity.[a]	As virtual group, group, subgroup, individual clinicians, or APM Entity. Certain types of MIPS eligible clinicians are automatically eligible for a zero percent weighting for the Promoting Interoperability performance category. Clinicians who submit an application and are approved for significant hardship or other exceptions are also eligible for a zero percent weighting. Each MIPS eligible clinician in the APM Entity reports data for the Promoting Interoperability performance category through either group TIN or individual reporting. [The burden estimates for this final rule assume group TIN-level reporting].[b]	As virtual group, group, subgroup, or individual clinicians. MIPS APMs do not submit information. CMS will assign the same improvement activities performance category score to each APM Entity based on the activities involved in participation in the MIPS APM.[c]	Groups electing to use a CMS-approved survey vendor to administer CAHPS must register. Groups electing to submit via CMS Web Interface for the first time must register. MVP participants electing to submit data for the measures and activities in an MVP must register. MIPS APMs electing the APM Performance Pathway. APM Entities will make Partial QP election for participating eligible clinicians. Virtual groups must register via email.[d]

* Because the cost performance category relies on administrative claims data, MIPS eligible clinicians are not required to provide any additional information, and therefore, the cost performance category is not represented in this table.

[a] Submissions by the ACO are not included in burden estimates for this proposed rule because quality data submissions to fulfill requirements of the Shared Savings Program are not subject to the PRA. Section 1899 (42 U.S.C. 1395jjj) states that the Shared Savings Program is not subject to the PRA.

[b] Both group TIN and individual clinician Promoting Interoperability data will be accepted. If both group TIN and individual scores are available for the same APM Entity, CMS will use the higher score for each TIN/NPI. The TIN/NPI scores are then aggregated for purposes of calculating the APM Entity score.

[c] The burden estimates for this proposed rule assume no improvement activities performance category reporting burden for APM participants because we assume the MIPS APM model provides a maximum improvement activity score. APM Entities participating in MIPS APMs receive an improvement activities performance category score of at least 50 percent (§ 414.1380) and do not need to submit improvement activities data unless the CMS-assigned improvement activities scores are below the maximum improvement activities score.

[d] Virtual group participation is limited to MIPS eligible clinicians, specifically, solo practitioners and groups consisting of 10 eligible clinicians or fewer.

The policies finalized in the CY 2017 and CY 2018 Quality Payment Program final rules, the CY 2019, CY 2020 and CY 2021 PFS final rules, and continued in this proposed rule create some additional data collection requirements not listed in Table 70. These additional data collections, some of which are currently approved by OMB under the control numbers 0938-

1314 (Quality Payment Program, CMS-10621) and 0938-1222 (CAHPS for MIPS, CMS-10450), are as follows:

Additional ICRs related to MIPS third-party intermediaries (see section V.B.8.c)

- Self-nomination of new and returning QCDRs (81 FR 77507 through 77508, 82 FR 53906 through 53908, and 83 FR 59998 through 60000) (OMB 0938-1314).
- Self-nomination of new and returning registries (81 FR 77507 through 77508, 82 FR 53906 through 53908, and 83 FR 59997 through 59998) (OMB 0938-1314).
- Approval process for new and returning CAHPS for MIPS survey vendors (82 FR 53908) (OMB 0938–1222).
- Open Authorization Credentialing and Token Request Process (New) (OMB 0938-1314) (see section V.B.8.d).

Additional ICRs related to the data submission and the quality performance category (see section V.B.8.e)

- CAHPS for MIPS survey completion by beneficiaries (81 FR 77509, 82 FR 53916 through 53917, and 83 FR 60008 through 60009) (OMB 0938-1222).
- Quality Payment Program Identity Management Application Process (82 FR 53914 and 83 FR 60003 through 60004) (OMB 0938-1314).

Additional ICRs related to the Promoting Interoperability performance category (see section V.B.8.g)

- Reweighting Applications for Promoting Interoperability and other performance categories (82 FR 53918 and 83 FR 60011 through 60012) (OMB 0938-1314).

Additional ICRs related to call for new MIPS measures and activities (see sections V.B.8.f, V.B.8.h, V.B.8.j. and V.B.8.k)

- Nomination of improvement activities (82 FR 53922 and 83 FR 60017 through 60018) (OMB 0938-1314).
- Call for new Promoting Interoperability measures (83 FR 60014 through 60015) (OMB

0938-1314).

● Call for MIPS quality measures (83 FR 60010 through 60011) (OMB 0938-1314).

● Nomination of MVPs (OMB 0938-1314)

Additional ICRs related to MIPS (see section V.B.8.o)

● Opt out of performance data display on Physician Compare for voluntary reporters under MIPS (82 FR 53924 through 53925 and 83 FR 60022) (OMB 0938-1314).

Additional ICRs related to APMs (see sections V.B.8.m and V.B.8.n)

● Partial QP Election (81 FR 77512 through 77513, 82 FR 53922 through 53923, and 83 FR 60018 through 60019) (OMB 0938-1314).

● Other Payer Advanced APM determinations: Payer Initiated Process (82 FR 53923 through 53924 and 83 FR 60019 through 60020) (OMB 0938-1314).

● Other Payer Advanced APM determinations: Eligible Clinician Initiated Process (82 FR 53924 and 83 FR 60020) (OMB 0938-1314).

● Submission of Data for All-Payer QP Determinations (83 FR 60021) (OMB 0938-1314).

b. ICRs Regarding the Virtual Group Election (§ 414.1315)

This rule is not proposing any new or revised collection of information requirements or burden related to the virtual group election. The virtual group election requirements and burden are currently approved by OMB under control number 0938-1343 (CMS-10652). Consequently, we are not proposing any changes under that control number.

c. ICRs Regarding Third-Party Intermediaries (§ 414.1400)

In section IV.A.3.h. of this rule, we propose multiple changes to the third-party intermediary regulations at § 414.1400. Specifically, we are proposing: (1) requirement for third-party intermediaries to submit MIPS data for APM Entities; (2) requirement for QCDRs and qualified registries to support MVPs and the APP; (3) requirement for all QCDRs and qualified registries to support subgroup reporting; (4) requirements for approved QCDRs and

qualified registries that have not submitted performance data; and (5) new QCDR measure rejection criteria. The proposed burden associated with each of these topics are discussed separately below for qualified registries, QCDRs, and survey vendors.

(1) Background

Under MIPS, the quality, Promoting Interoperability, and improvement activities performance category data may be submitted via relevant third-party intermediaries, such as qualified registries, QCDRs, and health IT vendors. Data on the CAHPS for MIPS survey, which counts as either one quality performance category measure, or towards an improvement activity, can be submitted via CMS-approved survey vendors. Entities seeking approval to submit data on behalf of clinicians as a qualified registry, QCDR, or survey vendor must complete a self-nomination process annually.[249] The processes for self-nomination for entities seeking approval as qualified registries and QCDRs are similar with the exception that QCDRs have the option to nominate QCDR measures for approval for the reporting of quality performance category data. Therefore, differences between QCDRs and qualified registry self-nomination are associated with the preparation of QCDR measures for approval.

(2) QCDR Self-Nomination Applications

The proposed requirements and burden associated with this rule's data submission changes related to QCDRs will be submitted to OMB for approval under control number 0938-1314 (CMS-10621). As explained below, in this rule we propose to: adjust the number of self-nomination applications based on current data (from 82 to 90), change the number of QCDR measures submitted for consideration by each QCDR at the time of self-nomination (from 2 to 12), and adjust the average time required to submit information for each QCDR measure (from 2.5 hours to 0.75 hours).

(a) Self-Nomination Process and Other Requirements

In section IV.A.3.h.(1) of this rule, we are proposing reorganization and consolidation of

[249] As stated in the CY 2019 PFS final rule (83 FR 53998), health IT vendors are not included in the burden estimates for MIPS.

§ 414.1400 generally. We assume that this proposal does not change the existing requirements for third-party intermediaries during the self-nomination process. Therefore, we are not revising our burden estimates related to these proposals. We refer readers to § 414.1400 which states that QCDRs interested in submitting MIPS data to us on behalf of a MIPS eligible clinician, group, or virtual group will need to complete a self-nomination process to be considered for approval to do so. We also refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77507 through 77508), CY 2018 Quality Payment Program final rule (82 FR 53906 through 53908), CY 2019 PFS final rule (83 FR 59998 through 60000), the CY 2020 PFS final rule (84 FR 63116 through 63121) and the CY 2021 PFS final rule (85 FR 84964 through 84969) for our previously finalized requirements and burden for self-nomination of QCDRs and nomination of QCDR measures.

In section IV.A.3.h.(2)(a) of this rule, we propose to: add APM Entities to § 414.1400(a)(1), and expand the general participation requirements of third-party intermediaries, to third party intermediaries reporting to MIPS on behalf of APM Entities reporting to MIPS in order to align reporting requirements for all participants in MIPS. We are also proposing that beginning with the CY 2023 MIPS performance period/2025 MIPS payment year, QCDRs and qualified registries must support the APP, and MVPs that are applicable to the MVP participants on whose behalf they submit MIPS data. As finalized in the CY 2017 PFS final rule, third-party intermediaries currently support MIPS data submission on behalf of eligible clinicians (81 FR 77016). APM Entities have historically used third party intermediaries for submitting their quality measures to their APMs. Additionally, QCDRs, qualified registries and health IT vendors are required under existing § 414.1400(a)(1) to submit data for the quality, improvement activities, and Promoting Interoperability performance categories in MIPS. Therefore, we anticipate no additional steps being added to the self-nomination process as a result of this proposal for third-party intermediaries to submit MIPS data on behalf of APM Entities, and to support measures and activities in MVPs that are applicable to the MVP

participants on whose behalf they submit MIPS data. For this proposed rule, we assume that there will be no impact on the time required for QCDRs to complete either the simplified or full self-nomination process because of the above proposals. Additionally, we are proposing to require QCDRs, qualified registries, health IT vendors, and CAHPS for MIPS survey vendors to support subgroup reporting, beginning with the CY 2023 MIPS performance period/2025 MIPS payment year. We anticipate that at the time of self-nomination, QCDRs would be using a checkbox to indicate their compliance for the proposed requirement to support data submission for subgroups beginning with the CY 2023 MIPS performance period/2025 MIPS payment year. We assume that this would not impact the overall time estimated for QCDRs to submit their information at the time of self-nomination. Therefore, we are not proposing to make any adjustments in the time required for QCDRs during the simplified or full self-nomination process because of this proposal. However, we anticipate that third-party intermediaries would need to make administrative changes to their existing workflows for submission of MVPs and APP data for clinicians participating as subgroups beginning with the CY 2023 MIPS performance period/2025 MIPS payment year. We refer readers to section VII.C.17.f.(2)(f) of this proposed rule where we discuss our impact analysis.

In section IV.A.3.h.(3)(a)(iii) of this rule, to provide further clarity and to better align with the existing policy (81 FR 77366 through 77367; 81 FR 77383 through 77384), we are proposing to codify QCDRs, and qualified registries must conduct validation on the data they intend to submit for the applicable MIPS performance period and provide the results of the executed data validation plan by May 31st of the year following the performance period. Additionally, we are proposing to codify a new requirement at § 414.1400(b)(3)(iv) to state that, beginning with the CY 2023 MIPS performance period/2025 MIPS payment year, the QCDR or qualified registry must submit a data validation plan annually, at the time of self-nomination, for CMS' approval, and may not change the plan once approved, without the prior approval of the agency. We anticipate that this proposal does not make any changes to the existing data

validation requirements for QCDRs and qualified registries. Through this proposal, CMS is codifying the finalized policies related to data validation for QCDRs and qualified registries in previous rules. We are not revising our burden estimates as a result of the above proposal and the associated burden was captured in the CY 2017 PFS final rule (81 FR 77383 through 77384) and the CY 2019 PFS final rule (83 FR 59998 through 59999) and submitted to OMB for approval under control number 0938-1314 (CMS-10621).

In section IV.A.3.h(3)(a)(i) of this proposed rule, we are proposing new requirements for approved QCDRs and qualified registries that have not submitted performance data. First, we are proposing to create a new requirement at § 414.1400(b)(3)(vii) to require QCDRs and qualified registries that have never submitted data since the inception of MIPS (CY 2017 MIPS performance period/2019 MIPS payment year) through the 2020 MIPS performance period/2022 MIPS payment year, to submit a participation plan as part of their self-nomination for CY 2023. If the QCDRs and qualified registries did not submit data, their participation plan must be submitted as part of self-nomination for the 2023 self-nomination period and must be accepted by CMS to continue to be an approved QCDR or qualified registry. We are also proposing to codify a new requirement at paragraph (b)(3)(viii) to state that, beginning with the CY 2024 MIPS performance period/2026 MIPS payment year, a QCDR or qualified registry that was approved but did not submit any MIPS data for either of the 2 years preceding the applicable self-nomination period must submit a participation plan for CMS's approval. Under this proposal, the participation plan must explain the QCDR and/or qualified registry's detailed plans about how the vendor intends to encourage clinicians to submit MIPS data to CMS through the third-party intermediary on behalf of clinicians or groups. The vendor must also explain why they should still be allowed to participate as a qualified vendor.

Based on our review of the existing list of approved QCDRs that did not submit performance data since the inception of MIPS (CY 2017 MIPS performance period/2019 MIPS payment year), we estimate that approximately 10 QCDRs will submit participation plans for the

CY 2022 and the CY 2023 self-nomination periods. Similar to our assumptions for submission of a Corrective Action Plan (CAP) in the CY 2021 PFS final rule (85 FR 84968), we anticipate that the effort involved in developing a participation plan including the proposed policies specified in this rule and submitting it to CMS is likely to be no more than 3 hours for a computer systems analyst at a rate of $95.22/hr. For the CY 2022 MIPS performance period/2024 MIPS payment year, we estimate an annual burden of 30 hours (3 hr x 10 participation plans) at a cost of $2,857 (30 hr x $95.22/hr) for QCDRs that would need to develop and submit a participation plan.

In section IV.A.3.h.(4) of this rule, we are proposing to codify new requirements that if a QCDR measure owner is not an approved active QCDR for a given self-nomination period, that QCDR measure will not be available for use. Additionally, we propose to codify a new requirement in section IV.A.3.h.(1)(d)(iv) and add a rejection criterion at § 414.1400(b)(4)(iv)(M) to state, a QCDR does not have permission to use a QCDR measure owned by another QCDR for the applicable performance period. It was finalized in the CY 2018 PFS final rule (82 FR 53813) that beginning with the CY 2018 MIPS performance period/2020 MIPS payment year, QCDR vendors may seek permission from another QCDR to use an existing measure that is owned by the other QCDR. Additionally, in the CY 2020 PFS final rule (84 FR 63070 through 63073), we finalized the QCDR measure rejection criteria considerations. Specifically, we stated that all previously approved QCDR measures and new QCDR measures would be reviewed on an annual basis (as a part of the QCDR measure review process that occurs after the self-nomination period closes on September 1st) to determine whether they are appropriate for the program. In the CY 2020 PFS final rule, we indicated to stakeholders that as information becomes available in future years, we will revisit our assumptions to better reflect the impact of these requirements on QCDRs and the quantity of measures annually (84 FR 63118 through 63119). As discussed in the CY 2019 PFS final rule (83 FR 60000) and CY 2020 PFS final rule (84 FR 63118), we are not accounting for QCDR measure licensing costs as part of our

burden estimate.

Based on the number of QCDR measures submitted at the time of self-nomination for the CY 2021 MIPS performance period/ 2023 MIPS payment year, we assume that 82 QCDRs will submit 984 measures for consideration in the CY 2022 MIPS performance period/2024 MIPS payment year, approximately 12 measures per QCDR, on average. We anticipate that out of the 984 measures, 820 measures would be existing or borrowed measures, approximately 10 measures submitted per QCDR self-nomination application. The remaining 104 measures would be new measures, approximately 2 measures on average per QCDR.

Using the above assumption that each QCDR submitting measures for approval during the self-nomination process will submit approximately 12 measures (10 existing or borrowed measures + 2 new measures), we estimate an increase of 10 measures from the currently approved estimate of 2 measures per QCDR. The estimated increase in the total number of measures submitted by a QCDR at the time of self-nomination is due to the inclusion of the existing or borrowed QCDR measures in our assumptions. Additionally, we anticipate that less information is needed for a QCDR to submit an existing or borrowed measure for approval, therefore, we estimate that the time needed for a QCDR to submit an existing or borrowed measure is 0.5 hours, independent of the selection of the simplified or full self-nomination process. Consistent with our assumption in the CY 2020 PFS final rule (84 FR 63119), we continue to estimate that each QCDR will require 2 hours to submit a new QCDR measures for approval, independent of the selection of the simplified or full self-nomination process. To account for the difference in the time for submission of new vs existing QCDR measures for approval, we are using the weighted average to estimate the time required for QCDR measure submission at the time of self-nomination. Therefore, we assume that the weighted average of the time required for each QCDR to submit a new or existing or borrowed measure for approval during the self-nomination process is 0.75 hours [((2 new measures × 2 hours) + (10 existing or borrowed measures × 0.5 hours))/total # of measures (12)]. Based on the above assumptions, we

are proposing to revise our estimates in the amount of time required for a QCDR to submit measures during the self-nomination process from a total of 2 hours to approximately 0.75 hours, a decrease of 1.75 hours from the currently approved estimated burden per QCDR measure submission.

In the CY 2019 PFS final rule, we estimated that it would take 0.5 hours and 3 hours for a QCDR to submit all the required information during the simplified and full self-nomination process, respectively (83 FR 59999). Based on our experience with the amount of time needed for QCDRs during the 2020 self-nomination period, we assume that the estimated time of 3 hours per QCDR for a full self-nomination process is an overestimate and are proposing to revise our estimated time required for the QCDR full-self-nomination process to 2.5 hours, a decrease of 0.5 hours. We are not making any adjustments in the amount of time needed for simplified self-nomination process.

Based on the trends noticed in the number of QCDRs that submit applications for self-nominations and consistent with our assumptions in the CY 2021 PFS final rule (85 FR 84965), we estimate that 90 QCDRs will submit applications for consideration during the self-nomination process for the CY 2022 MIPS performance period/2024 MIPS payment year, an increase of 8 applications from the currently approved estimate of 82. For QCDRs that submit measures as part of their self-nomination process, while simultaneously accounting for the estimated increase in the number of existing or borrowed QCDR measures submitted with the self-nomination application and the decrease in the estimated time for the QCDR full-nomination process, we are proposing to revise our estimated time for the QCDR self-nomination process to a minimum of 9.5 hours [0.5 hours for the simplified self-nomination process + (12 measures × 0.75 hr/measure for QCDR measure submission)] and a maximum of 11.5 hours [2.5 hours for the full self-nomination process + (12 measures × 0.75 hr/measure for QCDR measure submission)], an increase of 4 hours at a cost of $ 380.88 (4 hr × $95.22/hr) and 3.5 hours at a cost of $333.27 (3.5 hr × $95.22/hr) from the currently approved burden per respondent estimate in the CY 2021 PFS

final rule (85 FR 84965).

Consistent with our assumptions in the CY 2021 PFS final rule (85 FR 84967), based on the number of targeted audits received for the 2020 self-nomination period, we estimate that 20 QCDRs will submit targeted audits for the CY 2022 MIPS performance period/2024 MIPS payment year, an increase of 3 from the currently approved estimate of 17 QCDRs submitting targeted audits in the CY 2021 PFS final rule. Using the currently approved unchanged burden per respondent estimate, the proposed estimated burden associated with QCDRs completing targeted audits will range from 100 hours (20 audits × 5 hr/audit) at a cost of $9,522 (20 audits × $476.10 /audit) for the simplified self-nomination process to 200 hours (20 audits × 10 hr/audit) at a cost of $19,044 (20 audits × $952.20/audit) for the full self-nomination process (see Tbale 68 for the cost per audit). We assume that this would adjust our burden estimates for targeted audits by +15 hours (+3 respondents × 5 hr/audit) at a cost of $1,428.30 (15 hrs × $95.22/hr) and +30 hours (+3 respondents × 10 hr/audit) at a cost of $2,856.60 (30 hrs × $95.22/hr) for the simplified and full self-nomination process, respectively. Based on the assumptions discussed in this section, we provide an estimate of the total annual burden associated with a QCDR self-nominating to be considered "qualified" to submit quality measures results and numerator and denominator data on behalf of MIPS eligible clinicians.

As shown in Table 71, we assume that the staff involved in the QCDR self-nomination process will continue to be computer systems analysts or their equivalent, who have an average labor rate of $95.22/hr.

Using the change in the number of respondents and the estimated time per respondent for QCDRs that submit measures for approval during the self-nomination process, the proposed annual burden for the simplified and full-self nomination process will range from 855 hours (90 QCDRs x 9.5 hr) to 1,035 hours (90 QCDRs x 11.5 hr) at a cost ranging from $81,413 (855 hr x $95.22 /hr) and $98,553 (1,035 hr x $95.22 /hr), respectively.

As shown in Table 71, combined with our proposed adjusted estimate of annual burden

for targeted audits and the proposed burden for submission of participation plans, we are proposing to revise our estimated burden for the QCDR self-nomination process, ranging from 985 hours [855 hr (90 QCDRs x 9.5 hr) + 100 hr (20 audits x 5 hr) + 30 hr (10 participation plans x 3 hr)] at a cost of $93,792 [$81,414 (855 hr x $95.22/hr) + $9,522 (20 audits × $476.10/audit) + $2,857 (30 hr x $95.22/hr)] for a simplified self-nomination process to 1,265 hours [1,035 hr (90 QCDRs x 11.5 hr) + 200 hr (20 audits x 10 hr) + 30 hr (10 participation plans x 3 hr)] at a cost of $120,454 [$98,553 (1,035 hr x $95.22 /hr) + $19,044 (20 audits × $952.20/audit) + $2,857 (30 hr x $95.22/hr)] for the full self-nomination process.

TABLE 71: Estimated Burden for QCDR Self-Nomination and QCDR Measure Submission

	Minimum	Maximum
# of QCDR Simplified Self-Nomination Applications submitted (a)	90	0
# of QCDR Full Self-Nomination Applications submitted (b)	0	90
Total Applications	**90**	**90**
Annual Hours Per QCDR for Simplified Process (c)	9.5	9.5
Annual Hours Per QCDR for Full Process (d)	11.5	11.5
Annual Hours for Self-nomination (e) = (a) * (c) and (b) * (d)	**855**	**1,035**
# of Hours per Completion of Targeted Audit (e)	**5**	**10**
Annual Hours for Completion of 20 Targeted Audits (f)	**100**	**200**
# of Hours per Submission of Participation Plan (g)	**3**	**3**
Annual Hours for Submission of 10 Participation Plans (h)	**30**	**30**
Total Annual Time (Hours) (i)	**985**	**1,265**
Cost Per Simplified Process Per QCDR (@ computer systems analyst's labor rate of $95.22/hr) (j) = (c) * $95.22/hr	$904.60	$904.60
Cost Per Full Process Per QCDR (@ computer systems analyst's labor rate of $95.22/hr) (k) = (d) * $95.22/hr	$1,095.03	$1,095.03
Cost Per Targeted Audit (@ computer systems analyst's labor rate of $95.22/hr) (l) = (e) * $95.22/hr	$476.10	$952.20
Cost Per Participation Plan (@ computer systems analyst's labor rate of $95.22/hr) (m) = (g) * $95.22/hr	$285.70	$285.70
Total Annual Cost (l) = (a) * (h) + (b) * (i) + (j) * 20 + (k) * 10	**$93,792**	**$120,454**

As shown in Table 72, for the CY 2022 MIPS performance period/2024 MIPS payment year, independent of the proposed change to our per response time estimate, the estimated increase in 8 respondents from the currently approved 82 respondents to 90 results in an increase of between +76 hours (+8 respondents x 9.5 hrs/respondent for the simplified self-nomination process) and +92 hours (+8 respondents x 11.5 hrs/respondent for the full self-nomination process) at a cost of between +$7,237 (+8 respondents x $904.60/respondent for the simplified

self-nomination process) and +$8,760 (+8 respondents x $1,095.03/respondent for the full self-nomination process) (see Table 71 for the cost per QCDR).

Accounting for the proposed change in time required for the QCDR self-nomination process results in an adjustment of between +328 hours (82 respondents × +4 hr for the simplified self-nomination process or also referred to as minimum burden) at a cost + $31,232 [82 respondents × $380.88 (+4 hr × $95.22/hr)/respondent) and +287 hours (82 respondents × 3.5 hr for the full self-nomination process or also referred to as maximum burden) at a cost of and +$27,328 (82 respondents × $333.27 (+3.5 hr × $95.22/hr)/respondent). The reason for the increase in minimum burden compared to the maximum burden is due to an increase in the change in the number of hours required for the simplified self-nomination process compared to the increase in the number of hours for the full self-nomination process.

In aggregate, as shown in Table 72, when these impacts are combined with the proposed estimate for targeted audits and participation plans discussed above, the net impact ranges between +449 hours [76 hr (+8 respondents x 9.5 hrs/respondent) + 15 hr (+3 targeted audits x 5 hrs/audit) + 30 hr (10 participation plans x 3 hr/plan) + 328 hr (82 respondents × 4 hr)] at a cost of $42,754 ($7,237 + $1,428 + $2,857 + $31,232) for the simplified self-nomination process (also referred to as minimum burden) and +439 hours [92 hr (+8 respondents x 11.5 hrs/respondent) + 30 hr (+3 targeted audits x 10 hrs/audit) + 30 hr (10 participation plans x 3 hr/plan) + 287 hr (+82 respondents × 3.5 hr)] at a cost of $41,802 [$8,760 (+8 respondents x $1,095.03/respondent + $2,857 (30 hr x $95.22/hr) + $2,857 (30 hr x $95.22/hr) + $27,328 (82 respondents × $333.27/respondent)] for the full self-nomination process (also referred to as maximum burden) for the CY 2022 MIPS performance period/2024 MIPS payment year.

TABLE 72: Change in Estimated Burden for QCDR Self-Nomination and QCDR Measure Submission

	Minimum	Maximum
Total Annual Hours for Respondents in CY 2021 PFS Final Rule (a)	536	826
Total Annual Hours for Respondents in CY 2022 PFS Proposed Rule (b) (See Table 71)	985	1,265
Difference (c) = (b) - (a)	**+449 hr**	**+439 hr**
Total Annual Cost for Respondents in CY 2021 PFS Final Rule (d)	$51,038	$78,652
Total Annual Cost for Respondents in CY 2022 PFS Proposed Rule (e) (See Table 71)	$93,792	$120,454
Difference (f) = (e) - (d)	**+$42,754**	**+$41,802**

(b) QCDR Measure Requirements

In the CY 2018 Quality Payment Program final rule (82 FR 53813 through 53814), we discussed that beginning with the 2018 performance period and for future program years, QCDR vendors may seek permission from another QCDR to use an existing measure that is owned by the other QCDR. Additionally, in the CY 2020 Quality Payment Program rule (84 FR 63070 through 63073) we finalized the QCDR measure rejection criteria considerations.

In section IV.A.3.h.(4)(a)(i)(A)(aa) of this rule, we are proposing to codify a new requirement and add a rejection criterion that a QCDR does not have permission to use a QCDR measure owned by another QCDR for the applicable performance period. Additionally, we are proposing to codify new requirements that if a QCDR measure owner is not an approved active QCDR for a given self-nomination period, that QCDR measure will not be available for use. The inactive QCDR measure owner has the option to transfer ownership of the QCDR measure to an active QCDR or agree upon terms set forth with the active QCDR allowing co-ownership of the QCDR measure. We refer readers to section IV.A.3.h.(4)(a)(i)(A) of this rule for additional details on the proposed policies for transfer of ownership of QCDR measures. This proposal is to codify the existing requirements for the QCDR self-nomination process. We are not proposing to revise our burden estimates as result of this proposal because we assume that this does not change the requirements, or the time required for a QCDR to submit information for a QCDR measure at the time of self-nomination.

Additionally, we are proposing to codify another rejection criterion at

§ 414.1400(b)(4)(iv)(N) to state that, if a QCDR measure owner is not approved during a given self-nomination period, any associated QCDR measures with that QCDR would also not be approved. We are not revising our burden estimates as a result of the above proposal because we assume that there would not be additional requirements for QCDRs to submit at the time of self-nomination. This is part of the measure specification requirements for QCDRs which submit measures for approval during the self-nomination process.

(3) Qualified Registry Self-Nomination Process and Other Requirements

The requirements and burden associated with this rule's data submission changes related to qualified registries will be submitted to OMB for approval under control number 0938-1314 (CMS-10621).

We refer readers to § 414.1400 which states that qualified registries interested in submitting MIPS data to us on behalf of MIPS eligible clinicians, groups, or virtual groups need to complete a self-nomination process to be considered for approval to do so. We also refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77507 through 77508), CY 2018 Quality Payment Program final rule (82 FR 53906 through 53908), CY 2019 PFS final rule (83 FR 59997 through 59998), CY 2020 PFS final rule (84 FR 63114 through 63116) and the CY 2021 PFS final rule (85 FR 84967 through 85 FR 84969) for our previously finalized requirements and burden for self-nomination of qualified registries.

In section IV.A.3.h.(1) of this rule, we are proposing reorganization and consolidation of § 414.1400 generally. We assume that this proposal does not change the existing requirements for third-party intermediaries during the self-nomination process. Therefore, we are not revising our burden estimates related to these proposals.

In section IV.A.3.h.(2)(a) of this rule, we are proposing to add APM Entities to § 414.1400(a)(1), expanding the general participation requirements of third-party intermediaries, to third party intermediaries reporting to MIPS on behalf of APM Entities reporting to MIPS to align reporting requirements for all participants in MIPS. We are also proposing that beginning

with the CY 2023 MIPS performance period/2025 MIPS payment year, QCDRs and qualified registries must support APP, and MVPs that are applicable to the MVP participants on whose behalf they submit MIPS data. As finalized in the CY 2017 PFS final rule, third-party intermediaries currently support MIPS data submission on behalf of eligible clinicians (81 FR 77016). APM Entities have historically used third party intermediaries for submitting their quality measures to their APMs. Additionally, QCDRs, qualified registries and health IT vendors are required under existing § 414.1400(a)(1) to submit data for the quality, improvement activities, and promoting interoperability performance categories in MIPS. Like our discussion for QCDRs above, we anticipate no additional steps being added to the qualified registry self-nomination process as a result of this proposal for third party intermediaries to submit MIPS data on behalf of APM Entities, and to support measures and activities in MVPs that are applicable to the MVP participants on whose behalf they submit MIPS data. For this proposed rule, we assume that there will be no impact on the time required for qualified registries to complete either the simplified or full self-nomination process because of the above proposals. Additionally, we are proposing to require QCDRs, qualified registries, health IT vendors, and CAHPS for MIPS survey vendors to support subgroup reporting, beginning with the CY 2023 MIPS performance period/2025 MIPS payment year. We anticipate that at the time of self-nomination, qualified registries would be using a checkbox to indicate their compliance for the proposed requirement to support data submission for subgroups beginning with the CY 2023 MIPS performance period/2025 MIPS payment year. We assume that this would not impact the overall time estimated for qualified registries to submit their information at the time of self-nomination. Therefore, we are not proposing to make any adjustments in the time required for qualified registries during the simplified or full self-nomination process because of this proposal. However, we anticipate that third-party intermediaries would need to make administrative changes to their existing workflows for submission of MVPs and APP data for clinicians participating as subgroups beginning with the CY 2023 MIPS performance period/2025 MIPS

payment year. We refer readers to section VII.C.17.f.(2)(f) of this rule where we discuss our impact analysis.

Based on previous trends for the number of self-nominations for qualified registries received during the 2020 self-nomination period for the CY 2021 MIPS performance period/2023 MIPS payment year and consistent with our assumptions in the CY 2021 PFS final rule (85 FR 84967), we anticipate an increase in the number of submissions from qualified registries for the CY 2022 MIPS performance period/2024 MIPS payment year. Therefore, we estimate that we will receive 210 nomination applications from qualified registries for the CY 2022 MIPS performance period/2024 MIPS payment year, an increase of 27 from the currently approved estimate of 183. Based on our estimates in the CY 2021 PFS final rule (85 FR 84967), we are proposing to adjust the estimated number of qualified registries that will submit targeted audits for the CY 2022 MIPS performance period/2024 MIPS payment year. Similar to our assumptions in the CY 2021 PFS final rule (85 FR 84967) and based on the number of targeted audits received from qualified registries for the CY 2019 MIPS performance period/2021 payment year, we estimate 63 qualified registries would be required to conduct targeted audits, an increase of 7 from the currently approved estimate of 56. Therefore, we estimate the total impact associated with qualified registries completing targeted audits will range from 315 hours (63 registries ×5 hours/audit) at a cost of $29,994 (63 registries × $476.10/audit) to 630 hours (63 registries × 10 hours/audit) at a cost of $59,989 (63 registries × $952.20/audit) for the simplified and full self-nomination process, respectively (see Table 71 for the cost per audit). We assume that this would adjust our burden estimates for targeted audits by +35 hours (+7 respondents × 5 hr/audit) at a cost of $3,332.70 (35 hrs × $95.22/hr) and +70 hours (+7 respondents × 10 hr/audit) at a cost of $6,665.40 (70 hrs × $95.22/hr) for the simplified and full self-nomination process, respectively.

Using our currently approved time per response estimate of 3 hours, the resulting adjustment in burden for QCDRs and qualified registries to submit CAPs is 30 hours (10

respondents × 3 hrs/respondent) at a cost of $2,857 (30 hours × $95.22/hr).

In section IV.A.3.h.(3)(a)(1) of this proposed rule, we are proposing new requirements for approved QCDRs and qualified registries that have not submitted performance data. First, we are proposing to create a new requirement at paragraph at § 414.1400(b)(3)(vii) to require QCDRs and qualified registries that have never submitted data since the inception of MIPS (CY 2017 MIPS performance period/2019 MIPS payment year) through the CY 2020 MIPS performance period/2022 MIPS payment year, to submit a participation plan as part of their self-nomination for CY 2023. Exceptions to this requirement may occur if data is received for the CY 2021 MIPS performance period/2023 MIPS payment year. Under this scenario, QCDRs and qualified registries would not need to submit a participation plan for the 2023 self-nomination process. If the QCDRs and qualified registries did not submit data, their participation plan must be submitted as part of self-nomination for 2023 MIPS self-nomination period and must be accepted by CMS to continue to be an approved QCDR or qualified registry. We are also proposing to codify a new requirement that, beginning with the CY 2024 MIPS performance period/2026 MIPS payment year, a QCDR or qualified registry that was approved but did not submit any MIPS data for either of the 2 years preceding the applicable self-nomination period must submit a participation plan for CMS' approval. Under this proposal, the participation plan must explain the QCDR and/or qualified registry's detailed plans about how the vendor intends to encourage clinicians to submit MIPS data to CMS through the third-party intermediary on behalf of clinicians or groups. The vendor must also explain why they should still be allowed to participate as a qualified vendor.

Based on our review of the existing list of approved qualified registries that did not submit performance data since the inception of MIPS (CY 2017 MIPS performance period/2019 MIPS payment year), we estimate that 19 qualified registries will submit participation plans for the CY 2023 MIPS self-nomination period. Similar to our assumptions used for submission of a CAP in the CY 2021 PFS final rule (85 FR 84968), we anticipate that the effort involved in

developing a participation plan including the proposed policies specified in this rule and submitting it to CMS is likely to be no more than 3 hours for a computer systems analyst at a rate of $95.22/hr. For the CY 2023 MIPS performance period/2025 MIPS payment year, we estimate an annual burden of 57 hours (3 hr x 19 participation plans) at a cost of $5,428 (57 hr x $95.22/hr) for qualified registries to develop and submit a participation plan.

As stated above, based on the number of self-nominations received for the CY 2021 MIPS performance period/2023 MIPS payment year, we are proposing to adjust the estimated number of qualified registries that would self-nominate for the CY 2023 performance period to 210, an increase of 27 from the currently approved estimate of 183 in the CY 2021 PFS final rule (85 FR 84969). In the CY 2019 PFS final rule, we estimated that it would take 3 hours for a qualified registry to submit all the required information during the full self-nomination process (83 FR 59998). Based on our experience with the self-nomination process, we believe that the number of fields needed to be submitted for a qualified registry are fewer than those needed for a QCDR. We assume that our previous assumption of 3 hours is an overestimate. Therefore, we propose to revise our estimated time required for a qualified registry submitting a full-self-nomination process to 2 hours, a decrease of 1 hour.

We assume that the staff involved in the qualified registry self-nomination process will continue to be computer systems analysts or their equivalent, who have an average labor rate of $95.22/hr. Using the change in estimated burden per respondent time, associated with the self-nomination process range from a minimum of 0.5 hours to a maximum of 2 hours, we estimate that the annual burden will range from 105 hours (210 qualified registries x 0.5 hr) to 420 hours (210 qualified registries x 2 hr) at a cost ranging from $9,998 (105 hr x $95.22/hr) and $39,992 (420 hr x $95.22/hr), respectively (see Table 73).

Combined with our estimates of burden associated with completing targeted audits and developing and submitting participation plans and corrective action plans, our total burden estimate ranges from 507 hours [105 hr (210 qualified registries × 0.5 hr) + 57 hr (+19

participation plans × 3hr/plan) + 315 hr (63 targeted audits × 5 hours/audit) + 30 hr (10 CAPs × 3 hr) at a cost of $48,277 [$9,998 (105 hr x $95.22/hr) + $5,428 (57 hr x $95.22/hr) + $29,994 (63 registries × $476.10/audit) + $2,857 (30 hours × $95.22/hr)] to 1,137 hours [420 hr (210 qualified registries x 2 hr) + 57 hr (+19 participation plans × 3hr/plan) + 630 hr (63 targeted audits × 10 hours/audit)+ 30 hr (10 CAPs × 3 hr)] at a cost of $108,266 [$39,992 (420 hr x $95.22/hr) + $5,428 (57 hr x $95.22/hr) + $59,989 (63 registries × $952.20/audit) + $2,857 (30 hours × $95.22/hr) for the simple self-nomination process (see minimum burden in Table 73 below) and full self-nomination process (see maximum burden in Table 73) respectively.

Based on the assumptions discussed in this section, we provide a proposed estimate of the total annual burden associated with a qualified registry self-nominating to be considered "qualified" to submit quality measures results and numerator and denominator data on MIPS eligible clinicians.

TABLE 73: Estimated Burden for Qualified Registry Self-Nomination

	Minimum	Maximum
# of Qualified Registry Simplified Self-Nomination Applications submitted (a)	210	0
# of Qualified Registry Full Self-Nomination Applications submitted (b)	0	210
Total Applications (c)	**210**	**210**
Total Annual Hours Per Qualified Registry for Simplified Process (d)	0.5	0
Total Annual Hours Per Qualified Registry for Full Process (e)	0	2
Total Annual Hours for Self-Nomination for min. (f) = (a) * (d) and max. (b) * (e)	**105**	**420**
Total Annual Hours for Completion of 63 Targeted Audits (g)	**315**	**630**
Total Annual Hours for development and submittal of 19 Participation Plans (h)	**57**	**57**
Total Annual Hours for Submittal of 10 CAPs (i)	**30**	**30**
Total Annual Time (Hours) (j) = (e) + (f) + (g) + (h)	**507**	**1,137**
Cost Per Simplified Process Per Qualified Registry (@ computer systems analyst's labor rate of $95.22/hr) (k)	$47.61	$47.61
Cost Per Full Process Per Qualified Registry (@ computer systems analyst's labor rate of $95.22/hr) (l)	$190.44	$190.44
Cost Per Targeted Audit (@ computer systems analyst's labor rate of $95.22/hr) (m)	$476.10	$952.20
Cost Per Participation Plan (@ computer systems analyst's labor rate of $95.22/hr) (n)	$285.66	$285.66
Cost per CAP (@ computer systems analyst's labor rate of $95.22/hr) (o)	$285.66	$285.66
Total Annual Cost for min. (p) = (a) * (k) + (m) * 63 + (n) * 19 + (o) * 10 and max. (b) * (l) + (m) * 63 + (n) * 19 + (o) * 10	**$48,277**	**$108,266**

As shown in Table 74, for the CY 2022 MIPS performance period/2024 MIPS payment year, independent of the proposed change to our per response time estimate, the estimated increase in 27 respondents from the currently approved 183 respondents to 210 results in an

increase of between +13.5 hours (+27 respondents x 0.5 hrs/respondent) at a cost of +$1,285 (13.5 hours x $95.22/hr) and +54 hours (+27 respondents x 2 hrs/respondent) at a cost of +$5,142 (54 hours x $95.22/hr). Accounting for the proposed change in time required for the qualified registry self-nomination process results in an adjustment of 0 hours for the simplified self-nomination process and -183 hours (183 respondents × -1 hours) at a cost of -$17,425 (-183 hours × $95.22/hr) for the full self-nomination process.

When the above impacts are combined with the proposed estimates for targeted audits, participation plans and corrective action plans discussed above, the net impact ranges between +106 hours [13.5 hr (+27 respondents x 0.5 hrs/respondent) + 0 hr + 35 hr (+7 audits × 5 hr/audit) + 57 hr (+19 participation plans x 3hr/plan) + 0 hr)] at $10,046 [($1,286 (13.5 hours x $95.22/hr) + $0 + $3,333 (35 hrs × $95.22/hr) + $5,428 (+57 hr x $95.22/hr) + $0)] for the simplified self-nomination process and -2 hours [(54 hr (+27 respondents x 2 hrs/respondent) - 183 hr (183 respondents × -1 hours) + 70 hr (+7 audits × 10hr/audit) + 57 hr (+19 participation plans x 3hr) + 0 hr)] at a cost of -$190 [($5,142 (54 hours x $95.22/hr) - $17,425 (-183 hours × $95.22/hr) + $6,665 (70 hrs × $95.22/hr) + $5,428 (+57 hr x $95.22/hr) + $0)] for the full self-nomination process for the CY 2022 MIPS performance period/2024 MIPS payment year.

TABLE 74: Change in Estimated Burden for Qualified Registry Self Nomination

	Minimum	Maximum
Total Annual Hours for Respondents in CY 2021 PFS Final Rule (a)	401	1,139
Total Annual Hours for Respondents in CY 2022 PFS Proposed Rule (b) (See Table 73)	507	1,137
Difference (c) = (b) - (a)	**+106**	**-2**
Total Annual Cost for Respondents in CY 2021 PFS Final Rule (d)	$38,231	$108,456
Total Annual Cost for Respondents in CY 2022 PFS Proposed Rule (e) (See Table 73)	$48,277	$108,266
Difference (f) = (e) - (d)	**+$10,046**	**--$190**

(4) Survey Vendor Requirements

In section IV.A.3.h(2)(b)(ii) of this rule, we are proposing to require CAHPS for MIPS survey vendors to support subgroup reporting, beginning with the CY 2023 MIPS performance period/2025 MIPS payment year. Because of this proposal, we anticipate no additional steps

being added to the requirements for CAHPS for MIPS survey vendors to submit a participation form and assume there will be no impact on the time required for the survey vendors. Therefore, we are not proposing to make any adjustments in the time required for CAHPS survey vendors to submit the because of this proposal. The requirements and burden for CAHPS survey vendors to submit data for eligible clinicians are currently approved by OMB under control number 0938-1222 (CMS-10450). Consequently, we are not proposing any changes under that control number.

(5) Health IT Vendors

In section IV.A.3.h.(2)(b) of this rule, we propose to create a new requirement at paragraph § 414.1400(c)(1)(iii) to state that, beginning with the CY 2023 MIPS performance period/2025 MIPS payment year, health IT vendors must support MVPs that are applicable to the MVP participants on whose behalf they submit MIPS data. Health IT vendors may also support the APP. Additionally, we propose to require health IT vendors to support subgroup reporting beginning with the CY 2023 MIPS performance period/2025 MIPS payment year. We do not anticipate any requirement/burden changes as it relates to the support of reporting data.

d. ICR Regarding Open Authorization (OAuth) Credentialing and Token Request Process

This rule is not proposing any new or revised collection of information requirements or burden related to the identity management application process. The requirements and burden are currently approved by OMB under control number 0938-1314 (CMS-10621). Consequently, we are not proposing any changes under that control number.

e. ICRs Regarding Quality Data Submission (§§ 414.1318, 414.1325, 414.1335, and 414.1365)

(1) Background

We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77502 through 77503), CY 2018 Quality Payment Program final rule (82 FR 53908 through 53912), CY 2019 PFS final rule (83 FR 60000 through 60003), CY 2020 PFS final rule (84 FR 63121 through 63124), and the CY 2021 PFS final rule (85 FR 84970 through 84974) for our

previously finalized requirements for data submission for the quality performance category.

Under our current policies, two groups of clinicians must submit quality data under MIPS: those who submit as MIPS eligible clinicians and those who submit data voluntarily but are not subject to MIPS payment adjustments. Clinicians are ineligible for MIPS payment adjustments if they are newly enrolled to Medicare; are QPs; are partial QPs who elect to not participate in MIPS; are not one of the clinician types included in the definition for MIPS eligible clinician; or do not exceed the low-volume threshold as an individual or as a group.

(2) Changes and Adjustments to Quality Performance Category Respondents

To determine which QPs should be excluded from MIPS, we used the Advanced APM payment and patient percentages from the APM Participant List for the final snapshot date for the 2019 QP performance period. From this data, we calculated the QP determinations as described in the Qualifying APM Participant (QP) definition at § 414.1305 for the CY 2022 MIPS performance period/2024 MIPS payment year. Due to data limitations, we could not identify specific clinicians who have not yet enrolled in APMs, but who may become QPs in the future CY 2022 MIPS performance period/2024 MIPS payment year (and therefore will no longer need to submit data to MIPS); hence, our model may underestimate or overestimate the number of respondents.

In the CY 2019 PFS final rule, we finalized limiting the Medicare Part B claims collection type to small practices beginning with the CY 2019 MIPS performance period/2021 MIPS payment year and allowing clinicians in small practices to report Medicare Part B claims as a group or as individuals (83 FR 59752). As in the CY 2021 PFS final rule, we continue to use CY 2019 MIPS performance period/2021 MIPS payment year data to estimate the number of respondents in the CY 2022 PFS proposed rule.

There may be an undercount in submissions due to the PHE for COVID-19, because of the automatic extreme and uncontrollable circumstances policy, and application-based policy that allowed clinicians to elect not to submit during the submission period for the CY 2019 MIPS

performance period/2021 MIPS payment year that we are using to inform our burden estimates. Despite this limitation, we believe the data from the CY 2019 MIPS performance period/2021 MIPS payment year is still the best data source available as it most accurately reflects the impacts of policies finalized in previous rules and trends toward increased group reporting.

In section IV.A.3.d.(1)(d) of this rule, we are proposing to continue the CMS Web Interface measures as a collection type for the CY 2022 MIPS performance period/2024 MIPS payment year. Additionally, we are proposing to sunset the CMS Web Interface measures as a collection type/submission type starting with the CY 2023 MIPS performance period/2025 MIPS payment year. In the CY 2021 PFS final rule (85 FR 84981), we finalized the sunset of CMS Web Interface as a collection type for the CY 2022 MIPS performance period/2024 MIPS payment year. We refer readers to the CY 2021 PFS final rule for discussion on our assumptions for the CY 2022 MIPS performance period/2024 MIPS payment year, where we estimated a burden of zero due to our assumption that all Web Interface respondents will alternately utilize either the MIPS CQM and QCDR or eCQM collection types. Based on the number of groups that submitted quality performance data via the CMS Web Interface in the CY 2019 MIPS performance period/2021 MIPS payment year, we are not able to ascertain what alternative collection type(s) the groups would elect. In order to estimate the number of groups that will select each of these collection types, we first clustered the number of groups which submitted data via the CMS Web Interface collection type during the CY 2019 MIPS performance period/2021 MIPS payment year by practice size (between 25 and 49 clinicians, between 50 and 99 clinicians, etc.). Then, for each cluster, we allocated these groups to each of the MIPS CQM and QCDR and eCQM collection types based on the percent of TINs that submitted MIPS data via these two collection types. For example, of the 1,629 TINs with a practice size of 25 to 49 clinicians which submitted data for the CY 2019 MIPS performance period/2021 MIPS payment year, 1,066 (65 percent) submitted data via the MIPS CQM and QCDR collection type and 563 (35 percent) submitted data via the eCQM collection type. We applied these percentages to the 7

TINs with a practice size of 25 to 49 clinicians which submitted data via the CMS Web Interface collection type for the CY 2019 MIPS performance period/2021 MIPS payment year to estimate that 4 (7 TINs x 0.56) would elect to submit data via the MIPS CQM and QCDR collection type and the remaining 3 (7 TINs x 0.44) would elect to submit data via the eCQM collection type. In total, beginning with the CY 2023 MIPS performance period/2025 MIPS payment year, we estimate that 64 of the 114 groups that submitted data via the CMS Web Interface collection type for the CY 2019 MIPS performance period/2021 MIPS payment year will submit quality data via the MIPS CQM and QCDR collection type and 50 groups will now submit quality data via the eCQM collection type. Note that the 114 groups is an increase of 114 from our currently approved estimate of 0 groups in the CY 2022 performance period/2024 payment year. We also performed this analysis to determine the number of clinicians that would be affected and would need to submit quality data via an alternate collection type beginning with the CY 2023 performance period/2025 payment year. In total, of the estimated 45,599 individual clinicians affected by this provision, we estimate that 11,432 would submit quality data as part of a group via the MIPS CQM and QCDR collection type and 34,167 would submit quality data as part of a group via the eCQM collection type. These estimates are reflected in Tables 78 and 80 and the associated changes in burden are reflected in Tables 79 and 81. In aggregate, as discussed in section V.B.8.p of this proposed rule, we estimate the provision to sunset the CMS Web Interface measures as a collection type/submission type will result in a net decrease in quality performance data reporting burden while acknowledging the additional financial impacts on clinicians as discussed in section VII.F.17.f.(2)(a) of the Regulatory Impact Analysis. We assume that 100 percent of ACO APM Entities will submit quality data to CMS as required under their models. While we do not believe there is additional reporting for ACO APM entities, consistent with assumptions used in the CY 2020 and CY 2021 PFS final rules (84 FR 63122 and 85 FR 84972), we include all quality data voluntarily submitted by MIPS APM participants made at the individual or TIN-level in our respondent estimates. As stated in section V.B.8.e.(2)

of this proposed rule, we assume non-ACO APM Entities will participate through traditional MIPS and submit as an individual or group rather than as an entity. To estimate who will be a MIPS APM participant in the CY 2022 MIPS performance period/2024 MIPS payment year, we used the Advanced APM payment and patient percentages from the APM Participant List for the final snapshot date for the 2019 QP performance period. We elected to use this data source because the overlap with the data submissions for the CY 2019 MIPS performance period/2021 MIPS payment year enabled the exclusion of Partial QPs that elected to not participate in MIPS and required fewer assumptions as to who is a QP or not. Based on this information, if we determine that a MIPS eligible clinician will not be scored as a MIPS APM, then their reporting assumption is based on their reporting as a group or individual for the CY 2019 MIPS performance period/2021 MIPS payment year.

Our burden estimates for the quality performance category do not include the burden for the quality data that APM Entities submit to fulfill the requirements of their APMs. The burden is excluded from this collection of information section but is discussed in the regulatory impact analysis section of this proposed rule because sections 1899(e) and 1115A(d)(3) of the Act (42 U.S.C. 1395jjj(e) and 1315a(d)(3), respectively) state that the Shared Savings Program and the testing, evaluation, and expansion of Innovation Center models tested under section 1115A of the Act (or section 3021 of the Affordable Care Act) are not subject to the PRA.[250] Tables 72, 73, and 74 explain our revised estimates of the number of organizations (including groups, virtual groups, and individual MIPS eligible clinicians) submitting data on behalf of clinicians segregated by collection type.

Table 75 provides our estimated counts of clinicians that will submit quality performance category data as MIPS individual clinicians or groups in the CY 2022 and 2023 MIPS performance periods/2024 and 2025 MIPS payment years based on data from the CY 2019 MIPS

[250] Our estimates do reflect the burden on MIPS APM participants of submitting Promoting Interoperability performance category data, which is outside the requirements of their APMs.

performance period/2021 MIPS payment year.

For the CY 2022 MIPS performance period/2024 MIPS payment year, respondents will have the option to submit quality performance category data via Medicare Part B claims, direct, and log in and upload submission types, and Web Interface. For the CY 2023 MIPS performance period/2025 MIPS payment year, respondents would no longer have the option to submit quality performance category data via the Web Interface. We estimate the burden for collecting data via collection type: Medicare Part B claims, QCDR and MIPS CQMs, eCQMs, and the CMS Web Interface. We believe that, while estimating burden by submission type may be better aligned with the way clinicians participate with the Quality Payment Program, it is more important to reduce confusion and enable greater transparency by maintain consistency with previous rulemaking.

For the CY 2023 MIPS performance period/2025 MIPS payment year, we propose in section IV.A.3.b.(2)(d) of this rule that clinicians in MIPS would have the option to submit measures and activities in MVPs. We refer readers to section IV.A.3.b.(4)of this rule for additional details on the proposed reporting requirements for MVPs. For the quality performance category of MVPs, we assume that MVP Participants would choose to report via the Medicare Part B claims, QCDR, MIPS CQMs, and eCQMs collection type. Table 87 of this rule includes the estimated burden for collecting data for the quality performance category of MVPs.

As shown in Table 75, using participation data from the CY 2019 MIPS performance period/2021 MIPS payment year, combined with the estimate of QPs for the CY 2022 MIPS performance period/2024 MIPS payment year, we estimate a total of 625,703 clinicians will submit quality data as individuals or groups in each of the CY 2022 and 2023 MIPS performance periods/2024 and 2026 MIPS payment years, a decrease of 25,811 clinicians when compared to our estimate of 651,514 clinicians in the CY 2021 PFS final rule (85 FR 84972). For the CY 2022 performance period/2024 payment year, we estimate 28,252 clinicians will submit data as

individuals for the Medicare Part B claims collection type; 279,247 clinicians will submit data as individuals or as part of groups for the MIPS CQM and QCDR collection type; 273,819 clinicians will submit data as individuals or as part of groups via eCQM collection types; and 44,385 clinicians will submit as part of groups via the CMS Web Interface. Compared to the CY 2022 MIPS performance period/2024 MIPS payment year burden estimated in the CY 2021 PFS final rule (85 FR 84972), these are decreases from the estimates of 29,273, 295,941, and 326,300 for Medicare Part B claims, MIPS CQM and QCDR, eCQM, and an increase of 44,385 for the CMS Web Interface collection types, respectively. These adjustments are due to the availability of updated data from the CY 2019 MIPS performance period/2021 MIPS payment year and the delay in sunsetting the CMS Web Interface from the CY 2022 MIPS performance period/2024 MIPS payment year to the CY 2023 MIPS performance period/2025 MIPS payment year. For the CY 2023 performance period/2025 payment year, we estimate 25,427 clinicians will submit data as individuals for the Medicare Part B claims collection type; 288,637 clinicians will submit data as individuals or as part of groups for the MIPS CQM and QCDR collection type; 311,326 clinicians will submit data as individuals or as part of groups via the eCQM collection type.

Table 75 provides estimates of the number of clinicians to collect quality measures data via each collection type, regardless of whether they decide to submit as individual clinicians or as part of groups. Because our burden estimates for quality data submission assume that burden is reduced when clinicians elect to submit as part of a group, we also separately estimate the expected number of clinicians to submit as individuals or part of groups.

TABLE 75: Estimated Number of Clinicians Submitting Quality Performance Category Data by Collection Type (as Individual Clinicians or as Part of Groups)

	Medicare Part B Claims	QCDR/ MIPS CQM	eCQM	CMS Web Interface	Total
2022 MIPS performance period (excludes QPs) (a)	28,252	279,247	273,819	44,385	625,703
* Currently approved 2022 MIPS performance period (excludes QPs) (b)	29,273	295,941	326,300	0	651,514
Difference (c) = (a) - (b)	-1,021	-16,694	-52,481	44,385	-25,811
2023 MIPS performance period prior to MVP and Web Interface adjustments (excludes QPs) (d)	28,252	295,941	326,300	0	650,493
Adjustment for Web Interface Sunset (e)	0	24,767	19,618	0	44,385
Adjustment for Shift to MVP (10% reduction) (f) = ((d) + (e)) * -.1	-2,825	-32,071	-34,592	0	-69,488
2023 after adjustments (g) = (d) + (e) + (f)	25,427	288,637	311,326	0	625,390
* Currently approved 2022 MIPS performance period (excludes QPs) (h)	29,273	295,941	326,300	0	651,514
Difference (i) = (g) - (h)	-3,846	-7,304	-14,974	-0	-26,124

*Currently approved by OMB under control number 0938-1314 (CMS-10621) from the CY 2021 PFS final rule.

Because MIPS eligible clinicians may submit data for multiple collection types for a single performance category, the estimated numbers of individual clinicians and groups to collect via the various collection types are not mutually exclusive and reflect the occurrence of individual clinicians or groups that collected data via multiple collection types during the 2019 MIPS performance period/2021 MIPS payment year. We captured the burden of any eligible clinician that may have historically collected via multiple collection types, as we assume they will continue to collect via multiple collection types and that our MIPS scoring methodology will take the highest score where the same measure is submitted via multiple collection types.

Table 76 uses methods similar to those described to estimate the number of clinicians that will submit data as individual clinicians via each collection type in the CY 2022 and CY 2023 MIPS performance periods/2024 and 2025 MIPS payment years. For the CY 2022 MIPS performance period/ 2024 MIPS payment year, we estimate that approximately 28,252 clinicians will submit data as individuals using the Medicare Part B claims collection type; approximately 40,507 clinicians will submit data as individuals using MIPS CQM and QCDR collection type; and approximately 40,446 clinicians will submit data as individuals using eCQMs collection type. Based on performance data from the CY 2019 MIPS performance period/2021 MIPS

payment year, these are decreases of -1,021, -833, and -1,809 respondents from the currently approved estimates of 29,273, 41,340, and 42,255 for the Medicare Part B claims, MIPS CQM and QCDR, and eCQM collection types, respectively.

As shown in Table 76, for the CY 2023 MIPS performance period/2025 MIPS payment year, we estimate that approximately 25,427 clinicians will submit data as individuals using the Medicare Part B claims collection type; approximately 36,456 clinicians will submit data as individuals using MIPS CQM and QCDR collection type; and approximately 36,401 clinicians will submit data as individuals using eCQMs collection type. Based on performance data from the CY 2019 MIPS performance period/2021 MIPS payment year, these are decreases of -3,846, -4,884, and -5,854 respondents from the currently approved estimates of 29,273, 41,340, and 42,255 for the Medicare Part B claims, MIPS CQM and QCDR, and eCQM collection types, respectively.

TABLE 76: Estimated Number of Clinicians Submitting Quality Performance Category Data as Individuals by Collection Type

	Medicare Part B Claims	QCDR/ MIPS CQM	eCQM	CMS Web Interface	Total
2022 MIPS Performance Period (excludes QPs) (a)	28,252	40,507	40,446	0	109,205
*Currently approved 2022 MIPS performance period (excludes QPs) (b)	29,273	41,340	42,255	0	112,868
Difference (c) = (a) - (b)	-1,021	-833	-1,809	0	-3,663
2023 MIPS Performance Period (excludes QPs) prior to MVP adjustment (d)	28,252	40,507	40,446	0	109,205
MVP adjustment (10% reduction) (e) = (d)*- 0.1	-2,825	4,051	-4,044	0	-10,920
2023 MIPS Performance Period (excludes QPs) (f) = (d) + (e)	25,427	36,456	36,401	0	98,285
*Currently approved 2022 MIPS performance period (excludes QPs) (g)	29,273	41,340	42,255	0	112,868
Difference (h) = (f) - (g)	-3,846	-4,884	-5,854	0	-14,583

*Currently approved by OMB under control number 0938-1314 (CMS-10621).

Consistent with the policy finalized in the CY 2018 Quality Payment Program final rule that for MIPS eligible clinicians who collect measures via Medicare Part B claims, MIPS CQM, eCQM, or QCDR collection types and submit more than the required number of measures (82 FR 53735 through 54736), we will score the clinician on the required measures with the highest assigned measure achievement points and thus, the same clinician may be counted as a

respondent for more than one collection type. Therefore, our columns in Table 76 are not mutually exclusive.

Table 77 provides our estimated counts of groups or virtual groups that will submit quality data on behalf of clinicians for each collection type in the CY 2022 and 2023 MIPS performance period/2024 and 2025 MIPS payment years. We assume that clinicians that submitted quality data as groups in the CY 2019 MIPS performance period/2021 MIPS payment year will continue to submit quality data either as groups or virtual groups for the same collection types as they did as a group or TIN within a virtual group for the CY 2022 and 2023 MIPS performance periods/2024 and 2025 MIPS payment years. Specifically, for the CY 2022 MIPS performance period/2024 MIPS payment year we estimate that 11,529 groups and virtual groups will submit data for the MIPS CQM and QCDR collection type on behalf of 243,169 clinicians; 8,127 groups and virtual groups will submit for eCQM collection types on behalf of 249,878 eligible clinicians; and 114 groups will submit data via the CMS Web Interface on behalf of 44,385 clinicians. These are decreases of -75 and -93 respondents from the currently approved estimates of 11,604, and 8,220 groups and virtual groups for the MIPS CQM and QCDR and eCQM collection types, and an increase of +114 groups from the currently approved estimates of 0 groups for the CMS Web Interface collection types, respectively.

As shown in Table 77, for the CY 2023 MIPS performance period/2025 MIPS payment year we estimate that 10,434 groups and virtual groups will submit data for the MIPS CQM and QCDR collection type on behalf of 313,038 clinicians and 7,359 groups and virtual groups will submit for eCQM collection types on behalf of 339,109 eligible clinicians. These are decreases of -1,170 and -861 respondents from the currently approved estimates of 11,604, and 8,220 groups and virtual groups for the MIPS CQM and QCDR and eCQM collection types, respectively. The reason for the difference in estimated number of respondents from the estimates for the CY 2022 MIPS performance period/2024 MIPS payment year describe above, is due to the sunset of the CMS Web Interface as a collection type and the implementation of

MVPs beginning with the CY 2023 MIPS performance period/2025 MIPS payment year. As the data does not exist for APM performance pathway or MIPS quality measures for non-ACO APM entities, we assume non-ACO APM Entities would participate through traditional MIPS and base our estimates on submissions received in the CY 2019 MIPS performance period/2021 MIPS payment year.

TABLE 77: Estimated Number of Groups and Virtual Groups Submitting Quality Performance Category Data by Collection Type on Behalf of Clinicians

	Medicare Part B Claims	QCDR/ MIPS CQM	eCQM	CMS Web Interface	Total
2022 MIPS performance period (excludes QPs) (a)	0	11,529	8,127	114	19,770
*Currently approved 2022 MIPS performance period (excludes QPs) (b)	0	11,604	8,220	0	19,824
Difference (c) = (a) - (b)	0	-75	-93	+114	-54
2023 MIPS performance period (excludes QPs) (d) prior to adjustments	0	11,529	8,127	114	19,770
Adjustment for Web Interface (e)	0	64	50	-114	0
Adjustment for MVPs (10%) (g) = ((d) + (e)) * 0.1	0	-1,159	-817.7	0	-1977
2023 MIPS performance period (excludes QPs) – Adjusted. (h) = (d) + (e) + (f) + (g)	0	10,434	7,359	0	17,793
*Currently approved 2022 MIPS performance period (excludes QPs) (i)	0	11,604	8,220	0	19,824
Difference (j) = (h) - (i)	0	-1,170	-861	0	-2,031

*Currently approved by OMB under control number 0938-1314 (CMS-10621) from the CY 2021 PFS final rule.

The burden associated with the submission of quality performance category data have some limitations. We believe it is difficult to quantify the burden accurately because clinicians and groups may have different processes for integrating quality data submission into their practices' workflows. Moreover, the time needed for a clinician to review quality measures and other information, select measures applicable to their patients and the services they furnish, and incorporate the use of quality measures into the practice workflows is expected to vary along with the number of measures that are potentially applicable to a given clinician's practice and by the collection type. For example, clinicians submitting data via the Medicare Part B claims collection type need to integrate the capture of quality data codes for each encounter whereas

clinicians submitting via the eCQM collection types may have quality measures automated as part of their EHR implementation.

We believe the burden associated with submitting quality measures data will vary depending on the collection type selected by the clinician, group, or third-party. As such, we separately estimated the burden for clinicians, groups, and third parties to submit quality measures data by the collection type used. For the purposes of our burden estimates for the Medicare Part B claims, MIPS CQM and QCDR, and eCQM collection types, we also assume that, on average, each clinician or group will submit 6 quality measures. For the CY 2023 MIPS performance period/2025 MIPS payment year we refer readers to section IV.A.3.b.(4) of the rule for the changes related to MVP and subgroup reporting requirements. In terms of the quality measures available for clinicians and groups to report for the CY 2022 MIPS performance period/2024 MIPS payment year, we are proposing that the total number of quality measures will be 195. The new MIPS quality measures proposed for inclusion in MIPS for the CY 2022 MIPS performance period/2024 MIPS payment year and future years are found in Table Group A of Appendix 1; MIPS quality measures with proposed substantive changes can be found in Table Group D of Appendix 1; and MIPS quality measures proposed for removal can be found in Table Group C of Appendix 1. These proposed measures are stratified by collection type in Table 78, as well as counts of new, removed, and substantively changed measures.

TABLE 78: Summary of Proposed Quality Measures for the CY 2022 MIPS Performance Period

Collection Type	# Measures Proposed as New	# Measures Proposed for Removal*	# Measures Proposed with a Substantive Change*	# Measures Remaining for CY 2022*
Medicare Part B Claims Specifications	0	-14	15	33
MIPS CQMs Specifications	+2	-19	67	168
eCQM Specifications	+1	-2	40	46
Survey – CSV	0	0	0	1
CMS Web Interface Measure Specifications	0	0	10	10
Administrative Claims	+2	0	0	4
Total	+5	-19*	+84*	1,195*

*A measure may be specified under multiple collection types but will only be counted once in the total.

For the CY 2022 MIPS performance period/2024 MIPS payment year, we are proposing

a net reduction of 15 quality measures across all collection types compared to the 209 measures finalized for the CY 2021 MIPS performance period /2023 MIPS payment year (85 FR 84974). Specifically, as discussed in section IV.A.3.c.(1)(d), we are proposing to add 2 new administrative claims outcome measures, remove 19 quality measures, and make substantive updates to 84 quality measures. We do not anticipate that our proposal to remove these measures will increase or decrease the reporting burden on clinicians and groups as respondents generally are still required to submit quality data for 6 measures. For the change in associated burden related to the proposals introducing MVP and subgroup reporting beginning in the CY 2023 MIPS performance period/2025 MIPS payment year, we refer readers to Table 87 of this section.

(3) Quality Payment Program Identity Management Application Process

This rule is not proposing any new or revised collection of information requirements or burden related to the identity management application process. The requirements and burden are currently approved by OMB under control number 0938-1314 (CMS-10621). Consequently, we are not proposing any changes under that control number.

(4) Quality Data Submission by Clinicians: Medicare Part B Claims-Based Collection Type

This rule is not proposing any new or revised collection of information requirements related to the submission of Medicare Part B claims data for the quality performance category. However, we are adjusting our currently approved burden estimates based on more recent data. For the change in associated burden related to the proposals introducing MVP and subgroup reporting beginning in the CY 2023 MIPS performance period/2025 MIPS payment year, we refer readers to Table 87 of this section.

The following proposed burden will be submitted to OMB for approval under control number 0938-1314 (CMS-10621).

We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77501 through 77504), CY 2018 Quality Payment Program final rule (82 FR 53912), CY 2019 PFS final rule (83 FR 60004 through 60005), CY 2020 PFS final rule (84 FR 63124 through 63126)

and the CY 2021 PFS final rule (85 FR 84975 through 84976) for our previously finalized requirements and burden for quality data submission via the Medicare Part B claims collection type.

As noted in Table 76, based on data from the CY 2019 MIPS performance period/2021 MIPS payment year, we assume that 28,252 individual clinicians will collect and submit quality data via the Medicare Part B claims collection type. This rule is proposing to adjust the number of Medicare Part B claims respondents from the currently approved estimate of 29,273 to 28,252 (a decrease of 1,021) based on more recent data and our methodology of accounting only for clinicians in small practices who submitted such claims data in the CY 2019 MIPS performance period/2021 MIPS payment year rather than all clinicians who submitted quality data codes to us for the Medicare Part B claims collection type.

As shown in Table 79, consistent with our currently approved per response time figures, we estimate that the burden of quality data submission using Medicare Part B claims will range from 0.15 hours (9 minutes) for a computer systems analyst at a cost of $14.28 (0.15 hr x $95.22/hr) to 7.2 hours for a computer systems analyst at a cost of $685.58 (7.2 hr x $95.22/hr). The burden will involve becoming familiar with MIPS quality measure specifications.

Consistent with our currently approved per response time figures, we believe that the start-up cost for a clinician's practice to review measure specifications is 7 hours, consisting of 3 hours at $114.24/hr for a medical and health services manager, 1 hour at $217.32/hr for a physician, 1 hour at $48.16/hr for an LPN, 1 hour at $95.22/hr for a computer systems analyst, and 1 hour at $40.02/hr for a billing and posting clerk. We are not revising our currently approved per response time estimates.

As shown in Table 79, considering both data submission and start-up requirements for our adjusted number of clinicians, the estimated time (per clinician) ranges from a minimum of 7.15 hours (0.15 hr + 7 hr) to a maximum of 14.2 hours (7.2 hr + 7 hr). In this regard the total annual time for the CY 2022 MIPS performance period/2024 MIPS payment year ranges from

202,002 hours (7.15 hr x 28,252 clinicians) to 401,178 hours (14.2 hr x 28,252 clinicians). The estimated annual cost (per clinician) ranges from $758 [(0.15 hr x $95.22/hr) + (3 hr x $114.24/hr) + (1 hr x $95.22/hr) + (1 hr x $48.16/hr) + (1 hr x $40.02/hr) + (1 hr x $217.32 /hr)] to a maximum of $1,429 [(7.2 hr x $95.22/hr) + (3 hr x $114.24/hr) + (1 hr x $95.22/hr) + (1 hr x $48.16/hr) + (1 hr x $40.02/hr) + (1 hr x $217.32/hr)]. The total annual cost for the CY 2022 MIPS performance period/2024 MIPS payment year ranges from a minimum of $21,407,105 (28,252 clinicians x $758) to a maximum of $40,372,673 (28,252 clinicians x $1,429).

As shown in Table 79, for purposes of calculating total burden associated with the Claims collection type for the CY 2023 MIPS performance period/2025 MIPS payment year only the maximum burden is used. The decrease in the number of annual respondents results in an estimated total annual time of 361,061 hours (14.2 hr x 25,427 clinicians) for the CY 2023 MIPS performance period/2025 MIPS payment year. Using the currently approved unchanged estimate for cost per respondent, the total annual cost for the CY 2023 MIPS performance period/2025 MIPS payment year is $36,335,692 (25,427 clinicians x $1,429per respondent).

Table 79 summarizes our proposed estimated range of total annual burden associated with clinicians submitting quality data via Medicare Part B claims for both the CY 2022 and 2023 MIPS performance periods/2024 and 2025 MIPS payment years.

TABLE 79: Estimated Burden for Quality Performance Category: Clinicians Using the Medicare Part B Claims Collection Type

	Minimum Burden	Median Burden	Maximum Burden (CY 2022)	Maximum Burden (CY 2023)
# of Clinicians (a)	28,252	28,252	28,252	25,427
Hours Per Clinician to Submit Quality Data (b)	0.15	1.05	7.2	7.2
# of Hours Medical and Health Services Manager Review Measure Specifications (c)	3	3	3	3
# of Hours Computer Systems Analyst Review Measure Specifications (d)	1	1	1	1
# of Hours LPN Review Measure Specifications (e)	1	1	1	1
# of Hours Billing Clerk Review Measure Specifications (f)	1	1	1	1
# of Hours Physician Review Measure Specifications (g)	1	1	1	1
Annual Hours per Clinician (h) = (b) + (c) + (d) + (e) + (f) + (g)	7.15	8.05	14.2	14.2
Total Annual Hours (i) = (a) * (h)	**202,002**	**227,429**	**401,178**	**361,061**
Cost to Submit Quality Data (@ computer systems analyst's labor rate of $95.22/hr @ varying times) (j)	$14.28	$99.98	$685.58	$685.58
Cost to Review Measure Specifications (@ medical and health services manager's labor rate of $114.24/hr @ 3 hr) (k)	$342.72	$342.72	$342.72	$342.72
Cost to Review Measure Specifications (@ computer systems analyst's labor rate of $95.22/hr @ 1 hr) (l)	$95.22	$95.22	$95.22	$95.22
Cost to Review Measure Specifications (@ LPN's labor rate of $48.16/hr @1 hr) (m)	$48.16	$48.16	$48.16	$48.16
Cost to Review Measure Specifications (@ billing clerk's labor rate of $40.02/hr @ 1 hr) (n)	$40.02	$40.02	$40.02	$40.02
Cost to Review Measure Specifications (@ physician's labor rate of $210.44/hr @ 1 hr) (o)	$217.32	$217.32	$217.32	$217.32
*Total Annual Cost Per Clinician (p) = (j) + (k) + (l) + (m) + (n) + (o)	$758	$843	$1,429	$1,429
***Total Annual Cost (q) = (a) * (p)**	**$21,407,105**	**$23,828,302**	**$40,372,673**	**$36,355,692**

*Due to burden for certain activities being estimated in fractions of hours, totals may not reflect the sum of individual rows due to rounding.

As shown in Table 76, using the unchanged currently approved hours per respondent, we estimate that the burden per respondent for quality data submission using the Medicare Part B Claims collection type would range from $758 to $1,429. The decrease in number of respondents from 29,273 to 28,252 results in a total adjustment of between -7,300 hours (-1,021 respondents x 7.15 hr/respondent) at a cost of -$167,945 (-1,021 respondents x $758/respondent) and -14,499 hours (-1,021 respondents x 14.2 hr/respondent) at a cost of -$1,257,748 (-1,021 respondents x $1,429/respondent). For purposes of calculating total burden associated with the proposed rule as shown in Tables 113, 114, 115, and 116, only the maximum burden is used.

As shown in Table 80, for purposes of calculating total burden associated the CY 2023

MIPS performance period/2025 MIPS payment year only the maximum burden is used. Using the unchanged currently approved hours per respondent, we estimate that the burden per respondent for quality data submission using the Medicare Part B Claims collection type would be $1,429. The decrease in number of respondents from 29,273 to 25,427 results in a total adjustment of -54,616 hours (-25,427 respondents x 14.2 hr/respondent) at a cost of -$5,294,729 (-25,427 respondents x $1,429/respondent)

TABLE 80: Adjusted Burden for Quality Performance Category: Clinicians Using the Medicare Part B Claims Collection Type

	Minimum Burden	Median Burden	Maximum Burden (CY 2022)	Maximum Burden (CY 2023)
Total Annual Hours for Respondents in CY 2021 PFS Final Rule (a)	209,302	235,648	415,677	415,677
Total Annual Hours for Respondents in CY 2022 PFS Proposed Rule (b) (see Table 79, row (i))	202,002	227,429	401,178	361,061
Difference (c) = (b) - (a)	**-7,300**	**-8,219**	**-14,499**	**-54,616**

(5) Quality Data Submission by Individuals and Groups Using MIPS CQM and QCDR Collection Types

The following requirement and burden will be submitted to OMB for approval under control number 0938-1314 (CMS-10621).

We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77504 through 77505), CY 2018 Quality Payment Program final rule (82 FR 53912 through 53914), CY 2019 PFS final rule (83 FR 60005 through 60006), CY 2020 PFS final rule (84 FR 63127 through 63128), CY 2021 PFS final rule (85 FR 84977 through 84979) for our previously finalized requirements and burden for quality data submission via the MIPS CQM and QCDR collection types. For the change in associated burden for quality data submission related to the proposals introducing MVP and subgroup reporting beginning in the CY 2023 MIPS performance period/2025 MIPS payment year, we refer readers to Table 87.

As noted in Tables 72, 73, and 74, and based on data from the CY 2019 MIPS performance period/2021 MIPS payment year, for the CY 2022 performance period/2024 MIPS payment year, we assume that 279,247 clinicians will submit quality data as individuals or groups using MIPS CQM or QCDR collection types; 52,036 clinicians will submit as individuals and the remaining 279,223 clinicians will submit as members of 11,527 groups and virtual groups. This is an increase of 10,696 individuals and a decrease of 32 groups from the estimates of 41,340 individuals and the 11,559 groups provided in the CY 2021 PFS final rule (85 FR 84977). Given that the number of measures required for clinicians and groups is the same, we expect the burden to be the same for each respondent collecting data via MIPS CQM or QCDR, whether the clinician is participating in MIPS as an individual or group.

Under the MIPS CQM and QCDR collection types, the individual clinician or group may either submit the quality measures data directly to us, log in and upload a file, or utilize a third-party intermediary to submit the data to us on the clinician's or group's behalf.

We estimate that the burden associated with the QCDR collection type is similar to the burden associated with the MIPS CQM collection type; therefore, we discuss the burden for both together below. For MIPS CQM and QCDR collection types, we estimate an additional time for respondents (individual clinicians and groups) to become familiar with MIPS quality measure specifications and, in some cases, specialty measure sets and QCDR measures. Therefore, we believe that the burden for an individual clinician or group to review measure specifications and submit quality data is total of 9 hours at a cost of $922.76 per response. This consists of 3 hours at $95.22/hr for a computer systems analyst (or their equivalent) to submit quality data along with 2 hours at $114.24/hr for a medical and health services manager, 1 hour at $95.22/hr for a computer systems analyst, 1 hour at $48.16/hr for a LPN, 1 hour at $40.02/hr for a billing clerk, and 1 hour at $217.32/hr for a physician to review measure specifications. Additionally, clinicians and groups who do not submit data directly will need to authorize or instruct the qualified registry or QCDR to submit quality measures' results and numerator and denominator

data on quality measures to us on their behalf. We estimate that the time and effort associated with authorizing or instructing the quality registry or QCDR to submit this data will be approximately 5 minutes (0.083 hours) at $95.22/hr for a computer systems analyst at a cost of $7.90 (0.083 hr x $95.22/hr). Overall, we estimate 9.083 hr/response (3 hr + 2 hr + 1 hr + 1 hr + 1 hr + 1 hr + 0.083 hr) at a cost of $922.76/response [(3 hr x $95.22/hr) + (2 hr x $114.24/hr) + (1 hr x $217.32/hr) + (1 hr x $95.22/hr) + (1 hr x $48.16/hr) + (1 hr x $40.02/hr) + (0.083 hr x $95.22/hr)].

For the CY 2022 MIPS performance period/2024 MIPS payment year, in aggregate, we estimate a burden of 472,643 hours [9.083 hr/response x (40,507 clinicians submitting as individuals + 11,527 groups submitting via QCDR or MIPS CQM on behalf of individual clinicians or 52,036 responses)] at a cost of $ $48,016,739 (52,036 responses x $922.76/response).

For the CY 2023 MIPS performance period/2025 MIPS payment year, in aggregate, we estimate a burden of 425,787 hours [9.083 hr/response x (36,456 clinicians submitting as individuals + 10,432 groups submitting via QCDR or MIPS CQM on behalf of individual clinicians or 46,877 responses)] at a cost of $43,256,221 (46,877 responses x $922.76/response). Based on these assumptions, we have estimated in Table 81 the burden for these submissions.

TABLE 81: Estimated Burden for Quality Performance Category: Clinicians (Participating Individually or as Part of a Group) Using the MIPS CQM and QCDR Collection Type

	2022 Performance Period	2023 Performance Period
# of clinicians submitting as individuals (a)	40,507	36,456

# of Respondents (groups plus clinicians submitting as individuals) (c)=(a)+(b)	**52,036**	**46,877**
Hours Per Respondent to Report Quality Data (d)	3	3
# of Hours Medical and Health Services Manager Review Measure Specifications (e)	2	2
# of Hours Computer Systems Analyst Review Measure Specifications (f)	1	1
# of Hours LPN Review Measure Specifications (g)	1	1
# of Hours Billing Clerk Review Measure Specifications (h)	1	1
# of Hours Physician Review Measure Specifications (i)	1	1
# of Hours Per Respondent to Authorize Qualified Registry to Report on Respondent's Behalf (j)	0.083	0.083
Annual Hours Per Respondent (k)= (d) + (e) + (f) + (g) + (h) + (i) + (j)	9.083	9.083
Total Annual Hours (l) = (c)*(k)	**472,643**	**425,787**
Cost Per Respondent to Submit Quality Data (@ computer systems analyst's labor rate of $95.22/hr) (m)	$285.66	$285.66
Cost to Review Measure Specifications (@ medical and health services manager's labor rate of $114.24/hr) (n)	$228.48	$228.48
Cost Computer System's Analyst Review Measure Specifications (@ computer systems analyst's labor rate of $95.22/hr) (o)	$95.22	$95.22
Cost LPN Review Measure Specifications (@ LPN's labor rate of $48.16/hr) (p)	$48.16	$48.16
Cost Billing Clerk Review Measure Specifications (@ clerk's labor rate of $40.02/hr) (q)	$40.02	$40.02
Cost Physician Review Measure Specifications (@ physician's labor rate of $217.32/hr) (r)	$217.32	$217.32
Cost for Respondent to Authorize Qualified Registry/QCDR to Report on Respondent's Behalf (@ computer systems analyst's labor rate of $95.22/hr) (s)	$7.90	$7.90
*Total Annual Cost Per Respondent (t) = (m) + (n) + (o) + (p) + (q) + (r) + (s)	$922.76	$922.76
***Total Annual Cost (u) = (c) * (t)**	**$48,016,739**	**$43,256,221**

*Due to burden for certain activities being estimated in fractions of hours, totals may not reflect the sum of individual rows due to rounding.

As shown in Table 82, using the unchanged currently approved hours per respondent burden estimate, the decrease of 913 respondents from 52,949 to 52,036 for the CY 2022 MIPS performance period/2024 MIPS payment year results in a decrease of -8,293 hours (-913 respondents x 9.083 hr/respondent) and -$842,483 (913 respondents x $922.76/respondent).

For the CY 2023 MIPS performance period/ 2025 MIPS payment year, using the unchanged currently approved hours per respondent burden estimate, the decrease of 6,072

respondents from 52,949 to 46,877 results in a decrease of -55,149 hours (-6,072 respondents x 9.083 hr/respondent) and -$5,602,649 (-6,072 respondents x $922.76/respondent).

TABLE 82: Change in Estimated Burden for Quality Performance Category: Clinicians (Participating Individually or as Part of a Group) Using the MIPS CQM and QCDR Collection Type

	2022 Performance Period	2023 Performance Period
Total Annual Hours for Respondents in CY 2021 PFS Final Rule (a)	480,936	480,936
Total Annual Hours for Respondents in CY 2022 PFS Proposed Rule (b) (see Table 81, row (l))	472,643	425,787
Difference (c) = (b) - (a)	**8,293**	**-55,149**
Total Annual Cost for Respondents in CY 2021 PFS Final Rule (d)	$48,859,392	$48,859,392
Total Annual Cost for Respondents in CY 2022 PFS Proposed Rule (e) (see Table 81, row (u))	$48,016,909	$43,256,742
Difference (f) = (e) - (d)	**-$842,483**	**-$5,602,649**

(6) Quality Data Submission by Clinicians and Groups: eCQM Collection Type

The following requirement and burden will be submitted to OMB for approval under control number 0938-1314 (CMS-10621).

We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77505 through 77506), CY 2018 Quality Payment Program final rule (82 FR 53914 through 53915), CY 2019 PFS final rule (83 FR 60006 through 60007), CY 2020 PFS final rule (84 FR 63128 through 63130) and the CY 2021 PFS final rule (85 FR 84979 through 84980) for our previously finalized requirements and burden for quality data submission via the eCQM collection types. For the change in associated burden for quality data submission related to the proposals introducing MVP and subgroup reporting beginning in the CY 2023 MIPS performance period/2025 MIPS payment year, we refer readers to Table 87 of this section.

Based on CY 2019 MIPS performance period/2021 MIPS payment year data, for the CY 2022 MIPS performance period/2024 MIPS payment year, we assume that 322,392 clinicians will elect to use the eCQM collection type; 40,446 clinicians are expected to submit eCQMs as individuals; and 8,127 groups and virtual groups are expected to submit eCQMs on behalf of the

remaining 273,819 clinicians. This is a decrease of 2,109 individuals and 27 groups from the estimates of 42,555 individuals and 8,154 groups provided in the CY 2021 PFS final rule (85 FR 84979). We expect the burden to be the same for each respondent using the eCQM collection type, whether the clinician is participating in MIPS as an individual or group.

Under the eCQM collection type, the individual clinician or group may either submit the quality measures data directly to us from their eCQM, log in and upload a file, or utilize a third-party intermediary to derive data from their CEHRT and submit it to us on the clinician's or group's behalf.

To prepare for the eCQM collection type, the clinician or group must review the quality measures on which we will be accepting MIPS data extracted from eCQMs, select the appropriate quality measures, extract the necessary clinical data from their CEHRT, and submit the necessary data to a QCDR/qualified registry or use a health IT vendor to submit the data on behalf of the clinician or group. We assume the burden for collecting quality measures data via eCQM is similar for clinicians and groups who submit their data directly to us from their CEHRT and clinicians and groups who use a health IT vendor to submit the data on their behalf. This includes extracting the necessary clinical data from their CEHRT and submitting the necessary data to a QCDR/qualified registry.

We estimate that it will take no more than 2 hours at $95.22/hr for a computer systems analyst to submit the actual data file. The burden will also involve becoming familiar with MIPS quality measure specifications. In this regard, we estimate it will take 6 hours for a clinician or group to review measure specifications. Of that time, we estimate 2 hours at $114.24/hr for a medical and health services manager, 1 hour at $217.32/hr for a physician, 1 hour at $95.22/hr for a computer systems analyst, 1 hour at $48.16/hr for an LPN, and 1 hour at $40.02/hr for a billing clerk. Overall, we estimate a cost of $812.76/response [(2 hr x $95.22/hr) + (2 hr x $114.24/hr) + (1 hr x $217.32/hr) + (1 hr x $95.22/hr) + (1 hr x $48.16/hr) + (1 hr x $40.02/hr)].

For the CY 2022 MIPS performance period/2024 MIPS payment year, in aggregate, we

estimate a burden of 388,584 hours [8 hr x 48.573 (40,446 clinicians + 8,127 groups and virtual groups)] at a cost of $39,812,374 (48,573 responses x $819.64/response). For the CY 2023 MIPS performance period/2025 MIPS payment year, in aggregate, we estimate a burden of 350,186 hours [8 hr x 43,773 (36,401 clinicians + 7,372 groups and virtual groups)] at a cost of $35,878,102 (43,773 responses x $819.64/response). Based on these assumptions, we have estimated in Table 83 the burden for these submissions.

TABLE 83: Estimated Burden for Quality Performance Category: Clinicians (Submitting Individually or as Part of a Group) Using the eCQM Collection Type

	2022 Performance Period	2023 Performance Period
# of clinicians submitting as individuals (a)	40,446	36,401
# of Groups submitting via EHR on behalf of individual clinicians (b)	8,127	7,372
# of Respondents (groups and clinicians submitting as individuals) (c)=(a)+(b)	48,573	43,773
Hours Per Respondent to Submit MIPS Quality Data File to CMS (d)	2	2
# of Hours Medical and Health Services Manager Review Measure Specifications (e)	2	2
# of Hours Computer Systems Analyst Review Measure Specifications (f)	1	1
# of Hours LPN Review Measure Specifications (g)	1	1
# of Hours Billing Clerk Review Measure Specifications (h)	1	1
# of Hours Physicians Review Measure Specifications (i)	1	1
Annual Hours Per Respondent (j) = (d) + (e) + (f) + (g) + (h) + (i)	8	8
Total Annual Hours (k) = (c) * (j)	**388,584**	**350,186**
Cost Per Respondent to Submit Quality Data (@ computer systems analyst's labor rate of $95.22/hr) (l)	$190.44	$190.44
Cost to Review Measure Specifications (@ medical and health services manager's labor rate of $114.24/hr) (m)	$228.48	$228.48
Cost to Review Measure Specifications (@ computer systems analyst's labor rate of $95.22/hr) (n)	$95.22	$95.22
Cost to Review Measure Specifications (@ LPN's labor rate of $48.16/hr) (o)	$48.16	$48.16
Cost to Review Measure Specifications (@ clerk's labor rate of $40.02/hr) (p)	$40.02	$40.02
Cost to Review Measure Specifications (@ physician's labor rate of $217.32/hr) (q)	$217.32	$217.32
*Total Cost Per Respondent (r)=(l)+(m)+(n)+(o)+(p)+(q)	$819.64	$819.64
***Total Annual Cost (s) = (c) * (r)**	**$39,812,374**	**$35,878,102**

*Due to burden for certain activities being estimated in fractions of hours, totals may not reflect the sum of individual rows due to rounding.

As shown in Table 84, using the unchanged currently approved hours per respondent burden estimate, the decrease of 1,897 respondents from 50,470 to 48,573 for the CY 2022 MIPS performance period/2024 MIPS payment year results in a total difference of -15,176 hours at a

cost of -$1,544,857. For CY 2023 MIPS performance period/2025 MIPS payment year, using the unchanged currently approved hours per respondent burden estimate, the decrease of 6,697 respondents from 50,470 to 43,773 results in a total difference of -53,574 hours at a cost of -$5,488,883.

TABLE 84: Change in Estimated Burden for Quality Performance Category: Clinicians (Participating Individually or as Part of a Group) Using the eCQM Collection Type

Total Annual Cost for Respondents in CY 2022 PFS Proposed Rule (e) (see Table 83, row (s))	$39,812,374	$35,878,348
Difference (f) = (e) - (d)	**-$1,544,857**	**-$5,488,883**

(7) ICRs Regarding Burden for MVP Reporting

Section IV.A.3.b.(2)(d) of this rule describes proposals related to implementing MVPs beginning with the CY 2023 MIPS performance period/2025 MIPS payment year. The MVPs would include the Promoting Interoperability performance category as a foundational element and incorporate population health claims-based measures, as feasible, along with the relevant measures and activities in the quality, cost and improvement activities performance categories. For the CY 2023 MIPS performance period/2025 MIPS payment year, CMS is proposing an inventory of seven MVPs included in Appendix 3: MVP Inventory of this rule to assess performance across MVPs for the quality, cost, improvement activities, and Promoting Interoperability performance categories. Additionally, in section IV.A.3.b.(2)(c)(i) of this rule, we propose to use the term "MVP Participant" to refer to clinicians who would choose to participate in MIPS for reporting MVPs.

The following new ICRs reflect the burden associated with the first year of data collection related to the proposed implementation of MVPs and subgroup reporting in the CY

2023 MIPS performance period/2025 MIPS payment year as described in section IV.A.3.b.(2)(d) of this rule. The proposed requirements and burden associated with the implementation of MVPs and subgroups will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

While MVP respondents report on all performance categories, we believe that for purposes of data submission, the burden for clinicians submitting information for the Promoting Interoperability and improvement activities performance categories of MVPs will be consistent with the currently approved estimated burden per respondent for clinicians submitting data for these performance categories in traditional MIPS. We acknowledge that clinicians participating through MVPs will have fewer requirements to meet for the improvement activity performance category as discussed in section IV.A.3.b.(4)(d)(iv) of this proposed rule. We assume that these requirement changes will not significantly lower the burden for clinicians reporting MVPs. Therefore, we will not add additional ICRs to capture the burden for the Promoting Interoperability and Improvement Activity performance categories. For this rule, we are proposing to create a separate ICR for estimating the burden associated with data submission for the Quality performance category of MVPs. We considered whether we should have a separate ICR to estimate burden for submission of measures and activities in the Promoting Interoperability performance category of MVPs. Based on our assumption above that the burden for clinicians submitting information for these performance categories of MVPs will be consistent with the currently approved estimated burden per respondent for clinicians submitting data in traditional MIPS, we anticipate that the separate ICRs would not be of value to clinicians.

We seek comment on our proposal to distinctly estimate burden only for data submission in the Quality performance category of MVPs and whether we should revise the MVP submission ICR to include all the four MIPS performance categories and whether our assumptions on Promoting Interoperability and Improvement Activities should be modified for MVPs.

(a) Burden for MVP Quality Submission

In section IV.A.3.b.(2)(d)(i) of this rule, we propose to implement voluntary MVP reporting beginning with the CY 2023 MIPS performance period/2025 MIPS payment year. If this proposal is finalized, clinicians participating in MIPS would have the option to voluntarily submit data using MVPs starting with the CY 2023 MIPS performance period/2025 MIPS payment year. While we recognize the implementation of MVPs in MIPS will result in a burden for registration, we also assume that MVP reporting will result in a decline in burden for MVP participants due to proposed changes in the MVP reporting requirements described in section IV.A.3.b.(4)(d) of this rule. We anticipate that the clinicians choosing to participate in MIPS for reporting MVPs would need to select from a reduced inventory of measures and activities for the quality and improvement activities performance categories. This reduction in burden is described in the quality, improvement activities and Promoting Interoperability performance categories sections below.

For the ICRs related to MVP participants, we used the MIPS submission data from the CY 2021 MIPS performance period/2023 MIPS payment year. Based on our review of the proposed inventory of 7 MVPs in Appendix 3: MVP Inventory of this rule and the existing submission trends in MIPS for the measures and activities included in these MVPs, we anticipate that 10 percent of the clinicians who participate in traditional MIPS in the CY 2022 MIPS performance period/2024 MIPS payment year will report MVPs in the CY 2023 MIPS performance period/2025 MIPS payment year. Given that MVPs are new, voluntary, and represent a reduction in burden per response, we believe that we should be conservative in estimating the number of clinicians submitting through MVPs during the initial year. Given that MVPs are a new mechanism available for clinicians, we believe that initial participation numbers will be relatively low. In an effort to be conservative in our estimate of burden reduction due to MVP reporting and reflect the anticipate low uptake by clinicians in the first year of MVP

availability, we assume that a total of 10 percent of MIPS submitters will become MVP participants in the CY 2023 MIPS performance period/2025 MIPS payment year.

As described in section IV.A.3.b.(2)(d)(ii) of this rule, beginning with the CY 2023 MIPS performance period/2025 MIPS payment year, we are proposing voluntary subgroup reporting within MIPS limited to clinicians reporting the MVP or the APP. We recognize the implementation of subgroups for clinicians to participate in MVP and APP reporting in MIPS will result in additional burden. We believe that subgroup participation option would allow clinicians in certain specialties and subspecialties to report on measures and activities meaningful to the scope of care provided. We anticipate that public reporting of subgroup performance information would allow patients to identify clinicians in multispecialty groups that are representative of the care specific to their clinical condition. Clinician participation in subgroups is new to MIPS and we do not have any historical participation data to estimate the submission burden for clinicians who would choose to participate as subgroups for reporting the MVP or the APP. We refer readers to section IV.A.3.b.(3) of this proposed rule for details on the proposals related to subgroup composition.

We anticipate that the subgroup reporting option would increase reporting and allow clinicians in specialties to report on measures and activities meaningful to their practice. Due to the delay in implementation of subgroup reporting in the CY 2023 MIPS performance period/2025 MIPS payment year, we anticipate that there is an adequate amount of time for clinicians that historically participate in MIPS to determine if they would be able to participate as subgroups for reporting on the measures and activities in an MVP. However, due to the limited number of MVPs available for clinicians to choose, the additional burden involved in reporting, and also given the voluntary option to participate as subgroups for reporting the MVPs or the APP, we anticipate that a relatively small number of clinicians would choose to participate as subgroups in the CY 2023 MIPS performance period/2025 MIPS payment year. Therefore, we assume there will be 20 subgroups reporters in the CY 2023 MIPS performance period/2025

MIPS payment year. We assume that more clinicians will choose to participate as subgroups in future years. We seek comment on our MVP and subgroup reporting assumptions for the CY 2023 MIPS performance period/2025 MIPS payment year.

(i) Burden for MVP Registration: Individuals, Groups and APM Entities

Beginning with the CY 2023 MIPS performance period/2025 MIPS payment year, we propose that clinicians interested in participating in MIPS through MVP reporting would be required to complete an annual registration process described in section IV.A.3.b.(4)(f) of this rule. At the time of registration, MVP participants would need to select a specific MVP, a population health measure and if administrative claims measures are included in the selected MVP, the MVP participants would also need to choose an applicable administrative claims measure in the MVP. We refer readers to section IV.A.3.b.(4)(f) of this rule for additional details on MVP registration requirements.

Due to the delay in implementation of MVPs in the CY 2023 MIPS performance period/2025 MIPS payment year, we anticipate that there is an adequate amount of time for clinicians that historically participate in MIPS to determine if the measures and activities in an MVP are applicable to the scope of care provided. In Table 85, we estimate that the registration process for clinicians choosing to submit MIPS data for the measures and the activities in an MVP would require 0.25 hours of a computer systems analyst's time, similar to the currently approved burden of group registration process for CMS Web Interface finalized in the CY 2021 PFS final rule (85 FR 84983) for the CY 2023 MIPS performance period/2025 MIPS payment year. We assume that the staff involved in the MVP registration process will mainly be computer systems analysts or their equivalent, who have an average labor cost of $95.22/hour.

As discussed above, based on data from the CY 2019 MIPS performance period/2021 MIPS payment year, we assume that approximately 10 percent of the clinicians that currently participate in MIPS will submit data for the measures and activities in an MVP. Note that we apply this 10 percent calculation after adding the clinicians who begin submitting though the

CQM and eCQM collection types due to the proposed sunset of Web Interface in the CY 2023 MIPS performance period/2025 MIPS payment year. For the CY 2023 MIPS performance period/2025 MIPS payment year, we assume that a total of 25,798 submissions would be received for the measures and activities included in MVPs. This total includes our estimate of 20 subgroup reporters that will also be reporting MVPs in addition to MVP reporters who currently participate in MIPS. Therefore, we assume that the total number of individual clinicians, groups, subgroups and APM Entities to complete the MVP registration process is 12,918. We estimate that the total cost to clinicians participating as individuals and groups associated with the MVP registration process will be approximately $307,513. Table 85 includes our burden assumptions related to the MVP registration process for clinicians participating in MIPS for reporting MVPs as individuals, groups, subgroups, and APM Entities.

TABLE 85: Total Estimated Burden for MVP Registration (Individual clinicians, Groups, Subgroups and APM Entities)

	Burden Estimate
Estimated # of Individual clinicians, groups, subgroups and APM Entities Registering (a)	12,918
Estimated Total Annual Burden Hours Per Registration (b)	0.25
Estimated Total Annual Burden Hours for MVP Registration (c) = (a) * (b)	**3,230***
Estimated Cost Per MVP (@ computer systems analyst's labor rate of $95.22/hr. (d)	95.22
Estimated Total Annual Burden Cost for MVP Registration (e) = (c) * (d)	**$307,513***

*Due to burden being estimated in fractions of minutes and hours, totals may reflect impact of rounding.

(ii) Burden for Subgroup Registration

We propose to add a separate ICR to estimate the burden associated with subgroup registration to capture the proposed subgroup registration requirements in section IV.A.3.b.(4)(f)(ii)(D) of this rule. In section IV.A.3.b.(3)(c)(ii) of this rule, we propose to define a subgroup at § 414.1305 as a subset of a group, as identified by a combination of the group TIN, the subgroup identifier, and each eligible clinician's NPI. In addition to the burden for MVP

registration process described above, clinicians who choose to form subgroups for reporting the MVPs or the APP would need to submit a list of each TIN/NPI associated with the subgroup and a plain language name for the subgroup in a manner specified by CMS, described in section IV.A.3.b.(4)(f)(ii)(D) of this rule.

As discussed above, we estimate that clinicians would choose to form 20 subgroups for reporting the measures and activities in MVPs. Additionally, we estimate that clinicians who choose to participate as subgroups for reporting MVPs would require a minimum of 0.5 hours per subgroup respondent to submit the proposed requirements for subgroup registration. We assume that the staff involved in the subgroup registration process will mainly be computer systems analysts or their equivalent, who have an average labor cost of $95.22/hr.

As all subgroups will report MVPs, the burden associated with subgroup quality reporting will be included with the MVP quality reporting ICR. Burden associated with subgroup submissions for Promoting Interoperability and improvement activities will be included with those ICRs.

TABLE 86: Total Estimated Burden for Subgroup Registration CY 2023 MIPS Performance Period/2025 MIPS payment year

	Burden Estimate
Estimated # of Subgroups Registering(a)	20
Estimated Total Annual Burden Hours Per Subgroup (b)	0.5
Estimated Total Annual Burden Hours for Subgroup Reporting (c) = (a) * (b)	**10**
Estimated Cost Per Subgroup (@ computer systems analyst's labor rate of $95.22/hr. (d)	$95.22
Estimated Total Annual Burden Cost for Subgroup Registration (e) = (a) * (d)	**$952**

(iii) Burden for MVP Quality Performance Category Submission.

In the CY 2017 PFS final rule (81 FR 77100 through 77114), we established the submission criteria for quality measures (excluding the CMS Web Interface measures and the CAHPS for MIPS survey measure) at § 414.1335, which requires a MIPS eligible clinician,

group, or virtual group that is reporting on Qualified Clinical Data Registry (QCDR) measures, MIPS clinical quality measures (MIPS CQMs), electronic CQMs (eCQMs), or Medicare Part B claims measures to submit data on at least six measures, including at least one outcome measure. As discussed in section IV.A.3.b.(4)(d)(ii) of this proposed rule, we propose that except as provided in paragraph § 414.1365(c)(1)(i), an MVP Participant must select and report 4 quality measures, including 1 outcome measure (or, if an outcome measure is not available, 1 high priority measure, included in the MVP. The decrease in the number of required measures in the quality performance category from 6 to 4 is a two-thirds reduction in the number of measures needed for eligible clinicians to submit data for the quality performance category in MVPs described in Appendix 3: MVP Inventory of this proposed rule. Therefore, we estimate that the time for submitting the measures in the MVP quality performance category will, on average, take two-thirds of the currently approved burden per respondent for the quality performance category as it does to complete a MIPS quality submission through the CQM, eCQM, and Claims submission types.

As described above in this section of the proposed rule, we estimate that 10 percent of the clinicians who participated in MIPS for the CY 2019 MIPS performance period/2021 MIPS payment year would submit data for the quality performance category of MVPs beginning with the CY 2023 MIPS performance period/2025 MIPS payment year. We anticipate that there will be 20 subgroups reporters in the CY 2023 MIPS performance period/2025 MIPS payment year. As shown in Table 87, we estimate that approximately 2,825 clinicians would submit data for the MVP quality performance category using the Medicare Part B claims collection type; approximately 5,210 clinicians and 10 subgroups will submit data using MIPS CQM and QCDR collection type; and approximately 4,862 clinicians and 10 subgroups will submit data using eCQMs collection type. We want to note that we used the same methodologies used in sections V.B.8.e.(4), V.B.8.e.(5) and V.B.8.e.(6) to estimate the quality submission burden for each collection type. As shown in Table 87, for the clinicians and subgroups submitting data for the

MVP quality performance category, we estimate a burden of 26,670 hours (9.44 hr x 2,825 clinicians) at a cost of $2,691,329 (2,825 respondents x 952.68/respondent) for the Medicare Part B claims collection type, 31,163 hours [5.97 hr x 5,220 (5,210 +10)] at a cost of $3,211,216 (5,220 x 615.18/respondent) for the MIPS CQM and QCDR collection type, and 25,822 hours [5.3 hr x 4,872 (4,862 +10) respondents] at a cost of $2,662,191 (4,872 x 546.43/respondent) for the eCQM collection types.

TABLE 87: Estimated Burden for Quality Performance Category: Clinicians Submitting Data for MVPs in CY 2023

	eCQM Collection Type	CQM and QCDR Collection Type	Claims Collection Type
# of Submissions from pre-existing collection types (a)	4,862	5,210	2,825
# of Subgroup reporters (b)	10	10	0
Total MVP participants (c) = (a) + (b)	4,872	5,220	2,825
Hours Per Clinician to Submit Quality Data (d)	1.33	2	4.8
# of Hours Medical and Health Services Manager Review Measure Specifications (e)	1.33	1.33	2

Cost to Review Measure Specifications (@ billing clerk's labor rate of $40.02/hr) (o)	$26.41	$26.41	$26.41
Cost to Review Measure Specifications (@ physician's labor rate of $217.32/hr) (p)	$144.88	$144.88	$144.88
*Total Annual Cost Per Clinician (q) = (k) + (l) + (m) + (n) + (o) + (p)	$546.43	$615.18	$952.68
***Total Annual Cost (r) = (c) * (q)**	**$2,662,191**	**$3,211,216**	**$2,691,329**

*Due to burden for certain activities being estimated in fractions of hours, totals may not reflect the sum of individual rows due to rounding.

(8) Quality Data Submission via CMS Web Interface

The proposed requirements and burden will be submitted to OMB for approval under control number 0938-1314 (CMS-10621).

Background

In the CY 2021 PFS final rule, we finalized our policy to sunset the CMS Web Interface measures as a collection type/submission type starting with the CY 2022 MIPS performance period/2024 MIPS payment year. As a result of this provision, for the CY 2022 MIPS performance period/2024 MIPS payment year, we estimated a burden of zero due to our assumption that all Web Interface respondents will alternately utilize either the MIPS CQM and QCDR or eCQM collection types (85 FR 84981).

In section IV.A.3.d.(1)(d) of this rule, we are proposing to continue the CMS Web Interface measures as a collection type for the CY 2022 MIPS performance period/2024 MIPS payment year. Additionally, we are proposing to sunset the CMS Web Interface measures as a collection type for the CY 2023 MIPS performance period/2025 MIPS payment year. For this proposed rule, we are providing a burden estimate for the CY 2022 and CY 2023 MIPS performance periods/2024 and 2025 MIPS payment years.

For the CY 2022 MIPS performance period/2024 MIPS payment year, we assume that 114 groups will submit quality data via the CMS Web Interface based on the number of groups who completed 100 percent of reporting quality data via the Web Interface in the CY 2019 MIPS performance period/2021 MIPS payment year. This is an increase of 114 groups from the currently approved number of 0 groups provided in the CY 2021 PFS final rule (85 FR 84981 due to the proposal to continue with the CMS Web Interface as a collection type for the CY 2022 MIPS performance period/2024 MIPS payment year. We estimate that 44,385 clinicians will submit as part of groups via this method, an increase of 44,385 from our currently approved estimate of 0 clinicians.

The proposed estimated burden associated with the group submission requirements is the time and effort associated with submitting data on a sample of the organization's beneficiaries

that is prepopulated in the CMS Web Interface. Our proposed burden estimate for submission includes the time (61 hours and 40 minutes or 61.67 hours) needed for each group to populate data fields in the web interface with information on approximately 248 eligible assigned Medicare beneficiaries and submit the data (we will partially pre-populate the CMS Web Interface with claims data from their Medicare Part A and B beneficiaries). The patient data either can be manually entered, uploaded into the CMS Web Interface via a standard file format, which can be populated by CEHRT, or submitted directly. Each group must provide data on 248 eligible assigned Medicare beneficiaries (or all eligible assigned Medicare beneficiaries if the pool of eligible assigned beneficiaries is less than 248) for each measure. In aggregate, we estimate a burden for the CY 2022 MIPS performance period/2024 MIPS payment year of 7,030 hours (114 groups x 61.67 hr) at a cost of $669,432 (114 groups x $5,872.21/group). For the CY 2023 MIPS performance period/2025 MIPS payment year, we propose to revise our estimated burden to zero due to our assumption that with the proposed policy to sunset the CMS Web Interface as a collection type, all Web Interface respondents will alternately utilize either the MIPS CQM and QCDR or eCQM collection types. Based on the assumptions discussed in this section, Table 88 summarizes the proposed estimated burden for groups submitting to MIPS via the CMS Web Interface.

TABLE 88: Estimated Burden for Quality Data Submission via the CMS Web Interface

	CY 2022 MIPS Performance Period	CY 2023 MIPS Performance Period
# of Eligible Group Practices (a)	114	0
Total Annual Hours Per Group to Submit (b)	61.67	0
Total Annual Hours (c) = (a) * (b)	7,030	0
Cost Per Group to Report (@ computer systems analyst's labor rate of $95.22/hr) (d) = ($95.22/hr) * (b)	$5,872.21	0
Total Annual Cost (e) = (a) * (d)	$669,433	0

TABLE 89: Change in Estimated Burden for Quality Data Submission via the CMS Web Interface

	CY 2022 MIPS Performance Period	CY 2023 MIPS Performance Period
Total Annual Hours for Respondents in CY 2021 PFS Final Rule (a)	0	0
Total Annual Hours for Respondents in CY 2022 PFS Proposed Rule (b) (see Table 88, row (c))	7,030	0
Difference (c) = (b)-(a)	**+7,030**	**0**
Total Annual Cost for Respondents in CY 2021 PFS Final Rule (d)	$0	0
Total Annual Cost for Respondents in CY 2022 PFS Proposed Rule (e) (see Table 88, row (e))	$669,433	0
Difference (f) = (e)-(d)	**+$669,433**	**0**

(9) Beneficiary Responses to CAHPS for MIPS Survey

This rule does not propose any new or revised collection of information requirements or burden related to the CAHPS for MIPS survey. The CAHPS for MIPS survey requirements and burden are currently approved by OMB under control number 0938–1222 (CMS–10450). Consequently, we are not proposing any changes under that control number.

(10) Group Registration for CMS Web Interface

The proposed requirements and burden will be submitted to OMB for approval under control number 0938-1314 (CMS-10621).

In the CY 2021 PFS final rule, we finalized to sunset the CMS Web Interface measures as a collection type/submission type starting with the CY 2022 MIPS performance period/2024 MIPS payment year. As a result, we estimated that there would be zero hours and $0 burden for group registration for the CMS Web Interface for the CY 2022 MIPS performance period/2024 MIPS payment year (85 FR 84984). As discussed in section IV.A.3.d.(1)(d) of this proposed rule, we are proposing to continue the CMS Web Interface measures as a collection type for the CY 2022 MIPS performance period/2024 MIPS payment year. We are also proposing to sunset the CMS Web Interface as a collection type starting with the CY 2023 MIPS performance period/2025 MIPS payment year.

Groups interested in participating in MIPS using the CMS Web Interface for the first time must complete an online registration process. After first time registration, groups will only need

to opt out if they are not going to continue to submit via the CMS Web Interface. In Table 90, we estimate that the registration process for groups under MIPS involves approximately 0.25 hours at $95.22/hr for a computer systems analyst (or their equivalent) to register the group.

Because we are finalizing to sunset the CMS Web Interface beginning with the CY 2023 MIPS performance period/2025 MIPS payment year, it is possible that fewer groups will elect to register to submit quality data for the first time in the performance year prior to the collection type/submission type no longer being available; however, we currently have no data with which to estimate what the associated reduction may be. Consistent with our assumptions in the CY 2021 PFS final rule (85 FR 84983), we continue to assume that approximately 90 groups will elect to use the CMS Web Interface for the first time during the CY 2022 MIPS performance period/2025 MIPS payment year based on the estimated number of new registrations during the CY 2021 MIPS performance period/2023 MIPS payment year. As shown in Table 90, we estimate a burden of 22.5 hours (90 new registrations x 0.25 hr/registration) at a cost of $2,142 (22.5 hr x $95.22/hr).

TABLE 90: Estimated Burden for Group Registration for CMS Web Interface

	Burden Estimate
Number of New Groups Registering for CMS Web Interface (a)	90
Annual Hours Per Group (b)	0.25
Total Annual Hours (c) = (a) * (b)	22.5
Labor rate for a computer systems analyst (d)	$95.22/hr
Total Annual Cost (e) = (a) * (d)	$2,142

As shown in Table 91, the proposed estimated increase in the number of groups registering for the CMS Web Interface collection type to submit the MIPS data and the estimated increase in burden per respondent results in adjustment to the total time burden of +22.5 hours (+90 respondents × 0.25 hr/respondent) at a cost of $2,142 for the CY 2022 MIPS performance period/2024 MIPS payment year. For the CY 2023 MIPS performance period/2025 MIPS payment year, our proposed burden estimate is $0.

TABLE 91: Change in Estimated Burden for Group Registrations for the CMS Web Interface

	CY 2022Performance Period	CY 2023 Performance Period
Total Annual Hours for Respondents in CY 2021 PFS Final Rule (a)	0	0
Total Annual Hours for Respondents in CY 2022 PFS Proposed Rule (b) (See Table 90, row (c))	22.5	0
Difference (c) = (b) - (a)	**+22.5**	**0**
Total Annual Cost for Respondents in CY 2021 PFS Final Rule (d)	0	0
Total Annual Cost for Respondents in CY 2022 PFS Proposed Rule (e) (See Table 90, row (e))	$2,142	0
Difference (f) = (e) - (d)	**+2,142**	**0**

(11) Group Registration for CAHPS for MIPS Survey

This rule is not proposing any new or revised collection of information requirements or burden related to the group registration for the CAHPS for MIPS Survey. The CAHPS for MIPS survey requirements and burden are currently approved by OMB under control number 0938-1222 (CMS-10450). Consequently, we are not proposing any changes under that control number.

f. ICRs Regarding the Call for MIPS Quality Measures

This rule is not proposing any new or revised collection of information requirements or burden related to the call for MIPS quality measures. However, outside of the rulemaking process we are replacing the existing tool for stakeholders beginning with the 2021 Annual Call for Measures. To account for the updated tool (MERIT), we are proposing to revise our currently approved burden estimates. The updated tool and revised burden will be submitted to OMB under control number 0938–1314 (CMS–10621).

Beginning with the 2021 Annual Call for Measures, we replaced the customary Office of the National Coordinator (ONC) Issue Tracking System Jira platform that stakeholders used to submit candidate quality measure specifications and all supporting data files for CMS review with the MUC Entry/Review Information Tool (MERIT). For the ONC Issue Tracking System Jira platform used by stakeholders, the approved estimated time for a practice administrator to

identify, propose, and link to a quality measure is 0.9 hours and for a clinician to identify, propose, link to quality measure, and complete the Peer Review Journal Article form is 4.6 hours (0.6 hours to identify, propose, and link to quality measure (84 FR 63132) and 4 hours to complete the Peer Review Journal Article Form (84 FR 63133), with a total estimated time of 5.5 hours per quality measure submission. Based on the stakeholder experience with the updated tool and additional information collected at the time of submission, we estimate that it would add approximately 1.5 hours for the practice administrator at $114.24/hr and 0.5 hours at $217.32/hr for a clinician to identify, propose, and link the quality measure, and reduce approximately 2 hours at $217.32/hr for a clinician to complete the Peer Review Journal Article Form, resulting in a new estimated time of 2.4 hours for a practice administrator and 3.1 hours for a clinician, and an unchanged total estimated time of 5.5 hours per quality measure submission. In order to account for the implementation of the MERIT tool starting with the 2021 Annual Call for Measures, we propose to revise the estimated time required for a practice administrator to identify, propose, and link to a quality measure to 2.4 hours (from 0.9 hr) and a clinician to identify, propose, link to quality measure, and complete the Peer Review Journal Article Form to 3.1 hours (from 4.6 hr), resulting in a total estimated time of 5.5 hours per quality measure submission. Based on the number of submissions received during the CY 2020 Call for Quality Measures process, we anticipate receiving the same number of 28 submissions during the CY 2021 Call for Quality Measures process (84 FR 63132).

Although the total estimated time of 5.5 hours for completing a quality measure submission using the MERIT tool (see Table 92) is the same estimated time as the ONC Issue Tracking System Jira platform, we need to account for the changes to the individual components of the estimated time required by a practice administrator and clinician using the MERIT tool. Consistent with our assumptions in the CY 2021 PFS final rule (85 FR 84984), we estimate an annual burden of 154 hours (28 submissions × 5.5 hr/measure). Thus, we are proposing to adjust our estimated annual burden from $30,197 (28 submissions x [(0.9 hr x $110.74/hr) + (4.6 hr x

$212.78/hr)) to $26,541 (28 measures x [(2.4 hr x $114.24/hr) + (3.1 hr x $217.32/hr)]) a difference of -$3,656.

TABLE 92: Estimated Burden for Call for Quality Measures

	Burden estimate
# of New Quality Measures Submitted for Consideration (a)	28
# of Hours per Practice Administrator to Identify, Propose and Link Measure (b)	2.4
# of Hours per Clinician to Identify and Link Measure (c)	1.1
# of Hours per Clinician to Complete Peer Review Article Form (d)	2
Annual Hours Per Response (e) = (b) + (c) + (d)	5.5
Total Annual Hours (f)=(a)*(e)	**154**
Cost to Identify and Submit Measure (@ practice administrator's labor rate of $114.24/hr) * 2.4 hr = (g)	$274.20
Cost to Identify Quality Measure and Complete Peer Review Article Form (@ clinician's labor rate of $217.32/hr) * 3.1 hr = (h)	$673.69
Total Annual Cost Per Submitted Measure (i)	$947.89
***Total Annual Cost (j)=(a)*(i)**	**$26,541**

*Due to burden for certain activities being estimated in fractions of hours, totals may not reflect the sum of individual rows due to rounding.

g. ICRs Regarding Promoting Interoperability Data (§§ 414.1375 and 414.1380)

(1) Background

For the CY 2022 MIPS performance period/2024 MIPS payment year, clinicians and groups can submit Promoting Interoperability data through direct, log in and upload, or log in and attest submission types. With the exception of submitters who elect to use the log in and attest submission type for the Promoting Interoperability performance category, which is not available for the quality performance category, we anticipate that individuals and groups will use the same data submission type for the both of these performance categories and that the clinicians, practice managers, and computer systems analysts involved in supporting the quality data submission will also support the Promoting Interoperability data submission process. The following burden estimates show only incremental hours required above and beyond the time already accounted for in the quality data submission process. Although this analysis assesses burden by performance category and submission type, we emphasize that MIPS is a consolidated program and submission analysis, and decisions are expected to be made for the program as a whole.

(2) Reweighting Applications for Promoting Interoperability and Other Performance Categories

The requirements and burden associated with this rule's data submission will be submitted to OMB for approval under control number 0938-1314 (CMS-10621).

We refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53918 through 53919), CY 2019 PFS final rule (83 FR 60011 through 60012), CY 2020 PFS final rule (84 FR 63134 through 63135), and the CY 2021 PFS final rule (85 FR 84984 through 84985) for our previously finalized requirements and burden for reweighting applications for Promoting Interoperability and other performance categories.

As established in the CY 2017 and CY 2018 Quality Payment Program final rules, MIPS eligible clinicians who meet the criteria for a significant hardship or other type of exception may submit an application requesting a zero percent weighting for the Promoting Interoperability, quality, cost, and/or improvement activities performance categories under specific circumstances (81 FR 77240 through 77243, 82 FR 53680 through 53686, and 82 FR 53783 through 53785). Respondents who apply for a reweighting for the quality, cost, and/or improvement activities performance categories have the option of applying for reweighting for the Promoting Interoperability performance category on the same online form. We assume that respondents applying for a reweighting of the Promoting Interoperability performance category due to extreme and uncontrollable circumstances will also request a reweighting of at least one of the other performance categories simultaneously and not submit multiple reweighting applications.

Table 93 summarizes the burden for clinicians to apply for reweighting the Promoting Interoperability performance category to zero percent due to a significant hardship exception or as a result of a decertification of an EHR. Based on the number of reweighting applications received by March, 2021 for the CY 2020 MIPS performance period/2022 MIPS payment year, we assume 20,192 respondents (eligible clinicians or groups) will submit a request to reweight the Promoting Interoperability performance category to zero percent due to a significant hardship or EHR decertification and an additional 22,635 respondents will submit a request to reweight

one or more of the quality, cost, Promoting Interoperability, or improvement activities performance categories due to an extreme or uncontrollable circumstance. For the CY 2022 MIPS performance period/2024 MIPS payment year, we estimate that a total of 42,797 reweighting applications would be submitted. This is a decrease of 9,302 respondents compared to our currently approved estimate of 52,099 respondents (85 FR 84984). This decrease is likely due to the proposal in section IV.A.3.e.(2)(b)(iii)(A) of this rule to automatically reweight the Promoting Interoperability performance category for small practices who previously had to apply for reweighting. For the CY 2020 MIPS performance period/2024 MIPS payment year, 13,894 respondents requested reweighting due to significant hardship for small practices. Similar to the data used to estimate the number of respondents in the CY 2021 PFS final rule, our respondent estimate includes a significant number of applications submitted as a result of a data issue CMS was made aware of and is specific to a single third-party intermediary. While we do not anticipate similar data issues to occur in each performance period, we do believe future similar incidents may occur and are electing to use this data without adjustment to reflect this belief. We assume that, out of our total respondent count of 42,797 above, we estimate that 22,605 respondents (eligible clinicians or groups) will submit a request for reweighting the Promoting Interoperability performance category to zero percent due to extreme and uncontrollable circumstances, insufficient internet connectivity, lack of control over the availability of CEHRT, or as a result of a decertification of an EHR.

In the CY 2021 PFS final rule (85 FR 84984) we discussed that, beginning with the CY 2019 MIPS performance period/2021 MIPS payment year, APM Entities may submit an extreme and uncontrollable circumstances exception application for all four performance categories and applicable to all MIPS eligible clinicians in the APM Entity group. As discussed above in this section of this proposed rule, due to data limitations and our inability to determine who would use the APP versus the traditional MIPS submission mechanism for the 2022 MIPS performance period/2024 MIPS payment year, we assume ACO APM Entities will submit data through the

APP and non-ACO APM Entities would participate through traditional MIPS, thereby submitting as an individual or group rather than as an entity. Therefore, we limited our analysis to ACOs that were eligible for an exception due to extreme and uncontrollable circumstances during the 2020 MIPS performance period/2022 MIPS payment year and elected not to report quality data. Based on this data, we estimate that 30 APM Entities will submit an extreme and uncontrollable circumstances exception application for the CY 2022 MIPS performance period/2024 MIPS payment year. Combined with our aforementioned estimate of 42,797 eligible clinicians and groups, the total estimated number of respondents for the CY 2022 MIPS performance period/2024 MIPS payment year is 42,827.

Consistent with our assumptions in the CY 2021 PFS final rule (85 FR 84984-84985), we continue to estimate it will take 0.25 hours for a computer system analyst to complete and submit the application. As shown in Table 93, we estimate an annual burden of 10,707 hours (42,827 applications x 0.25 hr/application) and $1,019,521 (10,707 hr x $95.22/hr).

TABLE 93: Estimated Burden for Reweighting Applications for Promoting Interoperability and Other Performance Categories

	Burden Estimate
# of Eligible Clinicians or Groups Applying Due to Significant Hardship and Other Exceptions or Extreme and Uncontrollable Circumstances (a)	42,797
# APM Entities requesting Extreme and Uncontrollable Circumstances exception (b)	30
Total Applications Submitted (c)	42,827
Hours Per Applicant per Application Submission (d)	0.25
Total Annual Hours (e) = (a) * (c)	**10,707**
Labor Rate for a computer systems analyst (f)	$95.22/hr
Total Annual Cost (g) = (a) * (f)	**$1,019,521**

As shown in Table 94, using our currently approved burden estimates, the proposed decrease in the estimate number of respondents (from 52,099 to 42,827 respondents) results in an adjustment of minus 2,318 hours (9,272 respondents x 0.25 hr/respondent) and minus $184,747.

TABLE 94: Adjusted Burden for Reweighting Applications for Promoting Interoperability and Other Performance Categories

	Burden Estimate
Total Annual Hours for Respondents in CY 2021 PFS Final Rule (a)	13,025
Total Annual Hours for Respondents in CY 2022 PFS Proposed Rule (b) (see Table 93, row (e))	10,707
Difference (c) = (b) - (a)	**-2,318**
Total Annual Cost for Respondents in CY 2021 PFS Final Rule (d)	$1,204,268
Total Annual Cost for Respondents in CY 2022 PFS Proposed Rule (e) (see Table 93, row (g))	$1,019,521
Difference (f) = (e) - (d)	**-184,747**

(3) Submitting Promoting Interoperability Data

The requirements and burden associated with this rule's data submission will be submitted to OMB for approval under control number 0938-1314 (CMS-10621).

We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77509 through 77511), CY 2018 Quality Payment Program final rule (82 FR 53919 through 53920), CY 2019 PFS final rule (83 FR 60013 through 60014), CY 2020 PFS final rule (84 FR 63135 through 63137), and the CY 2021 PFS final rule (85 FR 84985 through 84987) for our previously finalized requirements and burden for submission of data for the Promoting Interoperability performance category.

We did not propose any changes to our current criteria for automatic reweighting of the Promoting Interoperability performance category for certain MIPS eligible clinicians or MIPS eligible clinicians who have experienced a significant hardship or decertification of an EHR. In section IV.A.3.d.(4)(d)(ii) of this proposed rule, we proposed the additional requirement that MIPS eligible clinicians must attest to conducting an annual assessment of the High Priority Guides of the SAFER Guides beginning with the 2022 performance period. Clinicians will complete this attestation by checking a box when they submit their promoting interoperability performance category data. We estimate that this requirement will add an additional minute to the time it takes to complete the submission of promoting interoperability data. We also proposed to modify the Provide Patients Electronic Access to Their Health Information measure

to require MIPS eligible clinicians to ensure that patient health information remains available to the patient (or patient-authorized representative) to access indefinitely. The proposed requirement would apply beginning with the performance period in 2022, and would include all patient health information from encounters on or after January 1, 2016. We do not believe this proposal will impact the burden of Promoting Interoperability data submission. Therefore, we are not revising the currently approved burden per respondent estimate.

As shown in Table 95, based on data from the CY 2019 MIPS performance period/2021 MIPS payment year, we estimate that a total of 51,647 respondents consisting of 40,172 individual MIPS eligible clinicians and 11,475 groups and virtual groups will submit Promoting Interoperability data. Since our CY 2021 PFS final rule estimated 53,636 respondents, this represents a decrease of 1,989 respondents (51,647 respondents – 53,636 active respondents).

We assume that MIPS eligible clinicians previously scored under the APM scoring standard, as described in the CY 2020 PFS final rule, will continue to submit Promoting Interoperability data (84 FR 63006) in a similar way through the APP. As a result, we do not anticipate any change in burden. Each MIPS eligible clinician in an APM Entity reports data for the Promoting Interoperability performance category through either their group TIN or individual reporting. Sections 1899 and 1115A of the Act (42 U.S.C. 1395jjj and 42 U.S.C. 1315a, respectively) state that the Shared Savings Program and the testing, evaluation, and expansion of Innovation Center models are not subject to the PRA. However, in the CY 2019 PFS final rule, we established that MIPS eligible clinicians who participate in the Shared Savings Program are no longer limited to reporting for the Promoting Interoperability performance category through their ACO participant TIN (83 FR 59822 through 59823). Burden estimates for this proposed rule assume group TIN-level reporting as we believe this is the most reasonable assumption for the Shared Savings Program, which requires that ACOs include full TINs as ACO participants. As we receive updated information which reflects the actual number of Promoting Interoperability data submissions submitted by Shared Savings Program ACO

participants, we will update our burden estimates accordingly.

TABLE 95: Estimated Number of Respondents to Submit Promoting Interoperability Performance Data on Behalf of Clinicians in CY 2022

	# of Respondents
Number of individual clinicians to submit Promoting Interoperability (a)	40,172
Number of groups to submit Promoting Interoperability (b)	11,475
Total Respondents in 2022 MIPS performance period (CY 2022 PFS Proposed Rule) (c) = (a) + (b)	51,647
*Total Respondents in 2021 MIPS performance period (CY 2021 PFS Final Rule) (d)	53,636
Difference (e) = (c) – (d)	-1,989

As discussed in section IV.A.3.b.(2)(d)(ii) of this proposed rule, we will be introducing subgroup reporting in CY 2023 MIPS performance period/2025 MIPS payment year. As we discussed above in this section of the proposed rule, we estimate that there will be 20 subgroup submissions in CY 2023 MIPS performance period/2025 MIPS payment year, each of which will have burden related to the submission of Promoting Interoperability data. We have included this burden in Table 96.

TABLE 96: Estimated Number of Respondents to Submit Promoting Interoperability Performance Data on Behalf of Clinicians in CY 2023

	# of Respondents
Number of individual clinicians to submit Promoting Interoperability in CY 2023 (a)	40,172
Number of groups to submit Promoting Interoperability in CY 2023 (b)	11,475
# of Subgroups to submit Promoting Interoperability in MVPs during the CY 2023 MIPS performance period (c)	20
Total Respondents in 2023 MIPS performance period (CY 2022 PFS Proposed Rule) (d) = (a) + (b) + (c)	51,667
*Total Respondents in 2021 MIPS performance period (CY 2021 PFS Final Rule) (e)	53,636
Difference (f) = (d) – (e)	-1,969

With the inclusion of the additional minute (0.02 hr) to attest to conducting an annual assessment of the High Priority Guides of the SAFER Guides, we are proposing to update our estimate of the time required for an individual or group to submit Promoting Interoperability data from 2.67 hours to 2.69 hours (2.67 hr + 0.02 hr). As shown in Table 97, the total burden estimate for submitting data on the specified Promoting Interoperability objectives and measures is estimated to be 138,930 hours (51,647 respondents x 2.69 incremental hours for a computer analyst's time above and beyond the physician, medical and health services manager, and computer system's analyst time required to submit quality data) and $13,228,915 (138,930 hr x

$95.22/hr)).

TABLE 97: Estimated Burden for Promoting Interoperability Performance Category Data Submission in CY 2022

	Burden Estimate
Number of individual clinicians to submit Promoting Interoperability (a)	40,172
Number of groups to submit Promoting Interoperability (b)	11,475
Total (c) = (a) + (b)	51,647
Total Annual Hours Per Respondent (d)	2.69
Total Annual Hours (e) = (c) * (d)	**138,930**
Labor rate for a computer systems analyst to submit Promoting Interoperability data (f)	$95.22/hr
Total Annual Cost (g) = (e) * (f)	**$13,228,915**

*Due to burden being estimated in fractions of hours, totals may reflect impact of rounding.

As shown in Table 98, with the introduction of subgroup reporting in CY 2023 MIPS performance period/2025 MIPS payment year, the total proposed burden estimate for submitting data on the specified Promoting Interoperability objectives and measures is estimated to be 138,984 hours (51,667 respondents x 2.69 incremental hours for a computer analyst's time above and beyond the physician, medical and health services manager, and computer system's analyst time required to submit quality data) and $13,234,078 (138,984 hr x $95.22/hr)).

TABLE 98: Estimated Burden for Promoting Interoperability Performance Category Data Submission in CY 2023

	Burden Estimate
Number of individual clinicians to submit Promoting Interoperability (a)	40,172
Number of groups to submit Promoting Interoperability (b)	11,475
Number of subgroups to submit Promoting Interoperability (c)	20
Total (d) = (a) + (b) + (c)	51,667
Total Annual Hours Per Respondent (e)	2.69
Total Annual Hours (f) = (d) * (e)	**138,984**
Labor rate for a computer systems analyst to submit Promoting Interoperability data (g)	$95.22/hr
Total Annual Cost (h) = (f) * (g)	**$13,234,078**

*Due to burden being estimated in fractions of hours, totals may reflect impact of rounding.

Table 99, using our updated per respondent burden estimate (+0.02 hr/response), the decrease in number of respondents and proposed SAFER guide attestation requirement results in a total adjustment of -4,099 hours at a cost of -$390,338 for the CY 2022 MIPS performance period/2024 MIPS payment year and -4,045 hours at a cost of -$385,175 for the CY 2023 MIPS performance period/2025 MIPS payment year.

TABLE 99: Adjusted Burden for Promoting Interoperability Performance Category Data Submission

	Burden Estimate 2022 MIPS Performance Period	Burden Estimate 2023 MIPS Performance period
Total Annual Hours for Respondents in CY 2021 PFS Final Rule (a)	143,029	143,029
Total Annual Hours for Respondents in CY 2022 PFS Proposed Rule (b) (see Table 98, row (f))	138,930	138,984
Difference (c) = (b) - (a)	**-4,099**	**-4,045**
Total Annual Cost for Respondents in CY 2021 PFS Final Rule (d)	$13,619,253	$13,619,253
Total Annual Cost for Respondents in CY 2022 PFS Proposed Rule (e) (see Table 98, row (h))	$13,228,915	$13,234,078
Difference (f) = (e) - (d)	**-$390,338**	**-$385,175**

h. ICRs Regarding the Nomination of Promoting Interoperability (PI) Measures

This rule is not proposing any new or revised collection of information requirements or burden related to the nomination of Promoting Interoperability measures. The requirements and burden are currently approved by OMB under control number 0938-1314 (CMS-10621). Consequently, we are not proposing any changes under that control number.

i. ICR Regarding Improvement Activities Submission (§§ 414.1305, 414.1355, 414.1360, and 414.1365)

The following proposed requirements and burden will be submitted to OMB for approval under control number 0938-1314 (CMS-10621). We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77511 through 77512), CY 2018 Quality Payment Program final rule (82 FR 53920 through 53922), CY 2019 PFS final rule (83 FR 60015 through 60017), CY 2020 PFS final rule (84 FR 63138 through 63140) and the CY 2021 PFS final rule (85 FR 84987 through 84989) for our previously finalized requirements and burden for submission of data for the improvement activities performance category.

In section IV.A.3.d.(3) of this rule, we are proposing to: (1) revise group reporting requirements for the 50 percent threshold to address subgroups; (2) add 7 new improvement activities, modify 15 existing improvement activities, and remove 6 previously adopted improvement activities for the CY 2022 MIPS performance period/2024 MIPS payment year and

future years; (3) revise the "Drug Cost Transparency to include requirements for use of real-time benefit tools" improvement activity; and (4) add the COVID-19 "Clinical Data Reporting with or without Clinical Trial" improvement activity for CY 2022 MIPS performance period/2024 MIPS payment year and future years. Additionally, we are proposing to adjust our currently approved burden estimates based on more recent data.

Specifically, we are proposing to revise § 414.1360(a)(2) to state that, beginning with the CY 2023 MIPS performance period/2025 MIPS payment year, each improvement activity for which groups and virtual groups submit a yes response in accordance with paragraph (a)(1) of this section must be performed by at least 50 percent of the NPIs that are billing under the group's TIN or virtual group's TINs or that are part of the subgroup, as applicable; and the NPIs must perform the same activity during any continuous 90-day period within the same performance year. In section IV.A.3.d.(3)(b) of this rule, we discussed stakeholder requests through the Quality Payment Program help desk to apply the 50 percent threshold to a portion of clinicians in a group. We anticipate that clinicians would find applicable and meaningful activities specific to practice size, specialty, or practice setting. Therefore, we assume that the proposal to apply the 50 percent minimum threshold to clinicians who submit for the improvement activity performance category as part of groups, virtual groups, or choose to participate as subgroups beginning with the CY 2023 MIPS performance period/2025 MIPS payment year would not present additional complexity or burden.

We do not believe the proposed changes to the improvement activities inventory will impact time or financial burden on stakeholders because MIPS eligible clinicians are still required to submit the same number of activities and the per response time for each activity is uniform. Therefore, we are not proposing to revise the estimated time of 5 minutes (per response) currently approved for improvement activities submission.

As represented in Table 100, based on data from the CY 2019 MIPS performance period/2021 MIPS payment year, we estimate that a total of 81,562 respondents consisting of

63,845 individual clinicians and 17,717 groups will submit improvement activities during the 2022 MIPS performance period/2024 MIPS payment year. Since our currently approved burden sets out 79,927 respondents, this represents an increase of 1,635 respondents (81,562 respondents - 79,927 active respondents). This is an increase of 1,242 individuals and 393 groups from the estimates of 62,603 individuals and 17,324 groups provided in the CY 2021 PFS final rule due to availability of updated data (85 FR 50362).

As discussed in sections V.B.8.e. and V.B.8.g.(3) of this proposed rule regarding our estimate of clinicians and groups submitting data for the quality and Promoting Interoperability performance categories, we are proposing to update our estimates for the number of clinicians and groups that will submit improvement activities data based on projections of the number of eligible clinicians that were not QPs or participating in an ACO in the CY 2019 MIPS performance period/2021 MIPS payment year but will be QPs in the CY 2022 MIPS performance period/2024 MIPS payment year, and will therefore not be required to submit improvement activities data.

TABLE 100: Estimated Number of Organizations Submitting Improvement Activities Performance Category Data on Behalf of Clinicians in CY 2022

	Count
# of clinicians to participate in improvement activities data submission as individuals during the CY 2022 MIPS performance period (a)	63,845
# of Groups to submit improvement activities on behalf of clinicians during the CY 2022 MIPS performance period (b)	17,717
Total # of Respondents (Groups, Virtual Groups, and Individual Clinicians) to submit improvement activities data on behalf of clinicians during the CY 2022 MIPS performance period (CY 2022 Proposed Rule) (c) = (a) + (b)	81,562
*Total # of Respondents (Groups, Virtual Groups, and Individual Clinicians) to submit improvement activities data on behalf of clinicians during the CY 2020 MIPS performance period (CY 2021 PFS Final Rule) (d)	79,927
Difference (e) = (c) - (d)	**+1,635**

*Currently approved by OMB under control number 0938-1314 (CMS-10621).

As discussed in section IV.A.3.b.(2)(d)(ii) of this proposed rule, we are proposing subgroup reporting in the CY 2023 MIPS performance period/2025 MIPS payment year. As we discussed in section V.B.8.e.(7)(a) of this proposed rule, we estimate that there will be 20 subgroup reporters in the CY 2023 MIPS performance period/2025 MIPS payment year, each of

which will have burden related to the submission of improvement activities. We have included this burden in Table 101.

TABLE 101: Estimated Number of Organizations Submitting Improvement Activities Performance Category Data on Behalf of Clinicians in CY 2023

	Count
# of clinicians to participate in improvement activities data submission as individuals during the CY 2023 MIPS performance period (a)	63,845
# of Groups to submit improvement activities on behalf of clinicians during the CY 2023 MIPS performance period (b)	17,717
# of Subgroups to submit improvement activities in MVPs during the CY 2023 MIPS performance period (c)	20
Total # of Respondents (Groups, Subgroups, Virtual Groups, and Individual Clinicians) to submit improvement activities data on behalf of clinicians during the CY 2023 MIPS performance period (CY 2022 PFS Proposed Rule) (d) = (a) + (b) + (c)	81,582
*Total # of Respondents (Groups, Virtual Groups, and Individual Clinicians) to submit improvement activities data on behalf of clinicians during the CY 2020 MIPS performance period (CY 2021 PFS Final Rule) (e)	79,927
Difference (f) = (d) - (e)	**+1,655**

Consistent with the CY 2021 PFS final rule, we continue to estimate that the per response time required per individual or group is 5 minutes for a computer system analyst to submit by logging in and manually attesting that certain activities were performed in the form and manner specified by CMS with a set of authenticated credentials (84 FR 63140).

As shown in Table 102, we estimate an annual burden of 6,797 hours (81,562 responses x 5 minutes/60) and $647,210 (6,797 hr x $95.22/hr)) in CY 2022 MIPS performance period/2024 MIPS payment year.

TABLE 102: Estimated Burden for Improvement Activities Submission in CY 2022

	Burden Estimate
Total # of Respondents (Groups, Virtual Groups, and Individual Clinicians) to submit improvement activities data on behalf of clinicians during the CY 2022 MIPS performance period (a)	81,562
Total Annual Hours Per Respondent (b)	5 minutes
Total Annual Hours (c) = (a) * (b)	**6,797**
Labor rate for a computer systems analyst to submit improvement activities (d)	$95.22/hr
Total Annual Cost (e) = (c) * (d)	**$647,210**

*Due to burden being estimated in fractions of hours, totals may reflect impact of rounding.

As shown in Table 103, with the introduction of subgroup reporting in the CY 2023 MIPS performance period/2025 MIPS payment year, we estimate an annual burden of 6,799

hours (81,582 responses x 5 minutes/60) and $647,401 (6,799 hr x $95.22/hr)).

TABLE 103: Estimated Burden for Improvement Activities Submission in CY 2023

	Burden Estimate
Total # of Respondents (Groups, Subgroups, Virtual Groups, and Individual Clinicians) to submit improvement activities data on behalf of clinicians during the CY 2023 MIPS performance period (a)	81,582
Total Annual Hours Per Respondent (b)	5 minutes
Total Annual Hours (c) = (a) * (b)	**6,799**
Labor rate for a computer systems analyst to submit improvement activities (d)	$95.22/hr
Total Annual Cost (e) = (c) * (d)	**$647,401**

*Due to burden being estimated in fractions of hours, totals may reflect impact of rounding.

As shown in Table 104, using our unchanged currently approved per respondent burden estimate, the increase of 1,635 in the number of respondents results in an adjustment of 136 hours (1,635 responses x 5 minutes/60) at a cost of $12,973 (136 hr x $95.22/hr).

TABLE 104: Adjusted Burden for Improvement Activities Submission

	Burden Estimate
Total Annual Hours for Respondents in CY 2021 PFS Final Rule (a)	6,661
Total Annual Hours for Respondents in CY 2022 PFS Proposed Rule (b) (see Table 102, row (c))	6,797
Difference (c) = (b) - (a)	**+136**
Total Annual Cost for Respondents in CY 2021 PFS Final Rule (d)	$634,221
Total Annual Cost for Respondents in CY 2022 PFS Proposed Rule (e) (see Table 102, row (e))	$647,210
Difference (f) = (e) - (d)	**+$12,989**

j. ICRs Regarding the Nomination of Improvement Activities (§ 414.1360)

The proposed requirements and burden associated with this rule's data submission will be submitted to OMB for approval under control number 0938-1314 (CMS-10621).

We refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53922), CY 2019 PFS final rule (83 FR 60017 through 60018), CY 2020 PFS final rule (84 FR 63141) and the CY 2021 PFS final rule (85 FR 84989 through 85 FR 84990) for our previously finalized requirements and information collection burden for the nomination of improvement activities.

In section IV.A.3.d.(3)(c)(i)(B) of this rule, we are proposing: (1) to revise the required

criteria for improvement activity nominations received through the Annual Call for Activities; (2) changes to the timeline for improvement activities nomination during a public health emergency (PHE); and (3) to suspend activities that become obsolete or impacted by clinical practice guideline changes from the program when this occurrence happens outside of the rulemaking process.

In section IV.A.3.d.(3)(c)(i)(B)(cc) of this rule, we are proposing 2 new criteria that beginning with the CY 2022 Annual Call for Activities MIPS improvement activities: (1) should not duplicate other improvement activities in the Inventory; and (2) should drive improvements that go beyond purely common clinical practices.

Additionally, we are proposing to increase the number of criteria stakeholders are required to meet when submitting an activity proposal from a minimum of 1 to all 8 criteria, which includes the two new proposed criteria. We believe that this proposal would provide clearer guidance to stakeholders when submitting a nomination for an improvement activity. In the CY 2021 PFS final rule, we estimated that it would require 0.6 hours for a medical and health services manager or equivalent and 0.4 hours for a physician to link the nominated improvement activity to existing and related cost and quality measures (85 FR 84989). Given that our current approved estimated time per respondent to nominate an improvement activity is 3 hours (1.8 hours for a medical and health services manager or equivalent and 1.2 hours for a physician), we assume that the proposed new requirement to meet all 8 criteria would require approximately 1 hour at $114.24/hr for a medical and health services manager to identify and submit an activity and 0.4 hours at a rate of $217.32/hr for a clinician to review each activity. Combined with our currently approved burden estimate, we propose to revise our estimate to 2.8 hours at $114.24/hr for a medical and health services manager or equivalent and 1.6 hours at $217.32 /hr for a physician to nominate an improvement activity. This represents a change of +1 hours (2.8 hr - 1.8 hr) for a medical and health services manager or equivalent and +0.4 hours (2 hr -1.6 hr) for a physician and an overall increase of 1.4 hours. We considered whether we should double our

estimates for nomination of an improvement activity to 6 hours. Since only 2 of the required 8 criteria are new, we assume that stakeholders are familiar with the existing criteria and would not need additional time to review but would need the additional time to verify and confirm if the considered activity meets all the 8 criteria. We seek comment on our proposed estimate to revise the time for nomination of an improvement activity to 4.4 hours and if there are additional burden implications that we should consider for above proposals to revise the criteria.

In the CY 2021 PFS final rule, we finalized an exception stating that during public health emergencies (PHE) stakeholders can nominate improvement activities outside of the established Annual Call for Activities timeframe (85 FR 84989). Instead of only accepting nominations and modifications submitted February 1st through July 1 each year, we would accept nominations for the duration of the PHE as long as the improvement activity is still relevant. No other aspects of the Annual Call for Activities process would be affected (for example, criteria for nominating improvement activities, considerations for selection of improvement activities, or weighting policies would all still apply). In section IV.A.3.d.(3)(c)(i)(B)(aa)of this rule, we are proposing to clarify that in order to implement a new improvement activity for a PHE during the same year as the nomination, the nomination would need to be received no later than January 5th of the nomination year to be included in a rule for notice-and-comment rulemaking during that fiscal or calendar year, a necessary precursor to implementation if it were to be finalized, as described above.

We believe this proposal will not affect our currently approved burden estimates since we assume that the number of nominations will not change, but it would make an activity available for reporting to clinicians in the same performance year it was intended to be implemented. Similar to our assumptions in the CY 2021 PFS final rule (85 FR 84989), we expect additional nominations may be received as a result of this change. However, we do not have any data with which to estimate what the additional number may be. As a result, we are not making any proposed revisions to our currently approved burden estimate.

In section IV.A.3.d.(3)(c)(i)(C)(aa)of this rule, we are proposing that beginning with the CY 2022 MIPS performance period/2024 MIPS payment year we are proposing that for each improvement activity that is in the Inventory, if applicable, and impacted by significant changes or errors prior to the applicable data submission deadline, it will be removed from the program as soon as possible. In the CY 2020 PFS final rule (84 FR 62988 through 62990), we finalized the factors for consideration in removing improvement activities. Following the publication of the CY 2021 PFS proposed rule, the improvement activities team became aware that clinicians could no longer complete the activity from April 1 through December 312020, because one of the improvement activities in the Inventory had expired on March 31, 2020. We do not anticipate any burden for stakeholders because of the above proposal as described, the proposed policy does not change requirements for the nomination of improvement activities. This proposal would help avoid stakeholder confusion and ensure the accuracy of the available activities in the Inventory. Therefore, we are not proposing to revise our estimated burden due to the above proposed policy.

Additionally, consistent with our assumptions in the CY 2021 PFS final rule (85 FR 84990) we continue to use our currently approved assumption that we will receive 31 nominations of new or modified activities which will be evaluated for the Improvement Activities Under Consideration (IAUC) list for possible inclusion in the CY 2023 Improvement Activities Inventory. The 2021 Annual Call for Activities ends on July 1, 2021; assuming updated information is available, we will update our estimate in the final rule.

As shown in Table 105, accounting for the change in burden per respondent estimate due to the provision to require all the 8 criteria for nomination of an improvement activity as described above in this section, we propose to revise our estimated annual information collection burden to 136 hours (31 nominations x 4.4 hr/nomination) at a cost of $20,695 (31 x [(2.8 hr x $114.24/hr) + (1.6 hr x $217.32/hr)]).

TABLE 105: Estimated Burden for Nomination of Improvement Activities

	Burden Estimate
# of Nominations of New Improvement Activities (a)	31
# of Hours Per Medical and Health Services Manager to Identify and Nominate Activity (b)	2.8
# of Hours Per Physician to Identify Activity (c)	1.6
Annual Hours Per Respondent (d)= (b) + (c)	4.4
Total Annual Hours (e) = (a) * (d)	**136**
Cost to Identify and Submit Activity (@ medical and health services manager's labor rate of $114.24/hr) (f) = $114.24/hr * (b)	$319.87
Cost to Identify Improvement Activity (@ physician's labor rate of $210.44/hr) (g) = $217.32/hr * (c)	$347.71
Total Annual Cost Per Respondent (h)=(f)+(g)	$667.58
Total Annual Cost (i) = (a) * (h)	**$20,695**

As shown in Table 106, using our unchanged estimate of the number of activities nominated, the increase in the burden per nomination results in a change of 43 hours (31 nominations x 1.4 hr/nomination) at a cost of $6,492 (31 activities x [(1 hr x $114.24/hr) + (0.4 hr x $217.32/hr)]).

TABLE 106: Change in Estimated Burden for Nomination of Improvement Activities

	Burden Estimate
Total Annual Hours for Respondents in CY 2021 PFS Final Rule (a)	93
Total Annual Hours for Respondents in CY 2022 PFS Proposed Rule (b) (see Table 105, row (e))	136
Difference (c) = (b) - (a)	**+43**
Total Annual Cost for Respondents in CY 2021 PFS Final Rule (d)	$14,203
Total Annual Cost for Respondents in CY 2022 PFS Proposed Rule (e) (see Table 105, row (i))	$20,695
Difference (f) = (e) - (d)	**+$6,492**

k. Nomination of MVPs

This rule does not propose any new or revised collection of information requirements or burden related to the nomination of MVPs for inclusion in the Quality Payment Program. The requirements and burden are currently approved by OMB under control number 0938-1314 (CMS-10621). Consequently, we are not proposing any changes under that control number.

l. ICRs Regarding the Cost Performance Category (§ 414.1350)

The cost performance category relies on administrative claims data. The Medicare Parts A and B claims submission process (OMB control number 0938-1197; CMS-1500 and CMS-1490S) is used to collect data on cost measures from MIPS eligible clinicians. MIPS eligible

clinicians are not required to provide any documentation by CD or hardcopy. Moreover, the proposed policies in this rule do not result in the need to add or revise or delete any claims data fields. Consequently, we are not proposing any changes under that control number.

m. ICRs Regarding Partial QP Elections (§§ 414.1310(b) and 414.1430)

This rule does not propose any new or revised collection of information requirements related to the Partial QP Elections to participate in MIPS as a MIPS eligible clinician. However, we are proposing to adjust our currently approved burden estimates based on updated projections for the CY 2022 MIPS performance period/2024 MIPS payment year. The proposed adjusted burden will be submitted to OMB for approval under control number 0938-1314 (CMS-10621).

As shown in Table 107, based on our predictive QP analysis for the 2022 QP performance period/2024 payment year, which accounts for historical response rates in the CY 2020 MIPS performance period/2022 MIPS payment year, we propose to revise our estimate that 150 APM Entities and 100 eligible clinicians (representing approximately 9,000 Partial QPs) will make the election to participate as a Partial QP in MIPS, a total of 250 elections which is a decrease of 50 from the 300 elections that are currently approved by OMB under the aforementioned control number. We continue to estimate it will take the APM Entity representative or eligible clinician 15 minutes (0.25 hr) to make this election. In aggregate, we propose to revise our estimated annual burden to 63 hours (250 respondents x 0.25 hr/election) and $5,999 (63 hr x $95.22/hr).

TABLE 107: Estimated Burden for Partial QP Election

	Burden Estimate
# of respondents making Partial QP election (100 APM Entities, 200 eligible clinicians) (a)	250
Total Hours Per Respondent to Elect to Participate as Partial QP (b)	0.25
Total Annual Hours (c) = (a) * (b)	**63**
Labor rate for computer systems analyst (d)	$95.22/hr
Total Annual Cost (e) = (c) * (d)	**$5,999**

As shown in Table 108, using our unchanged currently approved per respondent burden estimate, the proposed decrease in the number of Partial QP elections results in an adjustment of 12.5 hours (-50 elections x 0.25 hr) at a cost of -$1,191 (-12.5 hr x $95.22/hr) (85 FR 84991).

TABLE 108: Adjusted Burden for Partial QP Election

	Burden Estimate
Total Annual Hours for Respondents in CY 2021 PFS Final Rule (a)	75
Total Annual Hours for Respondents in CY 2022 PFS Proposed Rule (b) (see Table 107, row (c))	63
Difference (c) = (b)-(a)	**-12**
Total Annual Cost for Respondents in CY 2021 PFS Final Rule (d)	$7,142
Total Annual Cost for Respondents in CY 2022 PFS Proposed Rule (e) (see Table 107, row €)	$5,999
Difference (f) = –€ - (d)	**-$1,143**

n. ICRs Regarding Other Payer Advanced APM Determinations: Payer-Initiated Process (§ 414.1445) and Eligible Clinician Initiated Process (§ 414.1445)

The following burden will be submitted to OMB for approval under control number 0938-1314 (CMS-10621).

(1) Payer Initiated Process (§ 414.1445)

This rule is not proposing any new or revised collection of information requirements related to the Payer-Initiated Process. However, we are proposing to adjust our currently approved burden estimates based on updated projections for the CY 2022 MIPS performance period/2024 MIPS payment year.

As shown in Table 109, based on the actual number of requests received in the 2020 QP performance period, we propose to revise our estimate that for the 2023 QP performance period, 15 payer-initiated requests for Other Payer Advanced APM determinations will be submitted (6 Medicaid payers, 6 Medicare Advantage Organizations, and 3 remaining other payers), a decrease of 65 from the 80 total requests currently approved by OMB under the aforementioned control number. We continue to estimate it will take 10 hours for a computer system analyst per arrangement submission. We propose to revise our estimated annual burden to 150 hours (15

submissions x 10 hr/submission) and $14,283 (150 hr x $95.22/hr).

TABLE 109: Estimated Burden for Other Payer Advanced APM Identification Determinations: Payer-Initiated Process

	Burden Estimate
# of other payer payment arrangements (3 Medicaid, 3 Medicare Advantage Organizations, 1 remaining other payers) (a)	15
Total Annual Hours Per other payer payment arrangement (b)	10
Total Annual Hours (c) = (a) * (b)	**150**
Labor rate for a computer systems analyst (d)	$95.22/hr
Total Annual Cost (e) = (c) * (d)	**$14,283**

As shown in Table 110, using our unchanged currently approved per respondent burden estimate, the proposed decrease in the number of payer-initiated requests from 800 to 150 results in an adjustment of -650 hours (-65 requests x 10 hr) at a cost of -$61,893 (-650 hr x $95.22/hr) (85 FR 84992).

TABLE 110: Adjusted Burden for Other Payer Advanced APM Identification Determinations: Payer-Initiated Process

	Burden Estimate
Total Annual Hours for Respondents in CY 2021 PFS Final Rule (a)	800
Total Annual Hours for Respondents in CY 2022 PFS Proposed Rule (b) (see Table 109, row (c))	150
Difference (c) = (b) - (a)	**-650**
Total Annual Cost for Respondents in CY 2021 PFS Final Rule (d)	$76,176
Total Annual Cost for Respondents in CY 2022 PFS Proposed Rule (e) (see Table 109, row (e))	$14,283
Difference (f) = (e) - (d)	**-$61,893**

(2) Eligible Clinician Initiated Process (§ 414.1445)

This rule does not propose any new or revised collection of information requirements or burden related to the Eligible-Clinician Initiated Process. However, we are proposing to adjust our currently approved burden estimates based on updated projections for the CY 2022 MIPS performance period/2024 MIPS payment year. As mentioned above, the new and adjusted burden will be submitted to OMB for approval.

As shown in Table 111, based on the actual number of requests received in the 2020 QP performance period, we estimate that in CY 2022 for the 2023 QP performance period, 15

Eligible-Clinician Initiated request for Other Payer Advanced APM determinations will be submitted, a decrease of 135 from the 150 total requests currently approved by OMB under the aforementioned control number. We continue to estimate it will take 10 hours for a computer system analyst per arrangement submission. We propose to revise our estimated annual burden to 150 hours (15 submissions x 10 hr/submission) and $14,283 (150 hr x $95.22/hr).

TABLE 111: Estimated Burden for Other Payer Advanced APM Identification Determinations: Eligible Clinician Initiated Process

	Burden Estimate
# of other payer payment arrangements from APM Entities and eligible clinicians	15
Total Annual Hours Per other payer payment arrangement (b)	10
Total Annual Hours (c) = (a) * (b)	**150**
Labor rate for a computer systems analyst (d)	$95.22/hr
Total Annual Cost (e) = (c) * (d)	**$14,283**

As shown in Table 112, using our unchanged currently approved per respondent burden estimate, the proposed decrease in the number of eligible clinician-initiated requests from 150 to 15 results in an adjustment of -1,350 hours (-135 requests x 10 hr) at a cost of -$128,547 (-1,350 hr x $95.22/hr) (85 FR 84993).

TABLE 112: Adjusted Burden for Other Payer Advanced APM Identification Determinations: Eligible Clinician Initiated Process

	Burden Estimate
Total Annual Hours for Respondents in CY 2021 PFS Final Rule (a)	1,500
Total Annual Hours for Respondents in CY 2022 PFS Proposed Rule (b) (see Table 111, row (c))	150
Difference (c) = (b) - (a)	**-1,350**
Total Annual Cost for Respondents in CY 2021 PFS Final Rule (d)	142,830
Total Annual Cost for Respondents in CY 2022 PFS Proposed Rule (e) (see Table 111, row (e))	14,283
Difference (f) = (e) - (d)	**-$128,547**

(3) Submission of Data for QP Determinations under the All-Payer Combination Option (§ 414.1440)

This rule does not propose any new or revised collection of information requirements related to the Submission of Data for QP Determinations under the All-Payer Combination

Option. The requirements and burden are currently approved by OMB under control number 0938-1314 (CMS-10621). Consequently, we are not proposing any changes under that control number.

o. ICRs Regarding Voluntary Participants Election to Opt-Out of Performance Data Display on Physician Compare (§ 414.1395)

This rule does not propose any new or revised collection of information requirements related to the election by voluntary participants to opt-out of public reporting on Physician Compare. However, we are proposing adjustments to our currently approved burden estimates based on data from the CY 2019 MIPS performance period/2021 MIPS payment year. The proposed adjusted burden will be submitted to OMB for approval under control number 0938-1314 (CMS-10621).

We refer readers to the CY 2018 Quality Payment Program final rule (82 FR 53924 through 53925), CY 2019 PFS final rule (83 FR 60022), CY 2020 PFS final rule (84 FR 63145 through 63146) and the CY 2021 PFS final rule (85 FR 84993) for our previously finalized requirements and burden for voluntary participants to opt-out of public reporting on Physician Compare.

In the CY 2021 PFS final rule (85 FR 84993), we estimated that 10 percent of the clinicians and groups who voluntarily participate in MIPS would opt out of public reporting. Based on the number of opt-out eligible clinicians that chose to opt-out of public reporting in the CY 2019 MIPS performance period/2021 MIPS payment year, we propose to revise our estimates. We anticipate that 0.1 percent of the total clinicians and groups who will voluntarily participate in the CY 2022 MIPS performance period/2024 MIPS payment year will also elect not to participate in public reporting. This results in a total of 38 (0.001 x 37,934 voluntary MIPS participants) clinicians and groups, a decrease of 3,448 from the currently approved estimate of 3,486. Voluntary MIPS participants are clinicians that are not QPs and are expected to be excluded from MIPS after applying the eligibility requirements set out in the CY 2019 PFS

final rule but have elected to submit data to MIPS. As discussed in the RIA section of the CY 2019 PFS final rule, we continue to estimate that 33 percent of clinicians that exceed one (1) of the low-volume criteria, but not all three (3), will elect to opt-in to MIPS, become MIPS eligible, and no longer be considered a voluntary reporter (83 FR 60050).

Table 113 shows that for these voluntary participants, we continue to estimate it will take 0.25 hours for a computer system analyst to submit a request to opt-out. In aggregate, we estimate an annual burden of 9.5 hours (38 requests x 0.25 hr/request) and $904 (9.5 hr x $95.22/hr).

TABLE 113: Estimated Burden for Voluntary Participants to Elect Opt Out of Performance Data Display on Physician Compare

	Burden Estimate
# of Voluntary Participants Opting Out of Physician Compare (a)	38
Total Annual Hours Per Opt-out Requester (b)	0.25
Total Annual Hours (c) = (a) * (b)	**9.50**
Labor rate for a computer systems analyst (d)	$95.22/hr
Total Annual Cost (e) = (c) * (d)	**$904**

As shown in Table 108, using our unchanged currently approved per respondent burden estimate, the decrease of 3,448 opt outs by voluntary participants results in an adjustment of -862 hours (-3,448 requests x 0.25 hr) at a cost of $-82,079 (-862 hr x $95.22/hr).

TABLE 114: Adjusted Burden for Voluntary Participants to Elect Opt Out of Performance Data Display on Physician Compare

	Burden Estimate
Total Annual Hours for Respondents in CY 2021 PFS Final Rule (a)	871.5
Total Annual Hours for Respondents in CY 2022 PFS Proposed Rule (b) (see Table 113, row (c))	9.5
Difference (c) = (b)-(a)	**-862**
Total Annual Cost for Respondents in CY 2021 PFS Final Rule (d)	$82,984
Total Annual Cost for Respondents in CY 2022 PFS Proposed Rule (e) (see Table 113, row (e))	$904
Difference (f) = (e)-(d)	**-82,079**

p. Summary of Annual Quality Payment Program Burden Estimates

Table 115 summarizes this proposed rule's total burden estimates for the Quality Payment Program for both the CY 2022 and CY 2023 MIPS performance periods/2024 and 2025

MIPS payment years. In the CY 2021 PFS final rule, the total estimated burden for the CY 2022 MIPS performance period/ 2024 MIPS payment year was 1,473,741 hours at a cost of $144,034,968 (85 FR 84994). Accounting for updated wage rates and the subset of all Quality Payment Program ICRs discussed in this rule compared to the CY 2021 PFS final rule, the total estimated annual burden of continuing policies and information set forth in the CY 2021 PFS final rule into the CY 2022 MIPS performance period/2024 MIPS payment year is 1,468,547 hours at a cost of $148,093,881. These represent a decrease of 5,194 hours and an increase of $4,058,913. To understand the burden implications of the proposed policies in this rule, we provide an estimate of the total burden associated with continuing the policies and information collections set forth in the CY 2021 PFS final rule into the CY 2022 MIPS performance periods/2024 MIPS payment year. This burden estimate of 1,424,726 hours at a cost of $143,682,174 reflects the availability of more accurate data to account for all potential respondents and submissions across all the performance categories and more accurately reflect the exclusion of QPs from all MIPS performance categories, a decrease of 43,821 hours and $4,411,707. This burden estimate is lower than the burden approved for information collection related to the CY 2021 PFS final rule due to updated data and assumptions. Our total burden estimate for the CY 2022 MIPS performance period/2024 MIPS payment year is 1,428,537 hours and $144,040,730, which represents a decrease of 40,010 hours and $4,053,151from the CY 2021 PFS final rule. The difference of +3,811 hours (43,821 hours -40,010 hours) and +$358,556 ($4,385,824 - $4,026,590) between this estimate and the total burden shown in Table 115 is the reduction in burden associated with impacts of the policies proposed for the CY 2022 MIPS performance period/2024 MIPS payment year, which includes the re-introduction of the CMS Web Interface measures as a collection type/submission type.

Table 115 also offers a comparison between the total currently approved estimated burden from the CY 2021 PFS final rule and our proposed estimated burden for the CY 2023 MIPS performance period/2025 MIPS payment year. Our total burden estimate for the CY 2023

MIPS performance period/2025 MIPS payment year is 1,383,744 hours and $139,516,153, which represents a decrease of 84,803 hours and $8,577,728 from the CY 2021 PFS final rule. The difference of -40,982 hours (43,821 hours – 84,803 hours) and -$4,166,021 ($4,411,707 - $8,577,728) between this estimate and the total burden shown in Table 115 is the reduction in burden associated with impacts of the policies proposed for the CY 2023 MIPS performance period/2025 MIPS payment year. These policy changes include the proposals to sunset the CMS Web Interface measures as a collection type/submission type and to implement a new information collection for MVPs and subgroups.

We have included Table 115 to assist in understanding these differences. Note that the difference between the burden estimates for the CY 2022 and 2023 MIPS performance periods/2024 and 2025 MIPS payment years is entirely due to the proposed policies to introduce MVP and subgroup reporting and sunset the CMS Web Interface measures as a collection type/submission type beginning in the CY 2023 MIPS performance period/2025 MIPS payment year.

TABLE 115: Summary of Proposed Burden Estimates and Requirements from the CY 2022 PFS Proposed Rule

CY 2022 MIPS Performance Period		
Burden Estimate Description	**Time (Hours)**	**Cost**
Currently approved burden in CY 2021 PFS Final Rule (a)	1,473,741	$144,034,968
CY 2022 PFS Proposed Rule w/ updated wage rates and ICRs (b)	1,468,547	$148,093,881
CY 2022 PFS Proposed Rule w/ updated data and assumptions (c)	1,424,726	$143,682,174
Change in burden due to updated data and assumptions (d) = (c) – (b)	-43,821	-$4,411,707
CY 2022 PFS Proposed Rule Total Burden (e)	1,428,537	$144,040,730
Total change in burden (f) = (e) – (b)	-40,010)	-$4,053,151
Change in burden associated with policies (g) = (f) – (d)	+3,811	+$358,556
CY 2023 MIPS Performance Period		
Burden Estimate Description	**Time (Hours)**	**Cost**
Currently approved burden in CY 2021 PFS Final Rule (h)	1,473,741	$144,034,968
CY 2022 PFS Proposed Rule w/ updated wage rates and ICRs (i)	1,468,547	$148,093,881
CY 2022 PFS Proposed Rule w/ updated data and assumptions (j)	1,424,726	$143,682,174
Change in burden due to updated data and assumptions (k) = (j) – (i)	-43,821)	-$4,411,707
CY 2022 PFS Proposed Rule Total Burden (l)	1,383,744	$139,516,153
Total change in burden (as shown in Table 118) (m) = (l) – (i)	-84,803	-$8,577,728
Change in burden associated with policies (n) = (m) – (k)	-40,982	-4,166,021

The following table represents averages for the estimated changes in burden for the CY 2022 and CY 2023 MIPS performance periods/ 2024 and 2025 MIPS payment years.

TABLE 118: Calculating Average Total Change in Burden

Changes Under §§ 414.1325 and 414.1335, 414.1360, 414.1375, 414.1380, 414.1395, 414.1400, 414.1430, and 414.1440 (Quality Payment Program)	Respondents	Total Annual Responses	Burden per Response (hours)	Total Annual Time (hours)	Labor Cost ($/hr)	Total Cost ($)
CY 2022 MIPS Performance Period	119,890	-3,729	Varies	-40,010	Varies	-$4,053,151
CY 2023 MIPS Performance Period	119,910	-3,709	Varies	-84,803	Varies	-$8,577,728
TOTAL	239,800	-7,438	Varies	-124,813	Varies	-12,630,880
AVERAGE	119,900	-3,719	Varies	-62,407	Varies	-6,315,440

Table 119 provides the reasons for changes in the estimated burden for information collections in the Quality Payment Program segment of this proposed rule. We have divided the reasons for our change in burden into those related to new policies and those related to adjustments in burden from continued Quality Payment Program Year 5 policies that reflect updated data and revised methods.

TABLE 119: Reasons for Change in Burden Compared to the Currently Approved CY 2021 Information Collection Burden

Quality Payment Program Table	Proposed Changes in burden due to CY 2022 Proposed Rule policies	Adjustments in burden from continued CY 2021 PFS Final Rule policies due to revised methods or updated data
Section V.B.8.c.(2): QCDR Self-Nomination and other Requirements (See Table 72)	Increase in burden due to the proposed policy requiring submission of participation plans, as necessary (3 hours per plan). Increase in burden due to current policies not previously having a burden estimate. (QCDR pre-existing measures)	Increase in number of hours required for simplified and full self-nomination process.
Section V.B.8.c.(3): Qualified Registry Self-Nomination and other Requirements (See Table 74)	Increase in burden due to the proposed policy requiring submission of participation plans, as necessary (3 hours per plan).	Decrease in the estimated number of hours required for full-self nomination process
Section V.B.8.e.(4): Quality Performance Category Medicare Part B Claims Collection Type (See Table 80)	(CY 2023 MIPS Performance Period/2025 MIPS Payment Year) Decrease in burden due to estimated 10% of submitters reporting through MVPs. This decrease is offset slightly by the addition of Web Interface submitters due to the sunset of the CMS Web Interface collection type.	(CY 2022 MIPS Performance Period/2024 MIPS Payment Year) Decrease in number of respondents due to updated projections for the CY 2022 MIPS performance period/2024 MIPS payment year and updated QP projections for the CY 2022 MIPS performance period/2024 MIPS payment year.
Section V.B.8.e.(5): Quality Performance Category QCDR/ MIPS CQM Collection Type (See Table 82)	(CY 2022 MIPS Performance Period/2024 MIPS Payment Year) Decrease in the number of respondents due to the proposed policy to extend the CMS Web Interface measures as a collection type/submission type for the CY 2022 MIPS performance period/2024 MIPS payment year. (CY 2023 MIPS Performance Period/2025 MIPS Payment Year) Increase in the number of respondents due to the proposed policy to sunset the CMS Web Interface measures as a collection type/submission type and decrease in respondents due to proposed MVP implementation.	Decrease in number of respondents due to updated projections from the CY 2022 MIPS performance period/2024 MIPS payment year and updated QP projections for the CY 2022 MIPS performance period/2024 MIPS payment year.

Quality Payment Program Table	Proposed Changes in burden due to CY 2022 Proposed Rule policies	Adjustments in burden from continued CY 2021 PFS Final Rule policies due to revised methods or updated data
Section V.B.8.e.(6): Quality Performance Category eCQM Collection Type (See Table 84)	(CY 2022 MIPS Performance Period/2024 MIPS Payment Year) Decrease in the number of respondents due to the proposed policy to extend the CMS Web Interface measures as a collection type/submission type for the CY 2022 MIPS performance period/2024 MIPS payment year. (CY 2023 MIPS Performance Period/2025 MIPS Payment Year) Increase in number of respondents due to the proposed policy to sunset the CMS Web Interface measures as a collection type/submission type and decrease in respondents due to proposed MVP implementation.	Decrease in number of respondents due to updated projections for the CY 2022 MIPS performance period/2024 MIPS payment year and updated QP projections for the CY 2022 MIPS performance period/2024 MIPS payment year.
SSectionV.B.8.e.(7)(a)(i) : MVP Registration (See Table 85)	(CY 2023 MIPS Performance Period/2025 MIPS Payment Year) New information collection request	Not applicable
Section V.B.8.e.(7)(a)(ii) : Subgroup Registration (See Table 86)	(CY 2023 MIPS Performance Period/2025 MIPS Payment Year) New information collection request	Not applicable
Section V.B.8.e.(7)(a)(iii) : MVP Quality Performance Category Submission (See Table 87)	(CY 2023 MIPS Performance Period/2025 MIPS Payment Year) New information collection request	Not applicable
Section V.B.8.e.(8): Quality Performance Category CMS Web Interface Collection Type (See Table 89)	(CY 2022 MIPS Performance Period/2024 MIPS Payment Year) Addition of information collection due to the proposed policy to extend the CMS Web Interface measures as a collection type/submission type. (CY 2023 MIPS Performance Period/2025 MIPS Payment Year) Removal of information collection due to the proposed policy to sunset the CMS Web Interface measures as a collection type/submission type.	(CY 2022 MIPS Performance Period/2024 MIPS Payment Year) Increase in number of respondents (+114) due to proposed policy to extend the CMS Web Interface measures as a collection type/submission type. (CY 2023 MIPS Performance Period/2025 MIPS Payment Year) Decrease in number of respondents (-114) due to proposed policy to sunset the CMS Web Interface measures as a collection type/submission type.
Section V.B.8.e.(10): Registration for CMS Web Interface (See Table 91)	(CY 2022 MIPS Performance Period/2024 MIPS Payment Year) Addition of information collection due to the proposed policy to extend the CMS Web Interface measures as a collection type/submission type. (CY 2023 MIPS Performance Period/2025 MIPS Payment Year) Removal of information collection due to the proposed policy to sunset the CMS Web Interface measures as a collection type/submission type.	(CY 2022 MIPS Performance Period/2024 MIPS Payment Year) Increase in number of respondents (+90) due to proposed policy to extend the CMS Web Interface measures as a collection type/submission type. (CY 2023 MIPS Performance Period/2025 MIPS Payment Year) Decrease in number of respondents (-90) due to proposed policy to sunset the CMS Web Interface measures as a collection type/submission type.
Section V.B.8.g.(2): Reweighting Applications for Promoting Interoperability and Other Performance Categories (See Table 94)	Decrease in the number of respondents due to the proposed policy to allow automatic reweighting of the Promoting Interoperability performance category for small practices	None

Quality Payment Program Table	Proposed Changes in burden due to CY 2022 Proposed Rule policies	Adjustments in burden from continued CY 2021 PFS Final Rule policies due to revised methods or updated data
Section V.B.8.g.(3): Promoting Interoperability Performance Category Data Submission (See Table 99)	(CY 2022 MIPS Performance Period/2024 MIPS Payment Year) Increase in per response burden (+0.02 hours) due to the proposed policy for annual assessment SAFER Guides requirement (CY 2023 MIPS Performance Period/2025 MIPS Payment Year) Increase in number of respondents (+20) due to the proposed implementation of subgroup reporting for MVPs and APP.	Decrease in number of respondents due to updated projections for the CY 2022 MIPS performance period/2024 MIPS payment year and updated QP projections for the CY 2022 MIPS performance period/2024 MIPS payment year.
Section V.B.8.i: Improvement Activities Submission (See Table 104)	(CY 2023 MIPS Performance Period/2025 MIPS Payment Year) Increase in number of respondents (+20) due to the proposed implementation of subgroup reporting for MVPs and APP.	Increase in number of respondents due to updated projections for the CY 2022 MIPS performance period/2024 MIPS payment year
Section V.B.8.j: Nomination of Improvement Activities (See Table 106)	Increase in per response burden (+1.4 hours) due to the proposed revised criteria for nomination of improvement activities	None.
Section V.B.8.m: Partial QP Election (See Table 108)	None	Decrease in number of respondents due to updated projections for the CY 2022 MIPS performance period/2024 MIPS payment year.
Section V.B.8.n.(1): Other Payer Advanced APM Identification: Other Payer Initiated Process (See Table 110)	None.	Decrease in number of respondents due to updated projections for the CY 2022 MIPS performance period/2024 MIPS payment year.
Section V.B.8.o: Voluntary Participants to Elect to Opt Out of Performance Data Display on Physician Compare (See Table 114)	None.	Decrease in number of respondents due to updated projections for the CY 2022 MIPS performance period/2024 MIPS payment year.

C. Summary of Annual Burden Estimates for Proposed Changes

TABLE 120: Proposed Annual Requirements and Burden Estimates

Regulation Section(s) Under Title 42 of the CFR	OMB Control Number	Respondents	Total Annual Responses	Burden per Response (hours)	Total Annual Time (hours)	Labor Cost ($/hr)	Total Cost ($)
§§ 414.802 and 414.806 (Requiring Certain Manufacturers to Report Drug Pricing Information for Part B)*	0938-0921	740	2,960	13	38,480	38.86	1,495,333
§ 423.160(a) (Electronic Prescribing for Controlled Substances for a Covered Part D Drug Under a Prescription Drug Plan or an MA-PD Plan)*	0938-1396	100	100	0.1667	16.67	210.44	3,508
Part 403 (Open Payments Proposals included in the CY 2022 PFS)	0938-1237	2,398	2,398	Varies	1,263	Varies	64,561
§§ 414.1325 and 414.1335, 414.1360, 414.1375, 414.1380, 414.1395, 414.1400, 414.1430, and 414.1440 (Quality Payment Program)**	0938-1314	119,900	-3,719	Varies	-62,407	Varies	-6,315,440
TOTAL		123,138	1,739	varies	-22,647.33	varies	-$4,752,038

*The finalized requirements and burden will be submitted to OMB using the standard PRA process.
**Averages the CY 2022 and CY 2023 MIPS performance period burden changes over the 2-year 2024 and 2025 MIPS payment years.

D. Submission of Comments

We have submitted a copy of this rule to OMB for its review of the rule's proposed information collection requirements and burden. The requirements are not effective until they have been approved by OMB.

To obtain copies of the supporting statement and any related forms for the proposed collections previously discussed, please visit CMS's website at https://www.cms.gov/RegulationsandGuidance/Legislation/PaperworkReductionActof1995/PRAListing.html, or call the Reports Clearance Office at (410) 786–1326.

We invite public comments on the proposed information collection requirements and burden. If you wish to comment, please submit your comments electronically as specified in the DATES and ADDRESSES sections of this proposed rule and identify the rule (CMS–1751–P) and where applicable the ICR's CFR citation, CMS ID number, and OMB control number.

VI. Response to Comments

Because of the large number of public comments we normally receive on **Federal Register** documents, we are not able to acknowledge or respond to them individually. We will consider all comments we receive by the date and time specified in the "DATES" section of this preamble, and, when we proceed with a subsequent document, we will respond to the comments in the preamble to that document.

VII. Regulatory Impact Analysis

A. Statement of Need

In this proposed rule, we are proposing to make payment and policy changes under the Medicare PFS and required statutory changes under the Consolidated Appropriations Act, 2016 and sections 2003 and 2005 of the SUPPORT for Patients and Communities Act of 2018. We are also proposing changes to payment policy and other related policies for Medicare Part B. In addition, if finalized, this proposed rule would make modest revisions to certain Medicare provider and supplier enrollment regulatory provisions and add already existing provider and supplier requirements pertaining to prepayment and post-payment review activities.

This proposed rule is necessary to make policy changes under Medicare fee-for-service and to address various provider and supplier enrollment issues. Therefore, we include a detailed Regulatory Impact Analysis (RIA) to assess all costs and benefits of available regulatory alternatives and explain the selection of these regulatory approaches that we believe adhere to statutory requirements and, to the extent feasible, maximize net benefits.

B. Overall Impact

We examined the impact of this rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (February 2, 2013), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96-354), section 1102(b) of the Social Security Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March 22, 1995; Pub. L. 104-4), Executive Order 13132 on Federalism (August 4, 1999), and the Congressional Review Act (5 U.S.C. 804(2)).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). An RIA must be prepared for major rules with economically significant effects ($100 million or more in any 1 year). We estimated, as discussed in this section, that the PFS provisions included in this proposed rule would redistribute more than $100 million in 1 year. Therefore, we estimate that this rulemaking is "economically significant" as measured by the $100 million threshold, and hence also a major rule under the Congressional Review Act. Accordingly, we prepared an RIA that, to the best of our ability, presents the costs and benefits of the rulemaking. The RFA requires agencies to analyze options for regulatory relief of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small governmental jurisdictions. Most hospitals, practitioners and most other providers and suppliers are small entities, either by nonprofit status or by having annual revenues that qualify for small business status under the Small Business Administration standards. (For details, see the SBA's website at http://www.sba.gov/content/table-small-business-size-standards (refer to the 620000 series)). Individuals and states are not included in the definition of a small entity.

The RFA requires that we analyze regulatory options for small businesses and other entities. We prepare a regulatory flexibility analysis unless we certify that a rule would not have a significant economic impact on a substantial number of small entities. The analysis must include a justification concerning the reason action is being taken, the kinds and number of small entities the rule affects, and an explanation of any meaningful options that achieve the objectives with less significant adverse economic impact on the small entities.

Approximately 95 percent of practitioners, other providers, and suppliers are considered to be small entities, based upon the SBA standards. There are over 1 million physicians, other practitioners, and medical suppliers that receive Medicare payment under the PFS. Because

many of the affected entities are small entities, the analysis and discussion provided in this section, as well as elsewhere in this proposed rule is intended to comply with the RFA requirements regarding significant impact on a substantial number of small entities.

In addition, section 1102(b) of the Act requires us to prepare an RIA if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 603 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a Metropolitan Statistical Area for Medicare payment regulations and has fewer than 100 beds. Medicare does not pay rural hospitals for their services under the PFS; rather, the PFS pays for physicians' services, which can be furnished by physicians and NPPs in a variety of settings, including rural hospitals. We did not prepare an analysis for section 1102(b) of the Act because we determined, and the Secretary certified, that this proposed rule will not have a significant impact on the operations of a substantial number of small rural hospitals.

Section 202 of the Unfunded Mandates Reform Act of 1995 also requires that agencies assess anticipated costs and benefits on state, local, or tribal governments or on the private sector before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars, updated annually for inflation. In 2021, that threshold is approximately $158 million. This proposed rule will impose no mandates on state, local, or tribal governments or on the private sector.

Executive Order 13132 establishes certain requirements that an agency must meet when it issues a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on state and local governments, preempts state law, or otherwise has federalism implications. Since this proposed rule does not impose any costs on state or local governments, the requirements of Executive Order 13132 are not applicable.

We prepared the following analysis, which together with the information provided in the rest of this preamble, meets all assessment requirements. The analysis explains the rationale for

and purposes of this proposed rule; details the costs and benefits of the rule; analyzes alternatives; and presents the measures we would use to minimize the burden on small entities. As indicated elsewhere in this proposed rule, we discussed a variety of changes to our regulations, payments, or payment policies to ensure that our payment systems reflect changes in medical practice and the relative value of services, and implementing statutory provisions. We provide information for each of the policy changes in the relevant sections of this proposed rule. We are unaware of any relevant federal rules that duplicate, overlap, or conflict with this proposed rule. The relevant sections of this proposed rule contain a description of significant alternatives if applicable.

C. Changes in Relative Value Unit (RVU) Impacts

1. Resource-Based Work, PE, and MP RVUs

Section 1848(c)(2)(B)(ii)(II) of the Act requires that increases or decreases in RVUs may not cause the amount of expenditures for the year to differ by more than $20 million from what expenditures would have been in the absence of these changes. If this threshold is exceeded, we make adjustments to preserve budget neutrality.

Our estimates of changes in Medicare expenditures for PFS services compared payment rates for CY 2021 with payment rates for CY 2022 using CY 2020 Medicare utilization. The payment impacts described in this proposed rule reflect averages by specialty based on Medicare utilization. The payment impact for an individual practitioner could vary from the average and would depend on the mix of services he or she furnishes. The average percentage change in total revenues will be less than the impact displayed here because practitioners and other entities generally furnish services to both Medicare and non-Medicare patients. In addition, practitioners and other entities may receive substantial Medicare revenues for services under other Medicare payment systems. For instance, independent laboratories receive approximately 83 percent of their Medicare revenues from clinical laboratory services that are paid under the Clinical Laboratory Fee Schedule (CLFS).

The PFS update adjustment factor for CY 2022, as required by section 1848(d)(19) of the Act, is 0.00 percent before applying other adjustments. In addition, section 101 of Division N of the CAA provided a 3.75 percent increase in PFS payment amounts for services furnished on or after January 1, 2021, and before January 1, 2022 and required that the increase shall not be taken into account in determining PFS payment rates for subsequent years. The expiration of this 3.75 percent increase in payment amounts will result in the CY 2022 conversion factor being calculated as though the 3.75 percent increase for the CY 2021 conversion factor had never been applied.

To calculate the CY 2022 PFS conversion factor (CF), we took the CY 2021 conversion factor without the 1-year 3.75 percent increase provided by the CAA and multiplied it by the budget neutrality adjustment required as described in the preceding paragraphs. We estimate the CY 2022 PFS CF to be 33.5848 which reflects the budget neutrality adjustment under section 1848(c)(2)(B)(ii)(II) of the Act, the 0.00 percent update adjustment factor specified under section 1848(d)(19) of the Act, and the expiration of the 3.75 percent increase for services furnished in CY 2021, as provided in the CAA. We estimate the CY 2022 anesthesia CF to be 21.0442 which reflects the same overall PFS adjustments with the addition of anesthesia-specific PE and MP adjustments.

TABLE 121: Calculation of the CY 2022 PFS Conversion Factor

CY 2021 Conversion Factor		34.8931
Conversion Factor without CY 2021 Consolidated Appropriations Act Provision		33.6319
Statutory Update Factor	0.00 percent (1.0000)	
CY 2022 RVU Budget Neutrality Adjustment	-0.14 percent (0.9986)	
CY 2022 Conversion Factor		**33.5848**

TABLE 122: Calculation of the CY 2022 Anesthesia Conversion Factor

CY 2021 National Average Anesthesia Conversion Factor		21.5600
Conversion Factor without CY 2021 Consolidated Appropriations Act Provision		20.7807
Statutory Update Factor	0.00 percent (1.0000)	
CY 2022 RVU Budget Neutrality Adjustment	-0.14 percent (0.9986)	
CY 2022 Anesthesia Fee Schedule Practice Expense and Malpractice Adjustment	1.41 percent (1.0141)	
CY 2022 Conversion Factor		**21.0442**

Table 123 shows the payment impact of the policies contained in this proposed rule on

PFS services, should CMS finalize this rule as proposed. To the extent that there are year-to-year changes in the volume and mix of services provided by practitioners, the actual impact on total Medicare revenues will be different from those shown in Table 123 (CY 2022 PFS Estimated Impact on Total Allowed Charges by Specialty). The following is an explanation of the information represented in Table 123.

- Column A (Specialty): Identifies the specialty for which data are shown.
- Column B (Allowed Charges): The aggregate estimated PFS allowed charges for the specialty based on CY 2020 utilization and CY 2021 rates. That is, allowed charges are the PFS amounts for covered services and include coinsurance and deductibles (which are the financial responsibility of the beneficiary). These amounts have been summed across all services furnished by physicians, practitioners, and suppliers within a specialty to arrive at the total allowed charges for the specialty.
- Column C (Impact of Work RVU Changes): This column shows the estimated CY 2022 impact on total allowed charges of the changes in the work RVUs, including the impact of changes due to potentially misvalued codes.
- Column D (Impact of PE RVU Changes): This column shows the estimated CY 2022 impact on total allowed charges of the changes in the PE RVUs.
- Column E (Impact of MP RVU Changes): This column shows the estimated CY 2022 impact on total allowed charges of the changes in the MP RVUs.
- Column F (Combined Impact): This column shows the estimated CY 2022 combined impact on total allowed charges of all the changes in the previous columns. Column F may not equal the sum of columns C, D, and E due to rounding.

TABLE 123: CY 2022 PFS Estimated Impact on Total Allowed Charges by Specialty

(A) Specialty	(B) Allowed Charges (mil)	(C) Impact of Work RVU Changes	(D) Impact of PE RVU Changes	(E) Impact of MP RVU Changes	(F) Combined Impact

2. CY 2021 PFS Impact Discussion

a. Changes in RVUs

The most widespread specialty impacts of the RVU changes are generally related to the changes to RVUs for specific services resulting from the misvalued code initiative, including RVUs for new and revised codes. The estimated impacts for some specialties, including portable x-ray, family practice, hand surgery, general practice, and endocrinology, reflect increases relative to other physician specialties. These increases can be attributed largely to the proposed update to clinical labor pricing as the services that these specialties furnish rely primarily on clinical labor for their PE costs. These increases are also due to proposed increases in value for particular services in response to the recommendations from the American Medical Association (AMA)'s Relative Value Scale Update Committee (RUC), and CMS review and increased payments resulting from updates to supply and equipment pricing.

The estimated impacts for several specialties, including interventional radiology, vascular surgery, radiation oncology, and oral/maxillofacial surgery reflect decreases in payments relative to payment to other physician specialties which are largely the result of the redistributive effects of the proposed clinical labor pricing update. The services furnished by these specialties involve PE costs that rely primarily on supply or equipment items and therefore are affected negatively by the proposed updates to clinical labor pricing. Since PE is budget neutralized within itself, increased pricing for clinical labor holds a corresponding relative decrease for other components of PE such as supplies and equipment. These decreases are also due to the proposed revaluation of individual procedures based on reviews by the AMA RUC and CMS, as well as decreases

resulting from the continued phase-in implementation of the previously finalized updates to supply and equipment pricing. The estimated impacts also reflect decreases due to continued implementation of previously finalized code-level reductions that are being phased in over several years. For independent laboratories, it is important to note that these entities receive approximately 83 percent of their Medicare revenues from services that are paid under the CLFS. As a result, the estimated 2 percent decrease for CY 2021 is only applicable to approximately 17 percent of the Medicare payment to these entities.

We often receive comments regarding the changes in RVUs displayed on the specialty impact table (Table 123), including comments received in response to the proposed valuations. We remind stakeholders that although the estimated impacts are displayed at the specialty level, typically the changes are driven by the valuation of a relatively small number of new and/or potentially misvalued codes. The percentage changes in Table 123 are based upon aggregate estimated PFS allowed charges summed across all services furnished by physicians, practitioners, and suppliers within a specialty to arrive at the total allowed charges for the specialty, and compared to the same summed total from the previous calendar year. Therefore, they are averages, and may not necessarily be representative of what is happening to the particular services furnished by a single practitioner within any given specialty. To illustrate how impacts can vary within specialties, we created a public use file that models the expected percentage change in total RVUs per practitioner. Using CY 2020 utilization data, Total RVUs change between -1 percent and 1 percent for more than 52 percent of practitioners, representing more than 48 percent of the changes in Total RVUs for all practitioners, with variation by specialty. Some specialties, such as chiropractic, clinical social worker, and emergency medicine, exhibit little variation in changes in total RVUs per practitioner. For these specialties, more than 90 percent of these practitioners would experience a change in Total RVUs between -1 percent and 1 percent. Other specialties exhibit more variation in changes in total RVUs per practitioner. For example, for diagnostic testing facilities, 32 percent of IDTFs would experience

a 5 percent or more decrease in Total RVUs, but these suppliers represent only 28 percent of Total RVUs for this specialty. Meanwhile, one percent of IDTFs would experience 10 percent or more increases in Total RVUs and these suppliers account for 28 percent of Total RVUs for this specialty.

b. Impact

Column F of Table 123 displays the estimated CY 2022 impact on total allowed charges, by specialty, of all the RVU changes. A table showing the estimated impact of all of the changes on total payments for selected high volume procedures is available under "downloads" on the CY 2022 PFS proposed rule website at http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/. We selected these procedures for sake of illustration from among the procedures most commonly furnished by a broad spectrum of specialties. The change in both facility rates and the nonfacility rates are shown. For an explanation of facility and nonfacility PE, we refer readers to Addendum A on the CMS website at http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/.

D. Effect of Proposed Changes Related to Telehealth Services

Before the PHE for COVID-19, approximately 15,000 fee-for-service Medicare beneficiaries received a Medicare telemedicine service each week. According to a report prepared by the Assistant Secretary for Planning and Evaluation (ASPE),[251] in the last week of April 2020, nearly 1.7 million beneficiaries received telehealth services. By April 2020, nearly half of all Medicare primary care visits were telehealth encounters, a level consistent with health care encounters more broadly. There are approximately 270 services currently included on the list of Medicare telehealth services, including more than 160 that were added on a temporary basis during the PHE for COVID-19 (including service categories such as emergency department visits, initial inpatient and nursing facility visits, and discharge day management services) that are covered through the end of the PHE. Preliminary data show that between mid-March and

[251] Medicare Beneficiary Use of Telehealth Visits: Early Data from the Start of the Covid-19 Pandemic (hhs.gov).

mid-October 2020, over 24.5 million out of 63 million Medicare beneficiaries and enrollees have received a Medicare telemedicine service during the PHE. It is important to note that preliminary data reflect that the largest increases in services furnished via telehealth communications systems, by beneficiary access/volume, were for services that were already on the Medicare telehealth services list before the PHE.

As discussed in section II.D. of this proposed rule, we are proposing to amend the regulatory definition of interactive telecommunications system for purposes of Medicare telehealth services to include audio-only communication technology under certain circumstances for mental health services furnished to established patients in their homes. We anticipate that this policy will increase utilization of Medicare telehealth mental health services relative to utilization that would occur without the change. The estimated cost impact on overall Medicare services is unclear, though these changes would largely maintain current policies and access to the specific mental health services that are available to beneficiaries during the PHE. By requiring that a modifier be appended to the claim to identify that the service was furnished via audio-only communication technology, we will be able to closely monitor utilization and address any potential concerns regarding overutilization through future rulemaking.

Section 123 of the CAA removed the geographic and site of service restrictions for telehealth services furnished for the purpose of diagnosis, evaluation, or treatment of a mental health disorder, and requires that a physician or practitioner furnish an in-person, non-telehealth service to a beneficiary within 6 months prior to the first time the physician or practitioner furnishes a telehealth service to the beneficiary, and thereafter, at intervals as specified by the Secretary. Section 125 of the CAA created a new Medicare provider type – the rural emergency hospital, effective beginning in CY 2023 – and added rural emergency hospitals to the list of eligible telehealth originating sites at section 1834(m)(4)(C)(ii) of the Act. As discussed in section II.D. of this proposed rule, we are proposing to require that, as a condition of payment for a telehealth service described in section 1834(m)(7) of the Act, the billing physician or

practitioner must have furnished an in-person, non-telehealth service to the beneficiary within the 6-month period before the date of service of a telehealth service as specified in section 1834(m)(7)(B)(i) of the Act.

We are also seeking comment on whether the required in-person, non-telehealth service could also be furnished by another physician or practitioner of the same specialty and same subspecialty within the same group as the physician or practitioner who furnishes the telehealth service. Given that the removal of the geographic and site of service restrictions for telehealth will expand the availability of mental health services, we anticipate that utilization of these mental health services will be comparable to observed utilization for mental health services during the COVID-19 PHE.

With regard to our proposal to retain all services added to the Medicare telehealth services list on a Category 3 basis until the end of CY 2023, we believe our proposals would provide clarity to the stakeholder community but will have a negligible impact on PFS expenditures. For example, services that have already been added to the permanent telehealth services list are furnished via telehealth, on average, less than 0.1 percent of the time they are reported. The statutory payment requirements for Medicare telehealth services under section 1834(m) of the Act, such as the originating site requirements related to geographic location and site of service, have limited increases in utilization outside of the COVID-19 PHE; however, we believe there is value in allowing physicians to furnish services added to the Medicare telehealth services list on a category 3 basis, and for patients to receive broader access to this care through telehealth. Additionally, for services added to the Medicare telehealth list on a Category 3 basis, outside of the circumstances of the PHE for COVID-19, all of the statutory restrictions under section 1834(m) of the Act will also apply to these services; therefore, we do not anticipate any significant increase in utilization.

E. Effect of Changes Related to Services Furnished in Whole or in Part by PTAs and OTAs.

As discussed in section II.H., we are proposing revisions to the current *de minimis* policy for services furnished in whole or in part by PTAs/OTAs that we finalized in CY 2020 PFS final rule (84 FR 62702 through 62708) under which the CQ or CO modifier would apply when the PTA or OTA furnished more than 10 percent of a service or a 15-minute unit of service. Beginning January 1, 2022, CMS will apply a 15 percent reduction to the payment amount for a physical or occupational therapy service when the CQ/CO modifier is applied to the service. Our proposed revision to the policy would allow the PT/OT to bill without the CQ/CO modifier for the final 15-minute unit (in a multi-unit billing scenario) when the PT/OT meets the billing threshold of 8 minutes, which is when the minutes are greater than the midpoint (7.5 minutes) of the 15-minute unit, regardless of any minutes provided by the PTA/OTA for that final unit.

Under our proposal, the PT/OT services would not be inadvertently discounted as the result of any "left-over" minutes provided by the PTA/OTA when the therapist provides enough minutes on his or her own to meet the billing threshold amount. In these scenarios, the PTA's/OTA's minutes are considered immaterial for the purposes of billing. For example, if the PT/OT provided 23 minutes of a 15-minute service and the PTA/OTA provided another 20 minutes of the same service – three units of service can be billed for the 43 total minutes (38 minutes through 52 minutes). Here, one full 15-minute unit of service is billed without the CQ/CO modifier for the PT/OT service with 8 minutes remaining, and one full unit of service is billed with the CQ/CO modifier for the PTA/OTA service with 5 minutes remaining. Under the proposed policy, the third unit is billed without the CQ/CO modifier because the 8 minutes provided by the PT/OT meets the billing threshold amount. However, under our current *de minimis* policy, the 5 minutes provided by the PTA/OTA is more than 10 percent (it is 38 percent of the total service ─ PTA/OTA minutes divided by the total of PTA/OTA + PT/OT minutes: 5 divided by 13 = 38 percent) meaning the CQ/CO modifier is applied to the third and final unit of service.

Under our current *de minimis* policy, under which the CQ/CO modifier is applied whenever the PTA/OTA provides more than 10 percent of a service whether or not the PT/OT furnishes enough of the service to bill for it without the portion furnished by the PTA/OTA, stakeholders have expressed concern that the PT/OT has a financial incentive not to have the PTA/OTA provide any additional minutes, regardless of the individual patient's needs, when those minutes of service would lead to a reduced payment for a unit of a service. There may be a cost implication to our proposal as fewer billing scenarios may result in application of the CQ/CO modifiers and consequent payment reduction. However, we believe that basing our proposed policy on a "midpoint rule" in which the PT/OT provides enough minutes on their own (8 or more minutes) to bill for the final unit of a billing scenario could eliminate the PT's/OT's financial incentive to not provide appropriate therapy to an individual patient when it is furnished by the PTA/OTA. On the other hand, if we were to continue with our *de minimis* standard to apply to all billing scenarios for PTA/OTA services that exceed the 10 percent standard, we are uncertain how to gauge the overall costs of this policy because of the possible altered PT/OT behavioral change that is due to the financial incentives built into that policy as discussed above.

F. Other Provisions of the Regulation

1. Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs)

In section III.A. of this proposed rule, we make multiple proposals related to RHCs and FQHCs. In terms of estimated impacts to the Medicare program, Payment for Attending Physician Services Furnished by RHCs or FQHCs to Hospice Patients as required by section 132 of the CAA, 2021 and Concurrent Billing for CCM and Transitional Care Management TCM Services for RHCs and FQHCs will have negligible impact to Medicare spending.

Section 130 requires that all independent RHCs are now subject to the per-visit limit (which is also referred to as "cap") and phases in an increase in the statutory payment cap over an 8-year period. The cap in CY 2021, for services furnished after March 31, is set at $100 per visit, then at $126 per visit in 2022; at $139 per visit in 2023; at $152 per visit in 2024; at $152

per visit in 2025; at $165 per visit in 2026; at $178 per visit in 2027; and at $190 per visit in 2028. Beyond 2028 the limit is updated by the applicable Medicare Economic Index (MEI).

This provision also controls the annual rate of growth in payments to certain provider-based RHCs whose payments are currently higher than the payment limit. Each year, but for services provided after March 31 in 2021, the payment limit shall be set at the greater of: (1) the RHC per visit amount from the prior year, increased by the percentage increase in the applicable MEI; and (2) the cap limits applicable to each year as described above. In order to be eligible for this "grandfathering" policy, the RHC must have been based in a hospital with fewer than 50 beds and enrolled in Medicare as of December 31, 2019.

Section 2 of H.R. 1868, enacted on April 14, 2021, made technical corrections to section 130. First, for an RHC that is hospital-based and whose parent hospital has fewer than 50 beds, the date by which the RHC must be Medicare-certified, in order to be grandfathered, is changed from December 31, 2019 to December 31, 2020. Next, a clinic that is owned by a hospital with fewer than 50 beds and that submitted certain applications (received by Medicare) for certification as a Medicare RHC prior to the end of 2020 is to be grandfathered, and its clinic-specific cap is to be set based on its 2021 cost per visit. Lastly, a grandfathered RHC must continue to be owned by a hospital with fewer than 50 beds; if the parent hospital exceeds 50 beds, the RHC will lose its grandfathered status.

Table 124 are the FY estimates (in millions) for the impact of section 130, which improves payments to RHCs. These providers are currently paid an all-inclusive rate (AIR) for all medically necessary medical and mental health services, and qualified preventive health services furnished on the same day (with some exceptions). The AIR is subject to a payment limit, except for certain provider-based RHCs that have an exception to the payment limit. The RHC payment limit per visit for calendar year (CY) 2021 is $87.52, which is 1.4 percent higher than the CY 2020 payment limit of $86.31.

TABLE 124: Fiscal Year Estimates for the Impact of Section 130 of the CAA

Medicare (Part B)	2021	2022	2023	2024	2025	2026	2026	2028	2029	2030	2031	2022-26	2022-31

Part B benefits	10	180	160	230	310	390	490	580	640	700	750	1,270	4,430
Premium offset	–	-40	-40	-60	-80	-100	-120	-140	-160	-170	-190	-320	-1,100
Net Part B	10	140	120	170	230	290	370	440	480	530	560	950	3,330

In section III.B. of this proposed rule, we discuss that we are proposing to revise the regulatory requirement that an RHC or FQHC mental health visit must be a face-to-face (that is, in person) encounter between an RHC or FQHC patient and an RHC or FQHC practitioner to also include encounters furnished through interactive, real-time telecommunications technology, but only when furnishing services for the purposes of diagnosis, evaluation, or treatment of a mental health disorder.

According to our analysis of Medicare Part B claims data for services furnished via Medicare telehealth under the PFS during the PHE, use of telehealth for many professional services spiked in utilization around April 2020 and diminished over time, but not to pre-pandemic levels. In contrast, Medicare claims data suggests that for mental health services both permanently and temporarily added to the Medicare Telehealth list, subsequent to April 2020, the trend is toward maintaining a steady state of usage over time. Given the expanded availability of mental health services at RHCs and FQHCs, we do anticipate that this policy will increase spending, however, we are not certain of the magnitude of this increase, since it is not clear at this time how or whether trends related to utilization of communication technology during the PHE will continue after such a time that the PHE were to end. While the estimated cost impact of this proposal is unclear, the proposed requirement that a modifier be appended to the claim to identify that the service was furnished via audio-only communication technology would allow us to closely monitor utilization and address any potential concerns regarding overutilization through future rulemaking.

2. Requiring Certain Manufacturers to Report Drug Pricing Information for Part B (§§ 414.802 and 414.806)

This provision implements new statutory requirements under sections 1847A and 1927 of the Act, as amended by section 401 of the CAA (for the purposes of this section of this proposed

rule, hereinafter is referred to as "section 401"). These new requirements will improve the accuracy of reported payment limits and limit the use of WAC-based pricing.

As described in section III.D.1. of this proposed rule, in considering whether to exclude repackagers from the reporting requirements at section 1847A(f)(2) of the Act, we conducted two analyses to estimate: (1) the proportion of repackaged products in our existing ASP data; (2) the number of new ASP submissions we can expect as a result of the new reporting requirements under section 401; and (3) the proportion of those (new) submissions that involve repackaged products.

Additionally, while we believe it will impact reporting volume and payment limits under section 1847A of the Act for many billing and payment codes, we are unable to estimate the magnitude of these effects for the following reasons. We estimate: (1) 361 non-reporting manufacturers (of either single source or multiple source drugs) will now be required to report ASP data under section 1847A(f)(2) of the Act; and (2) 6114 products payable under Part B that these non-reporting manufacturers sell. However, we do not know which Healthcare Common Procedure Coding System (HCPCS) code payment limits will be impacted by these 6114 products, nor do we know the sales volume of these 6114 products. Because this information is used to calculate volume-weighted ASP payment limits, we, are unable to quantitatively estimate the economic impacts of this provision (that is, the likely costs or savings) on beneficiaries, the government, and other stakeholders. (We note that the economic impacts on manufacturers, as a result of the information collection requirements of this provision is discussed in section V. of this proposed rule.)

For single source drugs, these changes may result in lower payment limits because, typically, the WAC plus 3 percent is higher than ASP plus 6 percent. This then translates to cost savings for both the government and beneficiaries, who will pay coinsurance on a lesser amount. However, for the reason stated previously, we are unable to predict the magnitude of this effect.

Similarly, payment limits for multiple source drugs could increase or decrease, and we are unable to predict the direction or magnitude of specific or aggregate effects at this time.

We do not anticipate that this provision of this proposed rule would necessitate the revision of existing Medicaid Drug Rebate Agreements.

We welcome comment on (1) the likely costs or savings to beneficiaries, the government, and other stakeholders and (2) other related impacts of this provision.

3. Determination of ASP for Certain Self-administered Drug Products

a. Anticipated Effects

This provision implements new statutory requirements under section 1847A(g) of the Act, as amended by section 405 of the CAA 2021, (for the purposes of this section of this proposed rule, hereinafter is referred to as "section 405"). As identified by the OIG studies discussed in section III.D.2. of this proposed rule, the CMS payment-limit determination under section 1847A of the Act includes all versions of a product marketed under a single FDA approval, and consistent with section 1847A(b)(5) of the Act, the payment-limit determination does not exclude products based on packaging. Thus, the volume-weighted, average-ASP determination can include self-administered versions that may lead to increased program and beneficiary costs because of distorted ASP-based payment limits. In particular, the OIG studies identified two billing and payment codes that included self-administered NDCs. The OIG study determined that as a result of the inclusion of these NDCs in the calculation of the ASP payment limit, Medicare payment amounts remained inflated in 2017 and 2018, causing the program and its beneficiaries to pay an additional $497 million during this period. Since 2014, current payment methodology has resulted in an additional $173 million in Medicare beneficiary coinsurance for these two NDCs. (See OIG's July 2020 report titled, "Loophole in Drug Payment Rule Continues To Cost Medicare and Beneficiaries Hundreds of Millions of Dollars," available at https://oig.hhs.gov/oei/reports/OEI-BL-20-00100.asp.)

Implementation of the proposed regulatory changes has the potential to result in decreased payment limits for identified billing and payment codes that could, in turn, substantially reduce Medicare and beneficiary expenditures, as described in the OIG study. Since section 1847A(g)(3) of the Act requires CMS to implement the required payment changes beginning on July 1, 2021, these potential savings may be observed within the year.

By adding sections 1847A(g)(1) and (2) of the Act, section 405 also directs the OIG to conduct future studies with same or similar methodologies to those in the July 2020 report and directs CMS to apply the lesser of payment methodology to the applicable billing and payment codes. This has the potential to result in additional savings to the program and beneficiaries if additional products are identified by these periodic OIG studies.

b. Expected Benefits

Codifying the provisions set forth by section 405 would permit to CMS to apply the lesser of payment methodology at section 1847(g)(2) of the Act to billing and payment codes identified by future OIG studies (described in section III.D.2. of this proposed rule). This provision addresses distorted payment limits for these products and may result in payment amounts that are better aligned with versions of these products that are payable under Part B (for example, versions that are usually not self-administered). Although we are unable to quantify the total magnitude of the potential savings, these changes have the potential to substantially reduce program expenditures and beneficiary coinsurance.

4. Appropriate Use Criteria

Section 1834(q)(2) of the Act, as added by section 218(b) of the Protecting Access to Medicare Act (PAMA), established a program to promote the use of appropriate use criteria (AUC) for applicable imaging services furnished in an applicable setting.

In the CY 2019 PFS final rule (83 FR 59452), we performed a comprehensive regulatory impact analysis for this program. In this proposed rule, we are proposing to begin the payment penalty phase of the program on the later of January 1, 2023 or the January 1 of the year after the

year in which the PHE for COVID-19 ends. Because, under our proposals, the payment penalty phase will be further delayed, we are updating the estimates for incremental changes from the regulatory impact analysis from the CY 2019 PFS final rule. Since we are not proposing new policy requirements nor do we have sufficient reason to change any of the assumptions made in the RIA finalized in the CY 2019 PFS (83 FR 60034 through 60044) we are only updating the analysis to reflect 2019 Medicare claims data (updated from 2014). We identify four incremental changes from the CY 2019 PFS final rule estimates due to updated claims data: (1) impact of required AUC consultations by ordering professionals; (2) impact to Medicare beneficiaries; (3) process efficiencies to potentially offset the estimated burden on Medicare beneficiaries; and (4) impact on transmitting orders for advanced diagnostic imaging services. Each of these incremental changes results in a lower estimate.

a. Impact of Required AUC Consultations by Ordering Professionals

As discussed in detail in the CY 2019 PFS final rule (83 FR 60035 through 60037), the annual impact estimate of consultations by ordering professionals was $70,001,700. In our estimates, we calculated the burden for auxiliary personnel to consult AUC under the direction of an ordering professional and the burden for ordering professionals to perform the consultation directly. We estimated that 90 percent of consultations would be performed by a medical assistant (occupation code 31-9092) and 10 percent of consultations would be performed by a general practitioner (occupation code 29-1062). We estimated that 43,181,818 2-minute consultations occur annually.

Using 2019 Medicare claims data as our basis for the analysis, we propose to change the methodology used to determine the volume of consultations and propose to use more granular data that will reduce potential double-counting of advanced diagnostic imaging services. For example, an imaging service furnished in an outpatient hospital department could have two claims associated with that service. There could be a claim from the facility and a claim from the physician that interprets that imaging service. In the CY 2019 RIA (83 FR 60034 through

60044) we were concerned that the estimate of 43,181,818 consultations may be an overestimate because it took into account total claims. For this CY 2022 RIA, we propose to change the method of counting the total number of advanced diagnostic imaging services that would be furnished under the AUC program which will correspond to the total number of consultations.

Using the Integrated Data Repository we identified Medicare claims using the following parameters: (1) 2019 date of service; (2) claim lines containing one of the procedure codes identified in CR10481 and CR11268 at https://www.cms.gov/Regulations-and-Guidance/Guidance/Transmittals/2018Downloads/R2040OTN.pdf and https://www.cms.gov/files/document/r2404otn.pdf, respectively; and (3) claims types of outpatient or practitioner. Claims were then separated based on the setting in which the imaging service was furnished and further by claim type. Using only services billed on the professional claim type, the total number of claim lines containing one of the identified procedure codes was included to total 30,359,901 advanced diagnostic imaging services estimated to be subject to the AUC program. By using this combination, we believe we can reduce the risk of double-counting services to obtain a more accurate estimate of total number of diagnostic imaging services subject to the AUC program. Therefore, this analysis will use the estimate of 30,359,901 AUC consultations.

Using the May 2020 BLS mean hourly wages, we update our estimates for a medical assistant (occupation code 31-9092) with mean hourly wage of $17.75 and 100 percent fringe benefits for 90 percent of consultations (910,797 hours) to be $30,511,701 (910,797 hours x $33.50/hour). The occupation for general practitioner is no longer listed on the BLS so, instead, we update our estimate using the occupation code for general internal medicine physician (29-1216) with mean hourly wage of $101.42 and 100 percent fringe benefits for 10 percent of consultations (101,200 hours) to be $20,527,408 (101,200 hours x $202.84/hour). The updated total annual estimated impact of consultations is $51,039,109, for an incremental change (reduction) of $18,962,591.

b. Impact to Medicare Beneficiaries

In the CY 2019 PFS final rule, we estimated that the additional 2-minute consultation would impact the Medicare beneficiary when their advanced diagnostic imaging service is ordered by the ordering professional by introducing additional time to their office visit. For this update, we used the updated number of consultations calculated above from claims data, as well as the May 2020 BLS mean hourly wage. To estimate this annual cost, we multiplied the annual burden of 1,011,997 hours by the BLS occupation code that represents all occupations in the BLS (00–0000) as mean hourly wage plus 100 percent fringe ($54.14/hr) for a total estimate of $54,789,518 per year for an incremental change (reduction) of $13,211, 482. We also estimated that, over time, process efficiencies may be implemented. We assumed that 50 percent of practices implemented an improvement process that streamlined AUC consultation so Medicare beneficiaries spent the same amount of time in the physician's office regardless of whether an advanced diagnostic imaging service was ordered. The updated estimate that such an improvement process could offset the estimated burden on Medicare beneficiaries by $27,394,759 annually for an incremental change (reduction) of $6,605,741.

c. Impact on Transmitting Orders for Advanced Diagnostic Imaging Services

In the CY 2019 PFS final rule, we estimated that including AUC consultation information on the order for an advanced diagnostic imaging service to the furnishing professional or facility is estimated as the additional 5 minutes spent by a medical secretary (occupation code 43-6013). To update this estimate, we use the May 2020 mean hourly wage of $18.75 plus 100 percent fringe benefits to transmit the order for the advanced diagnostic imaging service. In aggregate, we assumed in the CY 2019 PFS final rule that 40,000,000 advanced diagnostic imaging services are ordered annually. We propose to update that number to match the total number of AUC consultations proposed earlier in this RIA to 30,359,901, so the updated total annual burden to communicate additional information in the order is estimated as $94,495,192 ($18.75/hr × 2 × 0.083 hr × 30,359,901 orders) for an incremental change (reduction) of $20,044,808.

d. Impact on Furnishing Professionals and Facilities

As described in the CY 2019 PFS final rule, we identified an estimated 174,064 furnishing professionals (comprising radiologists, ASCs, IDTFs and hospitals) and assumed that every identified furnishing professional will choose to update their processes for the purposes of the AUC program in the same way by purchasing an automated solution to report AUC consultation information which was estimated to cost $10,000 for each furnishing professional. We update this cost to account for inflation and therefore the updated estimated cost is $10,636.07 ($10,000 adjusted for inflation to 2021 dollars) for a total estimated one-time update cost of $1,851,356,888.48 (174,064 x $10,636.07).

e. Appropriate Use Criteria for Advanced Diagnostic Imaging Services

As described in the CY 2019 PFS final rule, we assumed that there may be some savings to the Medicare program due to the AUC program requirements and potential decreases in inappropriate utilization of advanced diagnostic imaging services. This assumption was based on literature describing prior experiences with clinical decision support in a pilot project conducted in Minnesota, a retrospective cohort study on evidence-based clinical decision support for lumbar MRI, brain MR and sinus CT and local implementation of clinical decision support, and we estimated that savings may account for $700,000,000 savings per year.

f. Summary of Delay-Attributable Changes and Discounted Rates

Table 125 summarizes the substantive changes from the CY 2019 PFS final rule to the CY 2022 PFS proposed rule impact estimates. The effect of a 3-year delay is approximated by applying 3 years' worth of discounting at 7 percent or 3 percent discount rates (Circular A-4, https://www.whitehouse.gov/sites/whitehouse.gov/files/omb/assets/regulatory_matters_pdf/a-4.pdf).

TABLE 125: AUC Program Related Activities with Changes in Impact Estimates Resulting from a Three-Year Delay

AUC Program Related Activity	CY 2022 PFS Proposed Rule Impact Estimate	Change from CY 2019 PFS Final Rule (as a function of the discount rate)
Impact of required AUC consultations by ordering professional	$51,039,109	- $4.3 million (3%) - $9.4 million (7%)
Impact to Medicare beneficiaries	$54,789,518	- $4.6 million (3%) - $10.1 million (7%)
Impact on transmitting orders for advanced diagnostic imaging services	$94,495,192	- $8.0 million (3%) - $17.4 million (7%)
AUC automated solution	$1,851,356,888	- $157.1 million (3%) - $340.1 million (7%)
Medicare program impacts associated with advanced diagnostic imaging services	$700,000,000	- $59.4 million (3%) - $128.6 million (7%)
Total Change Attributable to a Three-Year Delay		- $174.1 million (costs, 3%) - $376.9 million (costs, 7%) - $59.4 million (transfers, 3%) - $128.6 million (transfers, 7%)

5. Proposal to Remove Select National Coverage Determinations (NCDs)

We are proposing to remove two older NCDs that no longer contain clinically pertinent and current information or that involve items or services that are used infrequently by beneficiaries. Generally, proactively removing obsolete or unnecessary NCDs removes barriers to innovation and reduces burden for stakeholders and CMS. The two NCDs fall into two impact categories. First, eliminating an NCD for items and services that were previously covered means that the item or service will no longer be automatically covered by Medicare. Instead, the coverage determinations for those items and services will be made by Medicare Administrative Contractors (MACs). Second, if the previous national coverage determination barred coverage for an item or service under title XVIII, MACs would now be able to cover the item or service if the MAC determines that such action is appropriate under the statute. We believe that allowing local contractor flexibility in these cases better serves the needs of the Medicare program and its beneficiaries since we believe the future utilization for items and services within these policies will be limited, each affecting less than one percent of the Medicare FFS population.

For the one NCD where we are proposing to go from limited coverage to MAC discretion, claims data from 2019 shows that less than one percent of the Medicare population is affected. Specifically, we provide coverage with limitations for enteral nutrition and parenteral nutrition therapy under NCD 180.2, where in 2019 CMS paid 1,643,739 Medicare FFS claims for 83,551 unique beneficiaries totaling CMS payments of $356,228,606. While we have claims data available for 2020, the data shows a decrease in claims, unique beneficiaries and total amount paid by CMS. We believe this may be due in part to the COVID-19 pandemic; however, we do not have any information to be able to say that conclusively. The change could be due to other factors not examined here. We estimate there will be de minimis change to 2022 payments, compared to 2019 or 2020 because, as discussed in section III.F. of the proposed rule, local contractors have proposed LCDs that, if finalized, would provide parenteral and enteral nutrition coverage for certain Medicare beneficiaries. Therefore, we believe that removing this NCD would not result in significant changes to payments.

For the one non-covered NCD proposed to be eliminated, Positron Emission Tomography (PET) Scans under NCD 220.6, we would not expect to find historical claims data for the non-oncologic uses of PET at issue. We broadly noncover non-oncologic indications of PET, in other words, we required that every non-oncologic indication for PET must have its own NCD in order to receive coverage. Because this NCD provides for noncoverage on non-oncologic indications, we do not have accurate claims data to estimate total impact. However, based on the service, we expect future claims to affect less than one percent of Medicare FFS beneficiaries. As discussed in section III.F. of this proposed rule, the NCD allows coverage for diagnostic PET imaging for oncologic uses not already determined by an NCD, to be made at the discretion of local MACs. We believe that extending local contractor discretion for non-oncologic indications of PET provides an immediate avenue to potential coverage in appropriate candidates and provides a framework that better serves the needs of the Medicare program and its beneficiaries. For clarity,

we are not proposing to change any other subsections of 220.6. Thus, the NCDs listed at 220.6.1 through 220.6.20 would not be changed by this proposal.

6. Pulmonary Rehabilitation, Cardiac Rehabilitation and Intensive Cardiac Rehabilitation

As discussed in section III.H., Pulmonary Rehabilitation (PR), Cardiac Rehabilitation (CR) and Intensive Cardiac Rehabilitation (ICR), of this proposed rule, we are proposing largely conforming changes throughout §§ 410.47 (PR) and 410.49 (CR/ICR). These changes are intended to ensure consistency and accuracy in terminology, definitions and requirements where appropriate across PR and CR/ICR conditions of coverage. Specific to PR, we are proposing to remove the requirement for direct physician-patient contact related to the periodic review of the patient's treatment plan because such interaction within the PR program is not necessary for all patients and can be specified, as needed, in individualized treatment plans (ITPs). We are also proposing to add coverage of PR for beneficiaries who were hospitalized with a COVID-19 diagnosis and experience persistent symptoms, including respiratory dysfunction, for at least 4 weeks after hospital discharge.

In assessing the impact of these proposals, we note that the proposed expansion of PR coverage may increase utilization. Based on the low utilization rate discussed below, we do not believe the other proposed revisions will significantly impact utilization and the Medicare program.

To estimate the potential increase from the proposed expansion of coverage for PR, we searched the literature for articles that evaluated the utilization rate of PR for the currently eligible diagnosis of chronic obstructive pulmonary disease (COPD) in order to determine the historical utilization trends of this service.

Nishi et al. (2016) investigated the number of Medicare beneficiaries with COPD who received PR from January 1, 2003 to December 31, 2012. Their results included both individuals who had experienced hospitalizations for COPD and those who were outpatients only. The number of unique patients with COPD who initially participated in PR during the study period

was 2.6 percent in 2003 (before conditions of coverage at § 410.47 were established) and 2.88 percent in 2012 (after conditions of coverage at § 410.47 were established).[252] In 2019, Spitzer, et al. published an article based on Medicare claims data from 2012, finding that 2.7 percent of eligible Medicare beneficiaries received PR within 12 months of hospitalization with COPD.[253] Using claims data from fee-for-service Medicare beneficiaries hospitalized for COPD in 2014, Lindenauer et al. (2020) reported that only 3 percent initiated PR within 1 year of their hospital discharge.[254] Taken together, this data informs us that utilization of PR in the Medicare population is very low, and that the majority of patients who avail themselves of this service do so, post hospitalization.

There are limitations to applying this data to identify the utilization rate of PR to the conditions of coverage specified at § 410.47. Most notably, some of these studies included patients whose services were billed with non-PR respiratory therapy codes (G0237, G0238 and G0239), instead of only patients whose services were billed with the PR code (G0424). But the authors also limited patient inclusion to those with a principal or secondary COPD diagnosis, so we believe this suggests that 3 percent is an upper bound for the utilization of PR currently in Medicare beneficiaries. Given that participation in PR has remained steady for many years, we do not expect this pattern to change. As such, for the purposes of this analysis, we assume that 3 percent of eligible beneficiaries under the proposed expansion of coverage (hospitalized with COVID-19 and experiencing persistent symptoms, including respiratory dysfunction, for at least 4 weeks after discharge) will participate in PR.

To identify the eligible beneficiaries under our proposal, we first identify the number of

[254] Lindenauer PK, Stefan MS, Pekow PS, et al. Association Between Initiation of Pulmonary Rehabilitation After Hospitalization for COPD and 1-Year Survival Among Medicare Beneficiaries. *JAMA.* 2020;323(18):1813–1823. doi:10.1001/jama.2020.4437.

beneficiaries hospitalized with COVID-19 using the Preliminary Medicare COVID-19 Data Snapshot.[255] At the time of writing, the Snapshot included data from January 1, 2020 to March 20, 2021, and identified 1,141,592 total COVID-19 hospitalizations for Medicare beneficiaries. The Snapshot indicates that 18 percent of these patients expired so we reduce this number by 18 percent to 936,105 beneficiaries. A paper published by the Tony Blair Institute for Global Change[256] states that the Covid Symptom Study led by King's College London indicated that about 10 percent of survey participants reported symptoms (including shortness of breath and other symptoms like fatigue, headache and loss of smell) beyond a four-week recovery period. Using this information we estimate that the patient population we are proposing to expand PR coverage to, those who were hospitalized with a COVID-19 diagnosis and experienced persistent symptoms, including respiratory dysfunction, for at least 4 weeks after hospital discharge, to be 93,611 beneficiaries (936,105 x 0.10). Based on our assumption of utilization above, 3 percent, for the newly proposed covered patient population, we estimate 2,808 beneficiaries will receive PR (93,611 x 0.03).

Medicare covers PR for a maximum of 72 sessions. Using 2018 and 2019 Medicare claims data from the Chronic Conditions Data Warehouse (CCW), beneficiaries on average completed 14 sessions of PR. If we assume patients eligible based on our proposed expansion of coverage would participate, on average, in the same number of sessions, we estimate the proposed expansion of coverage will increase PR utilization by 39,312 sessions annually (2,808 beneficiaries x 14 average sessions completed per beneficiary).

Claims for PR are submitted using CPT code G0424. Our analysis of Medicare claims data indicates that 97.54 percent of PR sessions are billed under the Hospital OPPS at $55.66 (national average price) for an estimated total of $2,134,279 (39,312 PR sessions x 0.9754 x $55.66). The remaining 2.46 percent of PR sessions are billed under the PFS, with 2.12 percent

[256] Published at https://institute.global/sites/default/files/articles/Long-Covid-Reviewing-the-Science-and-Assessing-the-Risk.pdf on October 5 2020.

of PR sessions furnished in a physician's office which has a national average price of $30.36 and 0.34 percent billed by a physician when PR was furnished in a hospital outpatient department which has a national average price of $13.96. Taken together, the estimated total for this remaining 2.46 percent of PR sessions is $27,168 ((39,312 PR sessions x 0.0212 x $30.36) + (39,312 PR sessions x 0.0034 x $13.96)). We estimate the total added cost to the Medicare program of this proposed expansion of coverage to be $2,161,447 ($2,134,279 + $27,168) annually during and immediately following the public health emergency (PHE) for COVID-19. As hospitalizations and COVID-19 cases decline, we expect the annual impact to decrease because eligible patient populations will likely decrease, however we are unable to estimate the longer term impact of our proposals due to the unpredictable nature of the PHE and the lack of long term data on COVID-19.

7. Medical Nutrition Therapy

As discussed in section III.I., Medical Nutrition Therapy (MNT), of this proposed rule, we are proposing to remove the restriction that patients only be referred to MNT by the treating physician and update the glomerular filtration rate (GFR) eligibility for patients with chronic kidney disease. We do not anticipate any significant increase in utilization of MNT services resulting from our proposed revisions. Despite various policy changes that could have improved use, such as increasing payment via adding work RVUs to MNT codes in 2006, approving MNT for telehealth coverage in 2005 and including registered dieticians (RDs) and nutrition professionals as telehealth distant site providers, and waiving out-of-pocket costs to beneficiaries, MNT participation remains under 2 percent of eligible beneficiaries. Based on an analysis of Medicare claims data from 2018, 2019, 2020, we identify the utilization rate of MNT services among eligible beneficiaries to be between 1.5 and 1.8 percent.

Although MNT is covered by many state Medicaid programs and private insurers, use is low in the US.[257][258][259] The Academy of Nutrition and Dietetics recognizes that research specific to the underuse of MNT services is scant.[260] Anecdotal reports and related research on diabetes self-management training point to a multitude of reasons why utilization of the MNT services benefit have remained low. These potential barriers include lack of awareness of MNT by patients and clinicians, inconsistent coverage for MNT services by non-Medicare payers, patient travel and time issues to receive the services and lack of availability of services from RDs who may perceive the process of Medicare enrollment/insurance credentialing and billing as being burdensome and complex[261]. Of about 100,000 RDs in the US, only 1,589 submitted Medicare fee-for-service MNT claims in 2017. One study revealed that less than half of RDs providing MNT services in an ambulatory care setting indicated they were not Medicare providers due to reasons such as perceived low reimbursement rates, not providing MNT to Medicare eligible patients, not knowing how to become a Medicare provider, and providing MNT to Medicare patients for diagnoses not covered by Medicare.[262]

Our proposed revisions may increase beneficiary access to the MNT benefit and reduce primary care physician burden since we are proposing that referrals can come from other physicians and not only from the physician treating the patient for their diabetes or kidney disease; although, as discussed above, we do not expect the changes to make a significant impact on the Medicare program. We do not anticipate increased administrative burden as

documentation in the medical record of any referred service is already a part of discharge planning in the hospital setting. The proposed changes to the GFR requirements are to conform our regulation to updated clinical standards and also do not pose a significant change.

8. Medicare Shared Savings Program

a. Modifications to the Shared Savings Program Quality Reporting Requirements under the APP and the Quality Performance Standard

In section III.J.1.d. of this proposed rule, we are proposing to freeze the quality performance standard at the 30th percentile MIPS Quality Performance Category Score for performance year 2023, increasing to the 40th percentile MIPS Quality performance category score in performance year 2024. Without this proposed change, the quality standard would have increased to the 40th percentile in 2023. The quality performance standard is the minimum performance level ACOs must achieve in order to share in any savings earned, avoid maximum shared losses under certain payment tracks, and avoid quality-related compliance actions.

Our analysis of quality performance data reported by ACOs for performance years starting during 2019 indicates that about 20 percent of ACOs would have failed a quality performance standard defined as the 40th percentile across all MIPS Quality performance category scores as would apply for PY 2023 without the proposed 1-year delay. There is significant uncertainty whether PY 2023 would play out similarly to the baseline data. The fraction of ACOs ultimately failing to meet a higher standard in PY 2023 could change significantly if the universe of MIPS Quality performance category scores improves relative to ACOs' quality performance scores, or alternatively if ACOs, particularly ACOs at risk of failing, respond to the increased quality performance standard by boosting their performance. Utilizing a Monte Carlo approach, assuming that the simulated poor performing ACOs have a 50 percent chance of improving their quality performance beyond the 40th percentile, if CMS kept the quality performance standard at the 40th percentile, then the cost of reducing to the 30th percentile in 2023 would be $190 million (range $10 million to $370 million). There is a wide range

because slight changes in quality scoring at the low end of the distribution could render the 40th percentile more or less of an effective point of discrimination among ACOs earning shared savings.

In addition, in section III.J.1.c. of this proposed rule, we are proposing an update to the quality reporting requirements under the APM Performance Pathway or APP for performance years 2022 and 2023.

For performance year 2022: An ACO would be required to report on either

(a) The ten CMS Web Interface measures and administer a CAHPS for MIPS survey and CMS would calculate the two claims based measures included under the APP, or

(b) The three eCQM/MIPS CQM measures and administer a CAHPS for MIPS survey and CMS would calculate the two claims based measures included under the APP. If an ACO selects this option, meets the data completeness at § 414.1340 and the case minimum requirement at § 414.1380 for all three eCQM/MIPS CQM measures, and achieves a quality performance score equivalent to or higher than the 30th percentile on at least one measure in the APP measure set, the ACO would meet the quality performance standard used to determine eligibility for shared savings and to avoid maximum shared losses, if applicable, for that performance year. If an ACO chooses this option, its performance on all six measures in the APP measure set would be used for purposes of MIPS scoring under the APP. If an ACO decides to report both the ten CMS Web Interface measures and the three eCQM/MIPS CQM measures, it will receive the higher of the two quality scores for purposes of the MIPS Quality performance category.

If an ACO does not report any of the ten CMS Web Interface measures or any of the three eCQM/MIPS CQM measures and does not administer a CAHPS for MIPS survey under the APP, the ACO will not meet the quality performance standard.

For performance year 2023: An ACO would be required to report on either:

(a) The ten CMS Web Interface measures and at least one eCQM/MIPS CQM measure and administer a CAHPS for MIPS survey and CMS would calculate the two claims-based measures included under the APP or

(b) The three eCQM/MIPS CQM measures and administer a CAHPS for MIPS survey and CMS would calculate the two claims based measures included under the APP. If an ACO selects this option, meets the data completeness requirement at § 414.1340 and the case minimum requirement at § 414.1380 for all three eCQM/MIPS CQM measures, and achieves a quality performance score equivalent to or higher than the 30th percentile on one measure in the APP measure set, the ACO would meet the quality performance standard used to determine eligibility for shared savings and to avoid maximum shared losses, if applicable, for that performance year. If an ACO chooses this option, its performance on all six measures in the APP measure set would be used for purposes of MIPS scoring under the APP. If an ACO decides to report both the ten CMS Web Interface measures and the three eCQM/MIPS CQM measures, it will receive the higher of the two quality scores for purposes of the MIPS Quality performance category.

If an ACO does not report at least one eCQM/MIPS CQM measure the ACO would not meet the quality performance standard.

Absent the related proposal analyzed above to reduce the performance standard to the 30th percentile MIPS Quality performance category score, the proposed changes to the quality reporting requirements, including the accommodation to continue the availability of the CMS Web Interface as a reporting mechanism under the APP would have likely provided an easier path for a meaningful subset of ACOs that would have otherwise faced difficulty meeting the quality threshold previously established in rulemaking for PY 2023. However, we estimate that nearly all such ACOs would already meet the lower 30th percentile performance standard in PY 2023 without the additional reporting flexibility. Of the relatively few, remaining ACOs, that we estimate would fail to meet the proposed lower 30th percentile performance standard, we estimate

that about half (on average) would meet the quality performance standard as a result of the proposed quality reporting flexibility, and thereby further increase shared savings payments to ACOs by about $20 million in PY 2023.

b. Modifications to other Shared Savings Program Requirements

We do not anticipate a material aggregate impact for the other changes we are proposing related to the Shared Savings Program, specifically: revisions to the definition of primary care services used in the Shared Savings Program's beneficiary assignment methodology (section III.J.2. of this proposed rule); revisions to the repayment mechanism arrangement policy, including changes to the calculation and recalculation of repayment mechanism amounts (section III.J.3. of this proposed rule); revision of the requirements concerning disclosure of prior participation in the Shared Savings Program by the ACO, ACO participants, and ACO providers/suppliers, and revisions to Shared Savings Program requirements to reduce the frequency and circumstances under which ACOs submit sample ACO participant agreements and executed ACO participant agreements to CMS (section III.J.4. of this proposed rule); and revisions to the beneficiary notification requirement as it applies to ACOs under prospective assignment and ACOs under preliminary prospective assignment with retrospective reconciliation (section III.J.5. of this proposed rule).

However, as we note in section III.J.3. of this proposed rule, lower required repayment mechanism amounts could reduce costs for ACOs in fees charged by financial institutions for letters of credit and by insurance companies for surety bonds. We estimate that such relief, in total for all participating ACOs, could be worth $2 to $4 million annually under the proposed approach (assuming a reduction of approximately $196 million in repayment mechanism amounts, in aggregate) and $3 to $6 million annually under the second, alternative option (assuming a reduction of approximately $322 million in repayment mechanism amounts, in aggregate).

We also note that the proposed revisions to the definition of primary care services used in

the assignment methodology may have differing effects on a subset of participating ACOs, for example by changing the competing ACO to which a beneficiary ultimately is assigned, for a small subset of beneficiaries. We do not anticipate such ACO-level changes would result in a net impact on program spending overall.

9. Medicare Ground Ambulance Data Collection System

In section III.K. of this proposed rule, we propose a series of changes to the Medicare Ground Ambulance Data Collection System including the proposed change to the data collection period and data reporting period for selected ground ambulance organizations in year 3, proposed revisions to the timeline for when the payment reduction for failure to report will begin and when the data will be publicly available, and proposed revisions to the Medicare Ground Ambulance Data Collection Instrument.

While we believe that these changes and clarifications will be well received by the ground ambulance stakeholders, we do not believe that these changes would have any substantive impact on the cost or time associated with completing the Medicare Ground Ambulance Data Collection Instrument. We note that the overall length of the Medicare Ground Ambulance Data Collection Instrument is the same as previously finalized (84 FR 62888) with these changes. Additionally, some of the instructions which we propose to add are intended to improve clarity and may therefore reduce the time the ground ambulance organizations spend addressing the questions.

10. Medicare Diabetes Prevention Program Expanded

a. Effects of Proposals Relating to the Medicare Diabetes Prevention Program Expanded Model

(1) Effects on Beneficiaries

We propose to modify certain Medicare Diabetes Prevention Program (MDPP) expanded model policies to: (1) Allow CMS to remove the ongoing maintenance phase (months 13-24) of the MDPP set of services for those beneficiaries who started their first core session on or after January 1, 2022; (2) update the performance payments for the MDPP set of services in the core

and core maintenance performance periods; and (3) waive the Medicare provider enrollment application fee for all organizations enrolling as MDPP suppliers on a prospective basis. These proposed changes will have a positive impact on beneficiaries' health by increasing the capacity of MDPP eligible organizations to enroll in Medicare as MDPP suppliers and increasing access to the MDPP set of services to beneficiaries. Eligible beneficiaries receive these services as preventive services, which require no copays or cost sharing. These proposed changes address MDPP supplier and beneficiary needs based upon all available monitoring and evaluation data. The proposed changes are also responsive respond to stakeholder comments.

(2) Effects on the Market

Currently, more than 1,000 organizations nationally are eligible to become MDPP suppliers based on their preliminary or full CDC Diabetes Prevention Recognition Program (DPRP) status. However, only 27 percent of eligible organizations are participating in MDPP. We anticipate that the removal of the second year of the MDPP set of services will make MDPP attractive and feasible to more MDPP eligible organizations. Not only does a 12-month MDPP services period align with that of the CDC's National DPP and the DPP model test, our data show that only 10 percent of enrolled MDPP participants continue with the Ongoing Maintenance phase sessions (Year 2), and the majority are reaching their weight loss milestone within the first 6 months of the set of MDPP services. Stakeholders report that the second year of MDPP, or the ongoing maintenance phase, is cost prohibitive due to the costs to retain beneficiaries in year 2 of the expanded model as well as the costs to deliver an additional year of the expanded model that is not supported by the CDC National DPP curriculum. The CDC's National DPP curriculum supports a 1-year program and suppliers have found it difficult to extrapolate the curriculum to a second year. Additionally, MDPP suppliers commented that they have an increasingly difficult time making the business case for MDPP given the costs associated with the ongoing maintenance phase and the low performance payments associated with the second year. Given the low volume of participants continuing in the second year of MDPP,

delivering the MDPP ongoing maintenance period creates an undue burden to MDPP suppliers. The cost to offer and deliver the sessions to a small cohort of individuals outweigh the maximum payments available from Medicare.

Stakeholders have consistently commented that CMS should shorten the MDPP expanded model to 1 year, with payment levels at least equivalent to the levels provided in the DPP model test. For example, during the DPP model test, suppliers were paid an average of $462 per beneficiary for the 1-year model test. The second year has made delivering MDPP both financially unattractive and unstainable for many of the current and eligible MDPP suppliers. Suppliers have reported that it is very difficult to engage and retain beneficiaries in a second year, and the reimbursement levels for a second year are inadequate to cover supplier costs. Since a second year of the MDPP deviates from both the DPP model test and the National DPP clinical trial protocol, we propose to shorten the MDPP service period to 1 year and increase the performance payments in the first year. These changes respond to stakeholder feedback and may alleviate some of the difficulty retaining MDPP participants during the core maintenance phase of the program.

(3) Burden Related to Information Collection Requirements – No impact

(a) Supplier Standards

MDPP suppliers may encounter the Medicare enrollment fee during the following Medicare provider enrollment transactions: initial enrollment, revalidation (every 5 years for MDPP), or the addition of a new practice location. The provider/supplier enrollment fee for Calendar Year 2021 is $599. Although MDPP suppliers may submit a written request to CMS for a hardship exception to the application fee in accordance with § 424.514, many would not qualify and the hardship application process would simply add more burden on the organization. We have heard from the CDC as well as other stakeholders that the enrollment fee is a potential barrier to eligible MDPP suppliers who would not otherwise enroll in Medicare except for MDPP. Approximately 39 percent of our current suppliers are non-traditional suppliers that

serve their local communities and play a critical role in enrolling more diverse, equitable, and inclusive cohorts of Medicare beneficiaries to MDPP. These non-traditional suppliers include, but are not limited to YMCAs, county health departments, community health centers, and non-profit organizations that focus on health education, and otherwise would neither enroll nor be able to enroll as a Medicare supplier at all if it were not for MDPP. They often serve as trusted sources of health information for their communities. However, they also represent a large number of eligible organizations who have not enrolled in Medicare as MDPP suppliers. We anticipate that waiving the enrollment fee along with the other programmatic adjustments are likely to result in more MDPP suppliers, increased beneficiary access to MDPP services, and an ongoing reduction of the incidence of diabetes in eligible Medicare beneficiaries, in both urban and rural communities.

In April 2020, CMS waived all provider enrollment application fees as part of the COVID-19 Emergency Declaration Blanket Waivers for Health Care Providers. As a result, we saw an increase in MDPP supplier enrollment. We believe that granting a permanent waiver of the fee for MDPP suppliers to extend beyond the COVID-19 Emergency Declaration Blanket Waiver, along with the other proposed change to MDPP, may stimulate MDPP supplier enrollment and enhance the MDPP evaluation. We propose waiving the Medicare provider enrollment fee beyond COVID-19 Emergency Declaration Blanket Waivers for Health Care Providers because the enrollment fee creates a potential barrier to MDPP supplier enrollment, beneficiary access to the program, and subsequently, our ability to evaluate MDPP. Specifically, we propose, to waive the enrollment fee as described in section 1866(j)(2)(C)(i) and (ii) of the Act during the MDPP expanded model test phase.

(b) Payment for MDPP Services

Our regulations at § 414.84 specify the payments MDPP suppliers may be eligible to receive, payments for furnishing MDPP services, and meeting performance targets related to beneficiary weight loss and/or attendance. MDPP suppliers are paid by CMS by submitting

claims for MDPP beneficiaries using claim form CMS-1500 (https://www.cms.gov/Medicare/CMS-Forms/CMS-Forms/Downloads/CMS1500.pdf). As a condition for payment, claims submitted by MDPP suppliers must be for services furnished to eligible beneficiaries in accordance with § 414.84(b) and (c). We have streamlined the proposed performance payments so that they are easier to understand and suppliers receive larger payments for participants reaching attendance and weight loss performance-based milestones. For example, the proposed attendance-based performance payments are based on a standardized per-session rate, paid after the 1st, 4th, and 9th sessions attended during the core sessions interval, and after attending the two (2) sessions during each of the core maintenance intervals. We have increased performance payments for beneficiary achievement of the 5 percent weight loss goal as well as continued attendance during the core maintenance intervals. Although the proposed maximum payment of $661 over a 1-year service period is less than the current maximum payment of $704 under the original 2-year payment structure, we believe eliminating the second year and its associated payments while increasing the first year payments will result in a financially sustainable expanded model.

Increasing the first year MDPP payment amounts should not negatively affect a supplier's performance (for example, participants' weight loss). The increase to the payment amounts are not applied until after the 4th core session and the largest payments to suppliers are still driven by weight loss achievement. Further, in order to maintain CDC Diabetes Prevention Recognition Program (DPRP) recognition status, which is required to be an MDPP supplier, certain levels of performance metrics (for example, weight loss) must be satisfied. There is no evidence that eliminating the second year maintenance sessions, shortening the MDPP services period to 1 year, will have any negative effects on performance.

(4) Effects on the Medicare Program

(a) Estimated 10-Year Impact of MDPP

Table 126 shows estimates (in millions) for the impact on Medicare spending of two proposed changes to the Medicare Diabetes Prevention Program (MDPP) to be implemented in 2022:

- Waiving the Medicare enrollment fee for all new MDPP suppliers; and
- Shortening the MDPP services period to 1 year and shifting some of the Ongoing Maintenance reimbursement amounts to year one.

TABLE 126: Estimated 10-Year Impact of MDPP on Medicare Spending for CYs 2022 through 2031

Year	2022	2023	2024	2025	2026	2027	2028	2029	2030	2031	Total
Impact on Medicare Spending	$0.2	$0.2	$0.1	$0.0	-$0.1	-$0.2	-$0.2	-$0.3	-$0.3	-$0.4	-$0.9

These estimates by the CMS Office of the Actuary do not consider waiving the Medicare enrollment fee as a direct cost and assume there will be an additional 500 beneficiaries per year participating in MDPP. In the most recent year prior to the Public Health Emergency (PHE), 1,742 Medicare beneficiaries entered MDPP. Increasing the first year payment amounts to suppliers and waiving the Medicare enrollment fee should increase access to MDPP, resulting in more utilization of the MDPP set of services. Starting in 2022, we can assume that 2,000 beneficiaries would have entered the program each year without including the proposed changes. After including these changes, we will now assume 2,500 beneficiaries will enter the program each year. This assumption has a high level of uncertainty and we revisit it in the Sensitivity Analysis section.

(b) Sensitivity Analysis

Since the cost to suppliers for delivering the MDPP set of services is generally unknown, how utilization of the expanded model will be affected by the proposed changes is highly uncertain. Table 127 shows the 10-year impact estimates (in millions) for different levels of additional beneficiary participation as a result of the proposed changes:

TABLE 127: 10 Year Impact Estimates

Additional Beneficiaries Per Year	10-year Estimated Impact
0	$0.5
500 (assumption used in best estimate)	-$0.9
1,000	-$2.3
1,500	-$3.7

Finally, higher projected savings are associated with increases in beneficiary participation, while no additional beneficiaries would result in an estimated cost.

b. Alternatives Considered

No alternatives were considered. The 2-year MDPP service period has depressed interest in MDPP among would-be MDPP suppliers. These proposed actions address stakeholder comments on the barriers to MDPP expanded model success. If we do not take action, we will not be able to scale MDPP as intended, impacting Medicare beneficiary access to this expanded model. Reducing the MDPP from a 24 - to a 12-month services period, increasing the year 1 performance payments, and waiving the Medicare provider enrollment application fee not only better aligns the expanded model with the evidence that helped certify the DPP model test initially, but it will encourage eligible organizations to enroll as MDPP suppliers.

c. Impact on Beneficiaries

This change will have a positive impact on eligible MDPP beneficiaries, as it better aligns with the CDC's National DPP, giving both the participants and the coaches similar messaging around this program, regardless of payer. MDPP suppliers often offer the MDPP set of services to mixed cohorts, or classes with participants who are not eligible for MDPP, but who are enrolled in a National DPP cohort. Since MDPP generally follows the CDC's National DPP and aligns its expanded model with the CDC's DPRP Standards, it is confusing to participants, coaches, and staff when talking about a 2-year set of services to its eligible Medicare participants when the non-Medicare participants have a 1-year program. Finally, reducing the MDPP service period from 2 years to 1 year allows more cohorts to start and finish MDPP during the expanded model initial period of performance, which ends in March 2023.

d. Estimating Regulatory Familiarization Costs

Given that we tried to align this rule as much as possible with the CDC DPRP Standards, there should be minimal regulatory familiarization costs. This rule impacts only enrolled MDPP suppliers and eligible beneficiaries who have started the MDPP expanded model or are interested in MDPP.

11. Medicare Provider and Supplier Enrollment Changes--Provider Enrollment

As explained in section III.N. of this proposed rule, we propose changes to three of our existing revocation reasons:

- We propose to expand § 424.535(a)(2) to permit revocation based on the OIG exclusion of an individual serving in an administrative or management services role for the provider/supplier, such as a billing specialist, accountant, or human resources specialist.
- We propose to expand § 424.535(a)(13) to permit revocation of a physician's or other eligible professional's enrollment if he or she surrenders his/her Drug Enforcement Administration (DEA) certificate of registration in response to an order to show cause.
- We propose to revise the factors in § 424.535(a)(8)(ii) (which permits revocation based on a pattern or practice of submitting non-compliant claims) to better enable CMS to target shorter periods of non-compliant billing.

We believe that all three of these changes would result in an increase in the number of revocations that CMS imposes. However, we believe this number will be rather small. We currently impose only a limited number of revocations under §§ 424.535(a)(2), (a)(13), and (a)(8). Accordingly, since our expansion of these three revocation reasons would be fairly modest, we do not foresee more than a very slight increase in revocations thereunder.

Table 128 outlines the number of revocations we estimate would ensue under our proposed revocation expansions. These numbers only account for additional revocations stemming from our changes:

TABLE 128: Additional Revocations

Revocation Reason	Number
§ 424.535(a)(2)	5
§ 424.535(a)(13)	5
§ 424.535(a)(8)(ii)	5
Total	**15**

Internal CMS data indicates that the average provider/supplier that would be affected by these regulatory expansions receives roughly $50,000 in Medicare payments each year. (We used a similar $50,000 annual payment estimate for our provider enrollment provisions in the CY 2020 PFS final rule) (84 FR 62568)). Providers/suppliers revoked under our proposed revocation expansions would thus not receive these payments. Hence, multiplying our $50,000 estimate by the revocation totals in Table 128 results in a projected transfer from these providers/suppliers to the federal government of $750,000 ($50,000 x 15 revocations).

12. Provider/Supplier Medical Review Requirements--Prepayment and Post-payment Reviews

In section III.N.2. of this proposed rule, we are proposing to: (1) define key terms including “additional documentation,” “additional documentation request,” “post-payment medical review,” and “prepayment medical review;” (2) codify contractors’ authority to request additional documentation for prepayment and post-payment review within established timeframes; (3) codify timeframes for response to requests for documentation; and (4) codify result of a failure to comply with prepayment or post-payment documentation request(s) by a provider or supplier, specifically denial of payment. We do not believe these proposals involve any additional impact or burden on providers, suppliers, or states; however, we welcome feedback from stakeholders regarding the potential costs of these proposals.

The proposed regulations would incorporate already established key terms and definitions as well as processing requirements pertaining to prepayment and post-payment medical review into regulation. Although placing this information in regulation could improve provider and supplier understanding of the medical review process and their responsibilities in complying with our review contractor’s requests, the proposed regulations represent no change to medical review

requirements. As such, we do not anticipate any change in the number of prepayment medical reviews, post-payment medical reviews or the number of additional documentation requests made by contractors.

13. Effect of Proposed Modifications to Medicare Coverage for Opioid Use Disorder (OUD) Treatment Services Furnished by Opioid Treatment Programs (OTPs)

As discussed in section III.O of this proposed rule, we are proposing to allow OTPs to continue to furnish the therapy and counseling portions of the weekly bundles, as well as any additional counseling or therapy that is billed using the add-on code, using audio-only telephone calls rather than via two-way interactive audio-video communication technology in cases where audio/video communication is not available to the beneficiary after the conclusion of the PHE for COVID-19, provided all other applicable requirements are met.

We believe the Part B cost impact of this proposal would be minimal, since payment for therapy and counseling is included in the bundled payment regardless of the modality used to deliver it and we do not expect that this proposal would increase the frequency at which medically necessary counseling and therapy services are billed using the counseling and therapy add-on code (HCPCS code G2080). However, we are also proposing to require that when these services are furnished using audio-only technology, practitioners certify that they had the capacity to furnish the services using two-way audio/video communication technology, but instead, used audio-only technology because audio/video communication technology was not available to the beneficiary. We believe this proposed change would facilitate broader access to these services for beneficiaries.

Additionally, as discussed in section III.O. of this proposed rule, the FDA recently announced the approval of a new, higher dose naloxone hydrochloride nasal spray product used to treat opioid overdose and that the newly approved product delivers 8mg of naloxone. In the CY 2021 PFS final rule (85 FR 84683 through 84685), we finalized payment for HCPCS code G2215 (*Take-home supply of nasal naloxone (provision of the services by a Medicare-enrolled*

Opioid Treatment Program); List separately in addition to code for primary procedure). HCPCS code G2215 was priced based on an assumption of a typical case in which the beneficiary would be provided with a box of two 4mg nasal spray products. At the time of drafting this proposed rule, we do not yet have any available pricing information for this newly approved product. However, in order to be able to make payment to OTPs under Medicare for this product, we are proposing to create a new G-code describing a take-home supply of this higher dose naloxone hydrochloride nasal spray product. Since pricing information is unavailable for this new product at the time of drafting this proposed rule, the estimated cost impact is unclear at this time, however, we believe utilization would be low based on CY 2021 claims data received so far for HCPCS code G2215.

14. Physician Self-Referral Update

The physician self-referral law provisions are discussed in section III.P. of this proposed rule.

As discussed in section III.P. of this proposed rule, we are proposing to amend the provisions of § 411.354(c)(2) identifying unbroken chains of financial relationships that constitute "indirect compensation arrangements" to ensure that a long-standing prohibition on certain per-unit of service compensation formulas for determining charges for the rental of office space and equipment remains within the ambit of the law. This provision, which was inadvertently omitted when the definition of "indirect compensation arrangement" was revised in the December 2, 2020 final rule entitled "Modernizing and Clarifying the Physician Self-Referral Regulations" (85 FR 77492), is necessary to protect against potential abuses such as overutilization and anti-competitive behavior. We believe that most parties have continued to comply with the regulatory provisions on per-unit of service compensation formulas for the rental of office space and equipment as they have done since the requirements became effective on October 1, 2009. In response to stakeholder inquiries, we are also proposing to add provisions to assist stakeholders in identifying the individual unit to be analyzed under the

provisions of § 411.354(c)(2)(ii)(A)(i) through (iii) and proposed § 411.354(c)(2)(ii)(A)(iv). We believe that the clarity provided by this proposal would facilitate compliance without adding burden.

As discussed in section III.P. of this proposed rule, we are proposing to permit the use of the exception for preventive screening tests, immunizations, and vaccines at § 411.355(h) for COVID-19 vaccines even when they are not subject to CMS-mandated frequency limits, provided that all other requirements of the exception are satisfied. We believe that this proposal would ensure that the physician self-referral law would not impede the availability of critically important COVID–19 vaccines for Medicare and other patients.

As discussed in section III.P. of this proposed rule, we are proposing regulatory updates related to the process for publication of the Code List for Certain Designated Health Services (the Code List). Specifically, we would update the Code List each calendar quarter. We would provide public notification on the CMS website in advance of each Code List update, followed by a 30-day public comment period. We would provide information on the CMS website regarding the process for submitting public comments through www.regulations.gov, and address all public comments on the Code List on the CMS website. In addition, instead of publishing in the PFS final rule, we would publish the Code List solely on the CMS website. Finally, we would revise the definition of "List of CPT/HCPCS Codes" at § 411.351 by updating the URL that indicates where the Code List is published on the CMS website. We believe that these proposals would make available the most recent updates in a timelier manner and allow easier access to the most up-to-date Code List.

15. Requirement for Electronic Prescribing for Controlled Substances for a Covered Part D Drug under a Prescription Drug Plan or an MA-PD Plan (section 2003 of the SUPPORT Act)

In addition to the cost reflected in the Collection of Information section of this proposed rule, we expect that there would be an additional burden for CMS to award and work with a CMS contractor to develop a process for reviewing the PDE data to assess prescriber compliance

with the regulatory provision and review and process prescriber attestations. Based on similar contracts, and conversations with the industry, we have estimated the costs of (A) development of operational strategy for the new program, (B) reviewing PDE data, and (C) prescriber case work. We solicit stakeholder feedback on this estimate and all our assumptions.

(A) Development of policy: We estimate that it would take our contractor a week of work, 40 hours, to develop the strategy for how the contractor will process the prescriber attestations. We estimate that it would an operations manager and compliance officer working together at a combined hourly wage of $193.60/hr ($120.90/hr + $72.70/hr) would need a full 40-hour work week to operationalize this aspect of it. Therefore, the aggregate cost would be $7,744 (40hr * $193.60/hr).

(B) Since systems already exist to collect the appropriate PDE data, our contractor would only have to review the data for compliance with the EPCS mandate. We therefore estimate that it would take 2 computer systems analyst each working at $95.22/hr, a week and a half of work, 60 hours. Therefore, the aggregate cost is $5,713.20 (60 hr * $95.22/ hr).

(C) We estimate that it would take 4 administrative support workers each working at $36.82/hr, 60 hours to generate the letters and disseminate them to the appropriate prescriber, which means that it would cost our contractor $2,209.20/year (60 hr * $36.82/ hr) in administrative support costs. We estimate that it would be the full-time job of a customer service representative working at $37.02/hr to field prescriber inquiries about the disseminated letters. Thus, we expect that our contractor will spend $77,001.60 ($37.02/hr * 40 * 52) on the salary of the customer service representative for this task.

The aggregate impact for our contractor is 200 hours at a cost of $92,668. We seek comment on the accuracy of this burden estimate and on any measures that CMS can take to decrease the impact of this provision, while maintaining its utility and implementing the statutory mandate

16. Open Payments

a. Payment Context Field for Teaching Hospitals

This proposal is for a mandatory freeform text context field. We have created this proposal at the request of stakeholders, particularly after conversations with teaching hospitals. The teaching hospitals confirmed that the majority of their disputes arise because of a lack of information within the record and an inability to attribute it to the correct area within their large organization, not the inaccuracy of the record itself. The benefit of this field is to give better context to the records attributed to teaching hospitals and thereby reduce the number of disputes. For this reason, we also believe it will also increase goodwill between the program's stakeholders. The cost is that reporting entities will need to collect an additional piece of information, which will increase burden. We do not believe this burden will be great because compared to physician covered recipient payments, the number of teaching hospital payments is much lower. In addition, we have given flexibility to this field so that the reporting entity can choose which piece of information is most appropriate and can be something that they already collect, such as a check number or name of the department in the hospital.

b. Optional Annual Recertification

The optional annual recertification is at the request of reporting entities and will increase the availability of communication to CMS. The burden associated with this action is low because it will be a low-effort process only completed by the entities who choose to do so.

c. Defining a Physician-Owned Distributorship

Since the program began in 2013, we have heard feedback that physician-owned distributorship (PODs) should be better represented in the data because the conflict of interest potentially created by PODs is at the heart of the program. We created this new definition due to the lack of an existing definition of a POD that would be appropriate for the program's needs. Though this is a new definition, it will only be a subset of the existing definitions of applicable manufacturer and applicable group purchasing organization. "Applicable manufacturer – POD" and "Group purchasing organization – POD" are already "business type" choices when

registering in the Open Payments system. Therefore, this definition will not alter existing regulations beyond requiring PODs to identify themselves as such.

d. Disallowing Record Deletion Without Reason

We believe there is not currently language to prevent an applicable manufacturer or applicable group purchasing organization from submitting and attesting to records, then deleting the records to prevent publication. This action would be contrary to the spirit of transparency of the program. To help ensure compliance with this requirement, we are also adding a new field that will allow entities to communicate the reason for the deletion to CMS. Since the entities will have attested to the accuracy and completeness of these records, we believe it is appropriate to confirm the reason for the deletion. We have not perceived the behavior of inappropriate deletions within the data and do not believe it will increase burden beyond the additional field when deleting a record. We are preemptively closing a potential loophole.

e. Disallow Publication Delays of General Payments

The statute requires that delays are "made pursuant to product research or development agreements and clinical investigations" (1128G(c)(1)(E) of the Act). A small number of general payments are delayed annually, which we are unable to verify meet this requirement. Research payments contain the appropriate fields to ensure that the statutory provisions are being met. We do not believe that it will be a burden for the small number of general payments to either be reported as research payments or not delayed.

f. Short-Term Loans

Short-term loans are not required to be reported, but they must be shorter than 91 days to meet the exception. This proposal does not create burden because it only clarifies that those 90 days must be the cumulative total for a year, which is already outlined in subregulatory guidance. We do not anticipate that this will change reporting behavior but want to explain the exception more clearly within the text of the final rule.

g. Remove General Ownership Records

Ownership records have special rules for reporting outlined in the statute (section 1128G(a)(2) of the Act), which are not included in the format for general records. However, there is currently a general record for reporting ownership and investment interest (Nature of Payment = 11). We anticipate a small burden for the approximately 92 reporting entities who have previously used the general nature of payment category in order to fill out the different fields in the ownership record. This burden will allow the records to meet statutory mandates.

h. Updated Contact Information

Open Payments conducts regular compliance-related outreaches to reporting entities when it encounters data that may not meet program requirements. We have found that the two contacts provided by applicable manufacturers and group purchasing organizations often become obsolete, especially if a company has not updated its contact information during the recertification process. It is crucial for the integrity of the data that we have the ability to contact entities in the case of irregularities. Additionally, we believe that ensuring informal communications from CMS will reduce burden since it may prevent more formal compliance actions if the entity is unresponsive due to outdated contact information. However, we do not believe this is an issue for the majority of reporting entities, nor do we believe that keeping the contact information updated will create a large burden.

17. Updates to the Quality Payment Program

In section IV.A. of this proposed rule, we included our proposed policies for the Quality Payment Program. In this section, we first present the overall and incremental impacts to the number of expected QPs and associated APM Incentive Payments. In the following sections, we estimate the overall and incremental impacts to the total MIPS eligible population and the payment impacts by practice size for the 2022 MIPS performance period based on various proposed policies, including to modify MIPS eligibility, the MIPS final score and the performance threshold and additional performance threshold as discussed in sections IV.A.3.a.(1) and IV.A.3.f. of this proposed rule.

This RIA uses the 2019 MIPS performance period submissions that were used for the CY 2021 PFS final rule RIA (85 FR 85011 through 85023). The submissions for the 2020 MIPS performance period were not available in time to incorporate into this model and to assess whether the data for 2020 can be used to effectively predict future performance. For the 2020 performance year, we applied the MIPS automatic extreme and uncontrollable circumstances policy to all individual MIPS eligible clinicians and allowed for extreme and uncontrollable applications due to the COVID-19 Public Health Emergency (PHE) (https://qpp.cms.gov/resources/covid19?py=2020). Due to these extreme and uncontrollable circumstances policy, not all clinicians or groups may have submitted performance category data for the 2020 MIPS performance period. We will evaluate for the final rule whether it is appropriate to use the 2020 performance period data and whether adjustments would need to be made if CY 2020 performance category submissions data are used.

We ran two RIA models: a baseline and proposed policies RIA model. The aim of the baseline model is to reflect the CY 2022 performance period/2024 MIPS payment year if this proposed rule did not take effect, and therefore, reflects previously finalized policies for the CY 2022 performance period/CY 2024 MIPS payment year. Select examples of the baseline policies scheduled to start in the CY 2022 MIPS performance period/2024 MIPS payment year include the removal of the Web Interface as a collection type and the change in the performance category weights. Our baseline model used the performance threshold and additional performance threshold of the CY 2021 MIPS performance period/2023 MIPS payment year since those values were not previously defined for the CY 2022 MIPS performance period/2024 MIPS payment year. The aim of the proposed policies model is to estimate the incremental effect of the proposed policies for the CY 2022 performance period/CY 2024 MIPS payment year on MIPS eligibility, MIPS final scores, and payment adjustments. Select examples of the proposed policies include, the inclusion of new MIPS eligible clinician types, the inclusion of the Web Interface as a collection type, the change in performance threshold and additional performance

threshold, and the new complex patient bonus. Refer to section VII.F.17.d.(2) of this proposed rule for the detailed methods on how we integrated the policies into the baseline and proposed policies models.

a. Estimated APM Incentive Payments to QPs in Advanced APMs and Other Payer Advanced APMs

For payment years from 2019 through 2024, through the Medicare Option, eligible clinicians who have a sufficient percentage of their Medicare Part B payments for covered professional services or Medicare patients through Advanced APMs will be QPs in the applicable QP performance period for a year. These QPs will receive a lump-sum APM Incentive Payment equal to 5 percent of their estimated aggregate paid amounts for Medicare covered professional services furnished during the calendar year immediately preceding the payment year. Beginning in payment year 2021, in addition to the Medicare Option, eligible clinicians may become QPs through the All-Payer Combination Option. The All-Payer Combination Option allows eligible clinicians to become QPs by meeting the QP payment amount or patient count threshold through a pair of calculations that assess a combination of both Medicare Part B covered professional services furnished or patients through Advanced APMs and services furnished or patients through Other Payer Advanced APMs.

Eligible clinicians who become QPs for a year are not subject to MIPS reporting requirements and payment adjustments. Eligible clinicians who do not become QPs, but meet a lower threshold to become Partial QPs for the year, may elect to report to MIPS and, if they elect to report, would then be scored under MIPS and receive a MIPS payment adjustment. Partial QPs are not eligible to receive the APM Incentive Payment.

If an eligible clinician does not attain either QP or Partial QP status, and does not meet any another exemption category, the eligible clinician would be subject to MIPS, would report to MIPS, and would receive the corresponding MIPS payment adjustment.

Beginning in payment year 2026, the update to the PFS CF for services that are furnished

by clinicians who achieve QP status for a year is 0.75 percent, while the update to the PFS CF for services that are furnished by clinicians who do not achieve QP status for a year is 0.25 percent. In addition, MIPS eligible clinicians would receive positive, neutral, or negative MIPS payment adjustments to payment for their Part B PFS services in a payment year based on performance during a prior performance period. Although the statute establishes overall payment rate and procedure parameters until 2026 and beyond, this impact analysis covers only the 2024 MIPS payment year of the Quality Payment Program.

Overall, we estimate that for the 2022 QP Performance Period between 225,000 and 290,000 eligible clinicians will become QPs, therefore be excluded from MIPS, and qualify for the lump sum APM incentive payment in Payment Year 2024 based on 5 percent of their Part B paid amounts for covered professional services in the preceding year. These paid amounts for QPs are estimated to be between approximately $12,000 million and $15,000 million in total for the 2022 performance year. The analysis for this proposed rule used the 2020 third snapshot participation file. We based APM Incentive Payment Amounts on paid amounts with service dates of January 1, through September 30, 2020. We multiplied the calculated amounts by 1.5 to approximate payment amounts for the full calendar year. We estimate that the total lump sum APM Incentive Payments will be approximately $600-750 million for the 2024 Quality Payment Program payment year.

In section VII.F.17.a. of this proposed rule, we projected the number of eligible clinicians that will be QPs, and thus excluded from MIPS, using several sources of information. First, the projections are anchored in the most recently available public information on Advanced APMs. The projections reflect Advanced APMs that will be operating during the 2022 QP Performance Period, as well as some Advanced APMs anticipated to be operational during the 2022 QP Performance Period. The projections also reflect an estimated number of eligible clinicians that would attain QP status through the All-Payer Combination Option. We note that the Kidney Care Choices Model and the Radiation Oncology model have been included in our analysis as

we anticipate that the model will be Advanced APMs in 2022. The following APMs are expected to be Advanced APMs for the 2022 QP Performance Period:

- Bundled Payments for Care Improvement Advanced Model;
- Comprehensive Care for Joint Replacement Payment Model (CEHRT Track);
- Global and Professional Direct Contracting Model;
- Kidney Care Choices Model (Kidney Care First; Professional Option and Global Option);
- Maryland Total Cost of Care Model (Care Redesign Program; Maryland Primary Care Program);
- Medicare Shared Savings Program (Basic Track Level E, and the ENHANCED Track);
- Oncology Care Model (Two-Sided Risk Arrangements);
- Primary Care First (PCF) Model;
- Radiation Oncology model; and,
- Vermont All-Payer ACO Model (Vermont Medicare ACO Initiative).

We used the Participation Lists and Affiliated Practitioner Lists, as applicable, (*see* 81 FR 77444 through 77445 for information on the APM Participant Lists and QP determinations) on the 2020 third snapshot participation file to estimate the number of QPs, total Part B paid amounts for covered professional services, and the aggregate total of APM Incentive Payments for the 2022 QP Performance Period. We examined the extent to which Advanced APM participants would meet the QP Thresholds of having at least 50 percent of their Part B covered professional services or at least 35 percent of their Medicare beneficiaries furnished Part B covered professional services through the APM Entity.

b. Impact for the CY 2021 MIPS Performance Period/ 2023 MIPS Payment Year

In section IV.A.3.e.(2)(a)(ii) of this proposed rule, we proposed to double the complex patient bonus, and to increase its cap to 10 points. We expect this proposed policy to result in

the median bonus to increase by 3 points, thus increasing MIPS final scores at the median by 3 points. We do not know the effects of the PHE for COVID-19 and its effect on MIPS performance in 2021, so we did not recreate the analysis and payment distributions with the updated bonus for the 2021 MIPS performance period (85 FR 85012 through 85019). Directionally, the increase in complex patient bonus points will result in smaller payment adjustments for three reasons. First, the resulting increase in final scores will reduce the budget neutral pool. Second, the increase in complex patient bonus points will increase the number of clinicians with scores above the performance threshold or additional performance threshold, meaning more clinicians will share in the budget neutral pool and additional $500 million for exceptional performance and potentially lowering the scaling factor that is applied to the MIPS payment adjustment and additional payment adjustment. Third, the average scores of those receiving a positive or additional adjustment will be higher, which means the adjustment rates for clinicians that have scores above the performance threshold or additional performance threshold will be lower.

c. Estimated Number of Clinicians Eligible for MIPS Eligibility for the 2022 MIPS Performance Period/2024 MIPS Payment Year

(1) Methodology to Assess MIPS Eligibility

(a) Clinicians Included in the Model Prior to Applying the Low-Volume Threshold Exclusion

To estimate the number of MIPS eligible clinicians for the 2022 MIPS performance period and the effect of the proposed policies in this proposed rule, we ran two models as described in section VII.F.17.: a baseline model and proposed policies model.

For the baseline and proposed policies models, we used the same eligibility files and approach as described in the CY 2021 PFS final rule (85 FR 85013), which resulted in the inclusion of 1.6 million clinicians who had PFS claims from October 1, 2018 to September 30, 2019 as well as additional clinicians associated with a group who had at least one PFS claim from October 1, 2019 through December 31, 2019. We used the same exclusion criteria to

exclude clinicians from our MIPS eligibility assessment as described in the CY 2021 PFS final rule RIA (85 FR 85013), with the following model updates:

(1) In both the baseline and proposed policies models, we excluded practitioners in Next Generation ACOs because the Next Generation ACO model ends in the CY 2021 MIPS performance period.

(2) In both the baseline and proposed policies models, to determine which clinicians in the initial population of 1.6 million should be excluded as QPs, we used Advanced APM payment and patient percentages from the APM Participant List for the final snapshot date for the 2019 QP performance period. We elected to use this data source because the APM participant list for the 2019 final snapshot can reliably be used for RIA projections. From this data, we calculated the QP and Partial QP determinations as described in section of IV.A.4.c.(1)(b) of this proposed rule for the 2022 QP performance period for both models.

(3) In the proposed policies model, we included in our estimated MIPS eligible population for the CY 2022 performance period/2024 payment year clinical social workers and certified nurse-midwives as proposed in section IV.A.3.a.(1) of this proposed rule.

(4) In the proposed policies model, we are integrating the proposal that starting with the CY2022 MIPS performance period/2024 MIPS payment year, small practices, excluding virtual groups, must submit data as a group in any performance category to indicate that they wish to be scored as a group for Medicare Part B claims. This affects eligibility because previously a single Medicare Part B claims submission, without any other submission, started a group score. Once a group score is created, a clinician who was individually excluded from MIPS for being under the low-volume threshold, may now be eligible if the group exceeds the low-volume threshold. This proposed policy is described at section IV.A.3.a. of this rule.

(b) Assumptions Related to Applying the Low-Volume Threshold Exclusion

The low-volume threshold policy may be applied at the individual (TIN/NPI) or group (TIN) levels based on how data are submitted or at the APM Entity level if the clinician is part of

an APM Entity in a MIPS APM (hereafter, a MIPS APM Entity) that elects to submit to MIPS. A clinician or group that exceeds at least one but not all three low-volume threshold criteria may become MIPS eligible by electing to opt-in and subsequently submitting data to MIPS, thereby getting measured on performance and receiving a MIPS payment adjustment.

For the proposed policies model, we describe below the estimated MIPS eligibility status and the associated PFS allowed charges of clinicians in the initial population of 1.6 million clinicians. We present in section VII.F.17.c.(1)(c) the incremental impact of the proposed policies from the baseline model for the CY 2022 performance period/2024 payment year on the MIPS eligible clinician population and their associated PFS allowed charges. We applied the same assumptions presented in the CY 2021 PFS final rule RIA to apply the low-volume threshold and to understand whether clinicians participate as a group, virtual group, APM entity, or as individuals (85 FR 85013 through 85016), except for three modifications. We assumed only individuals or APM TINs that exceeded the low-volume threshold would receive an APM Performance Pathway (APP) score consistent with the policy as finalized in the CY 2021 PFS final rule (85 FR 84897).[263] We assumed APM TINs that qualified for opt-in and submitted data as a TIN would also be eligible. Finally, we did not consider clinicians in groups as MIPS eligible clinicians and start a group score for clinicians in small practices with only Medicare Part B claims submissions to reflect the proposed policy at section IV.A.3.a. of this rule.

For the proposed policies model, we estimate approximately 212,000 clinicians[264] will be MIPS eligible because they exceed the low volume threshold as individuals and are not otherwise excluded. These clinicians may ultimately choose to participate in MIPS as an individual, group, virtual group or APM entity. We identify these clinicians as having "required eligibility" in Table 129. We estimate approximately 595,000 additional MIPS eligible

[263] Under the proposed policy, APM TINs must submit data, but as that was not a requirement for 2019 Shared Saving Program participants, we assumed all TINs that exceed the low-volume threshold would submit data.
[264] The count of 212,000 MIPS eligible clinicians for required eligibility includes those who participated in MIPS (approximately 185,000 MIPS eligible clinicians), as well as those who did not participate (approximately 27,000 MIPS eligible clinicians).

clinicians will be eligible because they belong to an APM entity, group or virtual group that meets the low-volume threshold and submits to MIPS. These clinicians are identified as having "group eligibility" in Table 129. Finally, we estimate about 3,000 clinicians would be eligible through "opt-in eligibility" through the "opt-in" policy for a total MIPS eligible clinician population of approximately 810,000. This leads to an associated $67 billion allowed PFS charges estimated to be included in the 2022 performance period/2024 payment year.

TABLE 129: Description of MIPS Eligibility Status for CY 2022 Performance Period/2024 MIPS Payment Year Using the CY 2022 PFS Proposed Rule Assumptions**

		CY 2022 PFS Proposed Rule estimates	
Eligibility Status	**Predicted Participation Status in MIPS Among Clinicians***	**Number of Clinicians**	**PFS allowed charges ($ in mil)*****
Required eligibility (always subject to a MIPS payment adjustment because individual clinicians exceed the low-volume threshold in all 3 criteria)	Participate in MIPS	184,773	$ 45,007
	Do not participate in MIPS	27,015	$6,313
Group eligibility (only subject to payment adjustment because clinicians' groups exceed low-volume threshold in all 3 criteria and submit as a group)	Submit data as a group	594,578	$15,195
Opt-In eligibility assumptions (only subject to a positive, neutral, or negative adjustment because the individual or group exceeds the low-volume threshold in at least 1 criterion but not all 3, and they elect to opt-in to MIPS and submit data)	Elect to opt-in and submit data	3,259	$ 77
Total Number of MIPS Eligible Clinicians and the associated PFS allowed charges		**809,625 ***	**$ 66,592**
Not MIPS Eligible			
Potentially MIPS Eligible (not subject to payment adjustment for non-participation; could be eligible for one of two reasons: (1) meet group eligibility; or (2) opt-in eligibility criteria)	Do not opt-in; or Do not submit as a group	411,872	$ 10,529
Below the low-volume threshold (never subject to payment adjustment; both individual and group is below all 3 low-volume threshold criteria)	Not applicable	100,501	$ 565
Excluded for other reasons (Non-eligible clinician type, newly enrolled, QP)	Not applicable	303,873	$ 14,951
Total Number of Clinicians Not MIPS Eligible		816,246	$ 26,045
Total Number of Clinicians (MIPS and Not MIPS Eligible)		1,625,871	$ 92,638

* Estimated MIPS Eligible Population

** This table does not include clinicians impacted by the automatic extreme and uncontrollable policy. (approximately 6,000 clinicians and $527 million in PFS allowed charges). It also excludes CPC+, NextGen and submitters with one or more categories identified as being suppressed as a result of bad data.

*** Allowed charges estimated using 2019 dollars. Low-volume threshold is calculated using allowed charges. MIPS payment adjustments are applied to the paid amount.

Furthermore, we estimate there will be approximately 412,000 clinicians who are not MIPS eligible, but could be if their practice decides to participate or they elect to opt-in. We describe this group as "Potentially MIPS eligible" in Table 129. These clinicians would be included as MIPS eligible in the unlikely scenario in which all group practices elect to submit

data as a group, or clinicians in a group that does not submit are eligible to opt-into MIPS individually and choose to do so. This assumption is important because it quantifies the maximum number of MIPS eligible clinicians. When this unlikely scenario is modeled, we estimate the MIPS eligible clinician population could be as high as 1.2 million clinicians. Finally, we estimate approximately 101,000 clinicians would not be MIPS eligible because they and their group are below the low-volume threshold on all three criteria and another approximately 304,000 would not be MIPS eligible because they are categorically excluded regardless of volume or submission activity.

Eligibility among many clinicians is contingent on submission to MIPS as a group, virtual group or election to opt-in, therefore we will not know the number of MIPS eligible clinicians who submit until the submission period for the 2022 MIPS performance period is closed. For this proposed policies model analysis, we use the estimated population of 809,625 MIPS eligible clinicians described above.

(c) Estimated Impact of the Proposed Policies on MIPS eligibility and PFS allowed charges

We illustrate in Table 130 how the proposed policy to add clinical social workers and certified nurse-midwives as MIPS eligible clinician types as proposed in section IV.A.3.a.(1) of this proposed rule affects the estimated number of MIPS eligible clinicians. The first row presents the estimates from the RIA baseline model with the number of individuals that would be MIPS eligible clinicians for the 2022 MIPS performance period/2024 MIPS payment year if this proposed rule did not take effect. The second row presents estimates from the RIA proposed policies model with the incremental impact of adding the two new MIPS eligible clinician types on the number of MIPS eligible clinicians for the CY 2022 MIPS performance period/2024 MIPS payment year. As shown in Table 130, the proposed policy to add clinical social workers and certified nurse-midwives as MIPS eligible clinician types leads to a small increase in the number of MIPS eligible clinicians (1.1 percent increase) and a minimal increase in the PFS allowed charges (0.1 percent increase) for the CY 2022 performance period/2024 payment year.

TABLE 130: Effect of Eligibility Changes on the Expected Number of Clinicians and the Allowed Paid Amount in the CY 2022 Performance Period/2024 Payment Year

Policy changes	Estimated cumulative effect of policy change on number of clinicians	Estimated number of clinicians impacted by policy change	% Change /from Baseline in number of MIPS eligible clinicians	Estimated Cumulative PFS Allowed Charges (mil)	% Change in PFS Allowed Charges from Baseline
Baseline policies model: If the CY 2022 proposed rule did not exist.	801,013	N/A	N/A	66,503	N/A
Proposed policies model: Proposed policies for CY 2022 MIPS performance period/2024 payment year.	809,625	8,612	1.1%	66,592	0.1%

d. Estimated Impacts on Payments to MIPS Eligible Clinicians for the CY 2022 Performance Period/2024 Payment Year

(1) Summary of Approach

In sections IV.A.3.d., IV.A.3.e. and IV.A.3.f. of this proposed rule, we present several provisions which impact the measures and activities that impact the performance category scores, final score calculation, and the MIPS payment adjustment. We discuss these changes in more detail in section VII.F.17.d. of this RIA as we describe our methodology to estimate MIPS payments for the CY 2022 performance period/2024 payment year. We then present the impact of the overall proposed policies on the CY 2022 performance period/2024 payment year and then compare select metrics to the baseline model, which only incorporates previously finalized policies for the CY 2022 performance period/2024 payment year. By comparing the baseline model to the proposed policies model, we are able to estimate the incremental impact of the proposed policies for the CY 2022 performance period/2024 payment year.

The payment impact for a MIPS eligible clinician is based on the clinician's final score, and MIPS eligible clinicians can participate as an individual, group, virtual group, or APM Entity in the four MIPS performance categories: quality, cost, improvement activities, and Promoting Interoperability. As discussed in section VII.F.17. of this proposed rule, we generally used the most recently available submissions data from the Quality Payment Program which is

data submitted for the 2019 MIPS performance period. For the cost performance category, we used the same data as the CY 2020 PFS final rule (84 FR 63169).

The estimated payment impacts presented in this proposed rule are averages by practice size weighted by Medicare utilization. The payment impact for a MIPS eligible clinician will vary from the average and would depend on the measure submissions, scores and their performance. The average percentage change in total revenues that clinicians earn would be less than the impact displayed here because MIPS eligible clinicians generally furnish services to both Medicare and non-Medicare patients; this program does not impact payment from non-Medicare patients. In addition, MIPS eligible clinicians may receive Medicare revenues for services under other Medicare payment systems, such as the Medicare FQHC PPS, that would not be affected by MIPS payment adjustment factors.

(2) Methodology to Assess Impact

To estimate participation in MIPS for the CY 2022 performance period/ 2024 MIPS payment year for this proposed rule, we generally used 2019 MIPS performance period data for both the baseline and proposed policies models. Our baseline and proposed policies scoring models included the 801,013 and 809,625 estimated MIPS eligible clinicians, respectively, as described in section VII.F.17.c.(1) of this RIA.

To estimate the impact of MIPS policies on MIPS eligible clinicians, we generally used the 2019 MIPS performance period submissions data, including data submitted for the quality, improvement activities, and Promoting Interoperability performance categories. We supplemented this information with the most recent data available for CAHPS for MIPS and CAHPS for ACOs, testing data for the revised total per capita cost measure and Medicare Spending Per Beneficiary (MSPB) clinician measures which were finalized in the CY 2020 PFS final rule (84 FR 62969 through 62977), testing data for the new episode cost measures, administrative claims data for the new quality performance category measures, and other data

sets.[265] We calculated a hypothetical final score for the 2022 MIPS performance period/2024 MIPS payment year for the baseline and proposed policies scoring models for each MIPS eligible clinician using score estimates for quality, cost, Promoting Interoperability, and improvement activities performance categories, where each are described in detail in the following subsections.

(a) Methodology to Estimate the Quality Performance Category Score

We estimated the quality performance category score using a methodology like the one described in the CY 2021 PFS final rule (85 FR 85016 through 85017) for baseline and proposed policies RIA models for the CY 2022 MIPS performance period/2024 payment year.

For the baseline policies RIA model, which does not reflect the proposed policies for CY 2022 MIPS performance period/2024 payment year, we made the following modifications to reflect the previously finalized policies for the CY 2022 performance period/2024 payment year for the quality performance category:

(1) As previously finalized in the CY 2021 PFS final rule, we removed the Web Interface as a collection type in MIPS and through the APP for the CY 2022 performance period/2024 MIPS payment year (85 FR 84870 and 85 FR 84843). Although the Web Interface is proposed to be reinstated for groups for the CY 2022 MIPS performance period/2024 MIPS payment year and ACOs for CY 2022 MIPS performance period/2024 MIPS payment year and CY 2023 MIPS performance period/2025 MIPS payment year as discussed in sections IV.A.3.d.(1)(d) and IV.A.3.c.(2)(a), respectively, the baseline model is attempting to capture the CY 2022 MIPS performance period/2024 MIPS payment year as if this proposal did not exist. Therefore, the baseline model does not incorporate the Web Interface as a collection type for groups and ACOs. To estimate a quality performance category score for clinicians in groups who previously used the Web Interface as a collection type in 2019, we assumed these groups would use the other two

[265] Data submitted to MIPS for the 2018 MIPS performance period data was used for the improvement score for the quality performance category. We also incorporated some additional data sources when available to represent more current data.

other collection types (MIPS CQMs and eCQMs) available in the 2022 MIPS performance period/2024 MIPS payment year. We then applied the same methodology described in the CY 2021 PFS Proposed Rule when the removal of Web Interface as a collection type was previously proposed (85 FR 50387 through 50388) using 2019 MIPS submissions data. To estimate a quality performance category score for ACOs, we used the same methodology described in the CY 2021 PFS proposed rule when the Web Interface was not included in the APP (85 FR 50388).

(2) We used the published 2021 MIPS historical quality benchmarks file to identify measures subject to the topped out scoring cap that was finalized (82 FR 53721 through 53727).[266]

For the proposed policies model, we made the following modifications to the baseline model to reflect the newly proposed policies for the 2022 MIPS performance period/2024 MIPS payment year for the quality performance category:

(1) As discussed in section IV.A.3.d.(1)(e) of this proposed rule, we propose for this proposed rule two new administrative claims measures for those for whom it is applicable: (1) Risk-Standardized Acute Unplanned Cardiovascular-Related Admission Rates for Patients with Heart Failure for the Merit-based Incentive Payment System; and (2) Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions. To implement this policy in our proposed policies RIA model for the 2022 MIPS performance period/2024 MIPS payment year, we used testing data for these new administrative claims measures.

(2) As discussed in section IV.A.3.e.(1)(c) of this proposed rule, we proposed to use performance period benchmarks for the CY 2022 performance period in accordance with § 414.1380(b)(1)(ii) as opposed to a historical benchmark. Therefore, we used 2019 MIPS performance period benchmarks calculated from the CY 2019 MIPS submissions data because

[266] Data downloaded on April 9 2021 from https://qpp.cms.gov/resources/resource-library.

the performance data for this analysis came primarily from the 2019 MIPS performance period.

(3) As discussed in section IV.A.3.e.(1)(c)(iii)(A) of this proposed rule, we proposed to remove the 3-point floor for each measure that can be reliably scored against the benchmark and score the measure from 1 to 10 points. As described in section IV.A.3.e.(1)(c)(iii)(B) of this proposed rule, we also proposed to make the following changes: (1) remove the special scoring policy of scoring 3 points for class 2 measures, except for clinicians in small practices; (2) introduce a 5-point floor for new measures for their first two performance periods that meet data completeness and can be reliably scored against a benchmark (class 4a measures); and (3) introduce 5 points for new measures in their first two performance periods that meet data completeness, but cannot be reliably scored against a benchmark because they lack a benchmark or do not meet case minimum in the program (class 4b measures). We incorporated these scoring changes into our proposed policies model. Because we are using 2019 MIPS performance period data, we assume that measures new to the 2018 and 2019 MIPS performance periods could qualify as class 4 measures.

(4) As discussed in sections IV.A.3.e.(1)(c)(vi) and IV.A.3.e.(1)(c)(vii) of this proposed rule, we also propose to end measure bonus points for reporting high priority measures and for submitting with end-to-end electronic reporting beginning in the 2022 MIPS performance period. We incorporated these scoring changes into our proposed rule model for all MIPS collection types.

(5) As discussed in section IV.A.3.d.(1)(d), we are proposing to extend Web Interface measures for the CY 2022 performance period/2024 MIPS payment year for groups and virtual groups using the existing 10 CMS Web Interface measures. To estimate the impact of this proposed policy, we used the same methodology described in the CY 2021 PFS final rule (85 FR 85016 through 85017) using 2019 MIPS submissions data.

(6) Finally, we are also proposing to extend the CMS Web Interface as a means of reporting quality under the APM Performance Pathway for Shared Savings Program ACOs for

the CY 2022 and CY 2023 MIPS performance periods and 2024 and 2025 MIPS payment years as described in section IV.A.3.c.(2)(a) of this proposed rule. Under the proposal, for the CY 2022 and CY 2023 MIPS performance periods and 2024 and 2025 MIPS payment years, Web Interface reporting would work in the same manner as for performance year 2021, where ACOs would have the option of reporting either the CMS Web Interface, the APP eCQM/MIPS CQM measure set, or both. To estimate the impact of this proposed policy, we used the same methodology described in the CY 2021 PFS final rule RIA (85 FR 85016 through 85017) when Web Interface was retained for the APP.

(b) Methodology to Estimate the Cost Performance Category Score

We estimated the cost performance category score using a similar methodology described in the CY 2020 PFS final rule (84 FR 63169) with the modifications to the baseline and the proposed policies RIA model described in this section.

In the baseline policies RIA model, we refined our methodology for developing benchmarks to better reflect the previously finalized policy in CY 2017 Quality Payment Program final rule (81 FR 77308 through 77309). We did not estimate cost improvement scoring that starts in the 2022 MIPS performance period/2024 MIPS payment year as previously finalized at § 414.1380(a)(1)(ii) and in the CY 2019 PFS final rule (83 FR 58956) since we did not have sufficient data to conduct improvement scoring, which requires 2 years of cost data to model.

In the proposed policies RIA model, we modified the baseline model to incorporate the proposal to add five new episode-based cost performance category measures in the CY 2022 MIPS performance period/2024 payment year as described in section IV.A.3.d.(2) of this proposed rule, by using claims data from January 1, 2019 to December 31, 2019. Cost measures were scored if the clinicians or groups met or exceeded the case volume: 10 episodes for Melanoma Resection to align with the reporting case minimum for procedural cost measures currently in use in MIPS, 20 episodes for Sepsis to align with the reporting case minimum for

acute inpatient condition cost measures currently in use in MIPS, 20 episodes for Diabetes and Asthma/COPD as used in field testing for these chronic measures, and 20 episodes for Colon Resection. These newly proposed cost episode-based measures were calculated for both the TIN/NPI and the TIN.

(c) Methodology to Estimate the Facility-Based Measurement Scoring

For the baseline model, we estimated the facility-based score using the scoring policies finalized in the CY2018 Quality Payment Program final rule (82 FR 53763) and the methodology described in the CY 2020 PFS final rule (84 FR 63169). For the proposed policies model, we used the methodology proposed for the CY 2022 MIPS performance period/2024 MIPS payment year as discussed in section IV.A.3.e.(2)(b)(v)(B) of this proposed rule. We propose at § 414.1380(e)(vi) that beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, the MIPS quality and cost performance category scores will be based on the facility-based measurement scoring methodology unless a clinician or group receives a higher MIPS final score through another MIPS submission. Therefore, if a MIPS eligible clinician or a group is eligible for facility-based measurement, but they participate in MIPS as an individual or group, we used the higher final score between the facility-based scoring and MIPS submission-based scoring.

(d) Methodology to Estimate the Promoting Interoperability Performance Category Score

For the baseline RIA model, we used the CY 2019 MIPS Promoting Interoperability performance period data submissions data to estimate CY 2022 MIPS performance for the Promoting Interoperability performance category. We made the following two modifications to the 2019 performance period scoring to reflect the previously finalized policy changes between the CY 2019 and CY 2021 performance periods: (1) we doubled the bonus points for clinicians who submitted the PDMP measure as described in section IV.A.3.d.(4)(c)(i) of this proposed rule; and (2) we did not incorporate the Verify Opioid Treatment Agreement measure data, a measure that was finalized in the CY 2019 performance period (83 FR 59807) but removed in

the CY 2020 performance period (84 FR 62994). We retained the PDMP bonus for the baseline model for continuity between the CY 2021 and 2022 performance periods and for consistency since bonuses for the quality performance category were retained for the baseline as well. Because we lacked data on who would adopt the finalized Health Information Exchange bi-directional exchange measure for the CY 2021 performance period and how these clinicians would score, we only used past reporting on the existing Health Information Exchange Objective measures to estimate CY 2022 Promoting Interoperability performance.

For the proposed rule model, we considered the following policy proposals as potential modifications to the baseline RIA model:

(1) In section IV.A.3.d.(4)(c)(i) of this proposed rule, we proposed for the PDMP measure to remain optional and at 10 points. Modifications were not made to reflect this proposed policy in the proposed policies model since the baseline model already incorporated this policy.

(2) In section IV.A.3.d.(4)(c)(iii) of this rule, we proposed to require two of the measures associated with the Public Health and Clinical Data Exchange Objective, beginning with the CY 2022 performance period: Immunization Registry Reporting; and Electronic Case Reporting. Because we lacked data, we did not integrate this requirement into our proposed rule model.

(3) In section IV.A.3.d.(4)(h)(i) of this rule, we proposed to automatically reweight the Promoting Interoperability performance category to another performance category and assigned a weight of zero only in the event a small practice did not submit any data for any of the measures specified for the Promoting Interoperability performance category. This policy was implemented in the proposed policies model.

(4) In section IV.A.3.d.(4)(h)(ii) of this proposed rule, we proposed to reweight the Promoting Interoperability performance category for clinical social workers. This policy was implemented in the proposed policies model.

(5) In section IV.A.3.d.(4)(d) of this proposed rule, we proposed the additional

requirement that eligible clinicians must attest to conducting an annual assessment of the High Priority Guides of the SAFER Guides beginning with the 2022 MIPS performance period. This policy was not implemented in the proposed policies model as it does not affect eligibility or payment. We included this policy in our burden calculations in section V.B.8.g.(3) of this rule.

(e) Methodology to Estimate the Improvement Activities Performance Category Score

For the baseline model, we modeled the improvement activities performance category score based on CY 2019 MIPS performance period data and APM participation identified in section VII.F.17.c.(1) of this proposed rule. For clinicians and groups not participating in a MIPS APM, we used the CY 2019 submissions improvement activities score. We did not model the policy finalized in the CY 2020 performance period (84 FR 62980) to require a minimum threshold of 50 percent of clinicians in a group to complete an improvement activity for the group to receive credit since we did not have data to determine the proportion of clinicians in a group that completed the improvement activity. We continued to apply the methodology described in the CY 2020 PFS final rule (84 FR 63170) to assign an improvement activities performance category score. For the APM participants identified in section VII.F.17.c.(1) of this proposed rule, we assigned an improvement activity performance category score of 100 percent.

For the proposed policies model, we did not make modifications to the baseline model to reflect the proposed policies in section IV.A.3.d.(3) of this proposed rule since we did not have the data to model those changes.

(f) Methodology to Estimate the Complex Patient Bonus Points

In section IV.A.3.e.(2)(a)(iii)(B) of this proposed rule, we proposed to continue the complex patient bonus, with updates, for the CY 2022 MIPS performance period/2024 payment year. For the baseline RIA model, we used the complex patient bonus information calculated for the 2019 performance period data for the 2022 MIPS performance period/2024 payment year, as was previously done in the CY 2021 PFS final rule (85 FR 85017).

For the proposed policies RIA model, we calculated the complex patient bonus using the calculation proposed in section IV.A.3.e.(2)(a)(iii)(B)(cc) of this proposed rule for the CY 2022 performance period/2024 payment year. In section IV.A.3.e.(2)(a)(iii)(B)(aa) of this proposed rule, we propose updates to the complex patient bonus for the CY 2022 performance period/2024 payment year and future MIPS performance periods/payment years to account for social and medical complexity, while still using our current established indicators of dual proportion and HCC risk scores, respectively. Consistent with the proposed policy for the 2022 performance period, our proposed policies RIA model calculated and applied the separate risk indicator complex patient bonus components methodology with a single overall cap described in section IV.A.3.e.(2)(a)(iii)(B)(dd) of this proposed rule.

(g) Methodology to Estimate the Final Score

We did not propose any changes for how we calculated the MIPS final score. Our baseline and proposed policies RIA models assigned a final score for each TIN/NPI by multiplying each estimated performance category score by the corresponding performance category weight, adding the products together, multiplying the sum by 100 points, adding the complex patient bonus, and capping at 100 points.

For the baseline policies RIA model, we applied the performance category weights and redistribution weights finalized in the CY 2021 PFS final rule (85 FR 84913 through 84916).

For the proposed policies RIA model, we proposed to modify the redistribution policy for small practices. Therefore, we applied redistribution weights proposed in section IV.A.3.e.(2)(b)(iii)(A) of this proposed rule.

For both models, after adding any applicable bonus for complex patients, we reset any final scores that exceeded 100 points to equal 100 points. For MIPS eligible clinicians who were assigned a weight of zero percent for any performance category, we redistributed the weights according to section IV.A.3.e.(2)(b)(ii) of this proposed rule.

(h) Methodology to Estimate the MIPS Payment Adjustment

For the baseline and proposed policies RIA models, we applied the hierarchy as finalized in the CY 2021 PFS final rule (85 FR 84917 through 84919) to determine which final score should be used for the payment adjustment for each MIPS eligible clinician when more than one final score is available. We then calculated the parameters of an exchange function in accordance with the statutory requirements related to the linear sliding scale, budget neutrality, minimum and maximum adjustment percentages, and additional payment adjustment for exceptional performance (as proposed under § 414.1405).

For the baseline policies model, we applied the performance threshold and additional performance thresholds finalized for the CY 2021 performance period/2023 payment year (85 FR 84923), of 60 and 85, respectively. For the proposed policies model, we used the performance threshold of 75 points as proposed in section IV.A.3.f. (2) and the additional performance threshold of 89 points as proposed in section IV.A.3.f.(3). We used these resulting parameters to estimate the positive or negative MIPS payment adjustment based on the estimated final score and the paid amount for covered professional services furnished by the MIPS eligible clinician. As discussed in the CY 2021 PFS final rule RIA (85 FR 85013), we adjusted the paid amount of non-engaged clinicians to equal their proportion of paid amount prior to the PHE for COVID-19 for the baseline and proposed policies RIA models.

(3) Impact of Payments by Practice Size

As we shift from previous MIPS transition policies by removing bonuses from the quality performance category and increasing the performance threshold and the additional performance threshold, we observe large changes between the baseline and proposed policies RIA models.

First, we observe an increase in the funds available for redistribution due to the increase in clinicians with final scores below the performance threshold. The baseline model estimates $428 million would be redistributed through budget neutrality and that $500 million would be distributed to MIPS eligible clinicians for exceptional performance. The mean and median final scores for the baseline model are 78.13 and 82.59, respectively. Our proposed policies model

estimates that $587 million would be redistributed through budget neutrality. For clinicians who meet or exceed the additional performance threshold, an additional $425 million was estimated to be distributed. The mean and median final scores for the proposed policies model are 75.86 and 80.30, respectively.

In the proposed model, the estimated bonus for exceptional performance is less than the $500 million of available funding because the maximum additional payment adjustment for clinicians with exceptional performance reached 10 percent. As finalized in the 2017 QPP final rule (81 FR 77339 through 77340), we stated the maximum additional payment adjustment would be 10 percent, which is established by the statute, and that it would be multiplied by a scaling factor that cannot exceed 1.0. We reached the maximum additional payment adjustment allowed of 10 percent because the additional performance threshold is higher, and fewer clinicians performed above this higher additional performance threshold while a greater percentage of clinicians performed below the additional performance threshold. As a result, fewer clinicians were sharing the funds available through the additional bonus for exceptional performance.

Second, we observe an increase in the maximum positive payment adjustment. The baseline model estimates the maximum positive MIPS payment adjustment based on the budget neutral pool at 1.5 percent and the maximum positive MIPS additional payment adjustment for exceptional performance at 5.1 percent, for a combined maximum payment adjustment of 6.6 percent. The proposed policies model estimates the maximum MIPS positive payment adjustment based on the budget neutral pool at 4.0 percent and the maximum positive additional MIPS payment adjustment for exceptional performance bonus at 10.0 percent for a combined maximum payment adjustment of 14.0 percent.

Finally, we no longer observe large differences in performance across practice sizes due to the shift from MIPS transition policies. Table 131 shows the overall impact of the payment adjustments by practice size and based on whether clinicians are expected to submit data to

MIPS for the proposed policies model. We estimate performance under the proposed policies will be similar across all practice sizes. The smallest proportion of clinicians receiving a positive or neutral payment adjustment is among clinicians in practices with 16 to 24 clinicians compared to other sized practices among those who submit data. Table 131 also shows that overall 67.5 percent of MIPS eligible clinicians that participate in MIPS are expected to receive positive or neutral payment adjustments. In Table 132, we present the overall impact of the baseline and the proposed policies models among clinicians who submit data to assess the incremental impact of the proposed policies. The overall proportion of clinicians receiving a positive or neutral payment adjustment decreases from 91.7 percent to 67.5 percent with the implementation of the proposed policies that shift away from MIPS transition policies. Among clinicians who receive a positive payment adjustment in the baseline model and receive a negative payment adjustment in the proposed policies model, only 30 percent receive a negative payment adjustment greater than 1 percent. In addition, we no longer observe a disproportionate number of clinicians in small practices receiving a negative payment adjustment when implementing the proposed policies.

For the CY 2022 performance period/2024 payment year, we have policies targeted towards small practices including special scoring policies to minimize burden and facilitate small practice participation in MIPS or APMs, which we describe in section VII.F.17.f.(2)(e) of this proposed rule. The intention of the proposed policies is to provide a more equitable participation process and reduce the disparity in performance between clinicians in large and small practices. These findings and proposed policies reflect movement away from the transition policies implemented during the early years of MIPS and how MIPS is focusing on value rather than primarily on engagement. However, non-engagement by not submitting data to MIPS among clinicians in small practices is still a concern. Among those who we estimate would not submit data to MIPS, 85 percent are in small practices (23,056 out of 27,108 clinicians who do not submit data). We intend to continue working with stakeholders to improve engagement in MIPS among clinicians in small practices.

We want to highlight we are using 2019 MIPS performance period submissions data to simulate a 2022 MIPS performance period final score, and it is likely that there will be changes that we cannot account for at this time, including services and payments disrupted by the PHE for COVID-19 or clinicians changing behavior in response to the performance thresholds increased for the 2022 performance period/2024 payment year to avoid a negative payment adjustment. It should also be noted that the estimated number of clinicians who do not submit data to MIPS may be an overestimate of non-engagement in MIPS for the CY 2022 MIPS performance period/2024 payment year. This is because the PHE for COVID-19 may have resulted in fewer clinicians submitting data to MIPS or more clinicians electing to apply for the extreme and uncontrollable circumstances policies due to the PHE for COVID-19 for the 2019 MIPS performance period. Therefore, engagement levels in MIPS for the CY 2022 performance period/2024 payment year may differ from these reported estimates. We also note this participation data is generally based off participation for the 2019 performance period, which is associated with the 2019 performance period/2021 payment year and had a performance threshold of 30 points, and that participation may change for the 2022 performance period/2024 payment year when the performance threshold is 75 points.

Finally, the combined impact of negative and positive adjustments and the additional positive adjustments for exceptional performance as a percent of paid amount among those that do not submit data to MIPS was not the maximum negative payment adjustment of 9 percent possible because some MIPS eligible clinicians that do not submit data to MIPS receive a non-zero score for the cost performance category, which utilizes administrative claims data and does not require separate data submission to MIPS.

TABLE 131: MIPS Estimated 2022 Performance Period/2024 Payment Year Impact on Total Estimated Paid Amount by Participation Status and Practice Size**

e. Estimated Impacts on Payments to MIPS Eligible Clinicians for the 2023 MIPS Performance Period/2025 MIPS payment Year

We are proposing for the CY 2023 MIPS Performance Period to begin transitioning to MIPS Value Pathways (MVPs) and introduce subgroup reporting in the CY 2023 MIPS performance period/2025 payment year. As described in section IV.A.3.b.(2)(d) of the proposed rule, the first step in the transition plan for MVPs and subgroup reporting is to be voluntary, where eventually MVPs and subgroups will become required. Additionally, subgroups, if applicable, will have the option to report an APP. Since MVP and subgroup reporting will only begin in the CY 2023 MIPS performance period/2025 payment year, we do not have the data to report who would select MVP and who would report through subgroup in the first year and how these clinicians will score. For this regulatory impact analysis, we assume clinicians who elect to use MVPs and subgroups for reporting to MIPS will perform similarly to how they performed

through traditional MIPS because the scoring policies are similar. As discussed in section V.B.8.e.(7)(a) of this proposed rule, for the purposes of estimating burden associated with the proposal to implement MVP and subgroup reporting, we assume that 10 percent of MIPS eligible clinicians in the CY 2022 MIPS performance period/2024 payment year will report as MVP participants in the CY 2023 MIPS performance period/2025 payment year. In addition, we assume that there will be 20 subgroup reporters in the CY 2023 MIPS performance period/2025 payment year. We anticipate a per respondent reduction of 3 hours and $412 dollars per CQM/QCDR quality submission, 3 hours and $336 per eCQM quality submission, and 5 hours and $717 per claims quality submission. Overall, we estimate a net reduction in burden of $7,463,145 in the quality performance category ICRs due to the introduction of MVP and subgroup reporting in the CY 2023 MIPPS performance period/2025 payment year. We refer readers to section V.B.8.e.(7)(a)(iii) of the proposed rule for further discussion of burden associated with MVPs and subgroups.

f. Additional Impacts from Outside Payment Adjustments

(1) Burden Overall

In addition to policies affecting the payment adjustments, we are proposing several policies that have an impact on burden in the CY 2022 and CY 2023 MIPS performance periods/2024 and 2025 payment years. In section V.B.8 of this proposed rule, we outline estimates of the costs of data collection that includes both the effect of proposed policy updates and adjustments due to the use of updated data sources. For each proposal included in this regulation which impacts our estimate of collection burden, the incremental burden for each is summarized in Table 133. We also provide proposed additional burden discussions that we are not able to quantify.

TABLE 133: Incremental Burden from Associated Proposed Policies

Burden Description and associated finalized proposals	Burden Hours	Burden Dollars
Total burden associated with the proposal to continue the policies and ICRs set forth in the CY 2021 PFS final rule into the	1,468,547	$148,093,881

Burden Description and associated finalized proposals	Burden Hours	Burden Dollars
CY 2022 and 2023 MIPS performance periods (as discussed in section V.B.8.p.)		
Burden change due to proposed policy to continue the CMS Web Interface measures as a collection type/submission type for CY 2022	+7,030	+$669,433
Burden change due to proposed policy to sunset the CMS Web Interface measures as a collection type/submission type for CY 2023*	0	0
Burden change due to proposed policy to continue CMS Web Interface group registration for CY 2022	+23	+2,142
Burden change due to proposed policy to continue CMS Web Interface group registration for CY 2023	0	0
Burden change due to the proposed policy to require QCDRs to submit participation plans for the CY 2022 self-nomination period., if necessary	+156	+$14,826
Burden change due to the proposed policy to require qualified registries to submit participation plans for the CY 2022 self-nomination period., if necessary	+108	+$10,322
Burden change due to the proposed revised criteria for nomination of improvement activities: proposed increase of criteria from 1 to 8 including proposed addition of 2 new criteria for nomination of improvement activities beginning with the CY 2022 Annual Call for MIPS Improvement Activities	+43	+$6,236
Burden change due to proposed automatic reweighting of the Promoting Interoperability performance category for small practices	-3,474	-$330,747
Burden change due to proposed SAFER guides attestation requirement for the Promoting Interoperability performance category for CY 2022	+861	+$81,964
Burden change due to the new ICR for capturing proposed MVP registration requirement for clinicians participating in MVPs reporting beginning with the CY 2023 MIPS performance period*	+3,230	+$307,513
Burden change due to the new ICR for capturing proposed subgroup registration requirement for clinicians choosing to participate as subgroups for reporting the MVP or the APP beginning with the CY 2023 MIPS performance period*	+10	+$952
Burden change for Quality Data Submission by Clinicians: Medicare Part B Claims-Based Collection Type ICR for capturing reduced number of quality submissions due to MVP Quality Submissions beginning with the CY 2023 MIPS performance period*	-40,118	-$4,037,279
Burden change for Quality Data Submission by Clinicians: CQM/QCDR Collection Type ICR for capturing reduced number of quality submissions due to MVP Quality Submissions beginning with the CY 2023 MIPS performance period*	-47,264	-$4,801,691
Burden change for Quality Data Submission by Clinicians: eQM Collection Type ICR for capturing reduced number of quality submissions due to MVP Quality Submissions beginning with the CY 2023 MIPS performance period*	-38,926	-$3,988,122
Burden change due to new ICR for capturing the proposed reduced reporting requirements for the quality performance category of MVPs beginning with the CY 2023 MIPS performance period *	+84,336	+$8,564,735
Total change in burden due to policy for CY 2022	**+3,811**	**-+$358,556**
Total change in burden due to policy for CY 2023	**-40,982**	**- $4,166,021**
Total burden set forth in the CY 2022 PFS proposed rule for CY 2022	**1,428,537**	**$144,040,730**

Burden Description and associated finalized proposals	Burden Hours	Burden Dollars
Total burden set forth in the CY 2022 PFS proposed rule for CY 2023	**1,383,744**	**$139,516,153**

* The total change in burden due to this policy includes a decrease in burden due to elimination of the "Quality Data Submission: CMS Web Interface collection type" ICR beginning with the CY 2023 MIPS performance period and "Group Registration for CMS Web Interface" ICR beginning with the CY 2023 MIPS performance period as well as an increase in burden for the "Quality Data Submission: MIPS CQM and QCDR collection type" and "Quality Data Submission: eCQM collection type" ICRs beginning with the CY 2023 MIPS performance period for respondents who previously submitted via the CMS Web Interface submitting data via an alternate collection type. Burden will decrease in the "Quality Data Submission: MIPS CQM and QCDR collection type," "Quality Data Submission: eCQM collection type," and "Quality Data Submission: Claims collection type" ICRS beginning with the CY 2023 MIPS performance period due to respondents who previously submitted MIPS through those collection types submitting data with reduced Quality submission requirements as a MVP participant. Total change in burden also includes the increase in submission burden due to the introduction of the "MVP Quality Submission," "MVP registration," and "Subgroup registration" ICRs beginning with the CY 2023 MIPS performance period. See section V.B.8 of this proposed rule.

(2) Additional Impacts to Clinicians

(a) Web Interface

As discussed in section IV.A.3.d.(1)(d) of this proposed rule, we are proposing to continue the use of the CMS Web Interface measures as a collection type for groups and virtual groups with 25 or more eligible clinicians for the CY 2022 MIPS performance period/2024 MIPS payment year. We are also proposing to sunset the CMS Web Interface measures as a collection type for groups and virtual groups with 25 or more eligible clinicians starting with the CY 2023 MIPS performance period/2025 MIPS payment year. We refer readers to sections V.B.8.e.(8) and V.B.8.e.(10) of this proposed rule for our discussion on the estimated burden associated with the extension of the CMS Web Interface collection type in CY 2022 MIPS performance period/2024 MIPS payment year and the sunset of the CMS Web Interface collection type in the CY 2023 MIPS performance period/2025 payment year. Additionally, we assume that the impacts associated with the sunset of CMS Web Interface measures as a collection type for groups and virtual groups with 25 or more eligible clinicians will remain the same as our discussion in the CY 2021 PFS final rule (85 FR 85020 through 85021).

As discussed in section IV.A.3.c.(2)(a), we are proposing to extend the CMS Web Interface as a means of reporting quality under the APP for Shared Savings Program ACOs for

the CY 2022 MIPS performance period/2024 payment year and the CY 2023 MIPS performance period/2025 payment year.

(b) Administrative Claims Measure

As discussed in section IV.A.3.d.(1)(e), we are proposing to add the following two new administrative claims measures beginning in the 2022 MIPS performance period and for future performance periods: (1) Risk-Standardized Acute Unplanned Cardiovascular-Related Admission Rates for Patients with Heart Failure for the Merit-based Incentive Payment System; and (2) Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions. We acknowledge there are administrative burdens and related financial costs associated with each administrative claims measure that clinicians, groups, and organizations may choose to monitor. However, because these costs can vary significantly due to organizational size, number of administrative claims measures being reported, volume of clinicians reporting each measure, and the specific methods employed to improve performance, we are unable to provide an estimate of the financial impact each clinician, group, or organization may experience. In summary, we are acknowledging that while there are no data submission requirements per § 414.1325(a)(2)(i) for administrative claim measures, there may be associated costs for clinicians and group practices to monitor new administrative claim measures; however, we are unable to quantify that impact.

(c) Modifications to the Improvement Activities Inventory

As discussed in section IV.A.3.d.(3)(c)(ii) of this proposed rule, we are proposing the removal of 7 previously adopted improvement activities, modification of 15 existing improvement activities, and adoption of 5 new improvement activities. We refer readers to Appendix 2 of this proposed rule for further details. We do not believe these proposed changes to the inventory will impact time or financial burden on stakeholders because MIPS eligible clinicians are still required to submit the same number of activities and the per response time for each activity is uniform. We do not expect these proposed changes to the inventory to affect our

currently approved information collection burden estimates in terms of neither the number of estimated respondents nor the burden per response. We anticipate most clinicians performing improvement activities, to comply with existing MIPS policies, would continue to perform the same activities under the policies in this proposed rule because previously finalized improvement activities continue to apply for the current and future years unless otherwise modified per rulemaking (82 FR 54175). Most of the improvement activities in the Inventory remain unchanged for the CY 2022 MIPS performance period.

(d) Stakeholders Nominating Improvement Activities

In section IV.A.3.d.(3)(c)(i)(B) of this rule, we are proposing: (1) to revise the required criteria for improvement activity nominations received through the Annual Call for Activities; (2) changes to the timeline for improvement activities nomination during a public health emergency (PHE); and (3) to suspend activities that become obsolete or impacted by clinical practice guideline changes from the program when this occurrence happens outside of the rulemaking process.

With regard to the proposal to clarify the timeline for an improvement activity nominated during the PHE, we believe this proposal will not affect our currently approved burden estimates since we believe that the number of nominations will not change, but it would make an activity available for reporting to clinicians in the same performance year it was intended to be implemented. In section IV.A.3.d.(3)(c)(i)(B)(aa) of this rule, we are proposing that in order to implement a new improvement activity for a PHE during the same year as the nomination, the nomination would need to be received no later than January 5th of the nomination year to be included in a rule for notice-and-comment rulemaking during that fiscal or calendar year, a necessary precursor to implementation if it were to be finalized. As described in section V.B.8.j of this rule, we expect additional nominations may be received as a result of this proposal, but we do not have any data with which to estimate what the additional number may be. As a result, we are not making any proposed revisions to our currently approved burden estimate.

Regarding the proposal to suspend activities that become obsolete or impacted by clinical practice guideline changes from the program when this occurrence happens outside of the rulemaking process, we do not anticipate additional burden for stakeholders because of the proposal described above as the proposed policy does not change requirements for the nomination of improvement activities.

As described in section IV.A.3.d.(3)(c)(i)(B) of this rule, due to the proposals to add two new criteria and to increase the number of criteria stakeholders are required to meet when submitting an activity proposal from a minimum of 1 to all 8 criteria, which includes the two new proposed criteria, we propose to revise our estimated annual information collection burden for nomination of improvement activities to 136 hours (31 nominations x 4.4 hr/nomination) at a cost of $20,355 (31 x [(2.8 hr x $114.24/hr) + (1.6 hr x $210.44/hr)]).

(e) Impact on Small Practices

As described in section VII.F.17.d.(3) of this proposed rule RIA, we found 85 percent of clinicians who did not submit data to MIPS were in small practices. However, the estimated number of MIPS eligible clinicians who do not submit data, including those in small practices, may be smaller in the CY 2022 performance period/2024 payment year since more clinicians may choose to submit data after the PHE for COVID-19. CMS is committed to identifying flexibilities and options to help clinicians in small practices participate meaningfully and successfully in MIPS. Specifically, CMS made several proposals to support clinicians in small practices once they engage with MIPS in the quality, improvement activities and Promoting Interoperability performance categories for the CY 2022 performance period/2024 payment year. Based on our RIA model findings described in section VII.F.17.d.(3) of this proposed rule, the proposed policies for the CY 2022 performance period/2024 payment year led to clinicians in small practices no longer disproportionately receiving negative payment adjustments compared to clinicians in larger sized practices. Therefore, the combination of the special scoring policies for clinicians in small practices is expected to positively affect this group of clinicians and will

hopefully encourage and improve future engagement in MIPS among clinicians in small practices.

(f) Impact on Third Party Intermediaries

In section IV.A.3.h. of this rule, we are proposing multiple changes to the third-party intermediary regulations at § 414.1400. Specifically, we are proposing: (1) reorganization and consolidation of § 414.1400 generally; (2) expanding the general participation requirements of third-party intermediaries to third party intermediaries reporting to MIPS on behalf of APM Entities in order to align reporting requirements for all participants in MIPS; (3) beginning with the CY 2023 MIPS performance period/2025 payment year, QCDRs and qualified registries must support MVPs that are applicable to the MVP participants on whose behalf they submit MIPS data. Health IT vendors must support MVPs that are applicable to the MVP participants on whose behalf they submit MIPS data; (4) require QCDRs, qualified registries, health IT vendors, and CAHPS for MIPS survey vendors to support subgroup reporting, beginning with the CY 2023 MIPS performance period/2025 payment year; (5) require QCDRs and qualified registries that have never submitted data since the inception of MIPS (CY 2017 MIPS performance period/2019 payment year) through the 2020 MIPS performance period/2022 payment year, to submit a participation plan as part of their self-nomination for CY 2023; (6) beginning with the 2024 MIPS performance period/2026 payment year, a QCDR or qualified registry that was approved but did not submit any MIPS data for either of the 2 years preceding the applicable self-nomination period must submit a participation plan for CMS' approval; (7) beginning with the CY 2023 MIPS performance period/2025 payment year, the QCDR or qualified registry must submit a data validation plan annually, at the time of self-nomination, for CMS' approval, and may not change the plan once approved, without the prior approval of the agency; and (8) add a rejection criterion to state that a QCDR does not have permission to use a QCDR measure owned by another QCDR for the applicable performance period. Additionally, to provide further clarification of our current policy (84 FR 63070 through 63073), we are proposing to state, if a

QCDR measure owner is not an approved active QCDR for a given self-nomination period, that QCDR measure will not be available for use. The inactive QCDR measure owner has the option to transfer ownership of the QCDR measure to an active QCDR or agree upon terms set forth with the active QCDR allowing co-ownership of the QCDR measure.

With regard to the reorganization and consolidation of § 414.1400 generally, we do not anticipate this to require any additional effort for affected entities as the proposal is to allow CMS to reorganize the existing information.

For the requirements related to expanding the general participation requirements of third-party intermediaries to third party intermediaries reporting to MIPS on behalf of APM Entities in order to align reporting requirements for all participants in MIPS, we do not propose to revise our burden estimates as this requirement is not different from how third-party intermediaries currently submit data for the quality, improvement activities and Promoting Interoperability performance categories in MIPS on behalf of individual eligible clinicians and groups.

As previously discussed in section IV.A.3.h.(2)(b)(ii) of this rule, we are proposing to require QCDRs, qualified registries, health IT vendors, and CAHPS for MIPS survey vendors to support subgroup reporting, beginning with the CY 2023 MIPS performance period/2025 payment year. During the MVP Town Hall held in January 2021 (85 FR 74729), we heard from third-party intermediaries that they are confident that they can make the necessary updates to allow for subgroup reporting, if they have enough time. A few vendors suggested that we add subgroup reporting to the existing CEHRT requirements. Given our proposal described in section IV.A.3.b.(2)(d) of this rule to delay the implementation of subgroup reporting option to the CY 2023 MIPS performance period/2025 payment year, we assume that the proposed delay would give these entities adequate time to make the necessary updates. We assume that there will be no additional burden that third-party intermediaries will incur to implement the subgroup reporting option. We anticipate that there may be administrative burden associated with changes in workflows to their existing systems for submission of subgroup data for the CY 2023 MIPS

performance period/2025 payment year. However, given that each of these entities and their information technology systems are unique, we are unable to quantify the burden for these entities to capture and submit data on behalf of clinicians who may choose to participate as subgroups.

We do not anticipate a significant impact to QCDRs and qualified registries resulting from the finalized proposal to require QCDRs and qualified registries to conduct an annual data validation audit and if one or more deficiencies or data errors are identified also conduct targeted audits. First, we are not revising our burden estimates because the finalized data validation requirements are similar to existing expectations which we have already accounted for the associated burden as stated in the CY 2017 Quality Payment Program final rule (81 FR 77383 through 77384) and the CY 2019 PFS final rule (83 FR 59998 through 59999). Second, we believe that the proposed requirements for conduct of the data validation audits are aligned with methods and procedures which stakeholders currently utilize.

As discussed in section IV.A.3.h.(3)(a)(i) of this rule, due to the proposal to require QCDRs and qualified registries that have never submitted data since the inception of MIPS (CY 2017 MIPS performance period/2019 payment year) through the CY 2020 MIPS performance period/2022 payment year to submit a participation plan as part of their self-nomination for CY 2023 MIPS performance period, we refer readers to section V.B.8.c.(2) of this rule for details on the adjusted burden.

As discussed in section V.B.8.c.(2) of this rule, due to the proposal related to new rejection criteria for QCDR measures, we estimate that the annual burden will range from 855 hours (90 QCDRs x 9.5 hr) to 1,035 hours (90 QCDRs x 11.5 hr) at a cost ranging from $81,413 (855 hr x $95.22/hr) and $98,553 (1,035 hr x $95.22/hr).

(g) Assumptions & Limitations

We note several limitations to our estimates of clinicians' MIPS eligibility and participation, negative MIPS payment adjustments, and positive payment adjustments for the CY

2022 performance year/2024 payment year. Due to the PHE for COVID-19, we are aware that there may be changes in health care delivery and billing patterns that will impact results for the 2022 performance year/2024 payment year that we are not able to model with our historic data sources. The scoring model results presented in this proposed rule assume that CY 2019 Quality Payment Program data submissions and performance are representative of CY 2022 Quality Payment Program data submissions and performance. The estimated performance for the CY 2022 performance year/2024 payment year using CY 2019 Quality Payment Program data may be underestimated because the performance threshold to avoid a negative payment adjustment for the 2019 MIPS performance period/2021 MIPS payment year was significantly lower (30 out of 100 points) than the performance threshold for the 2022 performance year/2024 payment year (75 out of 100). We anticipate clinicians may submit more performance categories to meet the higher performance threshold to avoid a negative payment adjustment.

In our MIPS eligible clinician assumptions, we assumed that clinicians who elected to opt-in in the CY 2019 Quality Payment Program and submitted data would continue to elect to opt-in in the CY 2022 performance year/2024 payment year. It is difficult to predict whether clinicians will elect to opt-in to participate in MIPS with the proposed policies.

There are additional limitations to our estimates in addition to the limitations described throughout the methodology sections: (1) to the extent that there are year-to-year changes in the data submission, volume and mix of services provided by MIPS eligible clinicians, the actual impact on total Medicare revenues will be different from those shown in Table 129; and (2) our cost data does not overlap with CY 2019 so we may not be capturing performance for all clinicians. Due to the limitations described, there is considerable uncertainty around our estimates that is difficult to quantify.

G. Alternatives Considered

This proposed rule contains a range of policies, including some provisions related to specific statutory provisions. The preceding preamble provides descriptions of the statutory

provisions that are addressed, identifies those policies when discretion has been exercised, presents rationale for our policies and, where relevant, alternatives that were considered. For purposes of the payment impact on PFS services of the policies contained in this proposed rule, we presented the estimated impact on total allowed charges by specialty.

1. Alternatives Considered for Utilization Data in PFS Ratesetting

As discussed earlier in this section II.C.1 (Changes in Relative Value Unit (RVU) Impacts), our estimates of changes in Medicare expenditures for PFS services compared payment rates for CY 2021 with payment rates for CY 2022 using CY 2020 Medicare utilization. As an alternative to using CY 2020 data, we considered using CY 2019 utilization data for the purposes of determining the proposed CY 2022 RVUs, as well as in determining the proposed CY 2022 budget neutrality adjustment and conversion factor. We considered using CY 2019 data due to the PHE for COVID-19, which has impacted the delivery of health care services over the past 18 months. Increases in remote delivery of services to reduce risk of exposure to both practitioner and patients, as well as postponement of elective procedures have resulted in a change to service utilization patterns across Medicare FFS payment systems. Specific to the PFS, overall service utilization decreased by approximately 20 percent in CY 2020 compared to CY 2019, which caused us to question whether CY 2020 data is the best available data to use for CY 2022 ratesetting.

In order to determine if lower overall utilization in CY 2020 would result in differential impacts on specialties and practitioners, we modeled the PFS ratesetting process using CY 2019 utilization data. We found that the use of CY 2020 as opposed to CY 2019 data in establishing payment rates had relatively little differential impacts on payment, despite the approximately 20 percent decrease in overall service utilization. Table 134 illustrates specialty-specific impacts using CY 2019 data.

TABLE 134: CY 2022 PFS Estimated Impact on Total Allowed Charges by Specialty using CY 2019 Claims

(A) Specialty	(B) Allowed Charges (mil)	(C) Impact of Work RVU Changes	(D) Impact of PE RVU Changes	(E) Impact of MP RVU Changes	(F) Combined Impact
Allergy/Immunology	$265	0%	-2%	0%	-2%
Anesthesiology	$1,971	0%	1%	0%	1%
Audiologist	$75	0%	-1%	0%	-1%
Cardiac Surgery	$255	0%	0%	0%	0%

Psychiatry	$1,200	0%	1%	0%	1%
Pulmonary Disease	$1,704	0%	1%	0%	1%
Radiation Oncology And Radiation Therapy Centers	$1,825	0%	-5%	0%	-5%
Radiology	$5,064	0%	-1%	0%	-1%

(A) Specialty	(B) Allowed Charges (mil)	(C) Impact of Work RVU Changes	(D) Impact of PE RVU Changes	(E) Impact of MP RVU Changes	(F) Combined Impact
Rheumatology	$615	0%	0%	0%	0%
Thoracic Surgery	$341	0%	0%	0%	0%
Urology	$1,945	0%	0%	0%	0%
Vascular Surgery	$1,269	0%	-7%	0%	-7%
Total	$100,377	0%	0%	0%	0%

The majority of specialties experienced shifts of less than a percent when we used CY 2019 data, as opposed to CY 2020 data, as displayed in Table 123, as the basis for setting rates. Several specialties shifted by approximately one percent. We did not detect a pattern of specialties that were notably affected by the choice of claims data, either positively or negatively. While Pediatrics shifted from a 1 percent impact when we used CY 2020 claims data to a 5-payment impact when we used CY 2019 claims data, this shift is likely due to the smaller amount of allowed charges associated with the Pediatrics specialty.

We analyzed the percentage change in total RVUs per practitioner. Using CY 2019 utilization data, Total RVUs change between -1 percent and 1 percent for 53 percent of practitioners, representing more than 48 percent of the changes in Total RUs for all practitioners, similar to the results we found when using CY 2020 claims that we discussed in section II.C.1. Variations by specialty were also similar to the results we found using CY 2020 claims and are contained in the public use file that describes the percentage change in total RVUs per practitioner.

Similar to the process described in section II.C.1. of this proposed rule, we used CY 2019 claims data to estimate the CY 2021 PFS CF to be 33.6184 which reflects a budget neutrality adjustment under section 1848(c)(2)(B)(ii)(II) of the Act, which we estimated to be -0.04 using CY 2019 data, the 0.00 percent update adjustment factor specified under section 1848(d)(19) of the Act, and the expiration of the 3.75 percent fee schedule payment increase for CY 2021 provided by the CAA. The anesthesia CF, which reflects the same overall PFS adjustments with the addition of anesthesia-specific PE and MP adjustments, would shift by a similar magnitude

as the PFS CF. Thus, the estimated PFS CF and anesthesia CF using CY 2019 data is slightly higher compared to using claims data for CY 2020 with an estimated difference of 0.0336 (a little less than three and half cents). We note that the budget neutrality adjustment will be recalculated for the CY 2022 PFS final rule and the use of CY 2019 claims may or may not be higher than the use of CY 2020 claims based on which policies are ultimately finalized.

2. Alternatives Considered for Clinical Labor Pricing Update

As discussed in the PE section of this rule (section II.B. of this proposed rule), we are proposing to update the clinical labor pricing for CY 2022, in conjunction with the final year of the supply and equipment pricing update. We believe it is important to update the clinical labor pricing to maintain relativity with the recent supply and equipment pricing updates. We noted in regard to the specialty impacts in Table 123 that the proposed clinical labor pricing update will have a significant effect on the valuation of many services. We have occasionally implemented significant updates based on new data through a phased transition across several calendar years. For example, we utilized a 4-year transition for the market-based supply and equipment pricing update which will conclude in CY 2022. We considered, as an alternative, the use of a similar 4-year transition to implement the clinical labor pricing update that could smooth out the increases and decreases caused by the pricing update for affected stakeholders. In order to evaluate a phased approach to the clinical labor pricing update, we modeled the PFS ratesetting process using clinical labor prices which transitioned one quarter of the distance to their fully implemented updated price. Table 135 illustrates specialty-specific impacts using the first year of a potential 4-year phase-in for clinical labor pricing:

TABLE 135: CY 2022 PFS Estimated Impact on Total Allowed Charges by Specialty using the First Year of a 4-Year Clinical Labor Pricing Transition

(A) Specialty	(B) Allowed Charges (mil)	(C) Impact of Work RVU Changes	(D) Impact of PE RVU Changes	(E) Impact of MP RVU Changes	(F) Combined Impact
Allergy/Immunology	$220	0%	0%	0%	0%
Anesthesiology	$2,755	0%	1%	0%	1%
Audiologist	$58	0%	0%	0%	0%
Cardiac Surgery	$203	0%	-1%	0%	-1%
Cardiology	$6,119	0%	-1%	0%	-1%
Chiropractic	$617	0%	0%	0%	0%
Clinical Psychologist	$814	0%	0%	0%	0%
Clinical Social Worker	$873	0%	0%	0%	0%
Colon And Rectal Surgery	$144	0%	0%	0%	0%
Critical Care	$367	0%	0%	0%	0%
Dermatology	$3,454	0%	1%	0%	1%
Diagnostic Testing Facility	$682	0%	5%	0%	5%
Emergency Medicine	$2,525	0%	0%	0%	0%
Endocrinology	$506	0%	1%	0%	1%
Family Practice	$5,725	0%	1%	0%	1%
Gastroenterology	$1,476	0%	0%	0%	0%
General Practice	$368	0%	1%	0%	1%
General Surgery	$1,738	0%	0%	0%	0%
Geriatrics	$175	0%	1%	0%	1%
Hand Surgery	$222	0%	1%	0%	1%
Hematology/Oncology	$1,737	0%	-1%	0%	-1%
Independent Laboratory	$552	0%	0%	0%	0%
Infectious Disease	$639	0%	0%	0%	0%
Internal Medicine	$9,906	0%	0%	0%	1%
Interventional Pain Mgmt	$900	0%	2%	0%	2%
Interventional Radiology	$480	0%	-5%	0%	-5%
Multispecialty Clinic/Other Phys	$138	0%	0%	0%	0%
Nephrology	$2,303	0%	0%	0%	0%
Neurology	$1,354	0%	0%	0%	0%
Neurosurgery	$708	0%	0%	0%	0%
Nuclear Medicine	$50	0%	-1%	0%	-1%
Nurse Anes / Anes Asst	$2,092	0%	1%	0%	1%
Nurse Practitioner	$5,288	0%	0%	0%	1%
Obstetrics/Gynecology	$558	0%	1%	0%	1%
Ophthalmology	$4,365	0%	0%	0%	0%
Optometry	$1,108	0%	0%	0%	0%
Oral/Maxillofacial Surgery	$70	0%	-1%	0%	-1%
Orthopedic Surgery	$3,273	0%	1%	0%	1%
Other	$52	0%	0%	0%	0%
Otolarngology	$1,037	0%	0%	0%	0%
Pathology	$1,061	0%	0%	0%	0%
Pediatrics	$55	0%	0%	0%	0%
Physical Medicine	$1,030	0%	1%	0%	1%
Physical/Occupational Therapy	$3,976	-1%	0%	0%	-1%
Physician Assistant	$2,810	0%	0%	0%	0%
Plastic Surgery	$319	0%	1%	0%	1%
Podiatry	$1,847	0%	1%	0%	1%
Portable X-Ray Supplier	$84	0%	3%	0%	3%
Psychiatry	$1,040	0%	0%	0%	0%
Pulmonary Disease	$1,471	0%	0%	0%	0%
Radiation Oncology And Radiation Therapy Centers	$1,660	0%	-2%	0%	-2%
Radiology	$4,397	0%	-1%	0%	-1%

(A) Specialty	(B) Allowed Charges (mil)	(C) Impact of Work RVU Changes	(D) Impact of PE RVU Changes	(E) Impact of MP RVU Changes	(F) Combined Impact
Rheumatology	$541	0%	0%	0%	0%
Thoracic Surgery	$302	0%	-1%	0%	-1%
Urology	$1,677	0%	0%	0%	1%
Vascular Surgery	$1,144	0%	-5%	0%	-5%
Total	$89,065	0%	0%	0%	0%

Table 135 reflects all other proposed policies for CY 2022 with the only difference from Table 123 being the phased approach to updating the clinical labor pricing. Due to the budget neutral nature of PE under the PFS, we do not project that there would be any changes to the conversion factor if we were to use a 4-year transition for clinical labor pricing. We note that a phased transition would delay the full implementation of updated pricing and continue to rely on outdated data for clinical labor pricing.

3. Alternatives Considered for Split (or Shared) Visits

In section II.F of this proposed rule, we proposed to continue our current policy allowing billing of certain "split" or "shared" evaluation and management (E/M) visits by a physician, when the visit is performed in part by both a physician and an NPP, who are in the same group and the physician performs a substantive portion of the visit. We proposed to codify in our regulations a definition of a split (or shared) visit as an E/M visit in the facility setting that is performed in part by both a physician and NPP who are in the same group, in accordance with applicable laws and regulations, such that the E/M visit could be billed by either the physician or the NPP if it were furnished independently by only one of them in the facility setting (rather than as a split (or shared) visit). We proposed that the physician or NPP who performed the substantive portion of the split (or shared) visit would bill for the visit. We proposed to define substantive portion as more than half of the total time spent by the physician and NPP.

We considered several alternative approaches. First, we considered the option of proposing to disallow split (or shared) visit billing beginning in CY 2022. Under this alternative, in settings where payment for "incident to" services is prohibited, physicians and NPPs would

only be able to bill for visits they furnish in their entirety under their own NPI. Such a policy would be administratively simple, and reduce the likelihood of paying significantly more than the actual resource costs incurred. When physicians and practitioners furnish services in facility settings, they do not ordinarily incur the cost of clinical staff or other PE costs involved in furnishing the services. When the physician bills for an E/M visit, in accordance with section 1833(a)(1)(N) of the Act, the Medicare Part B payment is equal to 80 percent of the payment basis under the PFS which, under section 1848(a)(1) of the Act, is the lesser of the actual charge or the full fee schedule amount for the service. In contrast, if the NPP bills for it, in accordance with section 1833(a)(1)(O) of the Act, the Medicare Part B payment is equal to 80 percent of the lesser of the actual charge or 85 percent of the fee schedule rate. Because of this payment differential and the lower resource costs associated with E/M visits performed partly by a physician and partly by an NPP, it could be argued that the physician should not be able to bill for such a visit and be paid at the higher fee schedule amount. However, our understanding is that longstanding clinical practice relies substantially upon shared visits between physicians and NPPs in facility settings. To avoid the potential disruption in this common medical practice approach, we did not choose to propose to disallow billing for split (or shared) visits and we are instead seeking comment to confirm current practice patterns and whether there is a need for this kind of split billing, and how often.

We also considered, but did not propose, several alternatives for how to define the substantive portion of split (or shared) visit. We considered proposing to define "substantive portion" as any face-to-face portion of the split (or shared) visit, consistent with our current definition. We do not believe it would be appropriate to consider just any portion of the visit – with or without direct patient contact-- as a substantive portion. For instance, we do not believe it would be appropriate to consider a brief or trivial interaction, with or without direct patient contact, such as where the physician merely "pokes their head" into the room, to be a substantive portion of the visit. We do not believe it would be appropriate to permit a physician to bill for a

visit if they do not substantially participate in the visit, given that physicians are paid under the PFS at a higher rate than NPPs. Therefore, we are proposing to define "substantive portion" as more than half of the total time spent by the physician or NPP.

Another alternative we considered, but did not propose, was to utilize the medical decision making (MDM) to define substantive portion. We did not choose this approach because MDM is not easily attributed to a single physician or NPP when the work is shared, because MDM is not necessarily quantifiable and can depend on patient characteristics (for example, risk). We believe that time is a more precise factor than MDM to use as a basis for deciding which practitioner performs the substantive portion of the visit. We believe that using the time spent by each practitioner furnishing the split (or shared) visit would provide a more precise metric than potentially finding a way to parse MDM between the physician and the NPP.

We also considered defining substantive portion as performance of the history and/or physical exam, which are key components of certain E/M visits. Given recent changes in the CPT E/M Guidelines, history and physical exam are no longer necessarily included in all E/M visits, because for office/outpatient E/M visits, the visit level can now be selected based on either MDM or time, and history and exam are performed only as medically appropriate. Also, the CPT Editorial Panel is considering removing history and physical exam as key visit components for institutional visits, similar to the changes already made for office/outpatient E/M visits. Accordingly, defining "substantive portion" as any key component including history or exam is not a viable approach.

Lastly, we considered not defining substantive portion in this proposed rule and instead leaving determinations regarding the substantive portion to MAC and/or medical review discretion. However, this approach would impose a significant burden on MACs to assess individual cases and could lead to too much regional variation in payment. We seek public comment to help inform what we consider to be the "substantive portion" of a split (or shared) visit in institutional settings and assist us in consideration of our proposed definition of

"substantive portion".

We considered disallowing split (or shared) billing in critical care, skilled nursing facility (SNF) and nursing facility (NF) visits, as well as new patient and initial patient visits. We require certain SNF/NF visits to be provided entirely by a physician, but we believe we should allow shared visit billing for other visits that can be shared in these settings. (We refer readers to our Conditions of Participation in 42 CFR 483.30 for information regarding the SNF/NF visits that are required to be performed in their entirety by a physician. That regulation requires that certain SNF/NF visits must be furnished directly and solely by a physician). However, we believe current clinical practice generally allows sharing of critical care visits by appropriately trained and qualified practitioners, and we are seeking comment on this belief and this alternative considered. We proposed to allow split (or shared) visit billing in critical care because we believe the practice of medicine has evolved towards a more team-based approach to care, and greater integration in the practice of physicians and NPPs, particularly when care is furnished by clinicians in the same group in the facility setting. Given this evolution in medical practice, the concerns that may have been present when we issued current policy may no longer be as relevant. We understand that there have been changes in the practice of medicine over the past several years, some facilitated by the advent of EHRs and other systems, toward a more team-based approach to care. There has also been an increase in alternative payment models that employ a more team-based approach to care.

We are proposing to allow split (or shared) visits for both new and established patients as well as initial and subsequent visits. After conducting an internal review, including consulting our medical officers, we believe that the practice of medicine has evolved toward a more team-based approach to care, and greater integration in the practice of physicians and NPPs, particularly when care is furnished by practitioners in the same group in the facility setting. Given this evolution in medical practice, the concerns that may have been present when we issued the manual instructions may no longer be as relevant. We understand that there have been

changes in the practice of medicine over the past several years, some facilitated by the advent of electronic health records (EHRs) and other systems, toward a more team-based approach to care. There has also been an increase in alternative payment models that employ a more team-based approach to care. In considering and reevaluating our policy, we see no reason to preclude the physician or NPP from billing for split (or shared) visits for a new patient, in addition to an established patient, or for initial and subsequent split (or shared) visits. Therefore, we are proposing to permit the physician or NPP to bill for split (or shared) visits for both new and established patients, as well as for initial and subsequent visits. We believe this approach is also consistent with the CPT E/M Guidelines for split (or shared) visits, which does not exclude these types of visits from being billed when furnished as split (or shared) services.

4. Alternatives Considered for Requiring Certain Manufacturers to Report Drug Pricing Information for Part B (§§ 414.802, 414.806)

This provision implements new statutory requirements under sections 1847A and 1927 of the Act, as amended by section 401 of the CAA (for the purposes of this section of this proposed rule, hereinafter is referred to as "section 401"). These new requirements will improve the accuracy of reported prices and limit the use of WAC-based pricing.

As discussed in section III.D.1. of this proposed rule, section 1847A(c)(6)(A) of the Act incorporates the definition of manufacturer at section 1927(k)(5) of the Act, but permits the Secretary to exempt repackagers from the definition of manufacturer, as determined appropriate, for purposes of section 1847A(f)(2) of the Act.

We considered whether to implement the flexibility afforded by the statute. However, implementing the flexibility afforded by the statute could potentially lead to a gap in the ASP reporting requirements, meaning that ASPs could be distorted to the extent that certain sales are carved out of the reporting requirement through the use of repackagers.

As discussed previously in this regulatory impact analysis, we are unable to quantitatively estimate the impacts of this provision. We welcome comments on our approach,

and on the alternative relative to: (1) the likely costs or savings (to manufacturers, beneficiaries, the government, and other stakeholders); and (2) any other related impacts of this provision.

5. Alternatives Considered for the MDPP Expanded Model Emergency Policy

For the MDPP Expanded Model Emergency Policy, no alternatives were considered. The 2-year MDPP service period has depressed interest in MDPP among would-be MDPP suppliers. These proposed actions address stakeholder comments on the barriers to MDPP expanded model success. If we do not take action, we will not be able to scale MDPP as intended, impacting Medicare beneficiary access to this program. Reducing the MDPP from a 24 - to a 12-month services period, increasing the year 1 performance payments, and waiving the Medicare provider enrollment application fee not only better aligns the model with the evidence that helped certify the DPP model test initially, but it will encourage eligible organizations to enroll as MDPP suppliers.

6. Alternatives Considered for the Quality Payment Program

For purposes of the payment impact on the Quality Payment Program, we view the performance threshold as a critical factor affecting the distribution of payment adjustments. We ran a separate proposed policies RIA model based on the actual mean for the CY 2019 performance period/2021 payment year with a performance threshold of 86 and an additional performance threshold of 92 points, which are potential values that may be used for the CY 2022 performance period/2024 payment year. The model with a performance threshold of 86 and additional performance threshold of 92 has the same mean and median final score as our proposed policies RIA model since the performance threshold does not change the final score. We estimate that $ 885 million would be redistributed through budget neutrality. For clinicians who meet or exceed the additional performance threshold, an additional $294 million was distributed. The maximum positive payment adjustment would be 15.5 percent prior to the maximum additional payment adjustment and 25.5 percent after considering the MIPS maximum positive payment adjustment and the additional MIPS payment adjustment for exceptional

performance. In addition, 70.3 percent of MIPS eligible clinicians would receive a negative payment adjustment among those that submit data.

We report the findings for the baseline RIA model which describes the impact for the 2022 MIPS performance period/2024 MIPS payment year if this regulation did not exist. The baseline RIA model has a final score mean of 78.13 and median of 82.59. We estimate that $428 million would be redistributed through budget neutrality. There would be a maximum payment adjustment of 6.6 percent after considering the MIPS payment adjustment and the additional MIPS payment adjustment for exceptional performance. In addition, 8.3 percent of MIPS eligible clinicians would receive a negative payment adjustment among those that submit data.

H. Impact on Beneficiaries

We do not believe these provisions will have a negative impact on beneficiaries given overall PFS budget neutrality.

1. Requiring Certain Manufacturers to Report Drug Pricing Information for Part B (§§ 414.802, 414.806)

Section 1927(b)(3)(A)(iii) of the Act requires manufacturers with a Medicaid drug rebate agreement to report ASP data consistent with the information required for such reporting at section 1847A of the Act. Some manufacturers without Medicaid drug rebate agreements voluntarily submit ASP data for their single source drugs or biologicals that are payable under Part B, however other manufacturers without Medicaid drug rebate agreements do not voluntarily submit such data. Without manufacturer reported ASP data, CMS cannot calculate the ASP payment limit, and consequently, payment is typically based on Wholesale Acquisition Cost (WAC).

Consistent with section 1847A(c)(3) of the Act and our regulations at § 414.804(a)(2), the ASP is net of price concessions. However, consistent with the definition of WAC at section 1847A(c)(6)(B) of the Act, the WAC is not net of price concessions and is thus nearly always, and sometimes significantly, higher than ASP. Drugs with payment allowances based on WAC

may have greater "spreads" between acquisition costs and payment than drugs for which there is an ASP-based payment allowance, which, in turn, may: (1) incent the use of the drug based on its spread rather than on purely clinical considerations; (2) result in increased payments under Medicare Part B; and (3) result in increased beneficiary cost sharing. This provision implements new statutory requirements under sections 1847A and 1927 of the Act, as amended by section 401 of Division CC, Title IV of the CAA, 2021. These new requirements will improve the accuracy of reported payment limits and limit the use of WAC-based pricing.

For single source drugs, these changes may result in lower payment limits because, typically, the WAC plus 3 percent is higher than ASP plus 6 percent. This then translates to cost savings for both the government and beneficiaries, who will pay coinsurance on a lesser amount. However, for the reason stated earlier in this regulatory impact analysis (see section VII.G.4. of this proposed rule), we are unable to predict the magnitude of this effect.

Similarly, payment limits for multiple source drugs could increase or decrease, and we are unable to predict the direction or magnitude of specific or aggregate effects at this time.

We welcome comment on: (1) the likely costs or savings to beneficiaries; and (2) other related impacts of this provision.

2. Determination of ASP for Certain Self-administered Drug Products

Although we are unable to quantify the total magnitude of the potential savings, these changes have the potential to substantially reduce program expenditures and beneficiary coinsurance. The OIG's July 2020 report (discussed in section III.D.2. of this proposed rule) determined that the inclusion of self-administered versions of certolizumab and abatacept in their respective volume-weighted, average ASPs, alone, has resulted in $173 million in additional Medicare beneficiary coinsurance between 2014 and 2018.

The proposed regulatory changes have the potential to result in decreased payment limits for identified billing and payment codes and could, in turn, substantially reduce beneficiary coinsurance. Since section 405 of Division CC, Title IV of the CAA, 2021 directs CMS to

implement the statutory changes at section 1847A(g)(3) of the Act beginning on July 1, 2021, these potential savings may be observed within the year.

We welcome comment on: (1) the likely costs or savings to beneficiaries; and (2) other related impacts of this provision.

3. Medicare Diabetes Prevention Program Expanded Model Emergency Policy

This change will have a positive impact on eligible MDPP beneficiaries, as it better aligns with the CDC's National DPP, giving both the participants and the coaches similar messaging around this program, regardless of payer. MDPP suppliers often offer the MDPP set of services to mixed cohorts, or classes with participants who are not eligible for MDPP, but who are enrolled in a National DPP cohort. Since MDPP generally follows the CDC's National DPP and aligns its program with the CDC's DPRP Standards, it is confusing to participants, coaches, and staff when talking about a 2-year program to its eligible Medicare participants when the non-Medicare participants have a 1-year program. Finally, reducing the MDPP service period from 2 years to one (1) year allows more cohorts to start and finish MDPP during the expanded model initial period of performance, which ends in March 2023.

4. Quality Payment Program

There are several changes in this rule that are expected to have a positive effect on beneficiaries. In general, we believe that many of these changes, including the MVP and subgroup proposals if finalized will lead to meaningful feedback to beneficiaries on the type and scope of care provided by clinicians. Additionally, beneficiaries could use the publicly reported information on clinician performance in subgroups to identify and choose clinicians in multispecialty groups relevant to their care needs. Consequently, we anticipate this will improve the quality and value of care provided to Medicare beneficiaries. For example, several of the new measures include patient-reported outcome-based measures, which may be used to help patients make more informed decisions about treatment options. Patient-reported outcome-based measures provide information on a patient's health status from the patient's point of view and

may also provide valuable insights on factors such as quality of life, functional status, and overall disease experience, which may not otherwise be available through routine clinical data collection. Patient-reported outcome-based measured are factors frequently of interest to patients when making decisions about treatment.

K. Estimating Regulatory Familiarization Costs

If regulations impose administrative costs on private entities, such as the time needed to read and interpret this rule, we should estimate the cost associated with regulatory review. Due to the uncertainty involved with accurately quantifying the number of entities that will review the rule, we assumed that the total number of unique commenters on this year's proposed rule will be the number of reviewers of last year's rule. We acknowledge that this assumption may understate or overstate the costs of reviewing this rule. It is possible that not all commenters will review this year's rule in detail, and it is also possible that some reviewers will choose not to comment on the rule. For these reasons we thought that the number of commenters would be a fair estimate of the number of reviewers of last year's rule. We welcome any comments on the approach in estimating the number of entities which will review this rule.

We also recognized that different types of entities are in many cases affected by mutually exclusive sections of this rule, and therefore for the purposes of our estimate we assume that each reviewer reads approximately 50 percent of the rule. We are seeking comments on this assumption.

Using the wage information from the BLS for medical and health service managers (Code 11-9111), we estimate that the cost of reviewing this rule is $114.24 per hour, including overhead and fringe benefits https://www.bls.gov/oes/current/oes_nat.htm. Assuming an average reading speed, we estimate that it would take approximately 8.0 hours for the staff to review half of this rule. For each facility that reviews the rule, the estimated cost is $913.92 (8.0 hours x $114.24). Therefore, we estimated that the total cost of reviewing this regulation is $36,764,260 ($885.92 x 40,227 reviewers on last year's proposed rule).

J. Accounting Statement

As required by OMB Circular A-4 (available at http://www.whitehouse.gov/omb/circulars/a004/a-4.pdf), in Tables 132 and 133 (Accounting Statements), we have prepared an accounting statement. This estimate includes growth in incurred benefits from CY 2021 to CY 2022 based on the FY 2022 President's Budget baseline.

TABLE 136: Accounting Statement: Classification of Estimated Expenditures

CATEGORY	TRANSFERS
CY 2022 Annualized Monetized Transfers	Estimated increase in expenditures of $2.7 billion for PFS CF update.
From Whom To Whom?	Federal Government to physicians, other practitioners and providers and suppliers who receive payment under Medicare.

TABLE 137: Accounting Statement: Classification of Estimated Costs, Transfer, and Savings

CATEGORY	TRANSFER
CY 2022 Annualized Monetized Transfers of beneficiary cost coinsurance.	-$0.7 billion
From Whom to Whom?	Beneficiaries to Federal Government.

K. Conclusion

The analysis in the previous sections, together with the remainder of this preamble, provided an initial Regulatory Flexibility Analysis. The previous analysis, together with the preceding portion of this preamble, provides an RIA. In accordance with the provisions of Executive Order 12866, this regulation was reviewed by the Office of Management and Budget.

List of Subjects

42 CFR Part 403

Grant programs-health, Health insurance, Hospitals, Intergovernmental relations, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 405

Administrative practice and procedure, Diseases, Health facilities, Health insurance, Health professions, Medical devices, Medicare, Reporting and recordkeeping requirements, Rural areas, X-rays.

42 CFR Part 410

Diseases, Health facilities, Health professions, Laboratories, Medicare, Reporting and recordkeeping requirements, Rural areas, X-rays.

42 CFR Part 411

Diseases, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 414

Administrative practice and procedure, Biologics, Diseases, Drugs, Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 415

Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 423

Administrative practice and procedure, Emergency medical services, Health facilities, Health maintenance organizations (HMO), Health professionals, Medicare, Penalties, Privacy, Reporting and recordkeeping requirements.

42 CFR Part 424

Emergency medical services, Health facilities, Health professions, Medicare Reporting and recordkeeping requirements.

42 CFR Part 425

Administrative practice and procedure, Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, the Centers for Medicare & Medicaid Services proposes to amend 42 CFR chapter IV as set forth below:

PART 403—SPECIAL PROGRAMS AND PROJECTS

1. The authority citation for part 403 continues to read as follows:

Authority: 42 U.S.C. 1302, and 1395hh.

2. In § 403.902:

a. Amend the definition of "Ownership or investment interest" by adding paragraphs (3)(vi) and (vii);

b. Add the definition of "Physician-owned distributorship" in alphabetical order; and

c. Revise the definition of "Short term medical supply or device loan".

The additions and revision read as follows:

§ 403.902 Definitions.

* * * * *

Ownership or investment interest * * *

(3) * * *:

(vi) A titular ownership or investment interest that excludes the ability or right to receive the financial benefits of ownership or investment, including, but not limited to, the distribution of profits, dividends, proceeds of sale, or similar returns on investment; or

(vii) An interest in an entity that arises from an employee stock ownership plan (ESOP) that is qualified under section 401(a) of the Internal Revenue Code of 1986.

* * * * *

Physician-owned distributorship, for the purposes of determining the existence of a reportable ownership or investment interest under this subpart, means an entity that:

(1) Meets the definition of an applicable manufacturer or applicable group purchasing organization as defined in this section, and

(2) Meets at least one of the following two conditions:

(i) Has a minimum of 5 percent direct or indirect ownership or investment interest in the applicable manufacturer or applicable group purchasing organization held by a physician or a physician's immediate family member, or

(ii) A physician or a physician's immediate family member receives compensation from the applicable manufacturer or group purchasing organization in the form of a commission, return on investment, profit sharing, profit distribution, or other remuneration directly or indirectly derived from the sale or distribution of devices by the applicable manufacturer or group purchasing organization in which the physician or physician's immediate family member has ownership.

(3) This physician owned distributor definition does not apply for purposes of any other laws or regulations, including, but not limited to, section 1877 of the Act, the regulations at 42 CFR part 411, subpart J, section 1128B of the Act, or the regulations at 42 CFR 1001.952.

* * * * *

Short term medical supply or device loan means the loan of a covered device or a device under development, or the provision of a limited quantity of medical supplies for a short-term trial period, not to exceed a loan period of 90 cumulative days per calendar year or a quantity of 90 cumulative days of average daily use per calendar year, to permit evaluation of the device or medical supply by the covered recipient.

* * * * *

3. Amend § 403.904 by adding paragraph (a)(3) to read as follows:

§ 403.904 Reports of payments or other transfers of value to covered recipients.

(a) * * *

(3) An applicable manufacturer or applicable group purchasing organization that has reported payments or transfers of value under the scope of this section may not remove, delete, or alter any record/(s) unless an error is discovered in the information that had been furnished, or the record is otherwise believed to meet exceptions for reporting.

* * * * *

4. Amend § 403.908 by revising paragraph (c)(3) and adding paragraph (c)(4) to read as follows:

§ 403.908 Procedures for electronic submission of reports.

* * * * *

(c) * * *

(3) During registration, applicable manufacturers and applicable group purchasing organizations must name two points of contact with appropriate contact information. These points of contact must be updated for 2 years following record submission.

(4) An applicable manufacturer or applicable group purchasing organization that meets the definition of physician-owned distributorship as defined in § 403.902 must identify its status as a physician-owned distributorship when registering or recertifying.

* * * * *

PART 405—FEDERAL HEALTH INSURANCE FOR THE AGED AND DISABLED

5. The authority citation for part 405 continues to read as follows:

Authority: 42 U.S.C. 263a, 405(a), 1302, 1320b–12, 1395x, 1395y(a), 1395ff, 1395hh, 1395kk, 1395rr, and 1395ww(k)

6. Amend § 405.902 by adding the definitions of "Additional documentation", "Additional documentation request (ADR)", "Post-payment medical review", and "Prepayment medical review" in alphabetical order to read as follows:

§ 405.902 Definitions.

Additional documentation means any information requested by a contractor when conducting a prepayment review or post-payment review.

Additional documentation request (ADR) means a contractor's initial documentation request in reviewing claims selected for prepayment review or post-payment review.

* * * * *

Post-payment medical review (or post-payment review) means a review that occurs after payment is made on the selected claim to determine whether the initial determination for payment was appropriate.

Prepayment medical review (or prepayment review) means a review that occurs before an initial determination for payment is made on the selected claim to determine whether payment should be made.

* * * * *

7. Add § 405.903 to read as follows:

§ 405.903 Prepayment review.

(a) A contractor may select a claim(s) for prepayment review.

(b) In conducting a prepayment review, a contractor may issue additional documentation requests to a provider or supplier.

(1) A provider or supplier will be provided 45 calendar days to submit additional documentation in response to a contractor's request, except as stated in paragraph (b)(2) and (c) of this section.

(2) A contractor may accept documentation received after 45-calendar days for good cause. Good cause means situations such as natural disasters, interruptions in business practices, or other extenuating circumstances that the contractor deems good cause in accepting the documentation.

(c) A provider or supplier will be provided 30 calendar days to submit additional documentation in response to a UPIC's request for additional documentation. A UPIC may accept documentation received after the 30 calendar days for good cause. Good cause means situations such as natural disasters, interruptions in business practices, or other extenuating circumstances that the UPIC deems good cause in accepting the documentation.

(d) A contractor's prepayment review will result in an initial determination under § 405.920.

8. Add § 405.929 under the "Initial Determinations" heading in Subpart I to read as follows:

§ 405.929 Post-payment review.

(a) A contractor may select a claim(s) for post-payment review, which is conducted under the reopening authority in § 405.980.

(b) In conducting a post-payment review, a contractor may issue an additional documentation request to a provider or supplier.

(1) A provider or supplier will be provided 45 calendar days to submit additional documentation in response to a contractor's request, except as stated in paragraph (b)(2) and (c) of this section.

(2) A contractor may accept documentation received after 45 calendar days for good cause. Good cause means situations such as natural disasters, interruptions in business practices, or other extenuating circumstances that the contractor deems good cause in accepting the documentation.

(c) A provider or supplier will be provided 30 calendar days to submit additional documentation in response to a UPIC's request for additional documentation. A UPIC may accept documentation received after 30 calendar days for good cause. Good cause means situations such as natural disasters, interruptions in business practices, or other extenuating circumstances that the UPIC deems good cause in accepting the documentation.

(d) The outcome of a contractor's review will result in either no change to the initial determination or a revised determination under § 405.984.

9. Add § 405.930 under the "Initial Determinations" heading in Subpart I to read as follows:

§ 405.930 Failure to respond to additional documentation request.

If a contractor gives a provider or supplier notice and time to respond to an additional documentation request and the provider or supplier does not provide the additional

documentation in a timely manner, the contractor has authority to deny the claim.

10. Amend § 405.986 by revising paragraph (a) introductory text to read as follows:

§ 405.986 Good cause for reopening.

(a) *Establishing good cause for reopening.* Good cause may be established when -

* * * * *

11. Amend § 405.2411 by –

a. Revising paragraph (b)(2);

b. Redesignating paragraph (b)(3) as (4); and

c. Adding a new paragraph (b)(3).

The revision and addition read as follows:

§ 405.2411 Scope of benefits.

* * * * *

(b) * * *

(2) Covered when furnished during a Part A stay in a skilled nursing facility only when provided by a physician, nurse practitioner, physician assistant, certified nurse midwife or clinical psychologist employed or under contract with the RHC or FQHC at the time the services are furnished;

(3) Inclusive of hospice attending physician services, and are covered when furnished during a patient's hospice election only when provided by an RHC/FQHC physician, nurse practitioner, or physician assistant designated by the patient at the time of hospice election as his or her attending physician and employed or under contract with the RHC or FQHC at the time the services are furnished; and

* * * * *

12. Amend § 405.2446 by revising paragraph (c) to read as follows:

§ 405.2446 Scope of services.

* * * * *

(c) FQHC services are covered when provided in outpatient settings only, including a patient's place of residence, which may be a skilled nursing facility or a nursing facility, other institution used as a patient's home, or are hospice attending physician services furnished during a hospice election.

* * * * *

13. Amend § 405.2462 by—

a. Redesignating paragraphs (c) through (g) as paragraphs (e) through (i), respectively;

b. Revising paragraphs (a) through (c)

c. Adding new paragraph (d); and

d. In newly redesignated paragraph (e) introductory text, by removing the reference to "paragraph (d)" and adding in its place the reference to "paragraph (f)".

The additions and revisions read as follows:

§ 405.2462 Payment for RHC and FQHC services.

(a) *Payment to independent RHCs that are authorized to bill under the reasonable cost system*. (1) RHCs that are authorized to bill under the reasonable cost system are paid on the basis of an all-inclusive rate, subject to a payment limit per visit determined in paragraph (b) of this section, for each beneficiary visit for covered services. This rate is determined by the Medicare Administration Contractor (MAC), in accordance with this subpart and general instructions issued by CMS.

(2) The amount payable by the MAC for a visit is determined in accordance with paragraphs (i)(1) and (2) of this section.

(b) *RHC payment limit per visit.* (1) In establishing limits on payment for rural health clinic services provided by rural health clinics the limit for services provided prior to April 1, 2021:

(i) In 1988, after March 31, at $46 per visit; and

(ii) In a subsequent year (before April 1, 2021), at the limit established for the previous year increased by the percentage increase in the Medicare Economic Index (MEI) (as defined in section 1842(i)(3) of the Act) applicable to primary care services (as defined in section 1842(i)(4) of the Act) furnished as of the first day of that year.

(2) In establishing limits on payment for rural health services furnished on or after April 1, 2021, by rural health clinics or any rural health clinic that is enrolled on or after January 1, 2021 under section 1866(j) of the Act), the limit for services provided:

(i) In 2021, after March 31, at $100 per visit;

(ii) In 2022, at $113 per visit;

(iii) In 2023, at $126 per visit;

(iv) In 2024, at $139 per visit;

(v) In 2025, at $152 per visit;

(vi) In 2026, at $165 per visit;

(vii) In 2027, at $178 per visit; and

(viii) In 2028, at $190 per visit.

(ix) In a subsequent year, at the limit established for the previous year increased by the percentage increase in MEI applicable to primary care services furnished as of the first day of such year.

(3) In establishing limits on payment for rural health services furnished on or after April 1, 2021, by provider-based rural health clinics as described in section (c)(4) of this part, the limit for services provided:

(i) In 2021, after March 31, at an amount equal to the greater of:

(A) For rural health clinics that had an all-inclusive rate established for services furnished in 2020--

(*1*) The all-inclusive rate applicable to the rural health clinic for services furnished in 2020, increased by the percentage increase in the MEI applicable to primary care services furnished as of the first day of 2021, or

(*2*) The payment limit per visit applicable in paragraph (2) of this section.

(B) For rural health clinics that did not have an all-inclusive rate established for services furnished in 2020--

(*1*) The all-inclusive rate applicable to the rural health clinic for services furnished in 2021, or

(*2*) The payment limit per visit applicable in paragraph (2) of this section.

(ii) In a subsequent year, at an amount equal to the greater of:

(A) The amount established under paragraph (b)(3)(i)(A) or (B) of this section, as applicable for the previous year, increased by the percentage increase in MEI applicable to primary care services furnished as of the first day of such subsequent year, or

(B) The payment limit per visit applicable under paragraph (2) of this section for such subsequent year.

(c) *Payment to provider-based RHCs that are authorized to bill under the reasonable cost system.* (1) An RHC that is authorized to bill under the reasonable cost system is paid in accordance with parts 405 and 413 of this subchapter, as applicable, if the RHC is—

(i) An integral and subordinate part of a hospital, skilled nursing facility or home health agency participating in Medicare (that is, a provider of services); and

(ii) Operated with other departments of the provider under common licensure, governance and professional supervision.

(2) An RHC, described in paragraph (c)(1) of this section, is paid on the basis of an all-inclusive rate, subject to a payment limit per visit, described in paragraphs (b)(1) and (2) of this part, for each beneficiary visit for covered services when in a hospital with greater than 50 beds as determined in § 412.105(b) of this chapter. This all-inclusive rate is determined by the MAC,

in accordance with this subpart and general instructions issued by CMS. The amount payable by the MAC for a visit is determined in accordance with paragraphs (i)(1) and (2) of this section.

(3) Prior to April 1, 2021, an RHC, described in paragraph (c)(1) of this section, is paid on the basis of an all-inclusive rate and is not subject to a payment limit per visit described in paragraphs (b)(1) and (2) of this part for each beneficiary visit for covered services when in a hospital with less than 50 beds as determined in § 412.105(b) of this chapter. This all-inclusive rate is determined by the MAC, in accordance with this subpart and general instructions issued by CMS. The amount payable by the MAC for a visit is determined in accordance with paragraphs (i)(1) and (2) of this section.

(4) On or after April 1, 2021, an RHC, described in paragraph (c)(1) of this section, is paid on the basis of an all-inclusive rate, subject to a payment limit per visit, described in paragraph (b)(3) of this part, for each beneficiary visit for covered services when it meets the specified qualifications in paragraph(d) of this part. This all-inclusive rate is determined by the MAC, in accordance with this subpart and general instructions issued by CMS. The amount payable by the MAC for a visit is determined in accordance with paragraphs (i)(1) and (2) of this section.

(d) *Specified qualifications*. A provider-based rural health clinic must meet the following qualifications to have a payment limit per visit established in accordance with section (b)(3) of this part.

(1) As of December 31, 2020, was in a hospital with less than 50 beds (as determined in § 412.105(b) of this chapter) and after December 31, 2020 in a hospital that continues to have less than 50 beds (not taking into account any increase in the number of beds pursuant to a waiver during the COVID-19 Public Health Emergency (PHE)); and one of the following circumstances:

(i) As of December 31, 2020, was enrolled under section 1866(j) of the Act (including temporary enrollment during the COVID-19 PHE); or

(ii) Submitted an application for enrollment under section 1866(j) of the Act (or a request for temporary enrollment during the COVID-19 PHE) that was received not later than December 31, 2020.

(2) [Reserved]

* * * * *

14. Amend § 405.2463 by revising paragraphs (a)(1)(i) introductory text, and (b)(3) introductory text to read as follows:

§ 405.2463 What constitutes a visit.

(a) * * *

(1) * * *

(i) Face-to-face encounter (or, for mental health disorders only, an encounter that meets the requirements under paragraph (b)(3) of this section) between an RHC patient and one of the following:

* * * * *

(b) * * *

(3) *Visit - Mental health.* A mental health visit is a face-to-face encounter or an encounter furnished using interactive, real-time, audio and video telecommunications technology or audio-only interactions in cases where the patient is not capable of, or does not consent to, the use of video technology for the purposes of diagnosis, evaluation or treatment of a mental health disorder between an RHC or FQHC patient and one of the following:

* * * * *

15. Amend § 405.2466 by revising paragraph (b)(1)(iv) to read as follows:

§ 405.2466 Annual reconciliation.

* * * * *

(b) * * *

(1) * * *

(iv) For RHCs and FQHCs, payment for pneumococcal, influenza, and COVID-19 vaccine and their administration is 100 percent of Medicare reasonable cost.

* * * * *

16. Amend § 405.2469 by revising paragraph (d) to read as follows:

§ 405.2469 FQHC supplemental payments.

* * * * *

(d) *Per visit supplemental payment*. A supplemental payment required under this section is made to the FQHC when a covered face-to-face encounter or an encounter furnished using interactive, real-time, audio and video telecommunications technology or audio-only interactions in cases where beneficiaries do not wish to use or do not have access to devices that permit a two-way, audio/video interaction for the purposes of diagnosis, evaluation or treatment of a mental health disorder occurs between a MA enrollee and a practitioner as set forth in § 405.2463.

PART 410—SUPPLEMENTARY MEDICAL INSURANCE (SMI) BENEFITS

17. The authority citation for part 410 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395m, 1395hh, 1395rr, and 1395ddd.

18. Amend § 410.33 by revising paragraphs (c), (g)(6)(i), (g)(6)(ii), (g)(8)(i), (g)(8)(ii), and (g)(9) to read as follows:

§ 410.33 Independent diagnostic testing facility.

* * * * *

(c) *Nonphysician personnel*. (1) Except as otherwise stated in paragraph (c)(2) of this section, any nonphysician personnel used by the IDTF to perform tests must demonstrate the basic qualifications to perform the tests in question and have training and proficiency as evidenced by licensure or certification by the appropriate State health or education department. In the absence of a State licensing board, the technician must be certified by an appropriate national credentialing body. The IDTF must maintain documentation available for review that

these requirements are met.

(2) For services that do not require direct or in-person beneficiary interaction, treatment, or testing, any nonphysician personnel used by the IDTF to perform the tests must meet all applicable State licensure requirements for doing so. If there are any applicable State licensure requirements, the IDTF must maintain documentation available for review that these requirements are met.

* * * * *

(g) * * *

(6) * * *

(i) Except as otherwise stated in paragraph (g)(6)(ii) of this section, have a comprehensive liability insurance policy of at least $300,000 per location that covers both the place of business and all customers and employees of the IDTF. The policy must be carried by a nonrelative-owned company. Failure to maintain required insurance at all times will result in revocation of the IDTF's billing privileges retroactive to the date the insurance lapsed. IDTF suppliers are responsible for providing the contact information for the issuing insurance agent and the underwriter. In addition, the IDTF must—

(A) Ensure that the insurance policy must remain in force at all times and provide coverage of at least $300,000 per incident; and

(B) Notify the CMS designated contractor in writing of any policy changes or cancellations.

(ii) Paragraph (g)(6)(i) of this section does not apply to IDTFs that only perform services that do not require direct or in-person beneficiary interaction, treatment, or testing.

* * * * *

(8) * * *

(i) Except as otherwise stated in paragraph (g)(8)(ii) of this section, answer, document, and maintain documentation of a beneficiary's written clinical complaint at the physical site of

the IDTF. (For mobile IDTFs, this documentation would be stored at their home office.) This includes, but is not limited to, the following:

(A) The name, address, telephone number, and health insurance claim number of the beneficiary.

(B) The date the complaint was received, the name of the person receiving the complaint, and a summary of actions taken to resolve the complaint.

(C) If an investigation was not conducted, the name of the person making the decision and the reason for the decision.

(ii) Paragraph (g)(8)(i) of this section does not apply to IDTFs that only perform services that do not require direct or in-person beneficiary interaction, treatment, or testing.

(9) Openly post these standards for review by patients and the public. (This requirement does not apply to IDTFs that only perform services that do not require direct or in-person beneficiary interaction, treatment, or testing.)

* * * * *

19. Amend § 410.37 by adding paragraph (j) to read as follows:

§ 410.37 Colorectal cancer screening tests: Conditions for and limitations on coverage.

* * * * *

(j) Effective January 1, 2022, colorectal cancer screening tests include a planned screening flexible sigmoidoscopy or screening colonoscopy that involves the removal of tissue or other matter or other procedure furnished in connection with, as a result of, and in the same clinical encounter as the screening test.

20. Amend § 410.47 by--

a. Revising the section heading as set forth below;

b. In paragraph (a), revising the definitions of "Individualized treatment plan", "Medical director", Outcomes assessment", "Physician prescribed exercise", "Psychosocial assessment", and "Supervising physician";

c. Revising paragraphs (b), (c), (d), and (e);

d. Removing paragraph (f).

e. Redesignating paragraph (g) as new paragraph (f).

The revisions read as follows:

§ 410.47 Pulmonary rehabilitation program: Conditions of coverage.

(a) * * *

Individualized treatment plan means a written plan tailored to each individual patient that includes all of the following:

(i) A description of the individual's diagnosis.

(ii) The type, amount, frequency, and duration of the items and services furnished under the plan.

(iii) The goals set for the individual under the plan.

Medical director means the physician who oversees the pulmonary rehabilitation program at a particular site.

Outcomes assessment means an evaluation of progress as it relates to the individual's rehabilitation which includes the following:

(i) Evaluations, based on patient-centered outcomes, which must be measured by the physician or program staff at the beginning and end of the program. Evaluations measured by program staff must be considered by the physician in developing and/or reviewing individualized treatment plans.

(ii) Objective clinical measures of exercise performance and self-reported measures of shortness of breath and behavior.

* * * * *

Physician-prescribed exercise means aerobic exercise, combined with other types of exercise (such as conditioning, breathing retraining, step, and strengthening) as determined to be appropriate for individual patients by a physician.

Psychosocial assessment means an evaluation of an individual's mental and emotional functioning as it relates to the individual's rehabilitation or respiratory condition which includes an assessment of those aspects of an individual's family and home situation that affects the individual's rehabilitation treatment, and psychosocial evaluation of the individual's response to and rate of progress under the treatment plan.

* * * * *

Supervising physician means a physician that is immediately available and accessible for medical consultations and medical emergencies at all times items and services are being furnished to individuals under pulmonary rehabilitation programs.

(b) *General rule*. (1) *Covered conditions.* Medicare Part B covers pulmonary rehabilitation for beneficiaries:

(i) With moderate to very severe COPD (defined as GOLD classification II, III and IV), when referred by the physician treating the chronic respiratory disease;

(ii) Who were hospitalized with a COVID-19 diagnosis and experience persistent symptoms, including respiratory dysfunction, for at least four weeks after hospital discharge;

(iii) Additional medical indications for coverage for pulmonary rehabilitation may be established through a national coverage determination (NCD).

(2) *Components.* Pulmonary rehabilitation must include all of the following components:

(i) Physician-prescribed exercise during each pulmonary rehabilitation session.

(ii) Education or training that is closely and clearly related to the individual's care and treatment which is tailored to the individual's needs and assists in achievement of goals toward independence in activities of daily living, adaptation to limitations and improved quality of life. Education must include information on respiratory problem management and, if appropriate, brief smoking cessation counseling.

(iii) Psychosocial assessment.

(iv) Outcomes assessment.

(v) An individualized treatment plan detailing how components are utilized for each patient. The individualized treatment plan must be established, reviewed, and signed by a physician every 30 days.

(3) *Settings.* (i) Medicare Part B pays for pulmonary rehabilitation in the following settings:

(A) A physician's office.

(B) A hospital outpatient setting.

(ii) All settings must have the following:

(A) A physician immediately available and accessible for medical consultations and emergencies at all times when items and services are being furnished under the program. This provision is satisfied if the physician meets the requirements for direct supervision for physician office services at § 410.26 of this subpart; and for hospital outpatient services at § 410.27 of this subpart.

(B) The necessary cardio-pulmonary, emergency, diagnostic, and therapeutic life-saving equipment accepted by the medical community as medically necessary (for example, oxygen, cardiopulmonary resuscitation equipment, and defibrillator) to treat chronic respiratory disease.

(c) *Medical director standards.* The physician responsible for a pulmonary rehabilitation program is identified as the medical director. The medical director, in consultation with staff, is involved in directing the progress of individuals in the program and must possess all of the following:

(1) Expertise in the management of individuals with respiratory pathophysiology.

(2) Cardiopulmonary training in basic life support or advanced cardiac life support.

(3) Be licensed to practice medicine in the State in which the pulmonary rehabilitation program is offered.

(d) *Supervising physician standards*. Physicians acting as the supervising physician must possess all of the following:

(1) Expertise in the management of individuals with respiratory pathophysiology.

(2) Cardiopulmonary training in basic life support or advanced cardiac life support.

(3) Be licensed to practice medicine in the State in which the pulmonary rehabilitation program is offered.

(e) *Limitations on coverage:* The number of pulmonary rehabilitation sessions are limited to a maximum of 2 1-hour sessions per day for up to 36 sessions over up to 36 weeks with the option for an additional 36 sessions over an extended period of time if approved by the Medicare Administrative Contractor.

* * * * *

21. Amend § 410.49 by--

a. In paragraph (a), revising the definition of "Medical director", revising paragraph (i) in the definition of "Outcomes assessment", and revising the definition of "Physician-prescribed exercise"; and

b. Revising paragraphs (b)(1) introductory text, (b)(2) paragraph heading and introductory text, (b)(2)(ii), (b)(3)(i) introductory text, (d) paragraph heading and introductory text, (e) paragraph heading and introductory text, and (f).

The revisions read as follows:

§ 410.49 Cardiac rehabilitation program and intensive cardiac rehabilitation program: Conditions of coverage.

(a) * * *

Medical director means the physician who oversees the cardiac rehabilitation or intensive cardiac rehabilitation program at a particular site.

Outcomes assessment * * *

(i) Evaluations, based on patient-centered outcomes, which must be measured by the physician or program staff at the beginning and end of the program. Evaluations measured by program staff must be considered by the physician in developing and/or reviewing individualized

treatment plans.

* * * * *

Physician-prescribed exercise means aerobic exercise combined with other types of exercise (such as strengthening and stretching) as determined to be appropriate for individual patients by a physician.

* * * * *

(b) * * *

(1) *Covered conditions.* Medicare Part B covers cardiac rehabilitation and intensive cardiac rehabilitation for beneficiaries who have experienced one or more of the following:

* * * * *

(2) *Components*. Cardiac rehabilitation and intensive cardiac rehabilitation must include all of the following:

* * * * *

(ii) Cardiac risk factor modification, including education, counseling, and behavioral intervention, tailored to the individual's needs.

* * * * *

(3) * * *

(i) Medicare Part B pays for cardiac rehabilitation and intensive cardiac rehabilitation in the following settings:

* * * * *

(d) *Medical director standards.* The physician responsible for a cardiac rehabilitation program or intensive cardiac rehabilitation program is identified as the medical director. The medical director, in consultation with staff, is involved in directing the progress of individuals in the program and must possess all of the following:

* * * * *

(e) *Supervising physician standards.* Physicians acting as the supervising physician must

possess all of the following:

* * * * *

(f) *Limitations on coverage.* (1) *Cardiac rehabilitation:* The number of cardiac rehabilitation sessions are limited to a maximum of 2 1-hour sessions per day for up to 36 sessions over up to 36 weeks with the option for an additional 36 sessions over an extended period of time if approved by the Medicare Administrative Contractor.

(2) *Intensive cardiac rehabilitation:* Intensive cardiac rehabilitation sessions are limited to 72 1-hour sessions (as defined in section 1848(b)(5) of the Act), up to 6 sessions per day, over a period of up to 18 weeks.

22. Amend § 410.59 by—

a. Revising paragraph (a)(4)(iii)(B); and

b. Adding paragraphs (a)(4)(iv) and (v).

The revision and additions read as follows:

§ 410.59 Outpatient occupational therapy services: Conditions.

(a) * * *

(4) * * *

(iii) * * *

(B) Except as provided in paragraph (a)(4)(iv) of this section, furnishes a portion of a service, or in the case of a 15-minute timed code, a portion of a unit of service separately from the part furnished by the occupational therapist such that the minutes for that portion of a service (or unit of a service) furnished by the occupational therapist assistant exceed 10 percent of the total minutes for that service (or unit of a service).

(iv) Paragraph (a)(4)(iii)(B) of this section does not apply when determining whether the prescribed modifier applies to the last 15-minute unit of a service billed for a patient on a treatment day when the occupational therapist provides more than the midpoint of a 15-minute timed code, that is, 8 or more minutes, regardless of any minutes for the same service furnished

by the occupational therapy assistant.

(v) Where there are two remaining 15-minute units to bill of the same service, and the occupational therapist and occupational therapy assistant each provided between 9 and 14 minutes of the service with a total time of at least 23 minutes and no more than 28 minutes, one unit of the service is billed with the prescribed modifier for the minutes furnished by the occupational therapy assistant and one unit is billed without the prescribed modifier for the service provided by the occupational therapist.

* * * * *

23. Amend § 410.60 by—

a. Revising paragraph (a)(4)(iii)(B); and

b. Adding paragraphs (a)(4)(iv) and (v).

The revision and additions read as follows:

§ 410.60 Outpatient physical therapy services: Conditions.

(a) * * *

(4) * * *

(iii) * * *

(B) Except as provided in paragraph (a)(4)(iv) of this section, furnishes a portion of a service, or in the case of a 15-minute timed code, a portion of a unit of service separately from the part furnished by the physical therapist such that the minutes for that portion of a service (or unit of a service) furnished by the physical therapist assistant exceed 10 percent of the total minutes for that service (or unit of a service).

(iv) Paragraph (a)(4)(iii)(B) of this section does not apply when determining whether the prescribed modifier applies to the last 15-minute unit of a service billed for a patient on a treatment day, when the physical therapist provides more than the midpoint of a 15-minute timed code, that is, 8 or more minutes, regardless of any minutes for the same service furnished by the physical therapist assistant.

(v) Where there are two remaining 15-minute units to bill of the same service, and the physical therapist and physical therapist assistant each provided between 9 and 14 minutes of the service with a total time of at least 23 minutes, one unit of the service is billed with the prescribed modifier for the minutes furnished by the physical therapist assistant and one unit is billed without the prescribed modifier for the service provided by the physical therapist.

* * * * *

24. Amend § 410.67 by—

a. In paragraph (b), revising paragraphs (3) and (4) in the definition of "Opioid use disorder treatment service";

b. Revising paragraphs (d)(4)(ii) and (iii), and (d)(5);

c. Adding paragraph (d)(6).

The revisions and addition read as follows:

§ 410.67 Medicare coverage and payment of Opioid use disorder treatment services furnished by Opioid treatment programs.

* * * * *

(b) * * *

Opioid use disorder treatment service * * *

(3) Substance use counseling by a professional to the extent authorized under State law to furnish such services including services furnished via two-way interactive audio-video communication technology, as clinically appropriate, and in compliance with all applicable requirements. During a Public Health Emergency, as defined in § 400.200 of this chapter, or for services furnished after the end of such emergency, in cases where audio/video communication technology is not available to the beneficiary, the counseling services may be furnished using audio-only telephone calls if all other applicable requirements are met.

(4) Individual and group therapy with a physician or psychologist (or other mental health professional to the extent authorized under State law), including services furnished via two-way

interactive audio-video communication technology, as clinically appropriate, and in compliance with all applicable requirements. During a Public Health Emergency, as defined in § 400.200 of this chapter, or for services furnished after the end of such emergency, in cases where audio/video communication technology is not available to the beneficiary, the therapy services may be furnished using audio-only telephone calls if all other applicable requirements are met.

*****

(d) * * *

(4) ***

(ii) The payment amounts for the non-drug component of the bundled payment for an episode of care, the adjustments for counseling or therapy, intake activities, periodic assessments, and the non-drug component of the adjustment for take-home supplies of opioid antagonist medications will be geographically adjusted using the Geographic Adjustment Factor described in § 414.26 of this chapter.

(iii) The payment amounts for the non-drug component of the bundled payment for an episode of care, the adjustments for counseling or therapy, intake activities, periodic assessments, and the non-drug component of the adjustment for take-home supplies of opioid antagonist medications will be updated annually using the Medicare Economic Index described in § 405.504(d) of this chapter.

(5) Payment for medications delivered, administered or dispensed to a beneficiary as part of the bundled payment or an adjustment to the bundled payment under paragraph (d)(4)(i) of this section is considered a duplicative payment if a claim for delivery, administration or dispensing of the same medications for the same beneficiary on the same date of service was also separately paid under Medicare Part B or Part D. CMS will recoup the duplicative payment made to the opioid treatment program.

(6) When substance use counseling under paragraph (b)(3) of this section or therapy services under paragraph (b)(4) of this section are furnished using audio-only telephone calls

after the end of the Public Health Emergency as defined in § 400.200 of this chapter, the practitioner must document in the beneficiary's medical record that the services were furnished using audio-only technology and the rationale for doing so. For purposes of the adjustment to the bundled payment under paragraph (d)(4)(i)(A) of this section, the practitioner must also certify, in a form and manner specified by CMS, that they had the capacity to furnish the services using two-way, audio/video communication technology, but used audio-only technology because audio/video communication technology was not available to the beneficiary.

* * * * *

25. Add § 410.72 to read as follows:

§ 410.72 Registered dietitians' and nutrition professionals' services.

(a) *Definition: Registered dietitians and nutrition professionals.* Meet the qualifications at § 410.134.

(b) *Covered registered dietitian and nutrition professional services.* Medicare Part B covers:

(1) *Coverage condition.* Medical nutrition therapy (MNT) services as defined at § 410.130 under the conditions of coverage at § 410.132.

(2) *Other services.* Registered dietitians and nutrition professionals may also provide diabetes self-management (DSMT) services if they are or represent an accredited DSMT entity and have an order from a physician or qualified nonphysician practitioner who is treating the patient's diabetic condition.

(3) *Limits on MNT and DSMT*. (i) DSMT and MNT cannot be furnished to a patient on the same date of service, and

(ii) MNT and DSMT services cannot be furnished incident to the professional services of a physician or nonphysician practitioner service.

(c) *Limitations*. The following services are not registered dietitian or nutrition professional services for purposes of billing Medicare Part B:

(1) Services furnished by a registered dietitian or nutrition professional to an inpatient of a Medicare-participating hospital.

(2) Services furnished by a registered dietitian or nutrition professional to an inpatient of a Medicare-participating SNF.

(3) Services furnished by a registered dietitian or nutrition professional to a patient in a Medicare-participating ESRD facility in accordance with the limitation on coverage of MNT service listed at § 410.132(b)(1).

(d) *Professional services.* Registered dietitians and nutrition professionals can be paid for professional services only when the services have been personally performed by them.

(e) *Telehealth services.* MNT and DMST services may be provided as telehealth service (meeting the requirements in § 410.78) when registered dietitians or nutrition professionals act as distant site practitioners.

(f) *Restrictions*. The services are provided on an assignment-related basis, and a registered dietitian or nutrition professional may not charge a beneficiary for a service not payable under this provision. If a beneficiary has made payment for a service, the registered dietitian or nutrition professional must make the appropriate refund to the beneficiary.

26. Amend § 410.74 by revising paragraph (a)(2)(v) to read as follows:

§ 410.74 Physician assistants' services.

(a) * * *

(2) * * *

(v) Prior to January 1, 2022, furnishes services that are billed by the employer of a physician assistant; and

* * * * *

27. Amend 410.78 by—

a. Revising paragraph (a)(3); and

b. Adding paragraphs (b)(3)(xiii) and (xiv), and (b)(4)(iv)(D).

The revision and additions read as follows:

§ 410.78 Telehealth services.

(a) * * *

(3) *Interactive telecommunications system* means, except as otherwise provided in this paragraph, multimedia communications equipment that includes, at a minimum, audio and video equipment permitting two-way, real-time interactive communication between the patient and distant site physician or practitioner. For services furnished for purposes of diagnosis, evaluation, or treatment of a mental health disorder to a patient in their home, interactive telecommunications may include two-way, real-time audio-only communication technology if the distant site physician or practitioner is technically capable to use an interactive telecommunications system as defined in the previous sentence, but the patient is not capable of, or does not consent to, the use of video technology. A modifier designated by CMS must be appended to the claim for services described in this paragraph to verify that these conditions have been met.

* * * * *

(b) * * *

(3) * * *

(xiii) A rural emergency hospital (as defined in section 1861(kkk)(2) of the Act), for services furnished on or after January 1, 2023.

(xiv) The home of a beneficiary for the purposes of diagnosis, evaluation, and/or treatment of a mental health disorder for services furnished on or after the first day after the end of the PHE as defined in our regulation at § 400.200. Payment will not be made for a telehealth service furnished under this paragraph unless the physician or practitioner has furnished an item or service in person, without the use of telehealth, for which Medicare payment was made (or would have been made if the patient were entitled to, or enrolled for, Medicare benefits at the time the item or service is furnished) within 6 months prior to the initial telehealth service and at

least once within 6 months prior to the initial telehealth service and at least once within 6 months before any subsequent Medicare telehealth service.

(4) * * *

(iv) * * *

(D) Services furnished on or after the first day after the end of the PHE as defined in our regulation at § 400.200 for the purposes of diagnosis, evaluation, and/or treatment of a mental health disorder. Payment will not be made for a telehealth service furnished under this paragraph unless the physician or practitioner has furnished an item or service in person, without the use of telehealth, for which Medicare payment was made (or would have been made if the patient were entitled to, or enrolled for, Medicare benefits at the time the item or service is furnished) within 6 months prior to the initial telehealth service and within 6 months of any subsequent telehealth service.

* * * * *

28. Amend § 410.79 by—

a. Revising paragraph (c)(1)(ii);

b. Removing the second duplicate paragraph (c)(3)(ii); and

c. Revising paragraph (e)(3)(v)(C).

The revisions read as follows:

§ 410.79 Medicare Diabetes Prevention Program expanded model: Conditions of coverage.

* * * * *

(c) * * *

(1) * * *

(ii) An MDPP beneficiary is eligible for the first ongoing maintenance session interval only if the beneficiary:

(A) Starts his or her first core session on or before December 31, 2021;

(B) Attends at least one in-person core maintenance session during the final core

maintenance session interval; and

(C) Achieves or maintains the required minimum weight loss at a minimum of one in-person core maintenance session during the final core maintenance session interval.

* * * * *

(e) * * *

(3) * * *

(v) * * *

(C) Beneficiaries who began the set of MDPP services between January 1, 2021 and December 31, 2021 and who are in the second year of the set of MDPP services as of the start of an applicable 1135 waiver event, whose in-person sessions are suspended due to the applicable 1135 waiver event, and who elect not to continue with MDPP services virtually, may restart the ongoing maintenance session interval in which they were participating at the start of the applicable 1135 waiver event or may resume with the most recent attendance session of record.

* * * * *

29. Amend § 410.105 by—

a. Revising paragraph (d)(3)(ii); and

b. Adding paragraphs (d)(3)(iii) and (iv).

The revision and additions read as follows:

§ 410.105 Requirements for coverage of CORF services.

* * * * *

(d) * * *

(3) * * *

(ii) Except as provided in paragraph (d)(3)(iii) of this section, furnishes a portion of a service, or in the case of a 15-minute timed code, a portion of a unit of service, separately from the part furnished by the physical or occupational therapist such that the minutes for that portion

of a service (or unit of a service) exceed 10 percent of the total time for that service (or unit of a service).

(iii) Paragraph (d)(3)((ii) of this section does not apply when determining whether the prescribed modifier applies to the last 15-minute unit of a service billed for a patient on a treatment day when the physical or occupational therapist provides more than the midpoint of a 15-minute timed code, that is, 8 or more minutes, regardless of any minutes for the same service furnished by the physical therapist assistant or occupational therapy assistant.

(iv) Where there are two remaining 15-minute units to bill of the same service and the physical therapist and the physical therapist assistant or the occupational therapist and the occupational therapy assistant, as applicable, each provided between 9 and 14 minutes, with a total time of at least 23 minutes, one unit of the service is billed with the prescribed modifier for the minutes furnished by the physical therapist assistant or occupational therapy assistant and one unit is billed without the prescribed modifier for the service provided by the physical therapist or occupational therapist.

30. Amend § 410.130 by—

a. Revising the definition of "Chronic renal insufficiency"; and

b. Removing the definition of "Treating physician".

The revision reads as follows:

§ 410.130 Definitions.

* * * * *

Chronic renal insufficiency means the stage of renal disease associated with a reduction in renal function not severe enough to require dialysis or transplantation (glomerular filtration rate [GFR] 15 – 59 ml/min/1.73m^2).

* * * * *

31. Amend § 410.132 by revising paragraphs (a), (b)(5), and (c) to read as follows.

§ 410.132 Medical nutrition therapy.

(a) *Conditions for coverage of MNT services.* Medicare Part B pays for MNT services provided by a registered dietitian or nutrition professional as defined in § 410.134 when the beneficiary is referred for the service by a physician.

(b) * * *

(5) An exception to the maximum number of hours in paragraphs (b)(2), (3), and (4) of this section may be made when a physician determines that there is a change of diagnosis, medical condition, or treatment regimen related to diabetes or renal disease that requires a change in MNT during an episode of care.

(c) *Referrals.* Referral may only be made by a physician when the beneficiary has been diagnosed with diabetes or renal disease as defined in this subpart with documentation noted by a referring physician in the beneficiary's medical record.

32. Amend § 410.150 by revising paragraph (b)(15) to read as follows:

§ 410.150 To whom payment is made.

* * * * *

(b) * * *

(15)(i) Prior to January 1, 2022, to the qualified employer of a physician assistant for professional services furnished by the physician assistant and for services and supplies provided incident to his or her services. Payment is made to the employer of a physician assistant regardless of whether the physician assistant furnishes services under a W-2, employer-employee employment relationship, or whether the physician assistant is an independent contractor who receives a 1099 reflecting the relationship. Both types of relationships must conform to the appropriate guidelines provided by the Internal Revenue Service. A qualified employer is not a group of physician assistants that incorporate to bill for their services. Payment is made only if no facility or other provider charges or is paid any amount for services furnished by a physician assistant.

(ii) Effective on or after January 1, 2022, payment is made to a physician assistant for

professional services furnished by a physician assistant in all settings in both rural and nonrural areas and for services and supplies furnished incident to those services. Payment is made only if no facility or other provider charges, or is paid, any amount for the furnishing of professional services of the physician assistant.

* * * * *

33. Amend § 410.152 by revising paragraphs (l) introductory text and (l)(5) to read as follows:

§ 410.152 Amounts of payment.

* * * * *

(l) *Amount of payment: Preventive services.* Except as provided otherwise in this paragraph, Medicare Part B pays 100 percent of the Medicare payment amount established under the applicable payment methodology for the furnished by a provider or supplier for the following preventive services:

* * * * *

(5) Colorectal cancer screening tests (excluding barium enemas).

(i) For the colorectal cancer screening tests described in § 410.37(j) of this part, Medicare Part B pays at the specified percentage as follows:

(A) 80 percent for CY 2022.

(B) 85 percent for CY 2023 through 2026.

(C) 90 percent for 2027 through 2029.

(D) 100 percent beginning January 1, 2030.

(ii) [Reserved]

* * * * *

PART 411—EXCLUSIONS FROM MEDICARE AND LIMITATIONS ON MEDICARE PAYMENT

34. The authority citation for part 411 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395w-101 through 1395w-152, 1395hh, and 1395nn.

35. Amend § 411.351 by revising the definition of "List of CPT/HCPCS Codes" to read as follows:

§ 411.351 Definitions.

* * * * *

List of CPT/HCPCS Codes means the list of CPT and HCPCS codes that identifies those items and services that are designated health services under section 1877 of the Act or that may qualify for certain exceptions under section 1877 of the Act. It is updated each calendar quarter and posted on the CMS website at https://www.cms.gov/Medicare/Fraud-and-Abuse/PhysicianSelfReferral/List_of_Codes.

* * * * *

36. Amend §311.354 by—

a. Revising paragraphs (c)(2)(ii)(A)(*2*) and (*3*);

b. Adding paragraph (c)(2)(ii)(A)(*4*); and

c. Revising paragraph (c)(2)(ii)(B).

The revisions and addition read as follows:

§ 411.354 Financial relationship, compensation, and ownership or investment interest.

* * * * *

(c) * * *

(2) * * *

(ii) * * *

(A) * * *

(*2*) Is calculated using a formula that includes the physician's referrals to the entity furnishing designated health services as a variable, resulting in an increase or decrease in the amount of compensation that positively correlates with the number or value of the physician's referrals to the entity;

(*3*) Is calculated using a formula that includes other business generated by the physician for the entity furnishing designated health services as a variable, resulting in an increase or decrease in the amount of compensation per unit that positively correlates with the physician's generation of other business for the entity; or

(*4*) Is payment for anything other than services personally performed by the physician (or immediate family member).

(B) For purposes of applying paragraph (c)(2)(ii)(A) of this section:

(*1*) A positive correlation between two variables exists when one variable decreases as the other variable decreases, or one variable increases as the other variable increases.

(*2*) The individual unit is:

(*i*) Time, where the compensation paid to the physician (or immediate family member) is based solely on the period of time during which the services are provided.

(*ii*) Service, where the compensation paid to the physician (or immediate family member) is based solely on the service provided.

(*iii*) Time, where the compensation paid to the physician (or immediate family member) is not based solely on the period of time during which a service is provided or based solely on the service provided.

(*3*) Services that are personally performed by a physician (or immediate family member) do not include services that are performed by any person other than the physician (or immediate family member), including, but not limited to, the referring physician’s (or immediate family member’s) employees, independent contractors, group practice members, or persons supervised by the physician (or the immediate family member).

* * * * *

37. Amend § 411.355 by revising paragraph (h) to read as follows:

§ 411.355 General exceptions to the referral prohibition related to both ownership/ investment and compensation.

* * * * *

(h) *Preventive screening tests and vaccines.* (1) Preventive screening tests and vaccines that meet the following conditions:

(i) The preventive screening test or vaccine is listed on the List of CPT/HCPCS Codes as a code to which the exception in this paragraph (h) is applicable.

(ii) The preventive screening test or vaccine is covered by Medicare.

(iii) The preventive screening test or vaccine is subject to a CMS-mandated frequency limit.

(2) During such period as the vaccine is not subject to a CMS-mandated frequency limit, paragraph (h)(1)(iii) of this section does not apply to a COVID-19 vaccine identified on the List of CPT/HCPCS Codes as a code to which the exception in this paragraph (h) is applicable.

* * * * *

PART 414—PAYMENT FOR PART B MEDICAL AND OTHER HEALTH SERVICES

38. The authority citation for part 414 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395hh, and 1395rr(b)(l).

39. Amend § 414.64 by revising paragraph (a) to read as follows:

§ 414.64 Payment for medical nutrition therapy.

(a) *Payment under the physician fee schedule.* Medicare payment for medical nutrition therapy is made under the physician fee schedule in accordance with subpart B of this part. Payment to nonphysician professionals, as specified in paragraph (b) of this section, is 80 percent (or 100 percent if such services are recommended with a grade of A or B by the United States Preventive Services Task Force for any indication or population and are appropriate for the individual) or the lesser of the actual charges or 85 percent of the physician fee schedule amount.

* * * * *

40. Amend § 414.84 by—

a. Revising paragraphs (b)(1)(i)

b. In paragraph (b)(1)(ii) by removing the reference “CY 2018” and adding in its place

the reference “CY 2022”;

c. Revising paragraph (b)(2)(i)

d. In paragraph (b)(2)(ii) by removing the reference CY 2018” and adding in its place the reference “CY 2022”;

e. Revising paragraph (b)(3)(i);

f. In paragraph (b)(3)(ii) by removing the reference “CY 2018” and adding in its place the reference “CY 2022”;

g. Revising paragraph (b)(4)(i)(A);

h. In paragraphs (b)(4)(i)(B) and (b)(4)(ii)(B) by removing the reference “CY 2018” and adding in its place the reference “CY 2022”

i. Revising paragraph (b)(4)(ii)(A); and

j. Revising paragraphs (b)(5), (b)(6)(i), (b)(7)(i) and (ii), and (c).

The revisions read as follows:

§ 414.84 Payment for MDPP Services.

* * * * *

(b) * * *

(1) * * *

(i) For a first core session furnished January 1, 2022 through December 31, 2022 the amount is $26.

* * * * *

(2) * * *

(i) For the fourth core session furnished January 1, 2022 through December 31, 2022 the amount is $78.

* * * * *

(3) * * *

(i) For the ninth core session furnished January 1, 2022 through December 31, 2022 the

amount is $130.

* * * * *

(4) * * *

(i) * * *

(A) For a second core maintenance session January 1, 2022 through December 31, 2022 the amount is $106.

* * * * *

(ii) * * *

(A) For a second core maintenance session January 1, 2022 through December 31, 2022 the amount is $52.

* * * * *

(5) *Performance Goal 5: Attends two ongoing maintenance sessions and maintains the required minimum weight loss during an ongoing maintenance session interval.* For an MDPP beneficiary who attends his or her first core session on or before December 31, 2021, CMS makes a performance payment to an MDPP supplier if an MDPP beneficiary attends two ongoing maintenance sessions during an ongoing maintenance session interval, achieves attendance at that second ongoing maintenance session upon attendance at an ongoing maintenance session furnished by that supplier, and achieves or maintains the required minimum weight loss as measured in-person during an ongoing maintenance session furnished during the applicable ongoing maintenance session interval. CMS makes this performance payment to an MDPP supplier only once per MDPP beneficiary per ongoing maintenance session interval. The amount of this performance payment is determined as follows:

(i) For a second ongoing maintenance session furnished in interval 1 (months 13-15 of the MDPP services period), January 1, 2022 through December 31, 2022 the amount is $52.

(ii) For a second ongoing maintenance session furnished in interval 2 (months 16-18 of the MDPP services period), January 1, 2022 through December 31, 2022 the amount is $52.

(iii) For a second ongoing maintenance session furnished in interval 3 (months 19-21 of the MDPP services period), January 1, 2022 through December 31, 2022 the amount is $53.

(iv) For a second ongoing maintenance session furnished in interval 4 (months 22-24 of the MDPP services period), January 1, 2022 through December 31, 2022 the amount is $53.

(v) For a second ongoing maintenance session furnished during a subsequent year. The performance payment amount specified in this paragraph, adjusted as specified in paragraph (d) of this section.

(6) * * *

(i) For a core session or core maintenance session, as applicable, furnished January 1, 2022 through December 31, 2022 the amount is $189.

* * * * *

(7) * * *

(i) For a core session or core maintenance session, as applicable, furnished January 1, 2022 through December 31, 2022 the amount is $26.

(ii) For a core session or core maintenance session, as applicable, furnished during a calendar year subsequent to CY 2018. The performance payment amount specified in this paragraph, adjusted as specified in paragraph (d) of this section.

(c) *Bridge payment.* CMS makes a bridge payment to an MDPP supplier only for a core session or core maintenance session furnished to an MDPP beneficiary who has previously received MDPP services from a different MDPP supplier. An MDPP supplier that has previously been paid either a bridge payment or a performance payment for an MDPP beneficiary is not eligible to be paid a bridge payment for that beneficiary. A bridge payment is made only on an assignment-related basis in accordance with § 424.55 of this chapter, and MDPP suppliers must accept the Medicare allowed charge as payment in full and may not bill or collect from the beneficiary any amount. CMS will make a bridge payment only to an MDPP supplier that complies with all applicable enrollment and program requirements, and only for MDPP services

furnished by an eligible coach, on or after his or her coach eligibility start date and, if applicable, before his or her coach eligibility end date. As a condition of payment, the MDPP supplier must report the NPI of the coach who furnished the session on the claim for the MDPP session. The amount of the bridge payment is determined as follows:

(1) For core session or core maintenance session, as applicable, furnished January 1, 2022 through December 31, 2022 the amount is $26.

(2) For core session and core maintenance session, as applicable, furnished during a calendar year subsequent to CY 2022. The bridge payment amount specified in this paragraph, adjusted as specified in paragraph (d) of this section.

* * * * *

41. Amend § 414.626 by revising paragraphs (b)(1) and (f) to read as follows:

§ 414.626 Data reporting by ground ambulance organizations.

* * * * *

(b) * * *

(1) Within 30 days of the date that CMS notifies a ground ambulance organization under paragraph (c)(3) of this section that it has selected the ground ambulance organization to report data under this section, the ground ambulance organization must select a data collection period that corresponds with its annual accounting period and provide the start date of that data collection period to CMS or its contractor.

* * * * *

(f) *Public availability of data.* Beginning in 2024, and at least once every 2 years thereafter, CMS will post on its website data that it collected under this section, including but not limited to summary statistics and ground ambulance organization characteristics.

* * * * *

42. Amend § 414.802 by revising the definition of "Drug" to read as follows:

§ 414.802 Definitions.

* * * * *

Drug means a drug or a biological, and for purposes of applying section 1847A(f) of the Act, includes an item, service, supply, or product that is payable under Medicare Part B as a drug or biological.

* * * * *

43. Section 414.806 is revised to read as follows:

§ 414.806 Penalties associated with misrepresentation and the failure to submit timely and accurate ASP data.

(a) *Misrepresentation*. Section 1847A(d)(4)(A) specifies the penalties associated with misrepresentations in the reporting of the manufacturer's average sales price for a drug as defined at § 414.802.

(b) *Failure to provide timely information or the submission of false information*. (1) For a manufacturer that has entered into and has in effect a rebate agreement under section 1927 of the Act, section 1927(b)(3)(C) of the Act specifies the penalties associated with a manufacturer's failure to submit timely information or the submission of false information.

(2) For a manufacturer that has not entered into and does not have in effect a rebate agreement under section 1927 of the Act, sections 1847A(d)(4)(B) and (C) of the Act specify the penalties associated with a manufacturer's failure to submit timely information or the submission of false information.

44. Amend § 414.904 by adding paragraph (d)(4) to read as follows:

§ 414.904 Average sales price as the basis for payment.

* * * * *

(d) * * *

(4) *Payment adjustment for certain drugs for which there is a self-administered version.*

(i) *In general*. Except as provided in paragraphs (d)(4)(ii) and (iii) of this section, if the Inspector General identifies a drug or biological product in a study described in section

1847A(g)(1) of the Act, the Secretary must apply the payment limit for the applicable billing and payment code as specified in paragraph (d)(4)(iv) of this section, beginning with the first day of the second quarter after such study is publicly available. The methodology described in this paragraph will be recalculated each quarter thereafter, except when conditions described in paragraph (d)(4)(ii) are met.

(ii) *Exception*. The adjustment described in paragraph (d)(4)(i) of this section does not apply to the payment limit for a billing and payment code for a quarter if, at the time that ASP calculations are finalized for such quarter, the drug in the dosage form described by the billing and payment code is included by the FDA on the drug shortage list in effect under section 506E of the Federal Food, Drug, and Cosmetic Act.

(iii) *Special rule for certain billing and payment codes*. Effective July 1, 2021, for a billing and payment code described under section 1847A(g)(3) of the Act, the payment limit for the applicable billing and payment code must be determined as described in paragraph (d)(4)(iv) of this section, and the exception specified at paragraph (d)(4)(ii) of this section does not apply.

(iv) *Lesser-of methodology*. For purposes of this section, the payment limit is the lesser of:

(A) The payment limit determined under section 1847A of the Act for such billing and payment code if each National Drug Code for such product so identified under section 1847A(g)(1) of the Act were excluded from such determination; and

(B) The payment limit otherwise determined under section 1847A of the Act for such billing and payment code without application of section 1847A(g) of the Act.

(v) *NDC changes*. For an Inspector General-identified National Drug Code, as described under section 1847A(g)(1) or (3) of the Act, for which the manufacturer has redesignated the National Drug Code (without changes to the dosage form), the application of the lesser-of methodology described in this paragraph must use manufacturer-reported ASP data associated

with the redesignated National Drug Code in the same manner as the one originally identified by the Inspector General.

* * * * *

45. Amend § 414.1300 by revising paragraphs (a)(2) and (3) to read as follows:

§ 414.1300 Basis and scope.

(a) * * *

(2) Section 1848(k) – Quality Reporting System.

(3) Section 1848(m) – Incentive Payments for Quality Reporting.

* * * * *

46. Amend § 414.1305 by–

a. Revising the definitions of "Collection type" and "Meaningful EHR user for MIPS";

b. In the definition of "MIPS determination period", revising paragraph (2).

c. In the definition of "MIPS eligible clinician", revising the introductory text, paragraph (2) introductory text, and adding paragraph (3);

d. Adding the definitions of "Multispecialty group", ""MVP participant", "Population health measure", "QCDR measure", "Single specialty group", "Special status" and "Subgroup" in alphabetical order; and

e. Revising the definition of "Submission type".

The revision and additions read as follows:

§ 414.1305 Definitions.

* * * * *

Collection type means a set of quality measures with comparable specifications and data completeness criteria, as applicable, including, but not limited to: electronic clinical quality measures (eCQMs); MIPS clinical quality measures (MIPS CQMs); QCDR measures; Medicare Part B claims measures; for the CY 2017 through 2022 MIPS performance periods/2019 through 2024 MIPS payment years, CMS Web Interface measures; the CAHPS for MIPS survey; and

administrative claims measures.

* * * * *

Meaningful EHR user for MIPS means a MIPS eligible clinician who possesses CEHRT, uses the functionality of CEHRT, reports on applicable objectives and measures specified for the Promoting Interoperability performance category for a performance period in the form and manner specified by CMS, does not knowingly and willfully take action (such as to disable functionality) to limit or restrict the compatibility or interoperability of CEHRT, and engages in activities related to supporting providers with the performance of CEHRT.

* * * * *

MIPS determination period means: * * *

(2) Subject to § 414.1310(b)(1)(iii), an individual eligible clinician, group, or APM Entity group that is identified as not exceeding the low-volume threshold or as having special status, as applicable, during the first segment of the MIPS determination period will be identified as such for the applicable MIPS payment year regardless of the results of the second segment of the MIPS determination period. An individual eligible clinician, group, or APM Entity group for which the unique billing TIN and NPI combination is established during the second segment of the MIPS determination period will be assessed based solely on the results of such segment.

MIPS eligible clinician as identified by a unique billing TIN and NPI combination used to assess performance, means any of the following (except as excluded under § 414.1310(b)):

* * * * *

(2) For the 2021 through 2023 MIPS payment years:

* * * * *

(3) For the 2024 MIPS payment year and future years:

(i) A clinician described in paragraph (2) of this definition;

(ii) A clinical social worker (as defined in section 1861(hh)(1) of the Act);

(ii) A certified nurse midwife (as defined in section 1861(gg)(2) of the Act); and

(vii) A group that includes such clinicians.

* * * * *

Multispecialty group means a group that consists of two or more specialty types as identified by eligible clinicians in the Medicare Provider Enrollment, Chain, and Ownership System (PECOS).

MVP participant means an individual MIPS eligible clinician, multispecialty group, single-specialty group, subgroup, or APM Entity that is assessed on an MVP in accordance with § 414.1365 for all MIPS performance categories. For the CY 2025 MIPS performance period/2027 MIPS payment year and future years, MVP Participant means an individual MIPS eligible clinician, single-specialty group, subgroup, or APM Entity that is assessed on an MVP in accordance with § 414.1365 for all MIPS performance categories.

* * * * *

Population health measure means a quality measure that indicates the quality of a population or cohort's overall health and well-being, such as access to care, clinical outcomes, coordination of care and community services, health behaviors, preventive care and screening, health equity, or utilization of health services.

* * * * *

QCDR measure means a quality measure that is submitted by a QCDR and approved by CMS under § 414.1400. QCDR measures consist of:

(1) Measures that are not included in the MIPS final list of quality measures described in § 414.1330(a)(1) for the applicable MIPS payment year; and

(2) Measures that are included in the MIPS final list of quality measures described in § 414.1330(a)(1) for the applicable MIPS payment year, but have undergone substantive changes, as determined by CMS.

* * * * *

Single-specialty group means a group that consists of one specialty type as identified by

eligible clinicians in the PECOS.

* * * * *

Special status means that a MIPS eligible clinician:

(1) Meets the definition of an ASC-based MIPS eligible clinician, facility-based MIPS eligible clinician, hospital-based MIPS eligible clinician, non-patient facing MIPS eligible clinician, or is in a small practice; or

(2) Is located in an HPSA or rural area.

Subgroup means a subset of a group which contains at least one MIPS eligible clinician and is identified by a combination of the group TIN, subgroup identifier, and each eligible clinician's NPI.

Submission type means the mechanism by which the submitter type submits data to CMS, including, but not limited to:

(1) Direct;

(2) Log in and upload;

(3) Log in and attest;

(4) Medicare Part B claims; and

(5) For the CY 2017 through 2022 MIPS performance periods/ 2019 through 2024 MIPS payment years, the CMS Web Interface.

* * * * *

47. Amend § 414.1310 by revising paragraph (e)(1) to read as follows:

§ 414.1310 Applicability.

* * * * *

(e) *** (1) Except as provided under §§ 414.1315(a)(2), 414.1317(b), 414.1318(b), and 414.1370(f)(2) each MIPS eligible clinician in the group receives a final score based on the group's combined performance assessment.

* * * * *

48. Amend § 414.1317 by revising paragraph (b)(2) to read as follows:

§ **414.1317 APM Entity groups.**

* * * * *

(b) * * *

(2) *Performance category weights.* The cost performance category weight is zero percent of the final score for an APM Entity. The performance category reweighting scenarios under § 414.1380(c)(2) apply to an APM Entity.

* * * * *

49. Section 414.1318 is added to subpart O to read as follows:

§ 414.1318 Subgroups.

(a) *Eligibility and special status*. (1) *General.* Except as provided under paragraph (a)(2) of this section, for a MIPS payment year, determinations of meeting the low-volume threshold criteria and special status for subgroups are determined at the group level in accordance with §§ 414.1305 and 414.1310.

(2) *Exclusions*. An individual eligible clinician or group that elects to participate in MIPS as a MIPS eligible clinician in accordance with § 414.1310(b)(iii)(A) or § 414.1310(b)(2) is not eligible to participate in a subgroup.

(b) *Final score.* Except as provided under § 414.1317(b), each MIPS eligible clinician in the subgroup receives a final score based on the subgroup's combined performance assessment.

(c) *Subgroup reporting requirements.* For individual eligible clinicians to participate in MIPS as a subgroup, all of the following requirements must be met:

(1) Individual eligible clinicians that elect to participate in MIPS as a subgroup must aggregate their quality and improvement activities performance data across the subgroup's identifier.

(2) Individual eligible clinicians that elect to participate in MIPS as a subgroup will have their performance assessed at the subgroup level across all the MIPS performance categories

based on an MVP in accordance with § 414.1365 and on the APM Performance Pathway in accordance with § 414.1367, as applicable. Subgroups that are MVP Participants must adhere to an election process described in § 414.1365(b).

50. Amend § 414.1320 by—

a. Redesignating paragraphs (d) through (g) as paragraphs (e) through (h).

b. Adding a new paragraph (d).

The addition reads as follows:

§ 414.1320 MIPS performance period.

* * * * *

(d) For purposes of the 2022 MIPS payment year, the performance period for:

(1) The quality and cost performance categories are the full calendar year (January 1 through December 31) that occurs 2 years prior to the applicable MIPS payment year.

(2) The improvement activities performance categories are a minimum of a continuous 90-day period within the calendar year that occurs 2 years prior to the applicable MIPS payment year, up to and including the full calendar year.

* * * * *

51. Amend § 414.1325 by revising paragraph (c)(1) to read follows:

§ 414.1325 Data submission requirements.

* * * * *

(c) * * *

(1) For the quality performance category, the direct; login and upload; Medicare Part B claims (beginning with the CY 2019 MIPS performance period/2021 MIPS payment year, for small practices only); and, for the CY2017 through 2022 MIPS performance periods/2019 through 2024 MIPS payment years, CMS Web Interface (for groups consisting of 25 or more eligible clinicians or a third party intermediary submitting on behalf of a group) submission types.

* * * * *

52. Amend § 414.1340 by—

a. Revising paragraph (a)(3);

b. Adding paragraph (a)(4);

c. Revising paragraph (b)(3); and

d. Adding paragraph (b)(4).

The revisions and additions read as follows:

§ 414.1340 Data completeness criteria for the quality performance category.

(a) * * *

(3) At least 70 percent of the MIPS eligible clinician or group's patients that meet the measure's denominator criteria, regardless of payer for MIPS payment years 2022, 2023, and 2024.

(4) At least 80 percent of the MIPS eligible clinician or group's patients that meet the measure's denominator criteria, regardless of payer for MIPS payment year 2025.

(b) * * *

(3) At least 70 percent of the applicable Medicare Part B patients seen during the performance period to which the measure applies for MIPS payment years 2022, 2023, and 2024.

(4) At least 80 percent of the applicable Medicare Part B patients seen during the performance period to which the measure applies for MIPS payment year 2025.

* * * * *

53. Amend § 414.1350 by revising paragraph (c)(4) and adding paragraph (c)(6) to read as follows:

§ 414.1350 Cost performance category.

* * * * *

(c) * * *

(4) For the procedural episode-based measures specified beginning with the 2019

performance period, the case minimum is 10, unless otherwise specified for individual measures. Beginning with the 2022 performance period, the case minimum for Colon and Rectal Resection procedural episode-based measure is 20 episodes.

* * * * *

(6) For the chronic condition episode-based measures specified beginning with the 2022 performance period, the case minimum is 20.

* * * * *

54. Amend § 414.1360 by revising paragraph (a)(2) to read as follows:

§ 414.1360 Data submission criteria for the improvement activities performance category.

(a) * * *

(2) *Groups and virtual groups.* Beginning with the 2022 performance year, each improvement activity for which groups and virtual groups submit a yes response in accordance with paragraph (a)(1) of this section must be performed by at least 50 percent of the NPIs that are billing under the group's TIN or virtual group's TINs or that are part of the subgroup, as applicable; and the NPIs must perform the same activity during any continuous 90-day period within the same performance year.

* * * * *

55. Section 414.1365 is added to subpart O to read as follows:

§ 414.1365 MIPS Value Pathways.

(a) *General.* (1) Beginning with the CY 2023 MIPS performance period/2025 MIPS payment year, CMS uses MVPs included in the MIPS final inventory of MVPs established by CMS through rulemaking to assess performance for the quality, cost, improvement activities, and Promoting Interoperability performance categories.

(2) [Reserved]

(b) *MVP/Subgroup registration*. (1) To report an MVP, an MVP Participant must register for the MVP, and if applicable, as a subgroup during a period that begins on April 1 and ends on

November 30 of the applicable CY performance period or a later date specified by CMS. To report the CAHPS for MIPS survey associated with an MVP, a group, subgroup or APM Entity must complete their registration by June 30 of such performance period or a later date specified by CMS.

(2) At the time of registration, the MVP Participant must submit the following information, as applicable:

(i) Each MVP Participant must select an MVP, 1 population health measure included in the MVP, and any outcomes-based administrative claims measure on which the MVP Participant intends to be scored.

(ii) Each subgroup must submit a list of each TIN/NPI associated with the subgroup and a plain language name for the subgroup.

(c) *MVP reporting requirements.* (1) *Quality.* Except as provided in paragraph (c)(1)(i) of this section, an MVP Participant must select and report, if applicable, 4 quality measures, including 1 outcome measure (or, if an outcome measure is not available, 1 high priority measure), included in the MVP, excluding the population health measure required under paragraph (c)(4)(ii) of this section.

(i) Paragraph (c)(1) of this section does not apply to a small practice that reports on an MVP that includes fewer than 4 Medicare Part B claims measures, provided that the small practice reports each such measure that is applicable.

(ii) [Reserved]

(2) *Cost.* An MVP Participant is scored on the cost measures included in the MVP that they select and report.

(3) *Improvement activities*. An MVP Participant who reports an MVP, must report one of the following:

(i) Two medium-weighted improvement activities;

(ii) One high-weighted improvement activity;

(iii) Participation in a certified or recognized patient-centered medical home (PCMH) or comparable specialty practice, as described at § 414.1380(b)(3)(ii).

(4) *Foundational layer*--(i) *Promoting interoperability*. An MVP Participant is required to meet the Promoting Interoperability performance category reporting requirements described at § 414.1375(b).

(A) For the CY 2023 and 2024 performance periods/2025 and 2026 MIPS payment years, an MVP Participant that is a subgroup is required to submit its affiliated group's data for the Promoting Interoperability performance category.

(B) [Reserved]

(ii) *Population health measures*. Each MVP Participant is scored on 1 population health measure in accordance with paragraph (d)(1) of this section.

(d) *MVP scoring* —(1) *General.* An MVP Participant that is not an APM Entity is scored on measures and activities included in the MVP in accordance with paragraphs (d)(1) through (3) of this section. An MVP Participant that is an APM Entity is scored on measures and activities included in the MVP in accordance with § 414.1317(b).

(2) *Performance standards*. Unless otherwise indicated in this paragraph (d), the performance standards described at § 414.1380(a)(1)(i) through (iv) apply to the measures and activities included in the MVP.

(3) *Performance categories*. An MVP Participant is scored under MIPS in four performance categories.

(i) *Quality performance category.* Except as provided in paragraphs (d)(3)(i)(A)(*1*) and (B) of this section, the quality performance category score for MVP Participants is calculated in accordance with § 414.1380(b)(1) based on measures included in the MVP.

(A) *Population health measures*. Except as provided in paragraph (d)(3)(i)(A)(*1*) of this section, each selected population health measure that does not have a benchmark or meet the

case minimum requirement is excluded from the MVP participant's total measure achievement points and total available measure achievement points.

(*1*) Subgroups are scored on each selected population health measure that does not have a benchmark or meet the case minimum requirement based on their affiliated group score, if available. If the subgroup's affiliated group score is not available, each such measure is excluded from the subgroup's total measure achievement points and total available measure achievement points.

(*2*) [Reserved]

(B) *Outcomes-based administrative claims measures.* MVP Participants receive zero measure achievement points for each selected outcomes-based administrative claims measure that does not have a benchmark or meet the case minimum requirement.

(ii) *Cost performance category.* The cost performance category score is calculated for an MVP Participant using the methodology at § 414.1380(b)(2)(i) through (v) and the cost measures included in the MVP that they select and report.

(iii) *Improvement activities performance category.* The improvement activities performance category score is calculated based on the submission of high- and medium-weighted improvement activities. MVP Participants will receive 20 points for each medium-weighted improvement activity and 40 points for each high-weighted improvement activity required under § 414.1360 on which data is submitted in accordance with § 414.1325 or for participation in a certified or recognized patient-centered medical home (PCMH) or comparable specialty practice, as described at § 414.1380(b)(3)(ii).

(iv) *Promoting interoperability performance category.* The Promoting Interoperability performance category score is calculated for an MVP Participant using the methodology at § 414.1380(b)(4), except as provided in paragraph (d)(3)(iv)(A) of this section.

(A) If a subgroup does not submit its affiliated group's data for the Promoting Interoperability performance category, the subgroup will receive a score of zero for the Promoting Interoperability performance category.

(B) [Reserved]

(e) *Final score calculation.* The final score is calculated for an MVP Participant using the methodology at § 414.1380(c), unless otherwise indicated in this paragraph (e).

(1) *MVP performance category weights.* For an MVP Participant that is not an APM Entity, the final score is calculated using the performance category weights described at § 414.1380(c)(1). For an MVP Participant that is an APM Entity, the final score is calculated using the performance category weights described at § 414.1317(b).

(2) *Reweighting MVP performance categories*--(i) *General reweighting*. For an MVP Participant that is not an APM Entity, in accordance with paragraph (e)(2)(iii) of this section, a scoring weight different from the weights described at § 414.1380(c)(1) will be assigned to a performance category, and its weight as described at § 414.1380(c)(1) will be redistributed to another performance category or categories, in the circumstances described at § 414.1380(c)(2)(i)(A)(*2*) through (*9*) and § 414.1380(c)(2)(i)(C). For an MVP Participant that is an APM Entity, the performance category weights will be redistributed in accordance with § 414.1317(b).

(ii) *Subgroups*. For an MVP Participant that is a subgroup, any reweighting applied to its affiliated group will also be applied to the subgroup. In addition, if reweighting is not applied to the affiliated group, the subgroup may receive reweighting in the following circumstances independent of the affiliated group:

(A) A subgroup may submit an application to CMS demonstrating that it was subject to extreme and uncontrollable circumstances and receive reweighting in accordance with § 414.1380(c)(2)(i)(A)(*6*) and § 414.1380(c)(2)(i)(C)(*2*). In the event that a subgroup submits

data for a performance category, the scoring weight described at § 414.1380(c)(1) would be applied and its weight would not be redistributed.

(B) A subgroup will receive reweighting if CMS determines, based on information known to the agency prior to the beginning of the relevant MIPS payment year, that data for the subgroup are inaccurate, unusable or otherwise compromised due to circumstances outside of the control of the subgroup and its agents, in accordance with § 414.1380(c)(2)(i)(A)(*9*) and § 414.1380(c)(2)(i)(C)(*10*).

(iii) *Reweighting scenarios*. For an MVP Participant that is not an APM Entity, a scoring weight different from the weights described at § 414.1380(c)(1) will be assigned to a performance category, and its weight as described at § 414.1380(c)(1) will be redistributed to another performance category or categories, in accordance with § 414.1380(c)(2)(ii). For an MVP Participant that is an APM Entity, the performance category weights will be redistributed in accordance with § 414.1317(b).

(3) *Facility-based scoring.* If an MVP Participant, that is not an APM Entity, is eligible for facility-based scoring, a facility-based score also will be calculated in accordance with § 414.1380(e).

(4) *Complex patient bonus.* A complex patient bonus will be added to the final score for an MVP Participant in accordance with § 414.1380(c)(3).

56. Amend § 414.1375 by—

a. Revising paragraphs (b)(2)(ii);

b. Revising paragraphs (b)(3) paragraph heading and (b)(3)(ii) introductory text; and

c. Adding paragraph (b)(3)(iii).

The revisions and additions read as follows:

§ 414.1375 Promoting Interoperability (PI) performance category.

* * * * *

(b) * * *

(2) * * *

(ii) Beginning with the 2021 MIPS payment year:

(A) Report that the MIPS eligible clinician completed the actions included in the Security Risk Analysis measure during the year in which the performance period occurs;

(B) For each required measure, as applicable, report the numerator (of at least one) and denominator, or yes/no statement, or an exclusion for each measure that includes an option for an exclusion; and

(C) Beginning with the 2024 MIPS payment year, report that the MIPS eligible clinician completed the actions included in the SAFER Guides measure during the year in which the performance period occurs.

(3) *Engaging in activities related to supporting providers with the performance of CEHRT; support for health information exchange and the prevention of information blocking; actions to limit or restrict the compatibility or interoperability of CEHRT. ****

* * * * *

(ii) *Support for health information exchange and the prevention of information blocking*. For the 2019, 2020, 2021, 2022, and 2023 MIPS payment years, the MIPS eligible clinician must attest to CMS that he or she -

* * * * *

(iii) *Actions to limit or restrict the compatibility or interoperability of CEHRT.* Beginning with the 2024 MIPS payment year, the MIPS eligible clinician must attest to CMS that he or she –

(A) Did not knowingly and willfully take action (such as to disable functionality) to limit or restrict the compatibility or interoperability of certified EHR technology.

(B) [Reserved]

57. Amend § 414.1380 by—

a. Revising paragraphs (b)(1)(i) introductory text, and(b)(1)(i)(A)(*1*);

b. Adding paragraphs (b)(1)(i)(A)(*3*) and (b)(1)(i)(C);

c. Revising paragraphs (b)(1)(iii) and (b)(1)(iv)(B);

d. Revising paragraphs (b)(1)(v)(A) introductory text and (b)(1)(v)(B) introductory text;

e. Adding paragraph (b)(1)(v)(B)(*1*)(*iii*);

f. Revising paragraphs (b)(1)(vi)(C) introductory text, (b)(1)(vi)(C)(*4*), (b)(1)(vi)(E), (b)(1)(vii) introductory text, (b)(1)(vii)(A), (b)(2)(iii) introductory text and (b)(2)(v) introductory text;

g. Adding paragraphs (b)(2)(v)(A) and (B);

h. Revising paragraph (b)(4)(ii) introductory text and (b)(4)(ii)(C);

i. Revising the table in paragraph (c) introductory text;

j. Revising paragraph (c)(2)(i)(A)(*4*);

k. Removing and reserving paragraph (c)(2)(i)(A)(*5*);

l. Revising paragraphs (c)(2)(i)(C)(*9*), (c)(2)(ii)(A) and (c)(2)(ii)(F);

m. Adding paragraph (c)(2)(ii)(G);

n. Revising paragraph (c)(3);

o. Revising paragraph (e)(6)(iv) through (vi).

The revisions and additions read as follows:

§ 414.1380 Scoring.

* * * * *

(b) * * *

(1) * * *

(i) *Measure achievement points*. For the CY 2017 through 2021 performance periods/2019 through 2023 MIPS payment years, MIPS eligible clinicians receive between 3 and 10 measure achievement points (including partial points) for each measure required under § 414.1335 on which data is submitted in accordance with § 414.1325 that has a benchmark at paragraph (b)(1)(ii) of this section, meets the case minimum requirement at paragraph (b)(1)(iii)

of this section, and meets the data completeness requirement at § 414.1340 and for each administrative claims-based measure that has a benchmark at paragraph (b)(1)(ii) of this section and meets the case minimum requirement at paragraph (b)(1)(iii) of this section. Except as provided under paragraph (b)(1)(i)(C) of this section, beginning with the CY 2022 performance period/2024 MIPS payment year, MIPS eligible clinicians receive between 1 and 10 measure achievement points (including partial points) for each such measure. The number of measure achievement points received for each such measure is determined based on the applicable benchmark decile category and the percentile distribution. MIPS eligible clinicians receive zero measure achievement points for each measure required under § 414.1335 on which no data is submitted in accordance with § 414.1325. MIPS eligible clinicians that submit data in accordance with § 414.1325 on a greater number of measures than required under § 414.1335 are scored only on the required measures with the greatest number of measure achievement points. Beginning with the CY 2019 performance period/2021 MIPS payment year, MIPS eligible clinicians that submit data in accordance with § 414.1325 on a single measure via multiple collection types are scored only on the data submission with the greatest number of measure achievement points.

(A) * * *

(*1*) Except as provided in paragraphs (b)(1)(i)(A)(*2*) and (*3*) of this section, for the CY 2017 through 2021 MIPS performance periods/2019 through 2023 MIPS payment years, MIPS eligible clinicians receive 3 measure achievement points for each submitted measure that meets the data completeness requirement, but does not have a benchmark or meet the case minimum requirement. Beginning with the CY 2022 performance period/2024 MIPS payment year, MIPS eligible clinicians other than small practices receive 0 measure achievement points for each such measure, and small practices receive 3 measure achievement points for each such measure.

* * * * *

(*3*) Beginning with the CY 2022 performance period/2024 MIPS payment year, MIPS

eligible clinicians receive 5 measure achievement points for each submitted new measure that meets the data completeness requirement, but does not have a benchmark or meet the case minimum requirement.

* * * * *

(C) *New measures*. (*1*) Beginning with the CY 2022 performance period/2024 MIPS payment year, MIPS eligible clinicians receive between 5 and 10 measure achievement points (including partial points) for each measure required under § 414.1335 on which data is submitted in accordance with § 414.1325 that has a benchmark at paragraph (b)(1)(ii) of this section, meets the case minimum requirement at paragraph (b)(1)(iii) of this section, and meets the data completeness requirement at § 414.1340.

(*2*) For purposes of this section, "new measure" means a quality measure that is in its first 2 years in the program.

* * * * *

(iii) *Minimum case requirements.* Except as otherwise specified in the MIPS final list of quality measures described in § 414.1330(a)(1), the minimum case requirement is 20 cases.

(iv) * * *

(B) Except as provided in paragraph (b)(1)(iv)(B)(*1*) of this section, beginning with the 2021 MIPS payment year, each measure (except for measures in the CMS Web Interface) for which the benchmark for the applicable collection type is identified as topped out for 2 or more consecutive years receives no more than 7 measure achievement points in the second consecutive year it is identified as topped out, and beyond.

(*1*) For the CY 2022 MIPS performance period/2024 MIPS payment year, MIPS eligible clinicians receive no more than 7 measure achievement points for each measure (except for measures in the CMS Web Interface) for which the applicable benchmark is identified as topped out for 2 or more consecutive years based on the historical benchmarks published for the CY 2021 MIPS performance period and continues to be identified as topped out based on the

performance period benchmarks published for the CY 2022 MIPS performance period.

(*2*) [Reserved]

* * * * *

(v) * * *

(A) *High priority measures*. Subject to paragraph (b)(1)(v)(A)(*1*) of this section, for the CY 2017 through 2021 MIPS performance periods/2019 through 2023 MIPS payment years, MIPS eligible clinicians receive 2 measure bonus points for each outcome and patient experience measure and 1 measure bonus point for each other high priority measure. Beginning with the 2021 MIPS payment year, MIPS eligible clinicians do not receive such measure bonus points for CMS Web Interface measures.

* * * * *

(B) *End-to-end electronic reporting.* Subject to paragraph (b)(1)(v)(B)(*1*) of this section, for the CY 2017 through 2021 MIPS performance periods/2019 through 2023 MIPS payment years, MIPS eligible clinicians receive 1 measure bonus point for each measure (except claims-based measures) submitted with end-to-end electronic reporting for a quality measure under certain criteria determined by the Secretary.

(*1*) * * *

(*iii*) Beginning in the 2024 MIPS payment year, MIPS eligible clinicians will no longer receive measure bonus for submitting using end-to-end electronic reporting.

* * * * *

(vi) * * *

(C) The improvement percent score is assessed at the performance category level for the quality performance category and included in the calculation of the quality performance category score as described in paragraph (b)(1)(vii) of this section.

* * * * *

(*4*) Beginning with the CY 2018 performance period/2020 MIPS payment year, we will

assume a quality performance category achievement percent score of 30 percent if a MIPS eligible clinician earned a quality performance category score less than or equal to 30 percent in the previous year.

* * * * *

(E) For the purpose of improvement scoring methodology, the term "improvement percent score" means the score that represents improvement for the purposes of calculating the quality performance category score as described in paragraph (b)(1)(vii) of this section.

* * * * *

(vii) *Quality performance category score*. A MIPS eligible clinician's quality performance category score is the sum of all the measure achievement points assigned for the measures required for the quality performance category criteria plus the measure bonus points in paragraph (b)(1)(v) of this section. The sum is divided by the sum of total available measure achievement points. The improvement percent score in paragraph (b)(1)(vi) of this section is added to that result. The quality performance category score cannot exceed 100 percentage points.

(A) For each measure that is submitted, if applicable, and impacted by significant changes or errors prior to the applicable data submission deadline at § 414.1325(e), performance is based on data for 9 consecutive months of the applicable CY performance period. If such data are not available or CMS determines that they may result in patient harm or misleading results, the measure is excluded from a MIPS eligible clinician's total measure achievement points and total available measure achievement points. For purposes of this paragraph (b)(1)(vii)(A), "significant changes or errors" means changes to or errors in a measure that are outside the control of the clinician and its agents and that CMS determines may result in patient harm or misleading results. Significant changes or errors include, but are not limited to, changes to codes (such as ICD-10, CPT, or HCPCS codes) or the active status of codes, the inadvertent omission of codes or inclusion of inactive or inaccurate codes, or changes to clinical guidelines or measure

specifications. CMS will publish on the CMS website a list of all measures scored under this paragraph (b)(1)(vii)(A) as soon as technically feasible, but by no later than the data submission deadline at § 414.1325(e)(1).

* * * * *

(2) * * *

(iii) The cost performance category score is the sum of the following, not to exceed 100 percent:

* * * * *

(v) A cost performance category score is not calculated if a MIPS eligible clinician or group is not attributed any cost measures for the performance period because the clinician or group has not met the minimum case volume specified by CMS for any of the cost measures or a benchmark has not been created for any of the cost measures that would otherwise be attributed to the clinician or group.

(A) Beginning with the 2024 MIPS payment year, if data used to calculate a score for a cost measure are impacted by significant changes during the performance period, such that calculating the cost measure score would lead to misleading or inaccurate results, then the affected cost measure is excluded from the MIPS eligible clinician's or group's cost performance category score. For purposes of this paragraph (b)(2)(v)(A), "significant changes" are changes external to the care provided, and that CMS determines may lead to misleading or inaccurate results. Significant changes include, but are not limited to, rapid or unprecedented changes to service utilization, and will be empirically assessed by CMS to determine the extent to which the changes impact the calculation of a cost measure score that reflects clinician performance.

(B) [Reserved]

* * * * *

(4) * * *

(ii) Beginning with the 2019 performance period/2021 MIPS payment year, a MIPS

eligible clinician's Promoting Interoperability performance category score equals the sum of the scores for each of the required measures and any applicable bonus scores, not to exceed 100 points.

* * * * *

(C) Each optional measure is worth five or ten bonus points, as specified by CMS.

* * * * *

(c) * * *

Table 1 to paragraph (c) introductory text

For the 2019 MIPS payment year:
Final score = [(quality performance category score × quality performance category weight) + (cost performance category score × cost performance category weight) + (improvement activities performance category score × improvement activities performance category weight) + (Promoting Interoperability performance category score × Promoting Interoperability performance category weight)], not to exceed 100 points.
For the 2020 MIPS payment year:
Final score = [(quality performance category score × quality performance category weight) + (cost performance category score × cost performance category weight) + (improvement activities performance category score × improvement activities performance category weight) + (Promoting Interoperability performance category score × Promoting Interoperability performance category weight)] × 100 + [the complex patient bonus + the small practice bonus], not to exceed 100 points.
Beginning with the 2021 MIPS payment year:
Final score = [(quality performance category score × quality performance category weight) + (cost performance category score × cost performance category weight) + (improvement activities performance category score × improvement activities performance category weight) + (Promoting Interoperability performance category score × Promoting Interoperability performance category weight)] × 100 + the complex patient bonus, not to exceed 100 points.

* * * * *

(2) * * *

(i) * * *

(A) * * *

(*4*) *For the Promoting Interoperability performance category: (i)* For the 2021 through 2024 MIPS payment years, the MIPS eligible clinician is a physical therapist, occupational therapist, clinical psychologist, qualified audiologist, qualified speech-language pathologist, or a

registered dietitian or nutrition professional. In the event that a MIPS eligible clinician submits data for the Promoting Interoperability performance category, the scoring weight specified in paragraph (c)(1) of this section will be applied and its weight will not be redistributed.

(*ii*) For the 2019 through 2024 MIPS payment years, the MIPS eligible clinician is a nurse practitioner, physician assistant, clinical nurse specialist, or certified registered nurse anesthetist. In the event that a MIPS eligible clinician submits data for the Promoting Interoperability performance category, the scoring weight specified in paragraph (c)(1) of this section will be applied and its weight will not be redistributed.

(*iii*) For the 2024 MIPS payment year, the MIPS eligible clinician is a clinical social worker. In the event that a MIPS eligible clinician submits data for the Promoting Interoperability performance category, the scoring weight specified in paragraph (c)(1) of this section will be applied and its weight will not be redistributed.

* * * * *

(C) * * *

(*9*) For the 2020 MIPS payment year through the 2023 MIPS payment year the MIPS eligible clinician demonstrates through an application submitted to CMS that they are in a small practice as defined in § 414.1305, and overwhelming barriers prevent them from complying with the requirements for the Promoting Interoperability performance category. Beginning with the 2024 MIPS payment year the MIPS eligible clinician is in a small practice as defined in § 414.1305.

* * * * *

(ii) * * *

(A) For the 2019 MIPS payment year:

Table 2 to paragraph (c)(2)(ii)(A)

Performance category (%)	Weighting for the 2019 MIPS payment year (%)	Reweight scenario if no promoting interoperability performance category score (%)	Reweight scenario if no quality performance category score (%)	Reweight scenario if no improvement activities performance category score (%)
Quality	60	85	0	75
Cost	0	0	0	0
Improvement Activities	15	15	50	0
Promoting Interoperability	25	0	50	25

* * * * *

(F) Except as provided in paragraph (c)(2)(ii)(G) of this section, beginning with the 2024 MIPS payment year:

Table 7 to paragraph (c)(2)(ii)(F)

Reweighting scenario	Quality (%)	Cost (%)	Improvement activities (%)	Promoting Interoperability (%)
No Reweighting Needed:				
Scores for all four performance categories	30	30	15	25
No Cost	55	0	15	30
No Promoting Interoperability	55	30	15	0
No Quality	0	30	15	55
No Improvement Activities	45	30	0	25
No Cost and no Promoting Interoperability	85	0	15	0
No Cost and no Quality	0	0	15	85
No Cost and no Improvement Activities	70	0	0	30
No Promoting Interoperability and no Quality	0	50	50	0
No Promoting Interoperability and no Improvement Activities	70	30	0	0
No Quality and no Improvement Activities	0	30	0	70

(G) For small practices beginning with the 2024 MIPS payment year:

Table 8 to paragraph (c)(2)(ii)G)

Reweighting scenario	Quality (%)	Cost (%)	Improvement activities (%)	Promoting Interoperability (%)
No Reweighting Needed:				
Scores for all four performance categories	30	30	15	25
No Cost	55	0	15	30
No Promoting Interoperability	40	30	30	0
No Quality	0	30	15	55
No Improvement Activities	45	30	0	25
No Cost and no Promoting Interoperability	50	0	50	0
No Cost and no Quality	0	0	15	85
No Cost and no Improvement Activities	70	0	0	30
No Promoting Interoperability and no Quality	0	50	50	0
No Promoting Interoperability and no Improvement Activities	70	30	0	0
No Quality and no Improvement Activities	0	30	0	70

* * * * *

(3) *Complex patient bonus*. For the CY 2020, 2021, 2022, and 2023 MIPS payment years and associated performance periods, provided that a MIPS eligible clinician, group, virtual group or APM Entity submits data for at least one MIPS performance category for the applicable performance period for the MIPS payment year, a complex patient bonus will be added to the final score for the MIPS payment year, as stated in paragraphs (c)(3)(i) through (c)(3)(iv) of this section. Beginning with the CY 2022 MIPS performance period/CY 2024 MIPS payment year, provided that a MIPS eligible clinician, group, subgroup, virtual group or APM Entity submits data for at least one MIPS performance category for the applicable performance period for the MIPS payment year, a complex patient bonus will be added to the final score for the MIPS payment year, if applicable, as described in paragraphs (c)(3)(v) through (c)(3)(viii) of this section.

(i) For the CY 2020, 2021, 2022, and 2023 MIPS payment years and associated performance periods, for MIPS eligible clinicians and groups, the complex patient bonus is calculated as follows: [The average HCC risk score assigned to beneficiaries (pursuant to the

HCC risk adjustment model established by CMS pursuant to section 1853(a)(1) of the Act) seen by the MIPS eligible clinician or seen by clinicians in a group] + [the dual eligible ratio × 5].

(ii) For the CY 2020, 2021, 2022, and 2023 MIPS payment years and associated performance periods, for APM Entities and virtual groups, the complex patient bonus is calculated as follows: [The beneficiary weighted average HCC risk score for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation within the APM Entity or virtual group, respectively] + [the average dual eligible ratio for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation, within the APM Entity or virtual group, respectively, × 5].

(iii) For the 2020, 2021, 2022, and 2023 MIPS payment years and associated performance periods, the complex patient bonus cannot exceed 5.0 except as provided in paragraph (c)(3)(iv) of this section.

(iv) For the 2022 and 2023 MIPS payment years and associated performance periods, the complex patient bonus is calculated pursuant to paragraphs (c)(3)(i) and (ii) of this section, and the resulting numerical value is then multiplied by 2.0. The complex patient bonus cannot exceed 10.0.

(v) Beginning with the CY 2022 MIPS performance period/CY2024 MIPS payment year, the complex patient bonus is limited to MIPS eligible clinicians, groups, subgroups, APM Entities, and virtual groups with a risk indicator at or above the risk indicator calculated median.

(vi) Beginning with the CY2022 MIPS performance period/CY2024 MIPS payment year, for MIPS eligible clinicians, groups, and subgroups, the complex patient bonus components are calculated as follows for the specific risk indicators: medical complex patient bonus component=1.5+4*associated HCC standardized score calculated with the average HCC risk score assigned to beneficiaries (pursuant to the HCC risk adjustment model established by CMS pursuant to section 1853(a)(1) of the Act) seen by the MIPS eligible clinician or seen by

clinicians in a group or subgroup; social complex patient bonus component=1.5+4* associated dual proportion standardized score. The components are added together to calculate one overall complex patient bonus. A standardized score for each risk indicator is determined based on the mean and standard deviation of the raw risk indicator score and provides a standardized measurement of how far each risk score is from the mean: (raw risk indicator score - risk indicator mean)/risk indicator standard deviation.

(vii) Beginning with the CY2022 MIPS performance period/CY2024 MIPS payment year, for APM Entities and virtual groups, the complex patient bonus components are calculated as follows for the specific risk indicators: medical complex patient bonus component=1.5+4*the beneficiary weighted average HCC risk standardized score for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation within the APM Entity or virtual group, respectively; social complex patient bonus component =1.5+4*the average dual proportion standardized score for all MIPS eligible clinicians, and if technically feasible, TINs for models and virtual groups which rely on complete TIN participation, within the APM Entity or virtual group, respectively. The components are added together to calculate one overall complex patient bonus. A standardized score for each risk indicator is determined based on the mean and standard deviation of the raw risk indicator score and provides a standardized measurement of how far each risk score is from the mean: (raw risk indicator score - risk indicator mean)/risk indicator standard deviation.

(viii) Beginning with the CY2022 MIPS performance period/CY2024 MIPS payment year, the complex patient bonus cannot exceed 10.0 and cannot be below 0.0.

* * * * *

(e) * * *

(6) * * *

(iv) *Quality.* The quality performance category score is established by determining the percentile performance of the facility in the value-based purchasing program for the specified

year as described in paragraph (e)(1) of this section and awarding a score associated with that same percentile performance in the MIPS quality performance category score for those MIPS-eligible clinicians who are not eligible to be scored using facility-based measurement for the MIPS payment year. A clinician or group receiving a facility-based performance score will not earn improvement points based on prior performance in the MIPS quality performance category

(v) *Cost.* The cost performance category score is established by determining the percentile performance of the facility in the value-based purchasing program for the specified year as described in paragraph (e)(1) of this section and awarding a score associated with that same percentile performance in the MIPS cost performance category score for those MIPS eligible clinicians who are not eligible to be scored using facility-based measurement for the MIPS payment year. A clinician or group receiving a facility-based performance score will not earn improvement points based on prior performance in the MIPS cost performance category.

(A) *Other cost measures*. MIPS eligible clinicians who are scored under facility-based measurement are not scored on cost measures described in paragraph (b)(2) of this section.

(B) [Reserved]

(vi) *Use of score from facility-based measurement*. The MIPS quality and cost performance category scores will be based on the facility-based measurement scoring methodology described in paragraph (e)(6) of this section unless:

(A) For the CY 2019 MIPS performance period/ 2021 MIPS payment year, through the CY 2021 MIPS performance period/ 2023 MIPS payment year, a clinician or group receives a higher combined MIPS quality and cost performance category score through another MIPS submission.

(B) Beginning with the CY 2022 MIPS performance period/ 2024 MIPS payment year, a clinician or group receives a higher MIPS final score through another MIPS submission.

58. Amend § 414.1395 by revising paragraph (c) to read as follows:

§ 414.1395 Public reporting.

* * * * *

(c) *New measures and activities*. (1) CMS does not publicly report any data on new quality or cost measure for the first 2 years in which it is in the program, after which CMS evaluates the measure to determine whether it is suitable for public reporting under paragraph (b) of this section.

(2) CMS does not publicly report any MVP data on new improvement activity or Promoting Interoperability measure, objective, or activity included in an MVP for the first year in which it is included in the MVP.

* * * * *

59. Revise § 414.1400 to read as follows:

§ 414.1400 Third party intermediaries.

(a) *General.* (1) MIPS data may be submitted on behalf of a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity by any of the following third party intermediaries:

(i) QCDR;

(ii) Qualified registry;

(iii) Health IT vendor; or

(iv) CMS-approved survey vendor.

(2) Third party intermediary approval criteria --

(i) To be approved as a third party intermediary, an entity must agree to meet the applicable requirements of this section, including, but not limited to, the following:

(A) A third party intermediary's principle place of business and retention of any data must be based in the U.S.

(B) If the data is derived from CEHRT, a QCDR, qualified registry, or health IT vendor must be able to indicate its data source.

(C) All data must be submitted in the form and manner specified by CMS.

(D) If the clinician chooses to opt-in in accordance with § 414.1310, the third

party intermediary must be able to transmit that decision to CMS.

(E) The third party intermediary must provide services throughout the entire performance period and applicable data submission period.

(F) Prior to discontinuing services to any MIPS eligible clinician, group, virtual group, subgroup, or APM Entity during a performance period, the third party intermediary must support the transition of such MIPS eligible clinician, group, virtual group, subgroup, or APM Entity to an alternate third party intermediary, submitter type, or, for any measure on which data has been collected, collection type according to a CMS approved a transition plan.

(ii) The determination of whether to approve an entity as a third party intermediary for a MIPS payment year may take into account:

(A) Whether the entity failed to comply with the requirements of this section for any prior MIPS payment year for which it was approved as third party intermediary; and

(B) Whether the entity provided inaccurate information regarding the requirements of this subpart to any eligible clinician.

(iii) Beginning with the 2023 MIPS payment year, third party intermediaries must attend and complete training and support sessions in the form and manner, and at the times, specified by CMS.

(3) All data submitted to CMS by a third party intermediary on behalf of a MIPS eligible clinician, group, virtual group, subgroup, or APM Entity must be certified by the third party intermediary as true, accurate, and complete to the best of its knowledge. Such certification must be made in a form and manner and at such time as specified by CMS.

(b) *Additional requirements for QCDRs and qualified registries*--(1) *General*. (i) Beginning with the CY 2021 MIPS performance period/2023 MIPS payment year, QCDRs and qualified registries must be able to submit data for all of the following MIPS performance

categories:

(A) Quality, except:

(*1*) The CAHPS for MIPS survey; and

(*2*) For qualified registries, QCDR measures;

(B) Improvement activities; and

(C) Promoting Interoperability, if the eligible clinician, group, virtual group, or subgroup is using CEHRT, unless:

(*1*) The third party intermediary's MIPS eligible clinicians, groups, virtual groups, or subgroups fall under the reweighting policies at § 414.1380(c)(2)(i)(A)(*4*)(*i*) through (*iii*) or (c)(2)(i)(C)(*1*) through (*7*) or (c)(2)(i)(C)(*9*).

(*2*) [Reserved]

(ii) Beginning with the 2023 MIPS performance period/2025 MIPS payment year, QCDRs and qualified registries must support MVPs that are applicable to the MVP participant on whose behalf they submit MIPS data. QCDRs and qualified registries may also support the APP.

(2) *Self-nomination.* For the 2018 and 2019 MIPS performance periods/2020 and 2021 MIPS payment years, entities seeking to qualify as a QCDR or qualified registry must self-nominate September 1 until November 1 of the CY preceding the applicable performance period. For the 2020 MIPS performance period/2022 MIPS payment year and future years, entities seeking to qualify as a QCDR or qualified registry must self-nominate during a 60-day period during the CY preceding the applicable performance period (beginning no earlier than July 1 and ending no later than September 1). Entities seeking to qualify as a QCDR or qualified registry for a performance period must provide all information required by CMS at the time of self-nomination and must provide any additional information requested by CMS during the review process. For the 2019 MIPS performance period/2021 MIPS payment year and future years, existing QCDRs and qualified registries that are in good standing may attest that certain aspects

of their previous year's approved self-nomination have not changed and will be used for the applicable performance period.

(3) *Conditions for approval.* (i) Beginning with the 2020 MIPS performance period/2022 MIPS payment year, the QCDR or qualified registry must have at least 25 participants by January 1 of the year prior to the applicable performance period.

(ii) If an entity seeking to qualify as a QCDR or qualified registry uses an external organization for purposes of data collection, calculation, or transmission, it must have a signed, written agreement with the external organization that specifically details the responsibilities of the entity and the external organization. The written agreement must be effective as of September 1 of the year preceding the applicable performance period.

(iii) Beginning with the 2021 MIPS performance period/2023 MIPS payment year, the QCDR or qualified registry must provide performance feedback to their clinicians and groups at least 4 times a year, and provide specific feedback to their clinicians and groups on how they compare to other clinicians who have submitted data on a given measure within the QCDR or qualified registry. Exceptions to this requirement may occur if the QCDR or qualified registry submits notification to CMS within the performance period promptly within the month of realization of the impending deficiency and provides sufficient rationale as to why they do not believe they would be able to meet this requirement (for example, if the QCDR does not receive the data from their clinician until the end of the performance period).

(iv) Beginning with the 2023 MIPS performance period/2025 MIPS payment year, the QCDR or qualified registry must submit a data validation plan annually, at the time of self-nomination for CMS's approval and may not change the plan once approved without the prior approval of the agency.

(v) Beginning with the 2021 MIPS performance period/2023 MIPS payment year, the QCDR or qualified registry must conduct annual data validation audits in

accordance with this paragraph (b)(3)(v) of this section.

(A) The QCDR or qualified registry must conduct data validation for the payment year prior to submitting any data for that payment year to CMS for purposes of the MIPS program.

(B) The QCDR or qualified registry must conduct data validation on data for each performance category for which it will submit data, including if applicable the Quality, Improvement Activities, and Promoting Interoperability performance categories.

(C) The QCDR or qualified registry must conduct data validation on data for each submitter type for which it will submit data, including MIPS eligible clinicians, groups, virtual groups, subgroups, APM entities, voluntary participants, and opt-in participants, if applicable.

(D) The QCDR or qualified registry must use clinical documentation (provided by the clinicians they are submitting data for) to validate that the action or outcome measured actually occurred or was performed.

(E) The QCDR or qualified registry must conduct each data validation audit using a sampling methodology that meets the following requirements:

(*1*) Uses a sample size of at least 3 percent of the TIN/NPIs for which the QCDR or qualified registry will submit data to CMS, except that if a 3 percent sample size would result in fewer than 10 TIN/NPIs, the QCDR or qualified registry must use a sample size of at least 10 TIN/NPIs, and if a 3 percent sample size would result in more than 50 TIN/NPIs, the QCDR or qualified registry may use a sample size of 50 TIN/NPIs.

(*2*) Uses a sample that includes at least 25 percent of the patients of each TIN/NPI in the sample, except that the sample for each TIN/NPI must include a minimum of 5 patients and does not need to include more than 50 patients.

(F) Each QCDR or qualified registry data validation audit must include the following:

(*1*) Verification of the eligibility status of each eligible clinician, group, virtual

group, subgroup, opt-in participant, and voluntary participant.

(*2*) Verification of the accuracy of TINs and NPIs.

(*3*) Calculation of reporting and performance rates.

(*4*) Verification that only the MIPS quality measures and QCDR measures, as applicable, that are relevant to the performance period will be used for MIPS submission.

(G) In a form and manner and by a deadline specified by CMS, the QCDR or qualified registry must report the results of each data validation audit, including the overall data deficiencies or data error rate, the types of deficiencies or data errors discovered, the percentage of clinicians impacted by any deficiency or error, and, how and when each deficiency or data error type was corrected.

(*1*) QCDRs and qualified registries must conduct validation on the data they intend to submit for the MIPS performance period and provide the results of the executed data validation plan by May 31st of the year following the performance period.

(*2*) [Reserved]

(vi) Beginning with the 2021 MIPS performance period/2023 MIPS payment year, the QCDR or qualified registry must conduct targeted audits in accordance with this paragraph (b)(3)(vi).

(A) If a data validation audit under paragraph (b)(3)(v) of this section identifies one or more deficiency or data error, the QCDR or qualified registry must conduct a targeted audit into the impact and root cause of each such deficiency or data error for that MIPS payment year.

(B) The QCDR or qualified registry must conduct any required targeted audits for the MIPS payment year and correct any deficiencies or data errors identified through such audit prior to the submission of data for that MIPS payment year.

(C) The QCDR or qualified registry must conduct the targeted audit using the

sampling methodology that meets the requirements described in paragraph (b)(3)(iv)(E) of this section. The sample for the targeted audit must not include data from the sample used for the data validation audit in which the deficiency or data error was identified.

(D) In a form and manner and by a deadline specified by CMS, the QCDR or qualified registry must report the results of each targeted audit, including the overall deficiency or data error rate, the types of deficiencies or data errors discovered, the percentage of clinicians impacted by each deficiency or data error, and how and when each deficiency or data error type was corrected.

(vii) For the 2023 MIPS performance period/2025 MIPS payment year, a QCDR or qualified registry that was approved but did not submit any MIPS data for any of the 2019 through 2023 MIPS payment years must submit a participation plan for CMS's approval. The participation plan must include the QCDR and/or qualified registry's detailed plans about how the QCDR or qualified registry intends to encourage clinicians to submit MIPS data to CMS through the QCDR or qualified registry.

(viii) Beginning with the 2024 MIPS performance period/2026 MIPS payment year, a QCDR or qualified registry that was approved but did not submit any MIPS data for either of the 2 years preceding the applicable self-nomination period must submit a participation plan for CMS's approval. This participation plan must include the QCDR's and/or qualified registry's detailed plans about how the QCDR or qualified registry intends to encourage clinicians to submit MIPS data to CMS through the QCDR or qualified registry.

(4) *QCDR measures for the quality performance category*--(i) *QCDR measure self-nomination requirements*. For the 2018 MIPS performance period/2020 MIPS payment year and future years, at the time of self-nomination an entity seeking to become a QCDR must submit the following information for any measure it intends to submit for the payment year.

(A) For MIPS quality measures, the entity must submit specifications including

the MIPS measure IDs and specialty-specific measure sets, as applicable.

(B) For QCDR measures, the entity must submit for CMS-approval measure specifications including: Name/title of measures, NQF number (if NQF- endorsed), descriptions of the denominator, numerator, and when applicable, denominator exceptions, denominator exclusions, risk adjustment variables, and risk adjustment algorithms. In addition, no later than 15 calendar days following CMS approval of any QCDR measure specifications, the entity must publicly post the measure specifications for that QCDR measure (including the CMS- assigned QCDR measure ID) and provide CMS with a link to where this information is posted.

(ii) *QCDR measure submission requirements.* A QCDR must include the CMS-assigned QCDR measure ID when submitting data on any QCDR measure to CMS.

(iii) *QCDR measure approval criteria.* (A) QCDR measure requirements for approval are:

(*1*) QCDR measures that are beyond the measure concept phase of development.

(*2*) QCDR measures that address significant variation in performance.

(*3*) Beginning with the 2022 MIPS performance period/2024 MIPS payment year, all QCDR measures must meet face validity. To be approved for the 2023 MIPS performance period/2025 MIPS payment year, all QCDR measures must meet face validity for the initial MIPS payment year for which it is approved. For subsequent years, all QCDR measures must be fully developed and tested, with complete testing results at the clinician level, prior to submitting the QCDR measure at the time of self-nomination.

(*i*) To be included in an MVP for the 2022 MIPS performance period/2024 MIPS payment year and future years, a QCDR measure must be fully tested.

(*ii*) [Reserved]

(*4*) Beginning with the 2022 MIPS performance period/2023 MIPS payment year,

QCDRs are required to collect data on a QCDR measure, appropriate to the measure type, prior to submitting the QCDR measure for CMS consideration during the self-nomination period.

(*5*) Beginning with the 2020 MIPS performance period/2022 MIPS payment year, CMS may provisionally approve the individual QCDR measures for 1 year with the condition that QCDRs address certain areas of duplication with other approved QCDR measures or MIPS quality measures in order to be considered for the program in subsequent years. If such areas of duplication are not addressed, CMS may reject the duplicative QCDR measure.

(B) QCDR measure considerations for approval include, but are not limited to:

(*1*) Measures that are outcome-based rather than clinical process measures.

(*2*) Measures that address patient safety and adverse events.

(*3*) Measures that identify appropriate use of diagnosis and therapeutics.

(*4*) Measures that address the domain of care coordination.

(*5*) Measures that address the domain for patient and caregiver experience.

(*6*) Measures that address efficiency, cost, and resource use.

(*7*) Beginning with the 2021 performance period -

(*i*) That QCDRs link their QCDR measures as feasible to at least one cost measure, improvement activity, or an MVP at the time of self-nomination.

(*ii*) In cases where a QCDR measure does not have a clear link to a cost measure, improvement activity, or an MVP, we would consider exceptions if the potential QCDR measure otherwise meets the QCDR measure requirements and considerations.

(*8*) Beginning with the 2020 MIPS performance period/2022 MIPS payment year CMS may consider the extent to which a QCDR measure is available to MIPS eligible clinicians reporting through QCDRs other than the QCDR measure owner for purposes of MIPS. If CMS determines that a QCDR measure is not available to MIPS eligible

clinicians, groups, and virtual groups reporting through other QCDRs, CMS may not approve the measure.

(*9*) Greater consideration is given to measures for which QCDRs:

(i) Conducted an environmental scan of existing QCDR measures; MIPS quality measures; quality measures retired from the legacy Physician Quality Reporting System (PQRS) program; and

(*ii*) Utilized the CMS Quality Measure Development Plan Annual Report and the Blueprint in the CMS Measures Management System to identify measurement gaps prior to measure development.

(*10*) Beginning with the 2020 MIPS performance period/2022 MIPS payment year, we place greater preference on QCDR measures that meet case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive CY performance periods. Those that do not, may not continue to be approved.

(*i*) Beginning with the 2020 MIPS performance period/2022 MIPS payment year, in instances where a QCDR believes the low-reported QCDR measure that did not meet benchmarking thresholds is still important and relevant to a specialist's practice, that the QCDR may develop and submit a QCDR measure participation plan for our consideration. This QCDR measure participation plan must include the QCDR's detailed plans and changes to encourage eligible clinicians and groups to submit data on the low-reported QCDR measure for purposes of the MIPS program.

(*ii*) [Reserved]

(C) Beginning with the 2021 MIPS performance period/2023 MIPS payment year, QCDR measures may be approved for 2 years, at CMS discretion by attaining approval status by meeting QCDR measure considerations and requirements. Upon annual review, CMS may revoke a QCDR measure's second year approval, if the QCDR measure is found to be: Topped out; duplicative of a more robust measure; reflects an outdated clinical

guideline; or if the QCDR self-nominating the QCDR measure is no longer in good standing.

(iv) *QCDR measure rejection criteria.* Beginning with the 2020 MIPS performance period/2022 MIPS payment year, QCDR measure rejection considerations include, but are not limited to:

(A) QCDR measures that are duplicative or identical to other QCDR measures or MIPS quality measures that are currently in the program.

(B) QCDR measures that are duplicative or identical to MIPS quality measures that have been removed from MIPS through rulemaking.

(C) QCDR measures that are duplicative or identical to quality measures used under the legacy Physician Quality Reporting System (PQRS) program, which have been retired.

(D) QCDR measures that meet the topped out definition as described at § 414.1305.

(E) QCDR measures that are process-based, with consideration to whether the removal of the process measure impacts the number of measures available for a specific specialty.

(F) Whether the QCDR measure has potential unintended consequences to a patient's care.

(G) Considerations and evaluation of the measure's performance data, to determine whether performance variance exists.

(H) QCDR measures that split a single clinical practice or action into several QCDR measures.

(I) QCDR measures that are “check-box” with no actionable quality action.

(J) QCDR measures that do not meet the case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive years.

(K) QCDR measures with clinician attribution issues, where the quality action is not under the direct control of the reporting clinician.

(L) QCDR measures that focus on rare events or "never events" in the measurement period.

(M) QCDR does not have permission to use a QCDR measure owned by another QCDR for the applicable performance period.

(N) If a QCDR measure owner is not approved or is not in good standing, any associated QCDR measures will not be approved.

(c) *Additional requirements for Health IT vendors.* (1) Beginning with the CY 2021 MIPS performance period/2023 MIPS payment year, health IT vendors must be able to submit data for the MIPS performance categories as follows:

(i) Health IT vendors that support MVPs must be able to submit data for all of the MIPS performance categories:

(A) Quality, except:

(*1*) The CAHPS for MIPS survey; and

(*2*) QCDR measures;

(B) Improvement activities; and

(C) Promoting Interoperability, if the eligible clinician, group, virtual group, or subgroup is using CEHRT, unless:

(*1*) The third party intermediary's MIPS eligible clinicians, groups, virtual groups, or subgroups fall under the reweighting policies at § 414.1380(c)(2)(i)(A)(*4*)(*i*) through (*iii*) or (c)(2)(i)(C)(*1*) through (*7*) or (c)(2)(i)(C)(*9*).

(*2*) [Reserved]

(ii) Health IT vendors that do not support MVPs must be able to submit data for at least one of the MIPS performance categories described in paragraphs (c)(1)(i) of this section.

(iii) Beginning with the 2023 MIPS performance period/2025 MIPS payment year, Health IT vendors must support MVPs that are applicable to the MVP participant on whose behalf they submit MIPS data. Health IT vendors may also support the APP.

(2) [Reserved]

(d) *Additional requirements for CMS-approved survey vendors.* (1) CMS-approved survey vendors may submit data on the CAHPS for MIPS survey for the MIPS quality performance category.

(2) Entities seeking to be a CMS-approved survey vendor for any MIPS performance period must submit a survey vendor application to CMS in a form and manner specified by CMS for each MIPS performance period for which it wishes to transmit such data. The application and any supplemental information requested by CMS must be submitted by deadlines specified by CMS. For an entity to be a CMS-approved survey vendor, it must meet the following criteria:

(3) The entity must have sufficient experience, capability, and capacity to accurately report CAHPS data, including:

(i) At least 3 years of experience administering mixed-mode surveys (that is, surveys that employ multiple modes to collect date), including mail survey administration followed by survey administration via Computer Assisted Telephone Interview (CATI);

(ii) At least 3 years of experience administering surveys to a Medicare population;

(iii) At least 3 years of experience administering CAHPS surveys within the past 5 years;

(iv) Experience administering surveys in English and at least one other language for which a translation of the CAHPS for MIPS survey is available;

(v) Use equipment, software, computer programs, systems, and facilities that can verify addresses and phone numbers of sampled beneficiaries, monitor interviewers, collect data via CATI, electronically administer the survey and schedule

call-backs to beneficiaries at varying times of the day and week, track fielded surveys, assign final disposition codes to reflect the outcome of data collection of each sampled case, and track cases from mail surveys through telephone follow-up activities; and

(vi) Employment of a program manager, information systems specialist, call center supervisor and mail center supervisor to administer the survey.

(4) The entity has certified that it has the ability to maintain and transmit quality data in a manner that preserves the security and integrity of the data.

(5) The entity has successfully completed, and has required its subcontractors to successfully complete, vendor training(s) administered by CMS or its contractors.

(6) The entity has submitted a quality assurance plan and other materials relevant to survey administration, as determined by CMS, including cover letters, questionnaires and telephone scripts.

(7) The entity has agreed to participate and cooperate, and has required its subcontractors to participate and cooperate, in all oversight activities related to survey administration conducted by CMS or its contractors.

(8) The entity has sent an interim survey data file to CMS that establishes the entity's ability to accurately report CAHPS data.

(e) *Remedial action and termination of third party intermediaries.* (1) If CMS determines that a third party intermediary has ceased to meet one or more of the applicable criteria for approval, has submitted a false certification under paragraph (a)(3) of this section, or has submitted data that are inaccurate, unusable, or otherwise compromised, CMS may take one or more of the following remedial actions after providing written notice to the third party intermediary:

(i) Require the third party intermediary to submit a corrective action plan (CAP) by a date specified by CMS. The CAP must address the following issues, unless different or additional information is specified by CMS:

(A) The issues that contributed to the non-compliance.

(B) The impact to individual clinicians, groups, or virtual groups, regardless of whether they are participating in the program because they are MIPS eligible, voluntary participating, or opting in to participating in the MIPS program.

(C) The corrective actions to be implemented by the third party intermediary to ensure that the non-compliance has been resolved and will not recur in the future.

(D) The detailed timeline for achieving compliance with the applicable requirements.

(ii) Publicly disclose the entity's data error rate on the CMS website until the data error rate falls below 3 percent.

(2) CMS may immediately or with advance notice terminate the ability of a third party intermediary to submit MIPS data on behalf of a MIPS eligible clinician, group, or virtual group for one or more of the following reasons:

(i) CMS has grounds to impose remedial action;

(ii) CMS has not received a CAP within the specified time-period or the CAP is not accepted by CMS; or

(iii) The third party intermediary fails to correct the deficiencies or data errors by the date specified by CMS.

(3) Contains data inaccuracies affecting the third party intermediary’s total clinicians may lead to remedial action/termination of the third party intermediary for future program year(s) based on CMS discretion.

(4) For purposes of paragraph (e) of this section, CMS may determine that submitted data are inaccurate, unusable, or otherwise compromised, including but not limited to, if the submitted data:

(i) Includes, without limitation, TIN/NPI mismatches, formatting issues, calculation errors, or data audit discrepancies.

(ii) [Reserved]

(f) *Auditing of entities submitting MIPS data.* Any third party intermediary must comply with the following procedures as a condition of its qualification and approval to participate in MIPS as a third party intermediary.

(1) The entity must make available to CMS the contact information of each MIPS eligible clinician or group on behalf of whom it submits data. The contact information must include, at a minimum, the MIPS eligible clinician or group's practice phone number, address, and, if available, email.

(2) The entity must retain all data submitted to CMS for purposes of MIPS for 6 years from the end of the MIPS performance period.

(3) For the purposes of auditing, CMS may request any records or data retained for the purposes of MIPS for up to 6 years from the end of the MIPS performance period.

60. Amend § 414.1405 by adding paragraphs (b)(9), (d)(7) and (g) to read as follows:

§ 414.1405 Payment.

* * * * *

(b) * * *

(9) Pursuant to the methodology established at paragraph (g) of this section, the performance threshold for the 2024 MIPS payment year is 75 points. The prior period used to determine the performance threshold is the 2019 MIPS payment year.

* * * * *

(d) * * *

(7) The additional performance threshold for the 2024 MIPS payment year is 89 points.

* * * * *

(g) *Performance threshold methodology.* For each of the 2024, 2025, and 2026 MIPS payment years, the performance threshold is the mean of the final scores for all MIPS eligible clinicians from a prior period as specified under paragraph (b) of this section.

61. Amend § 414.1430 by—

a. Revising paragraph (a)(1)(iii); and

b. Adding paragraph (a)(1)(iv).

The revision and addition read as follows:

§ 414.1430 Qualifying APM participant determination: QP and partial QP thresholds.

(a) * * *

(1) * * *

(iii) 2023 and 2024: 50 percent

(iv) 2025 and later: 75 percent

* * * * *

62. Amend § 414.1450 by revising paragraph (c) introductory text to read as follows:

§ 414.1450 APM incentive payment.

* * * * *

(c) *APM Incentive Payment recipient.* CMS will pay the APM Incentive Payment amount for a payment year to a solvent TIN or TINs associated with the QP, identified based on Medicare Part B claims submitted for covered professional services during the base period or payment year, according to this section. If no TIN or TINs with which the QP has an association can be identified at a step, CMS will move to the next and successive steps listed in paragraphs (c)(1) through (8) of this section until CMS identifies a TIN or TINs with which the QP is associated, and to which CMS will make the APM Incentive Payment. If more than one TIN is identified at a step, the payment will be proportionately divided among the TINs according to the relative total paid amounts for Part B covered professional services paid to each TIN for services provided during the base year.

* * * * *

PART 415 - SERVICES FURNISHED BY PHYSICIANS IN PROVIDERS, SUPERVISING PHYSICIANS IN TEACHING SETTINGS, AND RESIDENTS IN CERTAIN SETTINGS

63. The authority citation for part 415 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

64. Section 415.140 is added to subpart D to read as follows:

§ 415.140 Conditions for payment: Split (or shared) visits.

(a) *Definitions.* For purposes of this section, the following definitions apply:

(1) *Split (or shared) visit* means an evaluation and management (E/M) visit in the facility setting that is performed in part by both a physician and a nonphysician practitioner who are in the same group, in accordance with applicable law and regulations such that the service could be could be billed by either the physician or nonphysician practitioner if furnished independently by only one of them.

(2) *Facility setting* for purposes of this section means institutional settings in which payment for services and supplies furnished incident to a physician or practitioner's professional services is prohibited under § 410.26(b)(1).

(3) *Substantive portion* means more than half of the total time spent by the physician and nonphysician practitioner performing the split (or shared) visit.

(b) *Conditions of payment.* For purposes of this section, the following conditions of payment apply: (1*) Substantive portion of split (or shared) visit.* In general, payment is made to the physician or nonphysician practitioner who performs the substantive portion of the split (or shared) visit.

(2) *Medical record documentation.* Documentation in the medical record must identify the physician and nonphysician practitioner who performed the visit. The individual who performed the substantive portion of the visit (and therefore bills for the visit) must sign and date the medical record.

(3) *Claim modifier.* The designated modifier must be included on the claim to identify that the service was a split (or shared) visit.

PART 423—VOLUNTARY MEDICARE PRESCRIPTION DRUG BENEFIT

65. The authority citation for part 423 continues to read as follows:

Authority: 42 U.S.C. 1302, 1306, 1395w-101 through 1395w-152, and 1395hh.

66. Amend § 423.160 by revising paragraph (a)(5) to read as follows:

§ 423.160 Standards for electronic prescribing.

(a) * * *

(5) Beginning on January 1, 2021, prescribers must, except in the circumstances described in paragraphs (a)(5)(i) through (iv) of this section, conduct prescribing for at least 70 percent of their Schedule II, III, IV, and V controlled substances that are Part D drugs electronically using the applicable standards in paragraph (b) of this section. Compliance actions against prescribers writing prescriptions for beneficiaries in long-term care facilities, and who do not meet the compliance threshold, will commence on or after January 1, 2025. Compliance actions against other prescribers who do not meet the compliance threshold will commence on or after January 1, 2023. Prescribers will be exempt from this requirement in the following situations:

(i) Prescriber and dispensing pharmacy are the same entity.

(ii) Prescriber who issue 100 or fewer controlled substance prescriptions for Part D drugs per calendar year as determined using CMS claims data as of December 31st of the preceding year.

(iii) Prescriber with an NCPDP database address in the geographic area of an emergency or disaster declared by a federal, state or local government entity.

(iv) Prescriber has received a CMS-approved waiver because the prescriber is unable to conduct electronic prescribing of controlled substances (EPCS) due to circumstances beyond the prescriber's control.

* * * * *

PART 424-CONDITIONS FOR MEDICARE PAYMENT

67. The authority for part 424 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

68. Amend § 424.205 by—

a. Redesignating paragraphs (b)(5) and (6) as paragraphs (b)(6) and (7), respectively; and

b. Adding new paragraph (b)(5);

The addition reads as follows:

§ 424.205 Requirements for Medicare Diabetes Prevention Program suppliers.

* * * * *

(b) * * *

(5) The Medicare provider enrollment application fee does not apply to all Medicare Diabetes Prevention Program (MDPP) suppliers that submit an enrollment application on or after January 1, 2022.

* * * * *

69. Amend § 424.502 by revising the definition of "Institutional provider" to read as follows:

§ 424.502 Definitions.

* * * * *

Institutional provider means any provider or supplier that submits a paper Medicare enrollment application using the CMS-855A, CMS-855B (not including physician and nonphysician practitioner organizations), CMS-855S, or an associated Internet-based PECOS enrollment application.

* * * * *

70. Amend § 424.530 by revising paragraphs (a)(2) introductory text and (a)(11)(i) to read as follows:

§ 424.530 Denial of enrollment in the Medicare program.

(a) * * *

(2) *Provider or supplier conduct.* The provider or supplier, or any owner, managing

employee, authorized or delegated official, medical director, supervising physician, or other health care or administrative or management services personnel furnishing services payable by a federal health care program, of the provider or supplier is—

* * * * *

(11) * * * (i) A physician or other eligible professional's Drug Enforcement Administration (DEA) Certificate of Registration to dispense a controlled substance is currently suspended or revoked or is surrendered in response to an order to show cause;

* * * * *

71. Amend § 424.535 by revising paragraphs (a)(2) introductory text, (a)(8)(ii), (a)(13)(i), and (e) to read as follows:

§ 424.535 Revocation of enrollment in the Medicare program.

(a) * * *

(2) *Provider or supplier conduct.* The provider or supplier, or any owner, managing employee, authorized or delegated official, medical director, supervising physician, or other health care or administrative or management services personnel furnishing services payable by a federal health care program, of the provider or supplier is—

* * * * *

(8) * * *

(ii) CMS determines that the provider or supplier has a pattern or practice of submitting claims that fail to meet Medicare requirements. In making this determination, CMS considers, as appropriate or applicable, the following:

(A) The percentage of submitted claims that were denied during the period under consideration.

(B) Whether the provider or supplier has any history of final adverse actions and the nature of any such actions.

(C) The type of billing non-compliance and the specific facts surrounding said non-

compliance (to the extent this can be determined).

(D) Any other information regarding the provider or supplier's specific circumstances that CMS deems relevant to its determination.

* * * * *

(13) * * *

(i) A physician or other eligible professional's Drug Enforcement Administration (DEA) Certificate of Registration to dispense a controlled substance is currently suspended or revoked or is surrendered in response to an order to show cause;

* * * * *

(e) *Reversal of revocation.* If the revocation was due to adverse activity (sanction, exclusion, or felony) against the provider's or supplier's owner, managing employee, authorized or delegated official, medical director, supervising physician, or other health care or administrative or management services personnel furnishing services payable by a federal health care program, the revocation may be reversed if the provider or supplier terminates and submits proof that it has terminated its business relationship with that individual within 30 days of the revocation notification.

* * * * *

§ 424.545 [Amended]

72. Amend § 424.545 in paragraph (b) by removing the reference "§ 405.374" and adding in its place the reference "§ 424.546."

73. Add § 424.546 to read as follows:

§ 424.546 Deactivation rebuttals.

(a) *Rebuttal submittal period*. (1) If a provider or supplier receives written notice from CMS or its contractor that the provider's or supplier's billing privileges are to be or have been deactivated under § 424.540, the provider or supplier has 15 calendar days from the date of the written notice to submit a rebuttal to CMS as permitted under § 424.545(b).

(2) CMS may, at its discretion, extend the 15-day time-period referenced in paragraph (a)(1) of this section.

(b) *Rebuttal requirements*. A rebuttal submitted pursuant to this section and § 424.545(b) must:

(1) Be in writing.

(2) Specify the facts or issues about which the provider or supplier disagrees with the deactivation's imposition and/or the effective date, and the reasons for disagreement.

(3) Submit all documentation the provider or supplier wants CMS to consider in its review of the deactivation.

(4) Be submitted in the form of a letter that is signed and dated by the individual supplier (if enrolled as an individual physician or nonphysician practitioner), the authorized official or delegated official (as those terms are defined in 42 CFR 424.502), or a legal representative (as defined in 42 CFR 498.10). If the legal representative is an attorney, the attorney must include a statement that he or she has the authority to represent the provider or supplier; this statement is sufficient to constitute notice of such authority. If the legal representative is not an attorney, the provider or supplier must file with CMS written notice of the appointment of a representative; this notice of appointment must be signed and dated by, as applicable, the individual supplier, the authorized official or delegated official, or a legal representative.

(c) *Waiver of rebuttal rights*. The provider's or supplier's failure to submit a rebuttal that is both timely under paragraph (a) of this section and fully compliant with all of the requirements of paragraph (b) of this section constitutes a waiver of all rebuttal rights under this section and § 424.545(b).

(d) *CMS review*. Upon receipt of a timely and compliant deactivation rebuttal, CMS reviews the rebuttal to determine whether the imposition of the deactivation and/or the designated effective date are correct.

(e) *Imposition*. Nothing in this section or in § 424.545(b) requires CMS to delay the

imposition of a deactivation pending the completion of the review described in paragraph (d) of this section.

(f) *Initial determination*. A determination made under this section is not an initial determination under § 498.3(b) of this chapter and therefore not appealable.

PART 425—MEDICARE SHARED SAVINGS PROGRAM

74. The authority citation for part 425 continues to read as follows:

Authority: 42 U.S.C. 1302, 1306, 1395hh, and 1395jjj.

75. Amend § 425.116 by revising paragraph (c) to read as follows:

§ 425.116 Agreements with ACO participants and ACO providers/suppliers.

* * * * *

(c) *Submission of agreements.* The ACO must submit an executed ACO participant agreement for each ACO participant that it requests to add to its list of ACO participants in accordance with § 425.118. The agreements may be submitted in the form and manner set forth in § 425.204(c)(6) or as otherwise specified by CMS.

76. Amend § 425.204 by—

a. Revising paragraphs (b), (c)(6), (f)(4)(ii)(A) and (B), (f)(4)(iii) introductory text, and (f)(4)(iii)(A); and

b. Adding paragraph (f)(4)(v).

The revisions and addition read as follows:

§ 425.204 Content of the application.

* * * * *

(b) *Prior participation.* Upon request by CMS during the application cycle, the ACO must submit information regarding prior participation in the Medicare Shared Savings Program by the ACO, its ACO participants, or its ACO providers/suppliers, including such information as may be necessary for CMS to determine whether to approve an ACO's application in accordance with § 425.224(b).

(c) * * *

(6) Upon request by CMS during the application cycle or at any point during an agreement period, the ACO must submit documents demonstrating that its ACO participants, ACO providers/suppliers, and other individuals or entities performing functions or services related to ACO activities are required to comply with the requirements of the Shared Savings Program. Upon such a request, the evidence to be submitted must include, without limitation, sample or form agreements and, in the case of ACO participant agreements, the first and signature page(s) of each executed ACO participant agreement. CMS may request all pages of an executed ACO participant agreement to confirm that it conforms to the sample form agreement submitted by the ACO. The ACO must certify that all of its ACO participant agreements comply with the requirements of this part.

* * * * *

(f) * * *

(4) * * *

(ii) * * *

(A) One-half percent of the total per capita Medicare Parts A and B fee-for-service expenditures for the ACO's assigned beneficiaries, based on expenditures and the number of assigned beneficiaries for the most recent calendar year for which 12 months of data are available.

(B) One percent of the total Medicare Parts A and B fee-for-service revenue of its ACO participants, based on revenue for the most recent calendar year for which 12 months of data are available, and based on the ACO’s number of assigned beneficiaries for the most recent calendar year for which 12 months of data are available.

(iii) CMS recalculates the ACO's repayment mechanism amount for the second and each subsequent performance year in the agreement period in accordance with paragraph (f)(4)(ii) of this section based on the certified ACO participant list for the relevant performance year, except

that the number of assigned beneficiaries used in the calculations is the number of beneficiaries assigned to the ACO at the beginning of the relevant performance year under § 425.400(a)(2)(i) (for ACOs under preliminary prospective assignment with retrospective reconciliation) or § 425.400(a)(3)(i) (for ACOs under prospective assignment).

(A) If the recalculated repayment mechanism amount exceeds the existing repayment mechanism amount by at least $1,000,000, CMS notifies the ACO in writing that the amount of its repayment mechanism must be increased to the recalculated repayment mechanism amount.

* * * * *

(v)(A) An ACO that established a repayment mechanism to support its participation in a two-sided model beginning on July 1, 2019, January 1, 2020 or January 1, 2021, may elect to decrease the amount of its repayment mechanism if the repayment mechanism amount for performance year 2022, as recalculated pursuant to paragraph (f)(4)(iii) of this section, is less than the existing repayment mechanism amount.

(B) CMS will notify the ACO in writing if the ACO may elect to decrease the amount of its repayment mechanism pursuant to this paragraph (f)(4)(v). The ACO must submit such election, and revised repayment mechanism documentation, in a form and manner and by a deadline specified by CMS. CMS will review the revised repayment mechanism documentation and may reject the election if the repayment mechanism documentation does not comply with the requirements of paragraph (f) of this section.

* * * * *

77. Amend § 425.312 by—

a. Revising paragraph (a)(2)(ii); and

b. Adding paragraph (a)(2)(iii).

The revision and addition read as follows:

§ 425.312 Beneficiary notifications.

(a) * * *

(2) * * *

(ii) In the case of an ACO that has selected preliminary prospective assignment with retrospective reconciliation, by the ACO or ACO participant providing each fee-for-service beneficiary with a standardized written notice prior to or at the first primary care visit of the performance year in the form and manner specified by CMS.

(iii) In the case of an ACO that has selected prospective assignment, by the ACO or ACO participant providing each prospectively assigned beneficiary with a standardized written notice prior to or at the first primary care visit of the performance year in the form and manner specified by CMS.

* * * * *

78. Amend § 425.400 by—

a. Revising paragraph (c)(1)(v) introductory text;

b. Adding paragraph (c)(1)(vi); and

c. Revising paragraphs (c)(2)(i) introductory text, (c)(2)(i)(A)(*2*), and (c)(2)(ii).

The addition and revisions read as follows:

§ 425.400 General.

* * * * *

(c) * * *

(1) * * *

(v) For the performance year starting on January 1, 2021:

* * * * *

(vi) For the performance year starting on January 1, 2022, and subsequent performance years as follows:

(A) CPT codes:

(*1*) 96160 and 96161 (codes for administration of health risk assessment).

(*2*) 99201 through 99215 (codes for office or other outpatient visit for the evaluation and

management of a patient).

(*3*) 99304 through 99318 (codes for professional services furnished in a nursing facility; professional services or services reported on an FQHC or RHC claim identified by these codes are excluded when furnished in a SNF).

(*4*) 99319 through 99340 (codes for patient domiciliary, rest home, or custodial care visit).

(*5*) 99341 through 99350 (codes for evaluation and management services furnished in a patient's home for claims identified by place of service modifier 12).

(*6*) 99354 and 99355 (add-on codes, for prolonged evaluation and management or psychotherapy services beyond the typical service time of the primary procedure; when the base code is also a primary care service code under this paragraph (c)(1)(vi)).

(*7*) 99421, 99422, and 99423 (codes for online digital evaluation and management).

(*8*) 99439 (code for non-complex chronic care management).

(*9*) 99483 (code for assessment of and care planning for patients with cognitive impairment).

(*10*) 99484, 99492, 99493 and 99494 (codes for behavioral health integration services).

(*11*) 99X21, 99487, 99489, 99490 and 99491 (codes for chronic care management).

(*12*) 99495 and 99496 (codes for transitional care management services).

(*13*) 99497 and 99498 (codes for advance care planning; services identified by these codes furnished in an inpatient setting are excluded).

(*14*) 99X22, 99X23, 99X24, and 99X25 (codes for principal care management services).

(B) HCPCS codes:

(*1*) G0402 (code for the Welcome to Medicare visit).

(*2*) G0438 and G0439 (codes for the annual wellness visits).

(*3*) G0442 (code for alcohol misuse screening service).

(*4*) G0443 (code for alcohol misuse counseling service).

(*5*) G0444 (code for annual depression screening service).

(*6*) G0463 (code for services furnished in ETA hospitals).

(*7*) G0506 (code for chronic care management).

(*8*) G2010 (code for the remote evaluation of patient video/images).

(*9*) G2012 and G2252 (codes for virtual check-in).

(*10*) G2058 (code for non-complex chronic care management).

(*11*) G2064 and G2065 (codes for principal care management services).

(*12*) G2212 (code for prolonged office or other outpatient visit for the evaluation and management of a patient).

(*13*) G2214 (code for psychiatric collaborative care model).

(C) Primary care service codes include any CPT code identified by CMS that directly replaces a CPT code specified in paragraph (c)(1)(vi)(A) of this section or a HCPCS code specified in paragraph (c)(1)(vi)(B) of this section, when the assignment window (as defined in § 425.20) for a benchmark or performance year includes any day on or after the effective date of the replacement code for payment purposes under FFS Medicare.

(2)(i) Except as otherwise specified in paragraph (c)(2)(i)(A)(*2*) of this section, when the assignment window (as defined in § 425.20) for a benchmark or performance year includes any month(s) during the COVID-19 Public Health Emergency defined in § 400.200 of this chapter, in determining beneficiary assignment, we use the primary care service codes identified in paragraph (c)(1) of this section, and additional primary care service codes as follows:

(A) * * *

(*2*) 99441, 99442, and 99443 (codes for telephone evaluation and management services). These codes are used in determining beneficiary assignment as specified in paragraphs (c)(2)(i) and (ii) of this section and until they are no longer payable under Medicare fee-for-service payment policies as specified under section 1834(m) of the Act and §§ 410.78 and 414.65 of this chapter.

* * * * *

(ii) Except as otherwise specified in paragraph (c)(2)(i)(A)(*2*) of this section, the additional primary care service codes specified in paragraph (c)(2)(i) of this section are applicable to all months of the assignment window (as defined in § 425.20), when the assignment window includes any month(s) during the COVID-19 Public Health Emergency defined in § 400.200 of this chapter.

79. Amend § 425.512 by--

a. Revising paragraphs (a)(2) and (3);

b. Redesignating paragraph (a)(4) as paragraph (a)(5);

c. Adding a new paragraph (a)(4);

d. Revising newly redesignated paragraph (a)(5);

e. Adding paragraph (a)(6);

f. Revising paragraphs (b)(2)(i) and (ii) and (b)(3)(i);

g. Redesignating paragraph (b)(3)(ii) as paragraph (b)(3)(iii);

h. Adding a new paragraph (b)(3)(ii); and

i. Revising newly redesignating paragraph (b)(3)(iii).

§ 425.512 Determining the ACO quality performance standard for performance years beginning on or after January 1, 2021.

(a) * * *

(2) *For the first performance year of an ACO's first agreement period under the Shared Savings Program.* If the ACO reports data via the APP and meets the data completeness requirement at § 414.1340 of this chapter and the case minimum requirement at § 414.1380 of this chapter on the measures specified in this paragraph (a)(2) for the applicable performance year, the ACO will meet the quality performance standard.

(i) *For performance year 2022.* The ten CMS Web Interface measures or the three eCQM/MIPS CQM measures, and the CAHPS for MIPS survey.

(ii) *For performance year 2023.* The ten CMS Web Interface measures and at least one eCQM/MIPS CQM measure or the three eCQM/MIPS CQM measures, and the CAHPS for MIPS survey.

(iii) *For performance year 2024 and subsequent performance years.* The three eCQM/MIPS CQM measures and the CAHPS for MIPS survey.

(3) *For performance year 2021* —(i) Except as specified in paragraph (a)(2) of this section, CMS designates the quality performance standard as the ACO reporting quality data via the APP established under § 414.1367 of this chapter, according to the method of submission established by CMS and achieving a quality performance score that is equivalent to or higher than the 30th percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring.

(ii) If an ACO does not report any of the ten CMS Web Interface measures or any of the three eCQM/MIPS CQM measures and does not administer a CAHPS for MIPS survey under the APP, the ACO will not meet the quality performance standard.

(4) *For performance year 2022*—(i) Except as specified in paragraph (a)(2) of this section, CMS designates the quality performance standard as the ACO reporting via the APP established under § 414.1367 of this chapter either:

(A) According to the method of submission established by CMS and achieving a quality performance score that is equivalent to or higher than the 30th percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, or

(B) The three eCQM/MIPS CQM measures in the APP measure set, meeting the data completeness requirement at § 414.1340 of this chapter and the case minimum requirement at § 414.1380 of this chapter for all three eCQM/MIPS CQM measures, and achieving a quality performance score equivalent to or higher than the 30th percentile of the performance benchmark on at least one measure in the APP measure set.

(ii) If an ACO does not report any of the ten CMS Web Interface measures or any of the

three eCQM/MIPS CQM measures and does not administer a CAHPS for MIPS survey under the APP, the ACO will not meet the quality performance standard.

(5) *For performance year 2023*—(i) Except as specified in paragraph (a)(2) of this section, CMS designates the quality performance standard as the ACO reporting via the APP established under § 414.1367 of this chapter either:

(A) According to the method of submission established by CMS, including at least one eCQM/MIPS CQM measure, and achieving a quality performance score that is equivalent to or higher than the 30th percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, or

(B) The three eCQM/MIPS CQM measures in the APP measure set, meeting the data completeness requirement at § 414.1340 of this chapter and the case minimum requirement at § 414.1380 of this chapter for all three eCQM/MIPS CQM measures, and achieving a quality performance score equivalent to or higher than the 30th percentile of the performance benchmark on at least one measure in the APP measure set.

(ii) If the ACO does not report at least one eCQM/MIPS CQM in the APP measure set, the ACO will not meet the quality performance standard.

(6) *For performance years 2024 and subsequent performance years.* (i) Except as specified in paragraph (a)(2) of this section, CMS designates the quality performance standard as the ACO reporting quality data via the APP established under § 414.1367 of this chapter, according to the method of submission established by CMS and achieving a quality performance score that is equivalent to or higher than the 40th percentile across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring.

(ii) If an ACO does not report any of the three eCQM/MIPS CQM measures and does not administer a CAHPS for MIPS survey under the APP, the ACO will not meet the quality performance standard.

(b) * * *

(2) * * *

(i) For performance years 2021 through 2023, the ACO's minimum quality performance score is set to the equivalent of the 30th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring for the relevant performance year.

(ii) For performance year 2024 and subsequent performance years, the ACO's minimum quality performance score is set to the equivalent of the 40th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the relevant performance year.

(3) * * *

(i) For performance years 2021 and 2022, if the ACO reports quality data via the APP and meets data completeness and case minimum requirements, CMS will use the higher of the ACO's quality performance score or the equivalent of the 30th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the relevant performance year.

(ii) For performance year 2023, if the ACO reports quality data via the APP, including at least one eCQM/MIPS CQM measure, and meets data completeness and case minimum requirements, CMS will use the higher of the ACO's quality performance score or the equivalent of the 30th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the performance year.

(iii) For performance year 2024 and subsequent performance years, if the ACO reports quality data via the APP and meets data completeness and case minimum requirements, CMS will use the higher of the ACO's quality performance score or the equivalent of the 40th percentile MIPS Quality performance category score across all MIPS Quality performance category scores, excluding entities/providers eligible for facility-based scoring, for the relevant

performance year.

* * * * *

Dated: July 9, 2021.

Xavier Becerra,

Secretary,

Department of Health and Human Services.

Note: The following appendices will not appear in the Code of Federal Regulations.

APPENDIX 1: MIPS QUALITY MEASURES

NOTE: Except as otherwise noted in this proposed rule, previously finalized measures and specialty measure sets will continue to apply for the 2022 MIPS performance period/2024 MIPS payment year and future years. In addition, electronic clinical quality measures (eCQMs) that are National Quality Forum (NQF) endorsed are shown in Table A as follows: NQF # / eCQM NQF #.

TABLE Group A: New Quality Measures Proposed for the CY 2022 MIPS Performance Period/2024 MIPS Payment Year and Future Years

A.1. Intravesical Bacillus-Calmette Guerin for Non-muscle Invasive Bladder Cancer

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	TBD
Description:	Percentage of patients initially diagnosed with non-muscle invasive bladder cancer and who received intravesical Bacillus-Calmette-Guerin (BCG) within 6 months of bladder cancer staging.
Measure Steward:	Oregon Urology
Numerator:	Intravesical Bacillus-Calmette Guerin (BCG) instillation for initial dose or series. BCG is initiated within 6 months of the bladder cancer staging and during the measurement period.
Denominator:	All patients initially diagnosed with T1, Tis or high grade Ta non-muscle invasive bladder cancer and a qualified encounter in the measurement period.
Exclusions:	Denominator Exceptions: Unavailability of BCG Denominator Exclusions: Immunosuppressed patients, includes HIV and immunocompromised state. Immunosuppressive drug therapy. Active Tuberculosis. Mixed histology urothelial cell carcinoma including micropapillary, plasmacytoid, sarcomatoid, adenocarcinoma and squamous disease. Patients who undergo cystectomy, chemotherapy or radiation within 6 months of Bladder Cancer Staging.
Measure Type:	Process
Measure Domain:	Effective Clinical Care (section 1848(s)(1)(B)(i) of the Act)
High Priority Measure:	No
Collection Type:	eCQM Specifications
Measure-Specific Case Minimum/Performance Period:	N/A for this measure
Rationale:	We are proposing this measure because it addresses a gap in care for patients diagnosed with bladder cancer. Treatment at this stage (non-muscle invasive) can help prevent invasion into the muscle layer which leads to potential bladder removal and additional chemotherapy and/or radiation treatment. It was reviewed by the 2016 National Quality Forum (NQF) Measure Application Partnership (MAP) with a recommendation to refine to address concerns what populations would be included or excluded from the measure. The measure was updated according to MAP feedback by redefining the eligible patient population and exclusions. The measure steward indicated that bladder cancer is ranked 10th for new cancer cases in 2020 and is the 9th leading cause of cancer death in the United States. There were an estimated 81,400 new cases in 2020 and 17,980 estimated deaths in 2020. Early detection (discovery of cancer in situ or localized to the primary site) is found in 85 percent of the patients, and with these there is a 5-year survival rate of 95.8 percent for in situ and 69.2 percent for localized. National Comprehensive Cancer Network (NCCN) Guidelines for Bladder Cancer (version 6.2020) defines intravesical Bacillus-Calmette-Guerin (BCG) as Category 1 Treatment for Ta - high grade, T1 and Tis non-muscle invasive bladder cancer. Most public data reflect prophylactic or adjuvant use of intravesical therapy with the goal of preventing recurrence or delaying progression to a higher grade or stage. Intravesical BCG has been shown to be an effective prophylaxis to prevent bladder cancer recurrences following transurethral resection of a bladder tumor (TURBT). The NCCN Bladder Cancer Panel Members recommend BCG as the preferred option over Mitomycin C for adjuvant treatment of high-grade lesions (Ta). BCG is also standard therapy for Primary Tis. Most T1 lesions are high risk and are similarly treated with adjuvant intravesical therapy with BCG being a Category 1 recommendation. (NCCN guidelines 6.2020). Based on research of the available information presented to the MAP, we believe the measure is evidence-based and represents an important clinical practice. Note: Refer to https://ecqi.healthit.gov/ecqm/ep/2022/cms646v2 for information on this measure.

A.2. Hemodialysis Vascular Access: Practitioner Level Long-term Catheter Rate

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	TBD
Description:	Percentage of adult hemodialysis patient-months using a catheter continuously for three months or longer for vascular access attributable to an individual practitioner or group practice.
Measure Steward:	Centers for Medicare & Medicaid Services
Numerator:	The numerator is the number of adult patient-months in the denominator who were on maintenance hemodialysis using a catheter continuously for three months or longer as of the last hemodialysis session of the reporting month.
Denominator:	All patients at least 18 years old as of the first day of the reporting month who are determined to be maintenance hemodialysis patients (in-center and home HD) for the complete reporting month under the care of the same practitioner or group partner.
Exclusions:	Exclusions that are implicit in the denominator definition include: • Pediatric patients (<18 years old). • Patients on Peritoneal Dialysis for any portion of the reporting month. • Patient-months where there are more than one MCP provider listed for the month. In addition, patients with a catheter that have limited life expectancy, as defined by the following criteria are excluded: • Patients under hospice care in the current reporting month. • Patients with metastatic cancer in the past 12 months. • Patients with end stage liver disease in the past 12 months. • Patients with coma or anoxic brain injury in the past 12 months
Measure Type:	Intermediate Outcome
Measure Domain:	Effective Clinical Care (section 1848(s)(1)(B)(i) of the Act)
High Priority Measure:	Yes
Collection Type:	MIPS CQMs Specifications
Measure-Specific Case Minimum/Performance Period:	N/A for this measure
Rationale:	We are proposing this measure because it represents an intermediate outcome for maintenance hemodialysis patients and may incentivize clinicians to evaluate their vascular access with potential to reduce infection, mortality, and hospitalization rates. Long-term catheter use is associated with higher mortality rate than use of an arteriovenous fistula. The measure was evaluated by the MAP and it was conditionally supported pending NQF endorsement. While we agree with the MAP that NQF endorsement of measures is preferred, NQF endorsement is not a requirement for measures to be considered for MIPS if the measure has an evidence-based focus as required by section 1848(q)(2)(D)(v) of the Act. The measure steward indicated, per their analysis of Consolidated Renal Operations in a Web enabled Network (CROWNWeb) data from January 2016 - December 2016, that the physician-level mean percentage of patient-months with a long-term catheter was 9.7 percent (SD=9.0 percent). Distribution: Min=0 percent, 1st quartile=4.5 percent, median=8.3 percent, 3rd quartile=12.7 percent, Max=100 percent. Reliability testing included 7,921 – 8,508 clinicians per month with moderate inter-unit reliability of 0.602 indicating that 60.2 percent of the variation in the annual long-term catheter rate can be attributed to between-practitioner differences in performance (signal) and about 39.8 percent to the within-practitioner variation (noise). Based on research of the available information presented to the MAP, we believe the measure is evidence-based and represents an important clinical practice. Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=91911.

A.3. Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM)

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	TBD
Description:	The Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM) uses the PCPCM PROM (a comprehensive and parsimonious set of 11 patient-reported items) to assess the broad scope of primary care. Unlike other primary care measures, the PCPCM PRO-PM measures the high value aspects of primary care based on a patient's relationship with the clinician or practice. Patients identify the PCPCM PROM as meaningful and able to communicate the quality of their care to their clinicians and/or care team. The items within the PCPCM PROM are based on extensive stakeholder engagement and comprehensive reviews of the literature.
Measure Steward:	The American Board of Family Medicine
Numerator:	The target population is all active patients in a practice during the performance reporting period. A patient is defined as active if the patient has had a documented interaction with the practice within 12 months of their birth month within the measurement period. The PCPCM PROM is the same for all patients, regardless of age. Because the PCPCM PROM applies to all patients and is not particular to a clinical encounter, it is administered once a year to each patient during their birth month. The target population is defined the same, regardless of unit of analysis (clinician, practice, or system). The numerator is the sum of all PCPCM PROM scores for active patients. 1. My practice makes it easy for me to get care. 2. My practice is able to provide most of my care. 3. In caring for me, my doctor considers all the factors that affect my health. 4. My practice coordinates the care I get from multiple places. 5. My doctor or practice knows me as a person. 6. My doctor and I have been through a lot together. 7. My doctor or practice stands up for me. 8. The care I get takes into account knowledge of my family. 9. The care I get in this practice is informed by knowledge of my community. 10. Over time, my practice helps me to stay healthy. 11. Over time, my practice helps me to meet my goals.
Denominator:	The denominator is the total number of complete PCPCM PROM instruments received in the reporting period. A completed PROM instrument is defined as a PROM instrument for which the patient has responded to at least 8 of 11 items. The target population is all active patients in a practice during the performance reporting period. A patient is defined as active if the patient has had a documented interaction with the practice within 12 months of their birth month during the measurement period. The PCPCM PROM is the same for all patients, regardless of age. Because the PCPCM PROM applies to all patients and is not particular to a clinical encounter, it is administered once a year to each patient during their birth month. The target population is defined the same, regardless of unit of analysis (clinician, practice, or system).
Exclusions:	None
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Measure Domain:	Person and Caregiver-centered Experience and Outcomes (section 1848(s)(1)(B)(iv) of the Act)
High Priority Measure:	Yes
Collection Type:	MIPS CQMs Specifications
Measure-Specific Case Minimum/Performance Period::	For each MIPS eligible clinician, group, subgroup*, virtual group, and APM Entity, a minimum of 30 PCPCM PROM instruments per clinician are needed for submission of this measure. All valid survey results (as defined in the specification) should be included in the aggregate score. For MIPS eligible groups, subgroups*, virtual groups, and APM Entities with 5 or more clinicians, a minimum of 150 PCPCM PROM instruments per TIN for each site/location associated with the clinicians part of the group, subgroups, virtual groups, and APM Entities are needed for submission of this measure. For TINs with a composition of multiple specialty practices at one site/location, a minimum of 150 PCPCM PROM instruments per specialty practice within a TIN are needed for submission of this measure. If the MIPS eligible group, subgroup*, virtual group, and APM Entity with 5 or more clinicians encompasses multiple sites/locations, each site/location would need to meet the PCPCM PROM instruments requirements as stated. *Subgroups are only available through MVP reporting. All measure-specific criteria must be met by the subgroup.
Rationale:	We are proposing this measure because assessment of patient experience of care is a critical element of quality care and captures the voice of the patient which is an important component of delivering high-value primary care. There are currently a limited number of patient experience measures within the MIPS quality measure set. The original measure was evaluated by the NQF MAP and received conditional support pending NQF endorsement. While we agree with the MAP that NQF endorsement of measures is preferred, NQF endorsement is not a requirement for measures to be considered for MIPS if the measure has an evidence-based focus as required by section 1848(q)(2)(D)(v) of the Act. Based on research of the available information presented to the MAP, evidence demonstrates a strong connection between patient experience of care and traditional health care outcomes, such as improved intermediate outcomes, greater adherence to recommended treatment, and reduced use of health care services. This measure addresses the Meaningful Measurement Area of Patient's Experience of Care and the MIPS high-priority category of Outcomes. Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=94650.

A.4. Risk-Standardized Acute Unplanned Cardiovascular-Related Admission Rates for Patients with Heart Failure for the Merit-based Incentive Payment System

Category	Description
NQF # / eCQM NQF #:	NQF # 3612
Quality #:	TBD
Description:	Annual risk-standardized rate of acute, unplanned cardiovascular-related admissions among Medicare Fee-for-Service (FFS) patients aged 65 years and older with heart failure (HF) or cardiomyopathy.
Measure Steward:	Centers for Medicare & Medicaid Services
Numerator:	The outcome for this measure is the number of acute cardiovascular-related admissions per 100 person-years at risk for admission during the measurement year. Time at risk is calculated as the number of days a patient is alive, from the start of the measurement period or first visit, until heart transplantation, LVAD implantation, or home inotropic therapy; enrollment in hospice; death; or the end of the measurement period. Time not considered at risk and excluded: Days spent in a hospital, SNF, or acute rehabilitation facility; 10 days following discharge from a hospital, SNF, or acute rehabilitation facility; and Time during and after LVAD implantation, home inotropic therapy, or heart transplantation. Acute cardiovascular-related admissions are defined using individual ICD-10-CM codes and the Agency for Healthcare Research and Quality's (AHRQ) Clinical Classification Software (CCS) diagnosis categories, which group clinically similar codes together. AHRQ CCS diagnosis categories used to define outcome: 55: Fluid and electrolyte disorders; 96: Heart valve disorders; 97: Peri-; endo-; and myocarditis; cardiomyopathy (except that caused by tuberculosis or sexually transmitted disease); 98: Essential hypertension; 100: Acute myocardial infarction; 102: Nonspecific chest pain; 104: Other and ill-defined heart disease; 105: Conduction disorders; 106: Cardiac dysrhythmias; 107: Cardiac arrest and ventricular fibrillation; 108: Congestive heart failure; non-hypertensive; 110: Occlusion or stenosis of precerebral arteries; 112: Transient cerebral ischemia; 115: Aortic; peripheral; and visceral artery aneurysms; 116: Aortic and peripheral arterial embolism or thrombosis; 157: Acute and unspecified renal failure; 245: Syncope. Subsets of the following AHRQ CCS diagnosis categories used to define outcome: 99: Hypertension with complications and secondary hypertension; 101: Coronary atherosclerosis and other heart disease; 103: Pulmonary heart disease; 109: Acute cerebrovascular disease; 114: Peripheral and visceral atherosclerosis; 117: Other circulatory disease; 130: Pleurisy; pneumothorax; pulmonary collapse; 131: Respiratory failure; insufficiency; arrest (adult); 133: Other lower respiratory disease; 237: Complication of device; implant or graft. The measure has several outcome exclusions: Planned admissions; Admissions from a skilled nursing facility (SNF) or acute rehab facility; Admissions within 10 days of discharge from a hospital, SNF, or acute rehab; Admissions after patient has entered hospice; Admissions before first visit to provider if no prior year visit; Admissions at time of or following: LVAD implantation, home inotropic therapy, or heart transplant.
Denominator:	The measure includes Medicare FFS beneficiaries ≥65 years of age with at least one inpatient principal diagnosis for heart failure/cardiomyopathy, or at least two outpatient or inpatient heart failure/cardiomyopathy diagnoses in any coding position (e.g., primary or secondary position) within the two years prior to the measurement year. • Beneficiaries must be enrolled full-time in Medicare Part A and B during the year prior to measurement and during the measurement period. Additionally, the cohort excludes: Patients with internalized left ventricular assist devices (LVADs); Patients with heart transplants; Patients on home inotropic therapy; Patients on hospice for any reason; Patients with end-stage renal disease (ESRD) – defined as chronic kidney disease stage 5 or on dialysis. Provider types included for measurement (vetted by TEP and Clinician Committee): Primary care providers (PCPs): CMS designates PCPs as physicians who practice internal medicine, family medicine, general medicine, or geriatric medicine, and non-physician providers, including nurse practitioners, certified clinical nurse specialists, and physician assistants; Cardiologists: Cardiologists are covered by the measure because they provide overall coordination of care for patients with HF and manage the conditions that put HF patients at risk for admission due to acute cardiovascular-related conditions. Outcome attribution: We begin by assigning each patient to the clinician most responsible for the patient's care, based on the pattern of outpatient visits with PCPs and relevant specialists. The patient can be assigned to a PCP, a cardiologist, or can be left unassigned. A patient who is eligible for attribution is assigned to a cardiologist if they have 2 or more visits with a single cardiologist, regardless of how many visits that patient has with a PCP. There are two scenarios where a patient can be assigned to a PCP. • First, if the patient has seen the PCP at least once but has no visits with a cardiologist, the patient is assigned to the PCP. • Second, if the patient has seen the PCP more than 2 or more times and has only one visit with a cardiologist, the patient is assigned to the PCP. If the patient has 1 visit each with a cardiologist and a PCP, the patient is assigned to the cardiologist. If the patient has 1 visit with a cardiologist and no visit with a PCP, the patient is assigned to the cardiologist. • Finally, the patient will be unassigned if they had no visits with a PCP or cardiologist. Patients are then assigned at the Taxpayer Identification Number (TIN) level, which includes solo clinicians and groups of clinicians who have chosen to report their quality under a common TIN. Patients "follow" their clinician to the TIN designated by the clinician (i.e. they are assigned to their clinician's TIN). Patients unassigned at the individual clinician-level, therefore, continue to be unassigned at the TIN level.
Exclusions:	Numerator Exclusions: The measure does not include the following types of admissions in the outcome because they do not reflect the quality of care provided by ambulatory care clinicians who are managing the care of HF patients: Planned admissions (utilizes the adapted planned admission algorithm (PAA) to identify and exclude admissions that are planned); Admissions that likely do not reflect the quality of heart failure management provided by ambulatory clinicians including: Admissions that occur within 10 days of discharge from a hospital, skilled nursing facility, or acute rehabilitation facility ("10-day buffer period"); Admissions that occur while patients are enrolled in Medicare's hospice benefit; Admissions that occur prior to the first visit with the assigned clinician. Admissions on the date or after any of the following: LVAD implantation, home inotropic therapy, or heart transplant (censored at the time of transition to advanced care). Denominator Exclusions: The measure excludes:

Category	Description
	1. Patients without continuous enrollment in Medicare Parts A and B for the duration of the measurement period. 2. Patients who (or until death), were ever in hospice during the year prior to the measurement year or in hospice at the start of the measurement period. 3. Patients who have had no Evaluation & Management (E&M) visits to a MIPS eligible clinician. 4. Patients who have had a heart transplant, been on home inotropic therapy, or who have had a left ventricular assist device (LVAD) placed.
Measure Type:	Outcome
Measure Domain:	Effective Clinical Care (section 1848(s)(1)(B)(i) of the Act)
High Priority Measure:	Yes
Collection Type:	Administrative Claims
Measure-Specific Case Minimum/Performance Period:	MIPS eligible clinicians, groups, subgroups*, virtual groups, and APM Entities / 21 case minimum / 1 year performance period (January 1st – December 31st) *Subgroups are only available through MVP reporting. All measure-specific criteria must be met by the subgroup.
Rationale:	We are proposing this administrative claims outcome measure as HF is a leading cause of hospitalization in the United States and a major source of disease burden among the elderly population. Approximately 5.7 million adults in the United States have HF, costing the United States $30.7 billion each year, which includes the cost of health care services, medications for treatment, and missed days of work.[1] The toll on patients is also great, with high rates of hospitalization and mortality; nearly half of people with HF die within 5 years of their diagnosis.[2] Patients with chronic HF are vulnerable to a range of complications that may put them at risk for hospitalization, including worsening of HF symptoms and destabilization due to other conditions, such as respiratory disease or infection. To expand the list of available reporting options for clinicians, we are proposing this HF measure for use in the MIPS program, as it is an administrative claims measure, which has no reporting burden. Another version of this measure specified for Accountable Care Organizations (ACOs), "Risk-standardized Acute Admission Rates for Patients with Heart Failure" (ACO-37, NQF ID 2886) was previously used in the CMS Medicare Shared Savings Program, initially for accountability and currently as an informational measure. We used the ACO-37 measure in the Shared Savings Program ACO quality measure set until 2019 and since 2019 has provided ACOs with their performance on the measure in quarterly claims-based reports for ACOs to use in quality improvement activities. The HF measure was evaluated by the NQF MAP who did not recommend for rulemaking with potential for mitigation siting NQF endorsement and an analysis of the appropriateness of the risk adjustment for clinicians with higher caseloads of patients with more complicated or severe heart failure. While we agree with the MAP that NQF endorsement of measures is preferred, NQF endorsement is not a requirement for measures to be considered for MIPS if the measure has an evidence-based focus as required by section 1848(q)(2)(D)(v) of the Act. While the measure raises concerns that the risk adjustment may not adequately account for advanced heart failure stages, based on research of the available information presented to the MAP, we believe the measure is evidence-based and represents an important clinical practice and has provided valuable information for other programs. Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=94650.

A.5. Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions[267]

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	TBD
Description:	Annual risk-standardized rate of acute, unplanned hospital admissions among Medicare Fee-for-Service (FFS) patients aged 65 years and older with multiple chronic conditions (MCCs).
Measure Steward:	Centers for Medicare & Medicaid Services
Numerator:	"The outcome for this measure is the number of acute, unplanned hospital admissions per 100 person-years at risk for admission during the measurement period. Time Period The outcome includes inpatient admissions to an acute care hospital during the measurement year. Excluded Admissions This measure does not include the following types of admissions in the outcome because they do not reflect the quality of care provided by ambulatory care clinicians who are managing the care of MCC patients: 1. Planned hospital admissions. 2. Admissions that occur directly from a skilled nursing facility (SNF) or acute rehabilitation facility. 3. Admissions that occur within a 10-day "buffer period" of time after discharge from a hospital, SNF, or acute rehabilitation facility. 4. Admissions that occur after the patient has entered hospice. 5. Admissions related to complications from procedures or surgeries. 6. Admissions related to accidents or injuries. 7. Admissions that occur prior to the first visit with the assigned clinician or clinician group. To identify planned admissions, the measure adopted an algorithm CORE previously developed for CMS's hospital readmission measures, CMS's Planned Readmission Algorithm Version 4.0. [1,2] In brief, the algorithm uses the procedure codes and principal discharge diagnosis code on each hospital claim to identify planned admissions. A few specific, limited types of care are always considered planned (for example, major organ transplant, rehabilitation, and maintenance chemotherapy). Otherwise, a planned admission is defined as a non-acute admission for a scheduled procedure (for example, total hip replacement or cholecystectomy). Admissions for an acute illness are never considered planned. To identify complications of procedures or surgeries, we use the Agency for Healthcare Research and Quality's (AHRQ's) Clinical Classifications Software (CCS), which clusters diagnoses into clinically meaningful categories using International Classification of Diseases, Ninth Revision, Clinical Modification (ICD-9-CM) or International Classification of Diseases, Tenth Revision, and Clinical Modification (ICD-10-CM) codes. We exclude the following 23 CCS categories. 1. 145: Intestinal obstruction without hernia 2. 237: Complication of device; implant or graft 3. 238: Complications of surgical procedures or medical care 4. 257: Other aftercare b) Accidents or injuries 5. 2601 E Codes: Cut/pierce 6. 2602 E Codes: Drowning/submersion 7. 2604 E Codes: Fire/burn 8. 2605 E Codes: Firearm 9. 2606 E Codes: Machinery 10. 2607 E Codes: Motor vehicle traffic (MVT) 11. 2608 E Codes: Pedal cyclist; not MVT 12. 2609 E Codes: Pedestrian; not MVT 13. 2610 E Codes: Transport; not MVT 14. 2611 E Codes: Natural/environment 15. 2612 E Codes: Overexertion 16. 2613 E Codes: Poisoning 17. 2614 E Codes: Struck by; against 18. 2615 E Codes: Suffocation 19. 2616 E Codes: Adverse effects of medical care 20. 2618 E Codes: Other specified and classifiable 21. 2619 E Codes: Other specified; NEC 22. 2620 E Codes: Unspecified 23. 2621 E Codes: Place of occurrence Person-time at risk Persons are considered at risk for hospital admission if they are alive, enrolled in Medicare FFS, and not in the hospital during the measurement period. In addition to time spent in the hospital, we also exclude from at-risk time: 1) time spent in a SNF or acute rehabilitation facility; 2) the time within 10 days following discharge from a hospital, SNF, or acute rehabilitation facility; and 3) time after entering hospice care. Citations

[267] This proposed quality measure is a Population Health measure.

	1. Yale New Haven Health Services Corporation – Center for Outcomes Research & Evaluation (YNHHSC/CORE). 2018 All-Cause Hospital Wide Measure Updates and Specifications Report - Hospital-Level 30-Day Risk-Standardized Readmission Measure – Version 7.0. Centers for Medicare & Medicaid Services; March 2018. 2. Horwitz L, Grady J, Cohen D, et al. Development and validation of an algorithm to identify planned readmissions from claims data. Journal of Hospital Medicine. October 2015;10(10):670-677."
Denominator:	"Patients included in the measure (target patient population) The cohort is comprised of patients whose combinations of chronic conditions put them at high risk of admission and whose admission rates could be lowered through better care. This definition reflects NQF's "Multiple Chronic Conditions Measurement Framework," which defines patients with MCCs as people "having two or more concurrent chronic conditions that…act together to significantly increase the complexity of management, and affect functional roles and health outcomes, compromise life expectancy, or hinder self-management." [1] The specific inclusion criteria are as follows. • Patient is alive at the start of the measurement period and has two or more of nine chronic disease groups in the year prior to the measurement period. Chronic conditions, except for diabetes, are defined using CMS's Chronic Conditions Data Warehouse (CCW). For diabetes, we used the diabetes cohort definition from the Accountable Care Organization (ACO) diabetes admission measure developed by CORE (v2018a ACO-36) as opposed to the definition used in CCW; CCW includes diagnoses for secondary and drug-induced diabetic conditions that are not the focus of the MIPS MCC admission measure. 1. Acute myocardial infarction (AMI), 2. Alzheimer's disease and related disorders or senile dementia, 3. Atrial fibrillation, 4. Chronic kidney disease (CKD), 5. Chronic obstructive pulmonary disease (COPD) or asthma, 6. Depression, 7. Diabetes, 8. Heart failure, and 9. Stroke or transient ischemic attack (TIA). • Patient is aged ≥65 years at the start of the year prior to the measurement period. • Patient is a Medicare FFS beneficiary with continuous enrollment in Medicare Parts A and B during the year prior to the measurement period. Provider types included for measurement • Primary care providers (PCPs): CMS designates PCPs as physicians who practice internal medicine, family medicine, general medicine, or geriatric medicine, and non-physician providers, including nurse practitioners, certified clinical nurse specialists, and physician assistants. • Relevant specialists: Specialists covered by the measure are limited to those who provide overall coordination of care for patients with MCCs and who manage the chronic diseases that put the MCC patients in the measure at risk of admission. These specialists were chosen with input from our Technical Expert Panel (TEP) and include cardiologists, pulmonologists, nephrologists, neurologists, endocrinologists, and hematologists/oncologists. Outcome attribution We begin by assigning each patient to the clinician most responsible for the patient's care, based on the pattern of outpatient visits with PCPs and relevant specialists. The patient can be assigned to a PCP, a relevant specialist, or can be left unassigned. • A patient who is eligible for attribution can be assigned to a relevant specialist only if the specialist has been identified as "dominant". A specialist is considered "dominant" if they have two or more visits with the patient, as well as at least two more visits than any primary care provider or other relevant specialist. • There are two scenarios where a patient can be assigned to a PCP. First, the patient must have seen at least one PCP. The patient will then be assigned to the PCP with the highest number of visits if there are no relevant specialists who are considered "dominant". Second, if the patient has had more than one visit with a relevant specialist, no "dominant" specialist has been identified, and has two or more visits with a PCP, they will be assigned to that PCP. • Finally, the patient will be unassigned if they only saw non-relevant specialists, if the patient has not seen a PCP and no "dominant" specialist can be identified, or if the patient has not had more than one visit with any individual PCP. Patients are then assigned at the Taxpayer Identification Number (TIN) level, which includes solo clinicians and groups of clinicians who have chosen to report their quality under a common TIN. • Patients "follow" their clinician to the TIN designated by the clinician (i.e. they are assigned to their clinician's TIN). Patients unassigned at the individual clinician-level, therefore, continue to be unassigned at the TIN level. Citations 1. National Quality Forum. Multiple Chronic Conditions Measurement Framework. http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=71227. Accessed February 20, 2019."
Exclusions:	Denominator Exclusions: "The cohort excludes the following patients: 1) Patients without continuous enrollment in Medicare Part A or B during the measurement period. 2) Patients who were in hospice at any time during the year prior to the measurement year or at the start of the measurement year. 3) Patients who had no Evaluation & Management (E&M) visits to a MIPS-eligible clinician type. 4) Patients assigned to clinician who achieve QP status and therefore do not participate in MIPS. 5) Patients attributed to hematologists and oncologists. 6) Patients not at risk for hospitalization during the measurement year." Note: Exclusions 1-3 are applied prior to attribution, while exclusions 4-6 are applied after the attribution algorithm is run.
Measure Type:	Outcome

Category	Description
Measure Domain:	Effective Clinical Care (section 1848(s)(1)(B)(i) of the Act)
High Priority Measure:	Yes
Collection Type:	Administrative Claims
Measure-Specific Case Minimum/Performance Period:	MIPS eligible groups, subgroups*, virtual groups, and APM Entities with at least 16 clinicians / 18 case minimum / 1 year performance period (January 1st – December 31st) *Subgroups are only available through MVP reporting. All measure-specific criteria must be met by the subgroup.
Rationale:	We are proposing this risk-standardized hospital admission rate administrative claims outcome measure as patients with MCCs are at high risk for hospital admission, often for potentially preventable causes, such as exacerbation of pulmonary disease. Evidence from several Medicare demonstration projects suggests that care coordination results in decreased hospital admission rates among high-risk patients. In addition, studies have shown that the types of ambulatory care clinicians this measure targets (for example, primary care providers and specialists caring for patients with MCCs) can influence admission rates through team-based and enhanced access to care, found specifically in the patient-centered medical home (PCMH) model of interventions, and broadly through increased primary care supply and continuity of care. To expand the list of available reporting options for clinicians, we are proposing the MCC measure for use in the MIPS program, as it is an administrative claims measure, which has no reporting burden. This measure was evaluated by the NQF MAP in 2019, who did not support for rulemaking with potential for mitigation, including applying the measure to clinician groups, not to individual clinicians, a higher reliability threshold (e.g., 0.7; 3), consideration of patient preference and selection as a method of attribution and NQF endorsement. While we agree with the MAP that NQF endorsement of measures is preferred, NQF endorsement is not a requirement for measures to be considered for MIPS if the measure has an evidence-based focus as required by section 1848(q)(2)(D)(v) of the Act. This measure has been submitted for endorsement as part of the fall 2020 NQF cycle. The measure developer indicated the measure will be used for clinician group reporting with a mean reliability score for groups of >15 clinicians with at least 18 MCC patients at 0.873. While the developer indicated that the patient attestation is not yet available for testing, based on research of the available information presented at the MAP, we believe the measure is evidence-based and represents an important clinical practice addressing a large Medicare patient population. Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=91911.

TABLE Group AA: COVID-19 Vaccination by Clinicians

In addition to the new quality measures in Table Group A, we are seeking comment on one quality measure for potential future inclusion within MIPS. We refer readers to section IV.A.3.d.(1)(f) of this proposed rule for our request for information pertaining to the COVID-19 Vaccination by Clinicians measure specifications.

AA.1. SARS-CoV-2 Vaccination by Clinicians

Category	Description
NQF # / eCQM NQF #:	N/A
Quality #:	TBD
Description:	Percentage of patients aged 18 years and older seen for a visit during the measurement period who have ever received or reported having ever received a SARS-CoV-2 vaccination dose OR who have ever received or reported having ever received a full SARS-CoV-2 vaccination course.
Measure Steward:	Centers for Medicare & Medicaid Services
Numerator:	Patients who have ever received or reported having ever received a SARS-CoV-2 vaccination dose OR who have ever received or reported having ever received a full SARS-CoV-2 vaccination course.
Denominator:	All patients aged 18 years and older seen for a visit during the measurement period.
Exclusions:	Patient received hospice services any time during the measurement period. Exceptions: 1. SARS-CoV-2 vaccine dose or full SARS-CoV-2 vaccination course was not administered, as documented by clinician, due to patient contraindication. 2. SARS-CoV-2 vaccine dose or full SARS-CoV-2 vaccination course was not administered, as documented by clinician, due to patient refusal. 3. SARS-CoV-2 vaccine dose or full SARS-CoV-2 vaccination course was not administered, as documented by clinician, due to vaccine being unavailable.
Measure Type:	Process
Measure Domain:	Community/Population Health (section 1848(s)(1)(B)(i) of the Act)
High Priority Measure:	No
Collection Type:	MIPS CQMs Specifications
Measure-Specific Case Minimum/Performance Period:	N/A for this measure
Rationale:	We are proposing this measure for comment as it represents a promising effort to advance measurement of vaccination for an evolving pandemic. On December 19, 2020, the Advisory Committee on Immunization Practice (ACIP) made an interim recommendation on the use of the Moderna COVID-19 vaccine for people ages 18 and older. Earlier that month, on December 12, ACIP also granted use of the Pfizer-BioNTech COVID-19 vaccine for people ages 16 and older, as an interim recommendation. The benefits of both vaccines were classified as high certainty (Type 1) based on the Grading of Recommendations, Assessment, Development and Evaluation (GRADE) evidence assessment. On February 28, 2021 ACIP issued an interim recommendation for use of the Janssen COVID-19 vaccine in persons aged ≥18 years for the prevention of COVID-19. The benefit for this single dose vaccine was classified as moderate certainty (Type 2) based on the GRADE evidence assessment. Future versions of the measure will be updated as more evidence and guidelines emerge. This measure would add value to the MIPS quality measure set by providing visibility into an important intervention to limit COVID-19 infections. In addition, collecting information on severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) vaccination coverage and providing feedback to clinicians, will facilitate performance benchmarking and drive quality improvement. Vaccination coverage will reduce transmission of COVID-19 and the associated mortality and morbidity. This measure was reviewed by the NQF MAP, who recommended conditional support for future rulemaking contingent on us bringing the measure back to MAP once the specifications are further refined. We are considering an expedited process for this measure recognizing the importance of a vaccine during a public health emergency and are exploring the inclusion of pediatric hospitals within this COVID-19 vaccination measure. Based on research of the available information presented to the MAP, we believe the measure is evidence-based and represents an important clinical topic. Note: Refer to the MAP Spreadsheet of Final Recommendations to CMS and HHS at http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=94650.

TABLE Group B: New Specialty Measures Set Proposed for Addition and Modifications to Previously Finalized Specialty Measures Sets Proposed for the CY 2022 MIPS Performance Period/2024 MIPS Payment Year and Future Years

We are proposing to add one new specialty measures set: Certified Nurse Midwife. This set is proposed to be added based in part on the proposed expanded definition of the MIPS eligible clinician to include certified nurse midwife under Section IV.A.3.a. of this proposed rule. Note: Clinical Social Work is also being proposed as a MIPS eligible clinician type under Section IV.A.3.a. of this proposed rule. See Table B.7 for the proposed changes to the previously finalized Clinical Social Work specialty set.

We are proposing to modify the previously finalized specialty measures sets below based upon review of updates made to existing quality measure specifications, proposed the addition of new measures for inclusion in MIPS, and considered the feedback provided by specialty societies. There may be instances where the quality measures within a specialty set remain static, but the individual measures have proposed substantive changes in Table Group D. In the first column, existing measures with substantive changes described in Table Group D are noted with an asterisk (*), core measures that align with Core Quality Measure Collaborative (CQMC) core measure set(s) are noted with the symbol (§), and high priority measures are noted with an exclamation point (!). In addition, the Indicator column includes a “high priority type” in parentheses after each high priority indicator (!) to represent the regulatory definition of high priority measures. In addition, electronic clinical quality measures (eCQMs) that are National Quality Forum (NQF) endorsed are shown in Table Group B as follows: NQF # / eCQM NQF #.

The definition of high priority at §414.1305 includes an outcome (including intermediate-outcome and patient-reported outcome), appropriate use, patient safety, efficiency, patient experience, care coordination, or opioid-related quality measure.

It should be noted that in the 2021 PFS final rule (85 FR 84870), the CMS Web Interface measures as a collection type would sunset starting with the CY 2022 MIPS performance period; however, in section IV.A.3.d.(1)(d) of this proposed rule, we are proposing to extend the availability of the CMS Web Interface measures as a collection type for the 2022 MIPS performance period and sunset the CMS Web Interface measures starting with the CY 2023 MIPS performance period. Therefore, we are proposing to modify the CMS Web Interface Measure Specifications collection type as outlined in the applicable measures within the B tables. In conjunction with seeking public comment on the proposal to extend the availability of the CMS Web Interface measures as a collection type, we are seeking public comment on the modifications proposed for the CMS Web Interface Measure Specifications collection type given that the CMS Web Interface Measure Specifications collection type has generally remained the same for three consecutive (CY 2019, CY 2020, and CY 2021) MIPS performance periods.

B.1. Allergy/Immunology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Allergy/Immunology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Allergy/Immunology specialty set.

Centers for Medicare & Medicaid Services
! (Outcome)	N/A / N/A	398	N/A	MIPS CQMs Specifications	Outcome	Effective Clinical Care	**Optimal Asthma Control:** Composite measure of the percentage of pediatric and adult patients whose asthma is well-controlled as demonstrated by one of three age appropriate patient reported outcome tools and not at risk for exacerbation.	Minnesota Community Measurement
	N/A / N/A	402	N/A	MIPS CQMs Specifications	Process	Community/ Population Health	**Tobacco Use and Help with Quitting Among Adolescents:** The percentage of adolescents 12 to 20 years of age with a primary care visit during the measurement year for whom tobacco use status was documented and received help with quitting if identified as a tobacco user.	National Committee for Quality Assurance

B.1. Allergy/Immunology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR **REMOVAL** FROM THE ALLERGY/IMMUNOLOGY SET Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**	**Rationale for Removal**
N/A / N/A	317	CMS22v10	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community / Population Health	**Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented:** Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is pre-hypertensive or hypertensive.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A / N/A	444	N/A	MIPS CQMs Specifications	Process	Efficiency and Cost Reduction	**Medication Management for People with Asthma**: The percentage of patients 5-64 years of age during the performance period who were identified as having persistent asthma and were dispensed appropriate medications that they remained on for at least 75% of their treatment period.	National Committee for Quality Assurance	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.

B.2. Anesthesiology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Anesthesiology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Anesthesiology specialty set.

B.2. Anesthesiology

The measure contains four goals. All four goals within a measure must be reached in order to meet that measure. The numerator for the all-or-none measure should be collected from the organization's total IVD denominator. All-or-None Outcome Measure (Optimal Control) - Using the IVD denominator optimal results include: • Most recent blood pressure (BP) measurement is less than or equal to 140/90 mm Hg -- And • Most recent tobacco status is Tobacco Free -- And • Daily Aspirin or Other Antiplatelet Unless Contraindicated -- And • Statin Use Unless Contraindicated	Wisconsin Collaborative for Healthcare Quality

B.4a. Cardiology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR **REMOVAL** FROM THE CARDIOLOGY SET Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**	**Rationale for Removal**
N/A / N/A	317	CMS22v10	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community /Population Health	**Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented:** Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is pre-hypertensive or hypertensive.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.

B.4b. Electrophysiology Cardiac Specialist

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Electrophysiology Cardiac Specialist specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Electrophysiology Cardiac Specialist specialty set.

B.4b. Electrophysiology Cardiac Specialist

PREVIOUSLY FINALIZED MEASURES IN THE ELECTROPHYSIOLOGY CARDIAC SPECIALIST SET								
Indicator	**NQF # / eCQM NQF #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**
§ ! (Outcome)	2474 / N/A	392	N/A	MIPS CQMs Specifications	Outcome	Patient Safety	**Cardiac Tamponade and/or Pericardiocentesis Following Atrial Fibrillation Ablation:** Rate of cardiac tamponade and/or pericardiocentesis following atrial fibrillation ablation. This measure is submitted as four rates stratified by age and gender: • Submission Age Criteria 1: Females 18-64 years of age • Submission Age Criteria 2: Males 18-64 years of age • Submission Age Criteria 3: Females 65 years of age and older • Submission Age Criteria 4: Males 65 years of age and older	American College of Cardiology Foundation
! (Outcome)	N/A / N/A	393	N/A	MIPS CQMs Specifications	Outcome	Patient Safety	**Infection within 180 Days of Cardiac Implantable Electronic Device (CIED) Implantation, Replacement, or Revision:** Infection rate following CIED device implantation, replacement, or revision.	American College of Cardiology Foundation

B.5. Certified Nurse Midwife

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, we are soliciting comment on applicable measures for a Certified Nurse Midwife specialty set, which takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. CMS may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures because certified nurse midwife is being proposed for inclusion in the definition of a MIPS eligible clinician type. We request comment on the measures available in the Certified Nurse Midwife specialty set.

B.5. Certified Nurse Midwife

MEASURES PROPOSED FOR **ADDITION** TO THE CERTIFIED NURSE MIDWIFE SET									
Indicator	**NQF # / eCQM NQF #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**	**Rationale for Inclusion**
! (Care Coordination)	0326 / N/A	047	N/A	Medicare Part B Claims, MIPS CQMs Specifications	Process	Communication and Care Coordination	**Advance Care Plan**: Percentage of patients aged 65 years and older who have an advance care plan or surrogate decision maker documented in the medical record or documentation in the medical record that an advance care plan was discussed but the patient did not wish or was not able to name a surrogate decision maker or provide an advance care plan.	National Committee for Quality Assurance	We propose to include this measure in the Certified Nurse Midwife specialty set as it is clinically relevant to this clinician type.
*	0041 / 0041e	110	CMS147v11	Medicare Part B Claims Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications	Process	Community/ Population Health	**Preventive Care and Screening: Influenza Immunization:** Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.	National Committee for Quality Assurance	We propose to include this measure in the Certified Nurse Midwife specialty set as it is clinically relevant to this clinician type.
§ ! (Patient Safety)	N/A / N/A	130	CMS68v11	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Patient Safety	**Documentation of Current Medications in the Medical Record:** Percentage of visits for patients aged 18 years and older for which the eligible professional or eligible clinician attests to documenting a list of current medications using all immediate resources available on the date of the encounter.	Centers for Medicare & Medicaid Services	We propose to include this measure in the Certified Nurse Midwife specialty set as it is clinically relevant to this clinician type.

B.5. Certified Nurse Midwife

MEASURES PROPOSED FOR **ADDITION** TO THE CERTIFIED NURSE MIDWIFE SET									
Indicator	**NQF # / eCQM NQF #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**	**Rationale for Inclusion**
* §	0028 / 0028e	226	CMS138v10	Medicare Part B Claims Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications	Process	Community/ Population Health	**Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention:** Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 12 months AND who received tobacco cessation intervention if identified as a tobacco user. Three rates are reported: a. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 12 months b. Percentage of patients aged 18 years and older who were identified as a tobacco user who received tobacco cessation intervention c. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 12 months AND who received tobacco cessation intervention if identified as a tobacco user.	National Committee for Quality Assurance	We propose to include this measure in the Certified Nurse Midwife specialty set as it is clinically relevant to this clinician type.
* ! (Outcome)	N/A / N/A	335	N/A	MIPS CQMs Specifications	Outcome	Patient Safety	**Maternity Care: Elective Delivery or Early Induction Without Medical Indication at < 39 Weeks (Overuse):** Percentage of patients, regardless of age, who gave birth during a 12-month period who delivered a live singleton at < 39 weeks of gestation completed who had elective deliveries by cesarean section (C-section), or early inductions of labor, without medical indication.	Centers for Medicare & Medicaid Services	We propose to include this measure in the Certified Nurse Midwife specialty set as it is clinically relevant to this clinician type.
* § ! (Care Coordination)	N/A / N/A	336	N/A	MIPS CQMs Specifications	Process	Communication and Care Coordination	**Maternity Care: Postpartum Follow-up and Care Coordination**: Percentage of patients, regardless of age, who gave birth during a 12-month period who were seen for postpartum care before or at 8 weeks of giving birth and received the following at a postpartum visit: breast-feeding evaluation and education, postpartum depression screening, postpartum glucose screening for gestational diabetes patients, family and contraceptive planning counseling, tobacco use screening and cessation education, healthy lifestyle behavioral advice, and an immunization review and update.	Centers for Medicare & Medicaid Services	We propose to include this measure in the Certified Nurse Midwife specialty set as it is clinically relevant to this clinician type.

B.5. Certified Nurse Midwife

MEASURES PROPOSED FOR **ADDITION** TO THE CERTIFIED NURSE MIDWIFE SET									
Indicator	**NQF # / eCQM NQF #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**	**Rationale for Inclusion**
§	2152 / N/A	431	N/A	MIPS CQMs Specifications	Process	Community/ Population Health	**Preventive Care and Screening: Unhealthy Alcohol Use: Screening & Brief Counseling:** Percentage of patients aged 18 years and older who were screened for unhealthy alcohol use using a systematic screening method at least once within the last 12 months AND who received brief counseling if identified as an unhealthy alcohol user.	National Committee for Quality Assurance	We propose to include this measure in the Certified Nurse Midwife specialty set as it is clinically relevant to this clinician type.
§	N/A / N/A	475	CMS349v4	eCQM Specifications	Process	Community/ Population Health	**HIV Screening:** Percentage of patients aged 15-65 at the start of the measurement period who were between 15-65 years old when tested for HIV.	Centers for Disease Control and Prevention	We propose to include this measure in the Certified Nurse Midwife specialty set as it is clinically relevant to this clinician type.

B.6. Chiropractic Medicine

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Chiropractic Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Chiropractic Medicine specialty set.

B.6. Chiropractic Medicine

PREVIOUSLY FINALIZED MEASURES IN THE CHIROPRACTIC MEDICINE SET								
Indicator	**NQF # / eCQM NQF #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**
* § ! (Care Coordination)	N/A / N/A	182	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	**Functional Outcome Assessment:** Percentage of visits for patients aged 18 years and older with documentation of a current functional outcome assessment using a standardized functional outcome assessment tool on the date of the encounter AND documentation of a care plan based on identified functional outcome deficiencies on the date of the identified deficiencies.	Centers for Medicare & Medicaid Services
* ! (Outcome)	N/A / N/A	217	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure	Communication and Care Coordination	**Functional Status Change for Patients with Knee Impairments:** A patient-reported outcome measure of risk-adjusted change in functional status for patients aged 14 years+ with knee impairments. The change in functional status (FS) is assessed using the FOTO Lower Extremity Physical Function (LEPF) patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).	Focus on Therapeutic Outcomes, Inc.
! American Academy of Dermatology

B.9. Dermatology

MEASURES PROPOSED FOR **ADDITION** TO THE DERMATOLOGY SET									
Indicator	**NQF # / eCQM NQF #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
*	N/A/ N/A	176	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	**Tuberculosis Screening Prior to First Course Biologic Therapy:** If a patient has been newly prescribed a biologic disease-modifying anti-rheumatic drug (DMARD) therapy, then the medical record should indicate TB testing in the preceding 12-month period.	American College of Rheumatology	We propose to include this measure in the Dermatology specialty set as it is clinically relevant to this clinician type. Previous stakeholder feedback resulted in an expanded list of acceptable medications, proposed in Table D.20, which now cover the broader dermatological patient population. With this expansion, and the clinical relevance to this clinician type, we propose to add to the Dermatology specialty set.

B.9. Dermatology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR **REMOVAL** FROM THE DERMATOLOGY SET Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**	**Rationale for Removal**
N/A / N/A	137	N/A	MIPS CQMs Specifications	Structure	Communication and Care Coordination	**Melanoma: Continuity of Care – Recall System:** Percentage of patients, regardless of age, with a current diagnosis of melanoma or a history of melanoma whose information was entered, at least once within a 12-month period, into a recall system that includes: • A target date for the next complete physical skin exam, AND • A process to follow up with patients who either did not make an appointment within the specified timeframe or who missed a scheduled appointment.	American Academy of Dermatology	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A / N/A	317	CMS22v10	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community /Population Health	**Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented:** Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is pre-hypertensive or hypertensive.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A / N/A	337	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	**Psoriasis: Tuberculosis (TB) Prevention for Patients with Psoriasis, Psoriatic Arthritis and Rheumatoid Arthritis on a Biological Immune Response Modifier:** Percentage of patients, regardless of age, with psoriasis, psoriatic arthritis and/or rheumatoid arthritis on a biological immune response modifier whose providers are ensuring active tuberculosis prevention either through negative standard tuberculosis screening tests or are reviewing the patient's history to determine if they have had appropriate management for a recent or prior positive test.	American Academy of Dermatology	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.

B.10. Diagnostic Radiology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Diagnostic Radiology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Diagnostic Radiology specialty set.

B.10. Diagnostic Radiology

PREVIOUSLY FINALIZED MEASURES IN THE DIAGNOSTIC RADIOLOGY SET								
Indicator	**NQF # / eCQM NQF #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**
! (Patient Safety)	N/A / N/A	145	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	**Radiology: Exposure Dose Indices or Exposure Time and Number of Images Reported for Procedures Using Fluoroscopy:** Final reports for procedures using fluoroscopy that document radiation exposure indices, or exposure time and number of fluorographic images (if radiation exposure indices are not available).	American College of Radiology
! (Care Coordination)	N/A / N/A	147	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	**Nuclear Medicine: Correlation with Existing Imaging Studies for All Patients Undergoing Bone Scintigraphy:** Percentage of final reports for all patients, regardless of age, undergoing bone scintigraphy that include physician documentation of correlation with existing relevant imaging studies (e.g., x-ray, Magnetic Resonance Imaging (MRI), Computed Tomography (CT), etc.) that were performed.	Society of Nuclear Medicine and Molecular Imaging
! (Appropriate Use)	N/A / N/A	360	N/A	MIPS CQMs Specifications	Process	Patient Safety	**Optimizing Patient Exposure to Ionizing Radiation: Count of Potential High Dose Radiation Imaging Studies: Computed Tomography (CT) and Cardiac Nuclear Medicine Studies:** Percentage of computed tomography (CT) and cardiac nuclear medicine (myocardial perfusion studies) imaging reports for all patients, regardless of age, that document a count of known previous CT (any type of CT) and cardiac nuclear medicine (myocardial perfusion) studies that the patient has received in the 12-month period prior to the current study.	American College of Radiology
! (Appropriate Use)	N/A / N/A	364	N/A	MIPS CQMs Specifications	Process	Communication and Care Coordination	**Optimizing Patient Exposure to Ionizing Radiation: Appropriateness: Follow-up CT Imaging for Incidentally Detected Pulmonary Nodules According to Recommended Guidelines:** Percentage of final reports for CT imaging studies with a finding of an incidental pulmonary nodule for patients aged 35 years and older that contain an impression or conclusion that includes a recommended interval and modality for follow-up (e.g., type of imaging or biopsy) or for no follow-up, and source of recommendations (e.g., guidelines such as Fleischner Society, American Lung Association, American College of Chest Physicians).	American College of Radiology

B.10. Diagnostic Radiology

PREVIOUSLY FINALIZED MEASURES IN THE DIAGNOSTIC RADIOLOGY SET								
Indicator	**NQF # / eCQM NQF #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**
! (Appropriate Use)	N/A / N/A	405	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	**Appropriate Follow-up Imaging for Incidental Abdominal Lesions:** Percentage of final reports for imaging studies for patients aged 18 years and older with one or more of the following noted incidentally with a specific recommendation for no follow-up imaging recommended based on radiological findings: • Cystic renal lesion that is simple appearing* (Bosniak I or II) • Adrenal lesion less than or equal to 1.0 cm • Adrenal lesion greater than 1.0 cm but less than or equal to 4.0 cm classified as likely benign or diagnostic benign by unenhanced CT or washout protocol CT, or MRI with in- and opposed-phase sequences or other equivalent institutional imaging protocols	American College of Radiology
! (Appropriate Use)	N/A / N/A	406	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	**Appropriate Follow-Up Imaging for Incidental Thyroid Nodules in Patients:** Percentage of final reports for computed tomography (CT), CT angiography (CTA) or magnetic resonance imaging (MRI) or magnetic resonance angiogram (MRA) studies of the chest or neck for patients aged 18 years and older with no known thyroid disease with a thyroid nodule < 1.0 cm noted incidentally with follow-up imaging recommended.	American College of Radiology
	N/A / N/A	436	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	**Radiation Consideration for Adult CT: Utilization of Dose Lowering Techniques:** Percentage of final reports for patients aged 18 years and older undergoing computed tomography (CT) with documentation that one or more of the following dose reduction techniques were used: • Automated exposure control. • Adjustment of the mA and/or kV according to patient size. • Use of iterative reconstruction technique.	American College of Radiology/ National Committee for Quality Assurance

B.10. Diagnostic Radiology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE DIAGNOSTIC RADIOLOGY SET

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0507/ N/A	195	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	**Radiology: Stenosis Measurement in Carotid Imaging Reports:** Percentage of final reports for carotid imaging studies (neck magnetic resonance angiography [MRA], neck computed tomography angiography [CTA], neck duplex ultrasound, carotid angiogram) performed that include direct or indirect reference to measurements of distal internal carotid diameter as the denominator for stenosis measurement.	American College of Radiology	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
0509/ N/A	225	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Structure	Communication and Care Coordination	**Radiology: Reminder System for Screening Mammograms:** Percentage of patients undergoing a screening mammogram whose information is entered into a reminder system with a target due date for the next mammogram.	American College of Radiology	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.

B.11. Emergency Medicine

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Emergency Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Emergency Medicine specialty set.

B.11. Emergency Medicine

PREVIOUSLY FINALIZED MEASURES IN THE EMERGENCY MEDICINE SET								
Indicator	**NQF # / eCQM NQF #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**
* § ! (Appropriate Use)	N/A / N/A	066	CMS146v10	eCQM Specifications, MIPS CQMs Specifications	Process	Efficiency and Cost Reduction	**Appropriate Testing for Pharyngitis:** The percentage of episodes for patients 3 years and older with a diagnosis of pharyngitis that resulted in an antibiotic dispensing event and a group A streptococcus (strep) test.	National Committee for Quality Assurance
* ! (Appropriate Use)	0654 / N/A	093	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Efficiency and Cost Reduction	**Acute Otitis Externa (AOE): Systemic Antimicrobial Therapy – Avoidance of Inappropriate Use:** Percentage of patients aged 2 years and older with a diagnosis of AOE who were not prescribed systemic antimicrobial therapy.	American Academy of Otolaryngology-Head and Neck Surgery
	N/A / 0104e	107	CMS161v10	eCQM Specifications	Process	Effective Clinical Care	**Adult Major Depressive Disorder (MDD): Suicide Risk Assessment:** All patient visits during which a new diagnosis of MDD or a new diagnosis of recurrent MDD was identified for patients aged 18 years and older with a suicide risk assessment completed during the visit.	Mathematica
* § ! (Appropriate Use)	0058 / N/A	116	N/A	MIPS CQMs Specifications	Process	Efficiency and Cost Reduction	**Avoidance of Antibiotic Treatment for Acute Bronchitis/Bronchiolitis:** The percentage of episodes for patients ages 3 months and older with a diagnosis of acute bronchitis/bronchiolitis that did not result in an antibiotic dispensing event.	National Committee for Quality Assurance
§	N/A / N/A	187	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	**Stroke and Stroke Rehabilitation: Thrombolytic Therapy:** Percentage of patients aged 18 years and older with a diagnosis of acute ischemic stroke who arrive at the hospital within two hours of time last known well and for whom IV alteplase was initiated within three hours of time last known well.	American Heart Association
*	N/A / N/A	254	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	**Ultrasound Determination of Pregnancy Location for Pregnant Patients with Abdominal Pain:** Percentage of pregnant female patients aged 14 to 50 who present to the emergency department (ED) with a chief complaint of abdominal pain or vaginal bleeding who receive a trans-abdominal or trans-vaginal ultrasound to determine pregnancy location.	American College of Emergency Physicians
! (Appropriate Use)	N/A / N/A	331	N/A	MIPS CQMs Specifications	Process	Efficiency and Cost Reduction	**Adult Sinusitis: Antibiotic Prescribed for Acute Viral Sinusitis (Overuse):** Percentage of patients, aged 18 years and older, with a diagnosis of acute viral sinusitis who were prescribed an antibiotic within 10 days after onset of symptoms.	American Academy of Otolaryngology-Head and Neck Surgery Foundation
! (Appropriate Use)	N/A / N/A	332	N/A	MIPS CQMs Specifications	Process	Efficiency and Cost Reduction	**Adult Sinusitis: Appropriate Choice of Antibiotic: Amoxicillin With or Without Clavulanate Prescribed for Patients with Acute Bacterial Sinusitis (Appropriate Use):** Percentage of patients aged 18 years and older with a diagnosis of acute bacterial sinusitis that were prescribed amoxicillin, with or without clavulanate, as a first line antibiotic at the time of diagnosis.	American Academy of Otolaryngology-Head and Neck Surgery Foundation

B.11. Emergency Medicine

Indicator	**NQF # / eCQM NQF #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**
! (Efficiency)	N/A / N/A	415	N/A	MIPS CQMs Specifications	Efficiency	Efficiency and Cost Reduction	**Emergency Medicine: Emergency Department Utilization of CT for Minor Blunt Head Trauma for Patients Aged 18 Years and Older:** Percentage of emergency department visits for patients aged 18 years and older who presented with a minor blunt head trauma who had a head CT for trauma ordered by an emergency care provider who have an indication for a head CT.	American College of Emergency Physicians
* ! (Efficiency)	N/A / N/A	416	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Efficiency	Efficiency and Cost Reduction	**Emergency Medicine: Emergency Department Utilization of CT for Minor Blunt Head Trauma for Patients Aged 2 through 17 Years:** Percentage of emergency department visits for patients aged 2 through 17 years who presented with a minor blunt head trauma who had a head CT for trauma ordered by an emergency care provider who are classified as low risk according to the Pediatric Emergency Care Applied Research Network (PECARN) prediction rules for traumatic brain injury.	American College of Emergency Physicians

B.11. Emergency Medicine

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR **REMOVAL** FROM THE EMERGENCY MEDICINE SET Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**	**Rationale for Removal**
N/A / N/A	317	CMS22v10	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community /Population Health	**Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented:** Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is pre-hypertensive or hypertensive.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.

B.12. Endocrinology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Endocrinology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Endocrinology specialty set.

MEASURES PROPOSED FOR **ADDITION** TO THE FAMILY MEDICINE SET									
Indicator	**NQF # / eCQM NQF #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
! (Outcome)	N/A/ N/A	TBD	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure	Person and Caregiver-centered Experience and Outcomes	**Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM):** The Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM) uses the PCPCM PROM (a comprehensive and parsimonious set of 11 patient-reported items) to assess the broad scope of primary care. Unlike other primary care measures, the PCPCM PRO-PM measures the high value aspects of primary care based on a patient's relationship with the provider or practice. Patients identify the PCPCM PROM as meaningful and able to communicate the quality of their care to their clinicians and/or care team. The items within the PCPCM PROM are based on extensive stakeholder engagement and comprehensive reviews of the literature.	The American Board of Family Medicine	We propose to include this measure in the Family Medicine specialty set as it is clinically relevant to this clinician type. This measure assesses the element of patient experience in care quality within the broad scope of primary care. Capturing the voice of the patient is an important component of delivering high-value primary care which is a focus of family medicine. Therefore, given the expansive purview of this specialty and applicability of this component in improving patient care, we propose the inclusion of this measure within the Family Medicine specialty set. See Table A.3 for rationale.

B.13. Family Medicine

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE FAMILY MEDICINE SET

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A / N/A	050	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Person and Caregiver-Centered Experience and Outcomes	**Urinary Incontinence: Plan of Care for Urinary Incontinence in Women Aged 65 Years and Older:** Percentage of female patients aged 65 years and older with a diagnosis of urinary incontinence with a documented plan of care for urinary incontinence at least once within 12 months.	National Committee for Quality Assurance	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
0101 / N/A	154	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	**Falls: Risk Assessment:** Percentage of patients aged 65 years and older with a history of falls that had a risk assessment for falls completed within 12 months.	National Committee for Quality Assurance	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A / N/A	317	CMS22v10	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community /Population Health	**Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented:** Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is pre-hypertensive or hypertensive.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A / N/A	337	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	**Psoriasis: Tuberculosis (TB) Prevention for Patients with Psoriasis, Psoriatic Arthritis and Rheumatoid Arthritis on a Biological Immune Response Modifier:** Percentage of patients, regardless of age, with psoriasis, psoriatic arthritis and/or rheumatoid arthritis on a biological immune response modifier whose providers are ensuring active tuberculosis prevention either through negative standard tuberculosis screening tests or are reviewing the patient's history to determine if they have had appropriate management for a recent or prior positive test.	American Academy of Dermatology	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
0209 / N/A	342	N/A	MIPS CQMs Specifications	Outcome	Person and Caregiver-Centered Experience and Outcomes	**Pain Brought Under Control Within 48 Hours:** Patients aged 18 and older who report being uncomfortable because of pain at the initial assessment (after admission to palliative care services) who report pain was brought to a comfortable level within 48 hours.	National Hospice and Palliative Care Organization	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.

B.13. Family Medicine

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR **REMOVAL** FROM THE FAMILY MEDICINE SET Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**	**Rationale for Removal**
N/A / N/A	444	N/A	MIPS CQMs Specifications	Process	Efficiency and Cost Reduction	**Medication Management for People with Asthma:** The percentage of patients 5-64 years of age during the performance period who were identified as having persistent asthma and were dispensed appropriate medications that they remained on for at least 75% of their treatment period.	National Committee for Quality Assurance	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.

B.14. Gastroenterology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Gastroenterology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Gastroenterology specialty set.

B.14. Gastroenterology

PREVIOUSLY FINALIZED MEASURES IN THE GASTROENTEROLOGY SET								
Indicator	**NQF # / eCQM NQF #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**

B.15. General Surgery

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE GENERAL SURGERY SET

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0268 / N/A	021	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	**Perioperative Care: Selection of Prophylactic Antibiotic – First OR Second-Generation Cephalosporin:** Percentage of surgical patients aged 18 years and older undergoing procedures with the indications for a first OR second-generation cephalosporin prophylactic antibiotic who had an order for a first OR second-generation cephalosporin for antimicrobial prophylaxis.	American Society of Plastic Surgeons	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A / N/A	023	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	**Perioperative Care: Venous Thromboembolism (VTE) Prophylaxis (When Indicated in ALL Patients):** Percentage of surgical patients aged 18 years and older undergoing procedures for which venous thromboembolism (VTE) prophylaxis is indicated in all patients, who had an order for Low Molecular Weight Heparin (LMWH), Low- Dose Unfractionated Heparin (LDUH), adjusted-dose warfarin, fondaparinux or mechanical prophylaxis to be given within 24 hours prior to incision time or within 24 hours after surgery end time.	American Society of Plastic Surgeons	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A / N/A	317	CMS22v10	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community /Population Health	**Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented:** Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is pre-hypertensive or hypertensive.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.

B.16. Geriatrics

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Geriatrics specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Geriatrics specialty set.

Large Urology Group Practice Association and Oregon Urology Institute

B.16. Geriatrics

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR **REMOVAL** FROM THE GERIATRICS SET Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**	**Rationale for Removal**
N/A / N/A	050	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Person and Caregiver-Centered Experience and Outcomes	**Urinary Incontinence: Plan of Care for Urinary Incontinence in Women Aged 65 Years and Older:** Percentage of female patients aged 65 years and older with a diagnosis of urinary incontinence with a documented plan of care for urinary incontinence at least once within 12 months.	National Committee for Quality Assurance	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
0101 / N/A	154	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	**Falls: Risk Assessment:** Percentage of patients aged 65 years and older with a history of falls that had a risk assessment for falls completed within 12 months.	National Committee for Quality Assurance	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.

B.17. Hospitalists

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Hospitalists specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Hospitalists specialty set.

Centers for Medicare & Medicaid Services

B.18. Infectious Disease

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Infectious Disease specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable. We request comment on the measures available in the proposed Infectious Disease specialty set.

Centers for Medicare & Medicaid Services
§	N/A / N/A	475	CMS349v4	eCQM Specifications	Process	Community/Population Health	**HIV Screening:** Percentage of patients aged 15-65 at the start of the measurement period who were between 15-65 years old when tested for HIV.	Centers for Disease Control and Prevention

B.19. Internal Medicine

MEASURES PROPOSED FOR **ADDITION** TO THE INTERNAL MEDICINE SET									
Indicator	**NQF # / eCQM NQF #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
! (Outcome)	N/A/ N/A	TBD	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure	Person and Caregiver-centered Experience and Outcomes	**Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM):** The Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure (PCPCM PRO-PM) uses the PCPCM PROM (a comprehensive and parsimonious set of 11 patient-reported items) to assess the broad scope of primary care. Unlike other primary care measures, the PCPCM PRO-PM measures the high value aspects of primary care based on a patient's relationship with the provider or practice. Patients identify the PCPCM PROM as meaningful and able to communicate the quality of their care to their clinicians and/or care team. The items within the PCPCM PROM are based on extensive stakeholder engagement and comprehensive reviews of the literature.	The American Board of Family Medicine	We propose to include this measure in the Internal Medicine specialty set as it is clinically relevant to this clinician type. This measure assesses the element of patient experience in care quality within the broad scope of primary care. Capturing the voice of the patient is an important component of delivering high-value primary care which is a focus of internal medicine. Therefore, given the expansive purview of this specialty and applicability of this component in improving patient care, we propose the inclusion of this measure within the Internal Medicine specialty set. See Table A.3 for rationale.

B.19. Internal Medicine

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE INTERNAL MEDICINE SET

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A / N/A	050	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Person and Caregiver-Centered Experience and Outcomes	**Urinary Incontinence: Plan of Care for Urinary Incontinence in Women Aged 65 Years and Older:** Percentage of female patients aged 65 years and older with a diagnosis of urinary incontinence with a documented plan of care for urinary incontinence at least once within 12 months.	National Committee for Quality Assurance	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
0101 / N/A	154	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	**Falls: Risk Assessment:** Percentage of patients aged 65 years and older with a history of falls that had a risk assessment for falls completed within 12 months.	National Committee for Quality Assurance	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A / N/A	317	CMS22v10	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community/ Population Health	**Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented**: Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is pre-hypertensive or hypertensive.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A/ N/A	337	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	**Psoriasis: Tuberculosis (TB) Prevention for Patients with Psoriasis, Psoriatic Arthritis and Rheumatoid Arthritis on a Biological Immune Response Modifier:** Percentage of patients, regardless of age, with psoriasis, psoriatic arthritis and/or rheumatoid arthritis on a biological immune response modifier whose providers are ensuring active tuberculosis prevention either through negative standard tuberculosis screening tests or are reviewing the patient's history to determine if they have had appropriate management for a recent or prior positive test.	American Academy of Dermatology	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
0209 / N/A	342	N/A	MIPS CQMs Specifications	Outcome	Person and Caregiver-Centered Experience and Outcomes	**Pain Brought Under Control Within 48 Hours:** Patients aged 18 and older who report being uncomfortable because of pain at the initial assessment (after admission to palliative care services) who report pain was brought to a comfortable level within 48 hours.	National Hospice and Palliative Care Organization	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.

B.19. Internal Medicine

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR **REMOVAL** FROM THE INTERNAL MEDICINE SET Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**	**Rationale for Removal**
N/A/ N/A	444	N/A	MIPS CQMs Specifications	Process	Efficiency and Cost Reduction	**Medication Management for People with Asthma:** The percentage of patients 5-64 years of age during the performance period who were identified as having persistent asthma and were dispensed appropriate medications that they remained on for at least 75% of their treatment period.	National Committee for Quality Assurance	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.

B.20. Interventional Radiology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Interventional Radiology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Interventional Radiology specialty set.

University of Southern California

B.21. Mental/Behavioral Health

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE MENTAL/BEHAVIORAL HEALTH SET

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A / N/A	317	CMS22v10	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community / Population Health	**Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented**: Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is pre-hypertensive or hypertensive.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A / N/A	374	CMS50v10	eCQM Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	**Closing the Referral Loop: Receipt of Specialist Report:** Percentage of patients with referrals, regardless of age, for which the referring provider receives a report from the provider to whom the patient was referred.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal from this specialty set beginning with the 2024 MIPS payment year. Specialty specific coding was not added to this quality measure for the 2022 performance period. In addition, the measure's limited existing mental/behavioral health coding has resulted in limited submissions of this measure historically. Therefore, this measure has minimal eligibility for this clinician type, and we propose to remove it.

B.22. Nephrology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Nephrology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Nephrology specialty set.

(Patient Safety)	0101 / N/A	318	CMS139v10	eCQM Specifications, CMS Web Interface Measure Specifications	Process	Patient Safety	**Falls: Screening for Future Fall Risk:** Percentage of patients 65 years of age and older who were screened for future fall risk during the measurement period.	National Committee for Quality Assurance
* §	N/A / N/A	400	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	**One-Time Screening for Hepatitis C Virus (HCV) for Patients at Risk:** Percentage of patients aged 18 years and older with one or more of the following: a history of injection drug use, receipt of a blood transfusion prior to 1992, receiving maintenance hemodialysis, OR birthdate in the years 1945-1965 who received one-time screening for hepatitis C virus (HCV) infection.	American Gastroenterological Association

B.22. Nephrology

MEASURES PROPOSED FOR **ADDITION** TO THE NEPHROLOGY SET									
Indicator	**NQF # / eCQM NQF #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
! (Outcome)	N/A/ N/A	TBD	N/A	MIPS CQMs Specifications	Intermediate Outcome	Effective Clinical Care	**Hemodialysis Vascular Access: Practitioner Level Long-term Catheter Rate**: Percentage of adult hemodialysis patient-months using a catheter continuously for three months or longer for vascular access attributable to an individual practitioner or group practice.	Centers for Medicare & Medicaid Services	We propose to include this measure in the Nephrology specialty set as it is clinically relevant to this clinician type. Given the high rates that patients with kidney diseases are treated and managed within this specialty, we recommend the inclusion of this measure in the Nephrology specialty set. See Table A.2 for rationale.

B.22. Nephrology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR **REMOVAL** FROM THE NEPHROLOGY SET Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**	**Rationale for Removal**
N/A / N/A	317	CMS22v10	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community / Population Health	**Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented:** Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is pre-hypertensive or hypertensive.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.

B.23. Neurology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Neurology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Neurology specialty set.

B.23. Neurology

Centers for Medicare & Medicaid Services
§ ! (Patient Safety)	N/A / N/A	130	CMS68v11	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Patient Safety	**Documentation of Current Medications in the Medical Record:** Percentage of visits for patients aged 18 years and older for which the eligible professional or eligible clinician attests to documenting a list of current medications using all immediate resources available on the date of the encounter.	Centers for Medicare & Medicaid Services
! (Patient Safety)	N/A / N/A	181	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	**Elder Maltreatment Screen and Follow-Up Plan:** Percentage of patients aged 65 years and older with a documented elder maltreatment screen using an Elder Maltreatment Screening tool on the date of encounter AND a documented follow-up plan on the date of the positive screen.	Centers for Medicare & Medicaid Services
* **§**	N/A / N/A	239	CMS155v10	eCQM Specifications	Process	Community / Population Health	**Weight Assessment and Counseling for Nutrition and Physical Activity for Children and Adolescents:** Percentage of patients 3-17 years of age who had an outpatient visit with a Primary Care Physician (PCP) or Obstetrician/Gynecologist (OB/GYN) and who had evidence of the following during the measurement period. Three rates are reported. • Percentage of patients with height, weight, and body mass index (BMI) percentile documentation. • Percentage of patients with counseling for nutrition. • Percentage of patients with counseling for physical activity.	National Committee for Quality Assurance
§	2152 / N/A	431	N/A	MIPS CQMs Specifications	Process	Community / Population Health	**Preventive Care and Screening: Unhealthy Alcohol Use: Screening & Brief Counseling:** Percentage of patients aged 18 years and older who were screened for unhealthy alcohol use using a systematic screening method at least once within the last 12 months AND who received brief counseling if identified as an unhealthy alcohol user.	National Committee for Quality Assurance

B.25. Nutrition/Dietician

MEASURES PROPOSED FOR **ADDITION** TO THE NUTRITION/DIETICIAN SET									
Indicator	**NQF # / eCQM NQF #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
	0417/ N/A	126	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	**Diabetes Mellitus: Diabetic Foot and Ankle Care, Peripheral Neuropathy – Neurological Evaluation**: Percentage of patients aged 18 years and older with a diagnosis of diabetes mellitus who had a neurological examination of their lower extremities within 12 months.	American Podiatric Medical Association	We propose to include this measure in the Nutrition/ Dietician specialty set as it is clinically relevant to this clinician type. Based on previous stakeholder feedback, many registered dietitians who are Medicare providers are certified diabetes educators, so these services would be very appropriate for them to perform and report on. As such, we agreed with the feedback and propose to add to the Nutrition/Dietician specialty set.
	0416/ N/A	127	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	**Diabetes Mellitus: Diabetic Foot and Ankle Care, Ulcer Prevention – Evaluation of Footwear**: Percentage of patients aged 18 years and older with a diagnosis of diabetes mellitus who were evaluated for proper footwear and sizing.	American Podiatric Medical Association	We propose to include this measure in the Nutrition/ Dietician specialty set as it is clinically relevant to this clinician type. Based on previous stakeholder feedback, many registered dietitians who are Medicare providers are certified diabetes educators, so these services would be very appropriate for them to perform and report on. As such, we agreed with the feedback and propose to add to the Nutrition/Dietician specialty set.

B.25. Nutrition/Dietician

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR **REMOVAL** FROM THE NUTRITION/DIETICIAN SET Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**	**Rationale for Removal**
0059 / N/A	001	CMS122v10	Medicare Part B Claims Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications	Intermediate Outcome	Effective Clinical Care	**Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%):** Percentage of patients 18-75 years of age with diabetes who had hemoglobin A1c > 9.0% during the measurement period.	National Committee for Quality Assurance	This measure is being proposed for removal from this specialty set beginning with the 2024 MIPS payment year. Nutrition/ Dietician specialty specific coding was not finalized for inclusion for the 2022 performance period. Therefore, we propose to remove the measure from the Nutrition/Dietician specialty set as it is no longer relevant to this specialty.

B.26. Obstetrics/Gynecology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Obstetrics/Gynecology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Obstetrics/Gynecology specialty set.

B.26. Obstetrics/Gynecology

PREVIOUSLY FINALIZED MEASURES IN THE OBSTETRICS/GYNECOLOGY SET								
Indicator	**NQF # / eCQM NQF #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**
! (Care Coordination)	0326 / N/A	047	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	**Advance Care Plan:** Percentage of patients aged 65 years and older who have an advance care plan or surrogate decision maker documented in the medical record or documentation in the medical record that an advance care plan was discussed but the patient did not wish or was not able to name a surrogate decision maker or provide an advance care plan.	National Committee for Quality Assurance
	N/A / N/A	048	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	**Urinary Incontinence: Assessment of Presence or Absence of Urinary Incontinence in Women Aged 65 Years and Older:** Percentage of female patients aged 65 years and older who were assessed for the presence or absence of urinary incontinence within 12 months.	National Committee for Quality Assurance
*	0041 / 0041e	110	CMS147v11	Medicare Part B Claims Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications	Process	Community/Population Health	**Preventive Care and Screening: Influenza Immunization:** Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.	National Committee for Quality Assurance
*	N/A / N/A	111	CMS127v10	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community/Population Health	**Pneumococcal Vaccination Status for Older Adults:** Percentage of patients 65 years of age and older who have ever received a pneumococcal vaccine.	National Committee for Quality Assurance

Centers for Medicare & Medicaid Services
* § ! (Appropriate Use)	N/A / 3475e	472	CMS249v4	eCQM Specifications	Process	Efficiency and Cost Reduction	**Appropriate Use of DXA Scans in Women Under 65 Years Who Do Not Meet the Risk Factor Profile for Osteoporotic Fracture:** Percentage of female patients 50 to 64 years of age without select risk factors for osteoporotic fracture who received an order for a dual-energy x-ray absorptiometry (DXA) scan during the measurement period.	Centers for Medicare & Medicaid Services
§	N/A / N/A	475	CMS349v4	eCQM Specifications	Process	Community/Population Health	**HIV Screening:** Percentage of patients aged 15-65 at the start of the measurement period who were between 15-65 years old when tested for HIV.	Centers for Disease Control and Prevention

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE OBSTETRICS/GYNECOLOGY SET

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A / N/A	050	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Person and Caregiver-Centered Experience and Outcomes	**Urinary Incontinence: Plan of Care for Urinary Incontinence in Women Aged 65 Years and Older:** Percentage of female patients aged 65 years and older with a diagnosis of urinary incontinence with a documented plan of care for urinary incontinence at least once within 12 months.	National Committee for Quality Assurance	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A / N/A	317	CMS22v10	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community/Population Health	**Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented:** Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is pre-hypertensive or hypertensive.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A / N/A	429	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	**Pelvic Organ Prolapse: Preoperative Screening for Uterine Malignancy:** Percentage of patients who are screened for uterine malignancy prior to vaginal closure or obliterative surgery for pelvic organ prolapse.	American Urogynecologic Society	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A / N/A	434	N/A	MIPS CQMs Specifications	Outcome	Patient Safety	**Proportion of Patients Sustaining a Ureter Injury at the Time of Pelvic Organ Prolapse Repair:** Percentage of patients undergoing pelvic organ prolapse repairs who sustain an injury to the ureter recognized either during or within 30 days after surgery.	American Urogynecologic Society	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.

B.27a. Oncology/Hematology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Oncology/Hematology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Oncology/Hematology specialty set.

The bone density evaluation must be prior to the start of ADT or within 3 months of the start of ADT.	Oregon Urology Institute

B.27a. Oncology/Hematology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE ONCOLOGY/HEMATOLOGY SET

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A / N/A	067	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	**Hematology: Myelodysplastic Syndrome (MDS) and Acute Leukemias: Baseline Cytogenetic Testing Performed on Bone Marrow:** Percentage of patients aged 18 years and older with a diagnosis of myelodysplastic syndrome (MDS) or an acute leukemia who had baseline cytogenetic testing performed on bone marrow.	American Society of Hematology	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A / N/A	070	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	**Hematology: Chronic Lymphocytic Leukemia (CLL): Baseline Flow Cytometry**: Percentage of patients aged 18 years and older, seen within a 12-month reporting period, with a diagnosis of chronic lymphocytic leukemia (CLL) made at any time during or prior to the reporting period who had baseline flow cytometry studies performed and documented in the chart.	American Society of Hematology	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
0383 / N/A	144	N/A	MIPS CQMs Specifications	Process	Person and Caregiver-Centered Experience and Outcomes	**Oncology: Medical and Radiation – Plan of Care for Pain:** Percentage of visits for patients, regardless of age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy who report having pain with a documented plan of care to address pain.	American Society of Clinical Oncology	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A/ N/A	317	CMS22 v10	Medicare Part B Claims Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community/ Population Health	**Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented**: Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is pre-hypertensive or hypertensive.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.

B.27b. Radiation Oncology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Radiation Oncology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Radiation Oncology specialty set.

B.27b. Radiation Oncology

American Society of Clinical Oncology	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.

B.28. Ophthalmology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Ophthalmology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Ophthalmology specialty set.

American Academy of Ophthalmology

B.28. Ophthalmology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE OPHTHALMOLOGY SET

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0087 / N/A	014	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	**Age-Related Macular Degeneration (AMD): Dilated Macular Examination:** Percentage of patients aged 50 years and older with a diagnosis of age-related macular degeneration (AMD) who had a dilated macular examination performed which included documentation of the presence or absence of macular thickening or geographic atrophy or hemorrhage AND the level of macular degeneration severity during one or more office visits within the 12-month performance period.	American Academy of Ophthalmology	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A / N/A	019	CMS142v 10	eCQM Specifications, MIPS CQMs Specifications	Process	Communicati on and Care Coordination	**Diabetic Retinopathy: Communication with the Physician Managing Ongoing Diabetes Care:** Percentage of patients aged 18 years and older with a diagnosis of diabetic retinopathy who had a dilated macular or fundus exam performed with documented communication to the physician who manages the ongoing care of the patient with diabetes mellitus regarding the findings of the macular or fundus exam at least once within 12 months.	American Academy of Ophthalmology	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.

B.29. Orthopedic Surgery

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Orthopedic Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Orthopedic Surgery specialty set.

B.29. Orthopedic Surgery

PREVIOUSLY FINALIZED MEASURES IN THE ORTHOPEDIC SURGERY SET								
Indicator	**NQF # / eCQM NQF #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**
! (Care Coordination)	N/A / N/A	024	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	**Communication with the Physician or Other Clinician Managing On-Going Care Post-Fracture for Men and Women Aged 50 Years and Older:** Percentage of patients aged 50 years and older treated for a fracture with documentation of communication, between the physician treating the fracture and the physician or other clinician managing the patient's on-going care, that a fracture occurred and that the patient was or should be considered for osteoporosis treatment or testing. This measure is submitted by the physician who treats the fracture and who therefore is held accountable for the communication.	National Committee for Quality Assurance
! (Care Coordination)	0326 / N/A	047	N/A	Medicare Part B Claims Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	**Advance Care Plan:** Percentage of patients aged 65 years and older who have an advance care plan or surrogate decision maker documented in the medical record or documentation in the medical record that an advance care plan was discussed but the patient did not wish or was not able to name a surrogate decision maker or provide an advance care plan.	National Committee for Quality Assurance
* §	N/A / N/A	128	CMS69 v10	Medicare Part B Claims Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community/Population Health	**Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan:** Percentage of patients aged 18 years and older with a BMI documented during the current encounter or within the previous twelve months AND who had a follow-up plan documented if most recent BMI was outside of normal parameters.	Centers for Medicare & Medicaid Services
§ ! (Patient Safety)	N/A / N/A	130	CMS68 v11	Medicare Part B Claims Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Patient Safety	**Documentation of Current Medications in the Medical Record:** Percentage of visits for patients aged 18 years and older for which the eligible professional or eligible clinician attests to documenting a list of current medications using all immediate resources available on the date of the encounter.	Centers for Medicare & Medicaid Services

The change in functional status (FS) is assessed using the FOTO Neck FS patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk-adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static/paper-pencil).	Focus on Therapeutic Outcomes, Inc.

B.29. Orthopedic Surgery

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE ORTHOPEDIC SURGERY SET

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0268 / N/A	021	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	**Perioperative Care: Selection of Prophylactic Antibiotic – First OR Second-Generation Cephalosporin:** Percentage of surgical patients aged 18 years and older undergoing procedures with the indications for a first OR second-generation cephalosporin prophylactic antibiotic who had an order for a first OR second-generation cephalosporin for antimicrobial prophylaxis.	American Society of Plastic Surgeons	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A / N/A	023	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	**Perioperative Care: Venous Thromboembolism (VTE) Prophylaxis (When Indicated in ALL Patients):** Percentage of surgical patients aged 18 years and older undergoing procedures for which venous thromboembolism (VTE) prophylaxis is indicated in all patients, who had an order for Low Molecular Weight Heparin (LMWH), Low- Dose Unfractionated Heparin (LDUH), adjusted-dose warfarin, fondaparinux or mechanical prophylaxis to be given within 24 hours prior to incision time or within 24 hours after surgery end time.	American Society of Plastic Surgeons	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
0101 / N/A	154	N/A	Medicare Part B Claims Specifications, MIPS CQMs Specifications	Process	Patient Safety	**Falls: Risk Assessment:** Percentage of patients aged 65 years and older with a history of falls that had a risk assessment for falls completed within 12 months.	National Committee for Quality Assurance	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A / N/A	317	CMS22v10	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community /Population Health	**Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented:** Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is pre-hypertensive or hypertensive.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.

B.30. Otolaryngology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Otolaryngology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Otolaryngology specialty set.

B.30. Otolaryngology

PREVIOUSLY FINALIZED MEASURES IN THE OTOLARYNGOLOGY SET								
Indicator	**NQF # / eCQM NQF #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**
! (Care Coordination)	0326 / N/A	047	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	**Advance Care Plan:** Percentage of patients aged 65 years and older who have an advance care plan or surrogate decision maker documented in the medical record or documentation in the medical record that an advance care plan was discussed but the patient did not wish or was not able to name a surrogate decision maker or provide an advance care plan.	National Committee for Quality Assurance
* § ! (Appropriate Use)	0069 / N/A	065	CMS154v10	eCQM Specifications, MIPS CQMs Specifications	Process	Efficiency and Cost Reduction	**Appropriate Treatment for Upper Respiratory Infection (URI):** Percentage of episodes for patients 3 months of age and older with a diagnosis of upper respiratory infection (URI) that did not result in an antibiotic dispensing event.	National Committee for Quality Assurance
* ! (Appropriate Use)	0654 / N/A	093	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Efficiency and Cost Reduction	**Acute Otitis Externa (AOE): Systemic Antimicrobial Therapy – Avoidance of Inappropriate Use:** Percentage of patients aged 2 years and older with a diagnosis of AOE who were not prescribed systemic antimicrobial therapy.	American Academy of Otolaryngology-Head and Neck Surgery
*	0041 / 0041e	110	CMS147v11	Medicare Part B Claims Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications	Process	Community/Population Health	**Preventive Care and Screening: Influenza Immunization:** Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.	National Committee for Quality Assurance
*	N/A / N/A	111	CMS127v10	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community/Population Health	**Pneumococcal Vaccination Status for Older Adults:** Percentage of patients 65 years of age and older who have ever received a pneumococcal vaccine.	National Committee for Quality Assurance

National Committee for Quality Assurance
! (Appropriate Use)	0657 / N/A	464	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	**Otitis Media with Effusion: Systemic Antimicrobials - Avoidance of Inappropriate Use:** Percentage of patients aged 2 months through 12 years with a diagnosis of OME who were not prescribed systemic antimicrobials.	American Academy of Otolaryngology – Head and Neck Surgery Foundation

B.30. Otolaryngology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR **REMOVAL** FROM THE OTOLARYNGOLOGY SET Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**	**Rationale for Removal**
0268 / N/A	021	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	**Perioperative Care: Selection of Prophylactic Antibiotic – First OR Second-Generation Cephalosporin:** Percentage of surgical patients aged 18 years and older undergoing procedures with the indications for a first OR second-generation cephalosporin prophylactic antibiotic who had an order for a first OR second-generation cephalosporin for antimicrobial prophylaxis.	American Society of Plastic Surgeons	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A / N/A	023	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	**Perioperative Care: Venous Thromboembolism (VTE) Prophylaxis (When Indicated in ALL Patients):** Percentage of surgical patients aged 18 years and older undergoing procedures for which venous thromboembolism (VTE) prophylaxis is indicated in all patients, who had an order for Low Molecular Weight Heparin (LMWH), Low- Dose Unfractionated Heparin (LDUH), adjusted-dose warfarin, fondaparinux or mechanical prophylaxis to be given within 24 hours prior to incision time or within 24 hours after surgery end time.	American Society of Plastic Surgeons	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
0101 / N/A	154	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	**Falls: Risk Assessment:** Percentage of patients aged 65 years and older with a history of falls that had a risk assessment for falls completed within 12 months.	National Committee for Quality Assurance	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A / N/A	317	CMS22v10	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community /Population Health	**Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented:** Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is pre-hypertensive or hypertensive.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.

B.31. Pathology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Pathology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Pathology specialty set.

B.31. Pathology

PREVIOUSLY FNALIZED MEASURES IN THE PATHOLOGY SET								
Indicator	**NQF #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**
	N/A / N/A	249	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	**Barrett's Esophagus:** Percentage of esophageal biopsy reports that document the presence of Barrett's mucosa that also include a statement about dysplasia.	College of American Pathologists
§	N/A / N/A	250	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Effective Clinical Care	**Radical Prostatectomy Pathology Reporting:** Percentage of radical prostatectomy pathology reports that include the pT category, the pN category, the Gleason score and a statement about margin status.	College of American Pathologists
* ! (Care Coordination)	N/A / N/A	395	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	**Lung Cancer Reporting (Biopsy/Cytology Specimens):** Pathology reports based on biopsy and/or cytology specimens with a diagnosis of primary non-small cell lung cancer classified into specific histologic type or classified as non-small cell lung cancer not otherwise specified (NSCLC-NOS) with an explanation included in the pathology report.	College of American Pathologists
* ! (Care Coordination)	N/A / N/A	396	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	**Lung Cancer Reporting (Resection Specimens):** Pathology reports based on resection specimens with a diagnosis of primary lung carcinoma that include the pT category, pN category and for non-small cell lung cancer (NSCLC), histologic type.	College of American Pathologists
* ! (Care Coordination)	N/A / N/A	397	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	**Melanoma Reporting:** Pathology reports for primary malignant cutaneous melanoma that include the pT category and a statement on thickness, ulceration and mitotic rate.	College of American Pathologists
! (Care Coordination)	N/A / N/A	440	N/A	MIPS CQMs Specifications	Process	Communication and Care Coordination	**Skin Cancer: Biopsy Reporting Time – Pathologist to Clinician:** Percentage of biopsies with a diagnosis of cutaneous Basal Cell Carcinoma (BCC) and Squamous Cell Carcinoma (SCC), or melanoma (including in situ disease) in which the pathologist communicates results to the clinician within 7 days from the time when the tissue specimen was received by the pathologist.	American Academy of Dermatology

B.32. Pediatrics

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Pediatrics specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Pediatrics specialty set.

B.32. Pediatrics

* §	N/A / N/A	310	CMS 153v10	eCQM Specifications	Process	Community/ Population Health	**Chlamydia Screening for Women:** Percentage of women 16-24 years of age who were identified as sexually active and who had at least one test for chlamydia during the measurement period.	National Committee for Quality Assurance
* §	N/A / N/A	366	CMS 136v11	eCQM Specifications	Process	Effective Clinical Care	**Follow-Up Care for Children Prescribed ADHD Medication (ADD):** Percentage of children 6-12 years of age and newly dispensed a medication for attention-deficit/hyperactivity disorder (ADHD) who had appropriate follow-up care. Two rates are reported. a) Percentage of children who had one follow-up visit with a practitioner with prescribing authority during the 30-Day Initiation Phase. b) Percentage of children who remained on ADHD medication for at least 210 days and who, in addition to the visit in the Initiation Phase, had at least two additional follow-up visits with a practitioner within 270 days (9 months) after the Initiation Phase ended.	National Committee for Quality Assurance
* § ! (Outcome)	0710 / 0710e	370	CMS 159v10	eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications	Outcome	Effective Clinical Care	**Depression Remission at Twelve Months:** The percentage of adolescent patients 12 to 17 years of age and adult patients 18 years of age or older with major depression or dysthymia who reached remission 12 months (+/- 60 days) after an index event date.	Minnesota Community Measurement
*	N/A / N/A	379	CMS 74v11	eCQM Specifications	Process	Effective Clinical Care	**Primary Caries Prevention Intervention as Offered by Primary Care Providers, including Dentists:** Percentage of children, 6 months - 20 years of age, who received a fluoride varnish application during the measurement period.	Centers for Medicare & Medicaid Services
! (Patient Safety)	N/A / 1365e	382	CMS 177v10	eCQM Specifications	Process	Patient Safety	**Child and Adolescent Major Depressive Disorder (MDD): Suicide Risk Assessment:** Percentage of patient visits for those patients aged 6 through 17 years with a diagnosis of major depressive disorder with an assessment for suicide risk.	Mathematica
* § ! (Care Coordination)	0576 / N/A	391	N/A	MIPS CQMs Specifications	Process	Communication /Care Coordination	**Follow-up After Hospitalization for Mental Illness (FUH):** The percentage of discharges for patients 6 years of age and older who were hospitalized for treatment of selected mental illness or intentional self-harm diagnoses and who had a follow-up visit with a mental health practitioner. Two rates are submitted: • The percentage of discharges for which the patient received follow-up within 30 days after discharge. • The percentage of discharges for which the patient received follow-up within 7 days after discharge.	National Committee for Quality Assurance

B.32. Pediatrics

PREVIOUSLY FNALIZED MEASURES IN THE PEDIATRICS SET								
Indicator	**NQF # / eCQM NQF #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**
§	N/A / N/A	394	N/A	MIPS CQMs Specifications	Process	Community/Population Health	**Immunizations for Adolescents:** The percentage of adolescents 13 years of age who had one dose of meningococcal vaccine (serogroups A, C, W, Y), one tetanus, diphtheria toxoids and acellular pertussis (Tdap) vaccine, and have completed the human papillomavirus (HPV) vaccine series by their 13th birthday.	National Committee for Quality Assurance
! (Outcome)	N/A / N/A	398	N/A	MIPS CQMs Specifications	Outcome	Effective Clinical Care	**Optimal Asthma Control:** Composite measure of the percentage of pediatric and adult patients whose asthma is well-controlled as demonstrated by one of three age appropriate patient reported outcome tools and not at risk for exacerbation.	Minnesota Community Measurement
	N/A / N/A	402	NA	MIPS CQMs Specifications	Process	Community/Population Health	**Tobacco Use and Help with Quitting Among Adolescents:** The percentage of adolescents 12 to 20 years of age with a primary care visit during the measurement year for whom tobacco use status was documented and received help with quitting if identified as a tobacco user.	National Committee for Quality Assurance
! (Appropriate Use)	0657 / N/A	464	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	**Otitis Media with Effusion: Systemic Antimicrobials - Avoidance of Inappropriate Use:** Percentage of patients aged 2 months through 12 years with a diagnosis of OME who were not prescribed systemic antimicrobials.	American Academy of Otolaryngology – Head and Neck Surgery Foundation

B.32. Pediatrics

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR **REMOVAL** FROM THE PEDIATRICS SET Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**	**Rationale for Removal**
N/A/ N/A	444	N/A	MIPS CQMs Specifications	Process	Efficiency and Cost Reduction	**Medication Management for People with Asthma:** The percentage of patients 5-64 years of age during the performance period who were identified as having persistent asthma and were dispensed appropriate medications that they remained on for at least 75% of their treatment period.	National Committee for Quality Assurance	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.

B.33. Physical Medicine

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Physical Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Physical Medicine specialty set.

B.33. Physical Medicine

PREVIOUSLY FINALIZED MEASURES IN THE PHYSICAL MEDICINE SET								
Indicator	**NQF # / eCQM NQF #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**
! (Care Coordination)	0326 / N/A	047	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	**Advance Care Plan:** Percentage of patients aged 65 years and older who have an advance care plan or surrogate decision maker documented in the medical record or documentation in the medical record that an advance care plan was discussed but the patient did not wish or was not able to name a surrogate decision maker or provide an advance care plan.	National Committee for Quality Assurance
* §	N/A / N/A	128	CMS69v10	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community/Population Health	**Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan:** Percentage of patients aged 18 years and older with a BMI documented during the current encounter or within the previous twelve months AND who had a follow-up plan documented if most recent BMI was outside of normal parameters.	Centers for Medicare & Medicaid Services
§ ! (Patient Safety)	N/A / N/A	130	CMS68v11	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Patient Safety	**Documentation of Current Medications in the Medical Record:** Percentage of visits for patients aged 18 years and older for which the eligible professional or eligible clinician attests to documenting a list of current medications using all immediate resources available on the date of the encounter.	Centers for Medicare & Medicaid Services
! (Care Coordination)	0101 / N/A	155	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	**Falls: Plan of Care:** Percentage of patients aged 65 years and older with a history of falls that had a plan of care for falls documented within 12 months.	National Committee for Quality Assurance
* § ! (Care Coordination)	N/A / N/A	182	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	**Functional Outcome Assessment:** Percentage of visits for patients aged 18 years and older with documentation of a current functional outcome assessment using a standardized functional outcome assessment tool on the date of the encounter AND documentation of a care plan based on identified functional outcome deficiencies on the date of the identified deficiencies.	Centers for Medicare & Medicaid Services

B.33. Physical Medicine

PREVIOUSLY FINALIZED MEASURES IN THE PHYSICAL MEDICINE SET								
Indicator	**NQF # / eCQM NQF #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**
* §	0028 / 0028e	226	CMS138v10	Medicare Part B Claims Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications	Process	Community/ Population Health	**Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention:** Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 12 months AND who received tobacco cessation intervention if identified as a tobacco user. Three rates are reported: a. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 12 months b. Percentage of patients aged 18 years and older who were identified as a tobacco user who received tobacco cessation intervention c. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 12 months AND who received tobacco cessation intervention if identified as a tobacco user.	National Committee for Quality Assurance
* ! (Care Coordination)	N/A / N/A	374	CMS50v10	eCQM Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	**Closing the Referral Loop: Receipt of Specialist Report:** Percentage of patients with referrals, regardless of age, for which the referring provider receives a report from the provider to whom the patient was referred.	Centers for Medicare & Medicaid Services
	N/A / N/A	402	N/A	MIPS CQMs Specifications	Process	Community/ Population Health	**Tobacco Use and Help with Quitting Among Adolescents:** The percentage of adolescents 12 to 20 years of age with a primary care visit during the measurement year for whom tobacco use status was documented and received help with quitting if identified as a tobacco user.	National Committee for Quality Assurance
§	2152 / N/A	431	N/A	MIPS CQMs Specifications	Process	Community/ Population Health	**Preventive Care and Screening: Unhealthy Alcohol Use: Screening & Brief Counseling:** Percentage of patients aged 18 years and older who were screened for unhealthy alcohol use using a systematic screening method at least once within the last 12 months AND who received brief counseling if identified as an unhealthy alcohol user.	National Committee for Quality Assurance
! (Opioid)	N/A / N/A	468	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	**Continuity of Pharmacotherapy for Opioid Use Disorder (OUD):** Percentage of adults aged 18 years and older with pharmacotherapy for opioid use disorder (OUD) who have at least 180 days of continuous treatment.	University of Southern California

B.33. Physical Medicine

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR **REMOVAL** FROM THE PHYSICAL MEDICINE SET Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**	**Rationale for Removal**
0101/ N/A	154	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	**Falls: Risk Assessment:** Percentage of patients aged 65 years and older with a history of falls that had a risk assessment for falls completed within 12 months.	National Committee for Quality Assurance	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A/ N/A	317	CMS22 v10	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community /Population Health	**Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented:** Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is pre-hypertensive or hypertensive.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.

B.34. Physical Therapy/Occupational Therapy

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Physical Therapy/Occupational Therapy specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Physical Therapy/Occupational Therapy specialty set.

B.34. Physical Therapy/Occupational Therapy

PREVIOUSLY FINALIZED MEASURES IN THE PHYSICAL THERAPY/OCCUPATIONAL THERAPY SET								
Indicator	**NQF # / eCQM NQF #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**
	0417 / N/A	126	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	**Diabetes Mellitus: Diabetic Foot and Ankle Care, Peripheral Neuropathy – Neurological Evaluation:** Percentage of patients aged 18 years and older with a diagnosis of diabetes mellitus who had a neurological examination of their lower extremities within 12 months.	American Podiatric Medical Association
	0416 / N/A	127	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	**Diabetes Mellitus: Diabetic Foot and Ankle Care, Ulcer Prevention – Evaluation of Footwear:** Percentage of patients aged 18 years and older with a diagnosis of diabetes mellitus who were evaluated for proper footwear and sizing.	American Podiatric Medical Association
* §	N/A / N/A	128	CMS69v10	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community/Population Health	**Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan:** Percentage of patients aged 18 years and older with a BMI documented during the current encounter or within the previous twelve months AND who had a follow-up plan documented if most recent BMI was outside of normal parameters.	Centers for Medicare & Medicaid Services
§ ! (Patient Safety)	N/A / N/A	130	CMS68v11	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Patient Safety	**Documentation of Current Medications in the Medical Record:** Percentage of visits for patients aged 18 years and older for which the eligible professional or eligible clinician attests to documenting a list of current medications using all immediate resources available on the date of the encounter.	Centers for Medicare & Medicaid Services
* §	N/A / N/A	134	CMS2v11	Medicare Part B Claims Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications	Process	Community/Population Health	**Preventive Care and Screening: Screening for Depression and Follow-Up Plan:** Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of the eligible encounter.	Centers for Medicare & Medicaid Services
! (Care Coordination)	0101 / N/A	155	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	**Falls: Plan of Care:** Percentage of patients aged 65 years and older with a history of falls that had a plan of care for falls documented within 12 months.	National Committee for Quality Assurance

B.34. Physical Therapy/Occupational Therapy

PREVIOUSLY FINALIZED MEASURES IN THE PHYSICAL THERAPY/OCCUPATIONAL THERAPY SET								
Indicator	**NQF # / eCQM NQF #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**
! (Patient Safety)	N/A / N/A	181	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	**Elder Maltreatment Screen and Follow-Up Plan:** Percentage of patients aged 65 years and older with a documented elder maltreatment screen using an Elder Maltreatment Screening tool on the date of encounter AND a documented follow-up plan on the date of the positive screen.	Centers for Medicare & Medicaid Services
* § ! (Care Coordination)	N/A / N/A	182	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	**Functional Outcome Assessment:** Percentage of visits for patients aged 18 years and older with documentation of a current functional outcome assessment using a standardized functional outcome assessment tool on the date of the encounter AND documentation of a care plan based on identified functional outcome deficiencies on the date of the identified deficiencies.	Centers for Medicare & Medicaid Services
* ! (Outcome)	N/A / N/A	217	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure	Communication and Care Coordination	**Functional Status Change for Patients with Knee Impairments:** A patient-reported outcome measure of risk-adjusted change in functional status for patients aged 14 years+ with knee impairments. The change in functional status (FS) is assessed using the FOTO Lower Extremity Physical Function (LEPF) patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).	Focus on Therapeutic Outcomes, Inc.
! (Outcome)	N/A / N/A	218	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure	Communication and Care Coordination	**Functional Status Change for Patients with Hip Impairments:** A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with hip impairments. The change in functional status (FS) is assessed using the FOTO Lower Extremity Physical Function (LEPF) patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).	Focus on Therapeutic Outcomes, Inc.

B.34. Physical Therapy/Occupational Therapy

PREVIOUSLY FINALIZED MEASURES IN THE PHYSICAL THERAPY/OCCUPATIONAL THERAPY SET								
Indicator	**NQF # / eCQM NQF #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**
* ! (Outcome)	N/A / N/A	219	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure	Communication and Care Coordination	**Functional Status Change for Patients with Lower Leg, Foot or Ankle Impairments:** A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with foot, ankle and lower leg impairments. The change in functional status (FS) is assessed using the FOTO Lower Extremity Physical Function (LEPF) patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).	Focus on Therapeutic Outcomes, Inc.
! (Outcome)	N/A / N/A	220	N/A	MIPS CQMs Specifications	Patient= Reported Outcome-Based Performance Measure	Communication and Care Coordination	**Functional Status Change for Patients with Low Back Impairments:** A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with low back impairments. The change in functional status (FS) is assessed using the FOTO Low Back FS patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).	Focus on Therapeutic Outcomes, Inc.
! (Outcome)	N/A / N/A	221	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure	Communication and Care Coordination	**Functional Status Change for Patients with Shoulder Impairments:** A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with shoulder impairments. The change in functional status (FS) is assessed using the FOTO Shoulder FS patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).	Focus on Therapeutic Outcomes, Inc.

B.34. Physical Therapy/Occupational Therapy

PREVIOUSLY FINALIZED MEASURES IN THE PHYSICAL THERAPY/OCCUPATIONAL THERAPY SET								
Indicator	**NQF # / eCQM NQF #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**
! (Outcome)	N/A / N/A	222	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure	Communication and Care Coordination	**Functional Status Change for Patients with Elbow, Wrist or Hand Impairments:** A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with elbow, wrist, or hand impairments. The change in functional status (FS) is assessed using the FOTO Elbow/Wrist/Hand FS patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).	Focus on Therapeutic Outcomes, Inc.
* §	0028 / 0028e	226	CMS138v10	Medicare Part B Claims Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications	Process	Community/Population Health	**Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention:** Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 12 months AND who received tobacco cessation intervention if identified as a tobacco user. Three rates are reported: a. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 12 months b. Percentage of patients aged 18 years and older who were identified as a tobacco user who received tobacco cessation intervention c. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 12 months AND who received tobacco cessation intervention if identified as a tobacco user.	National Committee for Quality Assurance
*	N/A / 2872e	281	CMS149v10	eCQM Specifications	Process	Effective Clinical Care	**Dementia: Cognitive Assessment:** Percentage of patients, regardless of age, with a diagnosis of dementia for whom an assessment of cognition is performed and the results reviewed at least once within a 12-month period.	American Academy of Neurology
	N/A / N/A	283	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	**Dementia Associated Behavioral and Psychiatric Symptoms Screening and Management:** Percentage of patients with dementia for whom there was a documented screening for behavioral and psychiatric symptoms, including depression, and for whom, if symptoms screening was positive, there was also documentation of recommendations for management in the last 12 months.	American Academy of Neurology

! (Patient Safety)	N/A / N/A	286	N/A	MIPS CQMs Specifications	Process	Patient Safety	**Dementia: Safety Concern Screening and Follow-Up for Patients with Dementia:** Percentage of patients with dementia or their caregiver(s) for whom there was a documented safety concerns screening in two domains of risk: 1) dangerousness to self or others and 2) environmental risks; and if safety concerns screening was positive in the last 12 months, there was documentation of mitigation recommendations, including but not limited to referral to other resources.	American Academy of Neurology
! (Care Coordination)	N/A / N/A	288	N/A	MIPS CQMs Specifications	Process	Communication and Care Coordination	**Dementia: Education and Support of Caregivers for Patients with Dementia:** Percentage of patients with dementia whose caregiver(s) were provided with education on dementia disease management and health behavior changes AND were referred to additional resources for support in the last 12 months.	American Psychiatric Association/ American Academy of Neurology
* ! (Patient Safety)	0101 / N/A	318	CMS139v10	eCQM Specifications, CMS Web Interface Measure Specifications	Process	Patient Safety	**Falls: Screening for Future Fall Risk:** Percentage of patients 65 years of age and older who were screened for future fall risk during the measurement period.	National Committee for Quality Assurance
* ! (Outcome)	N/A / N/A	478	N/A	MIPS CQMs Specifications	Patient-Reported Outcome-Based Performance Measure	Person and Caregiver-Centered Experience and Outcomes	**Functional Status Change for Patients with Neck Impairments:** This is a patient-reported outcome measure of risk-adjusted change in functional status for patients aged 14 years+ with neck impairments. The change in functional status (FS) is assessed using the FOTO Neck FS patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk-adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static/paper-pencil).	Focus on Therapeutic Outcomes, Inc.

B.34. Physical Therapy/Occupational Therapy

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR **REMOVAL** FROM THE PHYSICAL THERAPY/OCCUPATIONAL THERAPY SET Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**	**Rationale for Removal**
N/A/ N/A	050	N/A	Medicare Part B Claims Specifications, MIPS CQMs Specifications	Process	Person and Caregiver-Centered Experience and Outcomes	**Urinary Incontinence: Plan of Care for Urinary Incontinence in Women Aged 65 Years and Older:** Percentage of female patients aged 65 years and older with a diagnosis of urinary incontinence with a documented plan of care for urinary incontinence at least once within 12 months.	National Committee for Quality Assurance	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
0101/ N/A	154	N/A	Medicare Part B Claims Specifications, MIPS CQMs Specifications	Process	Patient Safety	**Falls: Risk Assessment:** Percentage of patients aged 65 years and older with a history of falls that had a risk assessment for falls completed within 12 months.	National Committee for Quality Assurance	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.

B.35. Plastic Surgery

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Plastic Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Plastic Surgery specialty set.

B.35. Plastic Surgery

PREVIOUSLY FINALIZED MEASURES IN THE PLASTIC SURGERY SET								
Indicator	**NQF # / eCQM NQF #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**
§ ! (Patient Safety)	N/A / N/A	130	CMS68v11	Medicare Part B Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Patient Safety	**Documentation of Current Medications in the Medical Record:** Percentage of visits for patients aged 18 years and older for which the eligible professional or eligible clinician attests to documenting a list of current medications using all immediate resources available on the date of the encounter.	Centers for Medicare & Medicaid Services
* §	0028 / 0028e	226	CMS138v10	Medicare Part B Measure Specifications, eCQM Specifications, CMS Web Interface Measure Specifications, MIPS CQMs Specifications	Process	Community/ Population Health	**Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention:** Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 12 months AND who received tobacco cessation intervention if identified as a tobacco user. Three rates are reported: a. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 12 months b. Percentage of patients aged 18 years and older who were identified as a tobacco user who received tobacco cessation intervention c. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 12 months AND who received tobacco cessation intervention if identified as a tobacco user.	National Committee for Quality Assurance
§ ! (Outcome)	N/A / N/A	355	N/A	MIPS CQMs Specifications	Outcome	Patient Safety	**Unplanned Reoperation within the 30 Day Postoperative Period:** Percentage of patients aged 18 years and older who had any unplanned reoperation within the 30 day postoperative period.	American College of Surgeons
! (Outcome)	N/A / N/A	356	N/A	MIPS CQMs Specifications	Outcome	Effective Clinical Care	**Unplanned Hospital Readmission within 30 Days of Principal Procedure:** Percentage of patients aged 18 years and older who had an unplanned hospital readmission within 30 days of principal procedure.	American College of Surgeons
! (Outcome)	N/A / N/A	357	N/A	MIPS CQMs Specifications	Outcome	Effective Clinical Care	**Surgical Site Infection (SSI):** Percentage of patients aged 18 years and older who had a surgical site infection (SSI).	American College of Surgeons

B.35. Plastic Surgery

PREVIOUSLY FINALIZED MEASURES IN THE PLASTIC SURGERY SET								
Indicator	**NQF # / eCQM NQF #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**
* ! (Patient Experience)	N/A / N/A	358	N/A	MIPS CQMs Specifications	Process	Person and Caregiver-Centered Experience and Outcomes	**Patient-Centered Surgical Risk Assessment and Communication:** Percentage of patients who underwent a non-emergency surgery who had their personalized risks of postoperative complications assessed by their surgical team prior to surgery using a clinical data-based, patient-specific risk calculator and who received personal discussion of those risks with the surgeon.	American College of Surgeons

B.35. Plastic Surgery

MEASURES PROPOSED FOR **ADDITION** TO THE PLASTIC SURGERY SET									
Indicator	**NQF # / eCQM NQF #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title And Description**	**Measure Steward**	**Rationale for Inclusion**
*	N/A/ N/A	128	CMS69v10	Medicare Part B Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community/ Population Health	**Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan:** Percentage of patients aged 18 years and older with a BMI documented during the current encounter or within the previous 12 months AND who had a follow-up plan documented if most recent BMI was outside of normal parameters.	Centers for Medicare & Medicaid Services	We propose to include this measure in the Plastic Surgery specialty set as it is clinically relevant to this clinician type. Stakeholders commented, and we agreed, that this is a measure consistently reported by their MIPS eligible clinicians. BMI does impact plastic surgery outcomes, therefore, is clinically relevant to the Plastic Surgery specialty set.

B.35. Plastic Surgery

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE PLASTIC SURGERY SET

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0268 / N/A	021	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	**Perioperative Care: Selection of Prophylactic Antibiotic – First OR Second-Generation Cephalosporin:** Percentage of surgical patients aged 18 years and older undergoing procedures with the indications for a first OR second-generation cephalosporin prophylactic antibiotic who had an order for a first OR second-generation cephalosporin for antimicrobial prophylaxis.	American Society of Plastic Surgeons	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A/ N/A	023	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	**Perioperative Care: Venous Thromboembolism (VTE) Prophylaxis (When Indicated in ALL Patients):** Percentage of surgical patients aged 18 years and older undergoing procedures for which venous thromboembolism (VTE) prophylaxis is indicated in all patients, who had an order for Low Molecular Weight Heparin (LMWH), Low- Dose Unfractionated Heparin (LDUH), adjusted-dose warfarin, fondaparinux or mechanical prophylaxis to be given within 24 hours prior to incision time or within 24 hours after surgery end time.	American Society of Plastic Surgeons	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A/ N/A	317	CMS22v10	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community /Population Health	**Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented**: Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is pre-hypertensive or hypertensive.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.

B.36. Podiatry

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Podiatry specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Podiatry specialty set.

B.36. Podiatry

PREVIOUSLY FINALIZED MEASURES IN THE PODIATRY SET								
Indicator	**NQF # / eCQM NQF #**	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**
	0417 / N/A	126	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	**Diabetes Mellitus: Diabetic Foot and Ankle Care, Peripheral Neuropathy – Neurological Evaluation:** Percentage of patients aged 18 years and older with a diagnosis of diabetes mellitus who had a neurological examination of their lower extremities within 12 months.	American Podiatric Medical Association
	0416 / N/A	127	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	**Diabetes Mellitus: Diabetic Foot and Ankle Care, Ulcer Prevention – Evaluation of Footwear:** Percentage of patients aged 18 years and older with a diagnosis of diabetes mellitus who were evaluated for proper footwear and sizing.	American Podiatric Medical Association
* §	N/A / N/A	128	CMS69v10	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community/Population Health	**Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan:** Percentage of patients aged 18 years and older with a BMI documented during the current encounter or within the previous twelve months AND who had a follow-up plan documented if most recent BMI was outside of normal parameters.	Centers for Medicare & Medicaid Services
! (Care Coordination)	0101 / N/A	155	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Communication and Care Coordination	**Falls: Plan of Care:** Percentage of patients aged 65 years and older with a history of falls that had a plan of care for falls documented within 12 months.	National Committee for Quality Assurance

National Committee for Quality Assurance

B.36. Podiatry

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR **REMOVAL** FROM THE PODIATRY SET Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**	**Rationale for Removal**
0101 / N/A	154	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	**Falls: Risk Assessment:** Percentage of patients aged 65 years and older with a history of falls that had a risk assessment for falls completed within 12 months.	National Committee for Quality Assurance	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.

B.37. Preventive Medicine

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Preventive Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Preventive Medicine specialty set.

B.37. Preventive Medicine

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE PREVENTIVE MEDICINE SET

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0101 / N/A	154	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	**Falls: Risk Assessment:** Percentage of patients aged 65 years and older with a history of falls that had a risk assessment for falls completed within 12 months.	National Committee for Quality Assurance	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A/ N/A	317	CMS22v10	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community /Population Health	**Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented**: Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is pre-hypertensive or hypertensive.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.

B.38. Pulmonology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this final rule, the Pulmonology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that were proposed to be added, and measures that were proposed for removal, as applicable. We request comment on the measures available in the proposed Pulmonology specialty set.

B.39. Rheumatology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR **REMOVAL** FROM THE RHEUMATOLOGY SET Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**	**Rationale for Removal**
N/A / N/A	317	CMS22v10	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community /Population Health	**Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented:** Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is pre-hypertensive or hypertensive.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.

B.40. Skilled Nursing Facility

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Skilled Nursing Facility specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Skilled Nursing Facility specialty set.

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE THORACIC SURGERY SET

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0268 / N/A	021	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	**Perioperative Care: Selection of Prophylactic Antibiotic – First OR Second-Generation Cephalosporin:** Percentage of surgical patients aged 18 years and older undergoing procedures with the indications for a first OR second-generation cephalosporin prophylactic antibiotic who had an order for a first OR second-generation cephalosporin for antimicrobial prophylaxis.	American Society of Plastic Surgeons	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A / N/A	023	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	**Perioperative Care: Venous Thromboembolism (VTE) Prophylaxis (When Indicated in ALL Patients):** Percentage of surgical patients aged 18 years and older undergoing procedures for which venous thromboembolism (VTE) prophylaxis is indicated in all patients, who had an order for Low Molecular Weight Heparin (LMWH), Low- Dose Unfractionated Heparin (LDUH), adjusted-dose warfarin, fondaparinux or mechanical prophylaxis to be given within 24 hours prior to incision time or within 24 hours after surgery end time.	American Society of Plastic Surgeons	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A / N/A	044	N/A	MIPS CQMs Specifications	Process	Effective Clinical Care	**Coronary Artery Bypass Graft (CABG): Preoperative Beta-Blocker in Patients with Isolated CABG Surgery:** Percentage of isolated Coronary Artery Bypass Graft (CABG) surgeries for patients aged 18 years and older who received a beta-blocker within 24 hours prior to surgical incision.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A / N/A	317	CMS22v10	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community /Population Health	**Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented:** Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is pre-hypertensive or hypertensive.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.

B.43. Urgent Care

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Urgent Care specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Urgent Care specialty set.

PREVIOUSLY FINALIZED MEASURES PRPOSED FOR **REMOVAL** FROM THE URGENT CARE SET Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.								
NQF # / eCQM NQF #	**Quality #**	**CMS eCQM ID**	**Collection Type**	**Measure Type**	**National Quality Strategy Domain**	**Measure Title and Description**	**Measure Steward**	**Rationale for Removal**
N/A / N/A	317	CMS22v10	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community /Population Health	**Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented:** Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is pre-hypertensive or hypertensive.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.

B.44. Urology

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Urology specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Urology specialty set.

B.44. Urology

Given the high rates that patients are assessed, treated, and managed for this condition within this specialty, we recommend the inclusion of this measure within the Urology specialty set. See Table A.1 for rationale.

B.44. Urology

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE UROLOGY SET

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
N/A/ N/A	023	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	**Perioperative Care: Venous Thromboembolism (VTE) Prophylaxis (When Indicated in ALL Patients):** Percentage of surgical patients aged 18 years and older undergoing procedures for which venous thromboembolism (VTE) prophylaxis is indicated in all patients, who had an order for Low Molecular Weight Heparin (LMWH), Low- Dose Unfractionated Heparin (LDUH), adjusted-dose warfarin, fondaparinux or mechanical prophylaxis to be given within 24 hours prior to incision time or within 24 hours after surgery end time.	American Society of Plastic Surgeons	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A/ N/A	050	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Person and Caregiver-Centered Experience and Outcomes	**Urinary Incontinence: Plan of Care for Urinary Incontinence in Women Aged 65 Years and Older:** Percentage of female patients aged 65 years and older with a diagnosis of urinary incontinence with a documented plan of care for urinary incontinence at least once within 12 months.	National Committee for Quality Assurance	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A / N/A	317	CMS22v10	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community /Population Health	**Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented:** Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is pre-hypertensive or hypertensive.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A / N/A	429	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	**Pelvic Organ Prolapse: Preoperative Screening for Uterine Malignancy:** Percentage of patients who are screened for uterine malignancy prior to vaginal closure or obliterative surgery for pelvic organ prolapse.	American Urogynecologic Society	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A / N/A	434	N/A	MIPS CQMs Specifications	Outcome	Patient Safety	**Proportion of Patients Sustaining a Ureter Injury at the Time of Pelvic Organ Prolapse Repair**: Percentage of patients undergoing pelvic organ prolapse repairs who sustain an injury to the ureter recognized either during or within 30 days after surgery.	American Urogynecologic Society	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.

B.45. Vascular Surgery

In addition to the considerations discussed in the introductory language of Table B of the appendix of this proposed rule, the Vascular Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to: whether the measure reflects current clinical guidelines and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures that we are maintaining within the set, measures that are proposed to be added, and measures that are proposed for removal, as applicable. We request comment on the measures available in the proposed Vascular Surgery specialty set.

Society of Interventional Radiology
! (Outcome)	N/A / N/A	441	N/A	MIPS CQMs Specifications	Intermediate Outcome	Effective Clinical Care	**Ischemic Vascular Disease (IVD) All or None Outcome Measure (Optimal Control):** The IVD All-or-None Measure is one outcome measure (optimal control). The measure contains four goals. All four goals within a measure must be reached in order to meet that measure. The numerator for the all-or-none measure should be collected from the organization's total IVD denominator. All-or-None Outcome Measure (Optimal Control) - Using the IVD denominator optimal results include: • Most recent blood pressure (BP) measurement is less than or equal to 140/90 mm Hg -- AND • Most recent tobacco status is Tobacco Free -- AND • Daily Aspirin or Other Antiplatelet Unless Contraindicated -- AND • Statin Use Unless Contraindicated.	Wisconsin Collaborative for Healthcare Quality

B.45. Vascular Surgery

PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE VASCULAR SURGERY SET

Note: In this this proposed rule, we propose the removal of the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

NQF # / eCQM NQF #	Quality #	CMS eCQM ID	Collection Type	Measure Type	National Quality Strategy Domain	Measure Title and Description	Measure Steward	Rationale for Removal
0268/ N/A	021	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	**Perioperative Care: Selection of Prophylactic Antibiotic – First OR Second-Generation Cephalosporin:** Percentage of surgical patients aged 18 years and older undergoing procedures with the indications for a first OR second-generation cephalosporin prophylactic antibiotic who had an order for a first OR second-generation cephalosporin for antimicrobial prophylaxis.	American Society of Plastic Surgeons	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A/ N/A	023	N/A	Medicare Part B Claims Measure Specifications, MIPS CQMs Specifications	Process	Patient Safety	**Perioperative Care: Venous Thromboembolism (VTE) Prophylaxis (When Indicated in ALL Patients):** Percentage of surgical patients aged 18 years and older undergoing procedures for which venous thromboembolism (VTE) prophylaxis is indicated in all patients, who had an order for Low Molecular Weight Heparin (LMWH), Low- Dose Unfractionated Heparin (LDUH), adjusted-dose warfarin, fondaparinux or mechanical prophylaxis to be given within 24 hours prior to incision time or within 24 hours after surgery end time.	American Society of Plastic Surgeons	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.
N/A / N/A	317	CMS22v10	Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications	Process	Community /Population Health	**Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented:** Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is pre-hypertensive or hypertensive.	Centers for Medicare & Medicaid Services	This measure is being proposed for removal beginning with the 2024 MIPS payment year. See Table C for rationale.

TABLE Group C: Previously Finalized Quality Measures Proposed for Removal in the CY 2022 MIPS Performance Period/2024 MIPS Payment Year and Future Years

In this proposed rule, we propose to remove 19 previously finalized quality measures from the MIPS Program for the 2022 MIPS performance period/2024 MIPS payment year and future years. These measures are discussed in detail below. Our measure removal criteria was discussed in the CY 2019 PFS final rule (83 FR 59763 through 59765).

Further considerations are given in the evaluation of the measure's performance data, to determine whether there is or no longer is variation in performance. As discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763), additional criteria that we use for the removal of measures also includes extremely topped out measures, which means measures that are topped out with an average (mean) performance rate between 98-100 percent. Beginning with the 2020 MIPS performance period/2022 MIPS payment year, we also refer readers to the CY 2020 PFS final rule (84 FR 62957 through 62959) for additional quality measure removal criteria.

TABLE Group C: Previously Finalized Quality Measures Proposed for Removal in the CY 2022 MIPS Performance Period/2024 MIPS Payment Year and Future Years

C.1. Age-Related Macular Degeneration (AMD): Dilated Macular Examination

Category	Description
NQF # / eCQM NQF #:	0087 / NA
Quality #:	014
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Collection Type:	Medicare Part B Claims Specifications, MIPS CQMs Specifications
Measure Description:	Percentage of patients aged 50 years and older with a diagnosis of age-related macular degeneration (AMD) who had a dilated macular examination performed which included documentation of the presence or absence of macular thickening or geographic atrophy or hemorrhage AND the level of macular degeneration severity during one or more office visits within the 12 month performance period.
Measure Steward:	American Academy of Ophthalmology
High Priority Measure:	No
Measure Type:	Process
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure has reached the end of the topped out lifecycle. Given this measure's continued topped out status (82 FR 53640), we believe it has a limited opportunity to improve clinical outcomes. The topped out status is based on the current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1275/2021%20MIPS%20Quality%20Benchmarks.zip.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.

C.2. Diabetic Retinopathy: Communication with the Physician Managing Ongoing Diabetes Care

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	019
CMS eCQM ID:	CMS142v10
National Quality Strategy Domain:	Communication and Care Coordination
Collection Type:	eCQM Specifications, MIPS CQMs Specifications
Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of diabetic retinopathy who had a dilated macular or fundus exam performed with documented communication to the physician who manages the ongoing care of the patient with diabetes mellitus regarding the findings of the macular or fundus exam at least once within 12 months.
Measure Steward:	American Academy of Ophthalmology
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure does not align with the Meaningful Measures Initiative. This is a process measure that is a standard of care requiring only the that results were communicated, which by itself may not have a meaningful direct impact on patient care as no follow-up or confirmation of care coordination is required. Additionally, the MIPS CQMs Specifications collection type is in the third year of the topped out lifecycle (82 FR 53640).
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.

C.3. Perioperative Care: Selection of Prophylactic Antibiotic – First OR Second-Generation Cephalosporin

Category	Description
NQF # / eCQM NQF #:	0268 / N/A
Quality #:	021
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Collection Type:	Medicare Part B Claims Specifications, MIPS CQMs Specifications
Measure Description:	Percentage of surgical patients aged 18 years and older undergoing procedures with the indications for a first OR second-generation cephalosporin prophylactic antibiotic who had an order for a first OR second-generation cephalosporin for antimicrobial prophylaxis.
Measure Steward:	American Society of Plastic Surgeons
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because the measure steward will not be further reviewing or updating the measure specifications. In addition, this measure has reached the end of the topped out lifecycle (82 FR 53640). Given this measure's continued topped out status, we believe it has a limited opportunity to improve clinical outcomes and the measure has become standard of care. The topped out status is based on the current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1275/2021%20MIPS%20Quality%20Benchmarks.zip.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.

C.4. Perioperative Care: Venous Thromboembolism (VTE) Prophylaxis (When Indicated in ALL Patients)

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	023
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Collection Type:	Medicare Part B Claims Specifications, MIPS CQMs Specifications
Measure Description:	Percentage of surgical patients aged 18 years and older undergoing procedures for which venous thromboembolism (VTE) prophylaxis is indicated in all patients, who had an order for Low Molecular Weight Heparin (LMWH), Low- Dose Unfractionated Heparin (LDUH), adjusted-dose warfarin, fondaparinux or mechanical prophylaxis to be given within 24 hours prior to incision time or within 24 hours after surgery end time.
Measure Steward:	American Society of Plastic Surgeons
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because the measure steward will not be further reviewing or updating the measure specifications. In addition, this measure has reached the end of the topped out lifecycle (82 FR 53640). Given this measure's continued topped out status, we believe it has a limited opportunity to improve clinical outcomes and the measure has become standard of care. The topped out status is based on the current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1275/2021%20MIPS%20Quality%20Benchmarks.zip.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.

C.5. Coronary Artery Bypass Graft (CABG): Preoperative Beta-Blocker in Patients with Isolated CABG Surgery

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	044
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Collection Type:	MIPS CQMs Specifications
Measure Description:	Percentage of isolated Coronary Artery Bypass Graft (CABG) surgeries for patients aged 18 years and older who received a beta-blocker within 24 hours prior to surgical incision.
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure has reached the end of the topped out lifecycle (82 FR 53640) and has a high performance rate of 96.08 percent for the MIPS CQMs Specifications collection type. Given this measure's continued topped out status, we believe it has a limited opportunity to improve clinical outcomes and should be a standard of care. The average performance rate and topped out status is based on the current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1275/2021%20MIPS%20Quality%20Benchmarks.zip.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.

C.6. Urinary Incontinence: Plan of Care for Urinary Incontinence in Women Aged 65 Years and Older

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	050
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Collection Type:	Medicare Part B Claims Specifications, MIPS CQMs Specifications
Measure Description:	Percentage of female patients aged 65 years and older with a diagnosis of urinary incontinence with a documented plan of care for urinary incontinence at least once within 12 months.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure does not align with the Meaningful Measures Initiative as it splits a clinical process into individual quality measures. In order to align with the Meaningful Measures Initiative, we plan to maintain measure Q048: Urinary Incontinence: Assessment of Presence or Absence of Urinary Incontinence in Women Aged 65 Years and Older. We recognize measure Q048 does not quantify the completion of plan of care but includes the assessment for the presence or absence of urinary incontinence within a broader patient population. Measure Q050 is limited to patients that were screened positive for urinary incontinence which results in an incomplete patient population being evaluated; whether screened for urinary incontinence or being voluntarily verbalized by the patient. We believe as a stand-alone measure it is not a true reflection of the quality of care being given, but only reflects care to a subpopulation of patients with documented urinary incontinence. To truly ensure quality of care for these patients, we believe that clinicians should engage patients and perform this assessment for all denominator eligible patients at risk for the presence or absence of urinary incontinence. Additionally, the Medicare Part B Claims Specifications collection type is at the end of the topped out lifecycle (82 FR 53640).
In the Circumstance the Measure is Retained	We would update the denominator eligible encounters to add coding for Physical Therapy MIPS eligible clinician type and add the measure to the Physical Therapy/Occupational Therapy specialty measure set.

C.7. Hematology: Myelodysplastic Syndrome (MDS) and Acute Leukemias: Baseline Cytogenetic Testing Performed on Bone Marrow

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	067
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Collection Type:	MIPS CQMs Specifications
Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of myelodysplastic syndrome (MDS) or an acute leukemia who had baseline cytogenetic testing performed on bone marrow.
Measure Steward:	American Society of Hematology
High Priority Measure:	No
Measure Type:	Process
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program at the measure steward's request as it is no longer being maintained for inclusion.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.

C.8. Hematology: Chronic Lymphocytic Leukemia (CLL): Baseline Flow Cytometry

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	070
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Collection Type:	MIPS CQMs Specifications
Measure Description:	Percentage of patients aged 18 years and older, seen within a 12-month reporting period, with a diagnosis of chronic lymphocytic leukemia (CLL) made at any time during or prior to the reporting period who had baseline flow cytometry studies performed and documented in the chart.
Measure Steward:	American Society of Hematology
High Priority Measure:	No
Measure Type:	Process
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program at the measure steward's request as it is no longer being maintained for inclusion.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.

C.9. Melanoma: Continuity of Care – Recall System

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	137
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Collection Type:	MIPS CQMs Specifications
Measure Description:	Percentage of patients, regardless of age, with a current diagnosis of melanoma or a history of melanoma whose information was entered, at least once within a 12 month period, into a recall system that includes: • A target date for the next complete physical skin exam, AND • A process to follow up with patients who either did not make an appointment within the specified timeframe or who missed a scheduled appointment.
Measure Steward:	American Academy of Dermatology
High Priority Measure:	Yes
Measure Type:	Structure
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure does not align with the Meaningful Measures Initiative as the measure is not advancing quality care but offers performance by simply establishing a recall system. Despite this structure supporting patient care, it does not measure quality care that directly impacts patients. We believe this measure is not providing a meaningful impact to quality improvement.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.

C.10. Oncology: Medical and Radiation - Plan of Care for Pain

Category	Description
NQF # / eCQM NQF #:	0383 / N/A
Quality #:	144
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Collection Type:	MIPS CQMs Specifications
Measure Description:	Percentage of visits for patients, regardless of age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy who report having pain with a documented plan of care to address pain.
Measure Steward:	American Society of Clinical Oncology
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure does not align with the Meaningful Measures Initiative as it splits a clinical process into individual quality measures. In order to align with the Meaningful Measures Initiative, we plan to maintain measure Q143: Oncology: Medical and Radiation – Pain Intensity Quantified. We recognize measure Q144 does not quantify the completion of a plan of care but includes the assessment of pain for patients undergoing cancer treatment. Measure Q144 is limited to those patients that were screened positive for pain; whether screened for pain or being voluntarily verbalized by the patient. We believe as a stand-alone measure it is not a true reflection of the quality of care being given, but only reflects care to a subpopulation of oncology patients with documented pain. To truly ensure quality of care for these patients, we believe that clinicians should engage all denominator eligible patients and perform this assessment to identify the presence of pain in patients undergoing cancer treatment.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.

C.11. Falls: Risk Assessment

Category	Description
NQF # / eCQM NQF #:	0101 / N/A
Quality #:	154
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Collection Type:	Medicare Part B Claims Specifications, MIPS CQMs Specifications
Measure Description:	Percentage of patients aged 65 years and older with a history of falls that had a risk assessment for falls completed within 12 months.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure has reached the end of the topped out lifecycle (82 FR 53640). Given this measure's continued topped out status, we believe it has a limited opportunity to improve clinical outcomes. The topped out status is based on the current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1275/2021%20MIPS%20Quality%20Benchmarks.zip.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.

C.12. Radiology: Stenosis Measurement in Carotid Imaging Reports

Category	Description
NQF # / eCQM NQF #:	0507 / N/A
Quality #:	195
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Collection Type:	Medicare Part B Claims Specifications, MIPS CQMs Specifications
Measure Description:	Percentage of final reports for carotid imaging studies (neck magnetic resonance angiography [MRA], neck computed tomography angiography [CTA], neck duplex ultrasound, carotid angiogram) performed that include direct or indirect reference to measurements of distal internal carotid diameter as the denominator for stenosis measurement.
Measure Steward:	American College of Radiology
High Priority Measure:	No
Measure Type:	Process
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure has reached the end of the topped out lifecycle (82 FR 53640) and has a high performance rate of 95.62 percent for the Medicare Part B Claims Specifications collection type and 97.47 percent for the MIPS CQMs Specifications collection type. Given this measure's continued topped out status, we believe it has a limited opportunity to improve clinical outcomes. The average performance rate and topped out status is based on the current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1275/2021%20MIPS%20Quality%20Benchmarks.zip.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.

C.13. Radiology: Reminder System for Screening Mammograms

Category	Description
NQF # / eCQM NQF #:	0509 / N/A
Quality #:	225
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Collection Type:	Medicare Part B Claims Specifications, MIPS CQMs Specifications
Measure Description:	Percentage of patients undergoing a screening mammogram whose information is entered into a reminder system with a target due date for the next mammogram.
Measure Steward:	American College of Radiology
High Priority Measure:	Yes
Measure Type:	Structure
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure does not align with the Meaningful Measures Initiative as it represents a structure measure rather than a measure that supports direct patient care. In addition, the performance on the MIPS CQMs Specifications collection type is extremely high and unvarying, making this measure extremely topped out for this collection type as discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763). The average performance for this measure is 98.37 percent for the MIPS CQMs Specifications collection type. The average performance rate is based on the current MIPS benchmarking data located at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1275/2021%20MIPS%20Quality%20Benchmarks.zip.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.

C.14. Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	317
CMS eCQM ID:	CMS22v10
National Quality Strategy Domain:	Community/Population Health
Collection Type:	Medicare Part B Claims Specifications, eCQM Measure Specifications, MIPS CQMs Specifications
Measure Description:	Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented, as indicated, if blood pressure is pre-hypertensive or hypertensive.
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure does not align with the Meaningful Measures Initiative as it is low-bar and a frequently performed assessment. This is a process measure that only requires a blood pressure to be taken and if abnormal a follow-up plan of care be documented; however, the documented follow-up includes referring the patient to a primary care physician and does require confirmation of follow-up. Additionally, the measure does not strive to ensure adequate control of blood pressure as patients with an active diagnosis of hypertension are excluded from the denominator eligible patient population. While screening patients for high blood pressure is an important piece of quality care, it is the controlling of high blood pressure which reduces patient clinical risks and truly drives positive patient outcomes. This quality action is already available in measure Q236: Controlling High Blood Pressure.
In the Circumstance the Measure is Retained	We would update the description to replace 'pre-hypertensive' with 'elevated'. Additionally, the definition for all collection types would be revised to reflect 2017 ACC/AHA guidelines; including, changing blood pressure classifications, relevant thresholds, and applicable interventions. The eCQM Measure Specifications collection type would be revised to have the logic apply to exceptions based on blood pressure classification to more accurately capture a patient declining applicable intervention(s). This measure would also be removed from the Thoracic Surgery specialty measure set.

C.15. Psoriasis: Tuberculosis (TB) Prevention for Patients with Psoriasis, Psoriatic Arthritis and Rheumatoid Arthritis on a Biological Immune Response Modifier

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	337
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Collection Type:	MIPS CQMs Specifications
Measure Description:	Percentage of patients, regardless of age, with psoriasis, psoriatic arthritis and/or rheumatoid arthritis on a biological immune response modifier whose providers are ensuring active tuberculosis prevention either through negative standard tuberculosis screening tests or are reviewing the patient's history to determine if they have had appropriate management for a recent or prior positive test.
Measure Steward:	American Academy of Dermatology
High Priority Measure:	No
Measure Type:	Process
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure is duplicative to measure Q176: Tuberculosis Screening Prior to First Course Biologic Therapy because we are proposing in Table D.20 substantive changes to measure Q176 that would broaden the denominator by including an expanded list of biologic therapies that capture much of the denominator patient population for this measure.
In the Circumstance the Measure is Retained	We would update the denominator to include only those patients who are on a biologic immune response modifier prescribed within the current measurement period. There is no specialty set movement proposed for this measure.

C.16. Pain Brought Under Control Within 48 Hours

Category	Description
NQF # / eCQM NQF #:	0209 / N/A
Quality #:	342
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Collection Type:	MIPS CQMs Specifications
Measure Description:	Patients aged 18 and older who report being uncomfortable because of pain at the initial assessment (after admission to palliative care services) who report pain was brought to a comfortable level within 48 hours.
Measure Steward:	National Hospice and Palliative Care Organization
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because it does not align with the Meaningful Measures Initiative. This measure should be a standard of care given it represents a central pillar of quality palliative care by supporting effective pain management for patients. As currently specified, this measure only assesses if pain was brought to a comfortable level within 48 hours of the initial assessment and does not ensure treatment is aligned with patient goals, a plan of care for the duration of palliative care, and current guidelines; additionally, it may not be feasible dependent upon the medication and delivery method (i.e., procedural versus oral medication administration). It is important to incorporate shared-decision making and patient engagement while in palliative care, which may not always align with the time constraint of the measure.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.

C.17. Pelvic Organ Prolapse: Preoperative Screening for Uterine Malignancy

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	429
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Collection Type:	Medicare Part B Claims Specifications, MIPS CQMs Specifications
Measure Description:	Percentage of patients who are screened for uterine malignancy prior to vaginal closure or obliterative surgery for pelvic organ prolapse.
Measure Steward:	American Urogynecologic Society
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure does not align with the Meaningful Measures Initiative as it does not show meaningful measurement. The limited patient population and adoption of the quality measure does not allow for the creation of benchmarks to provide a meaningful impact to quality improvement.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.

C.18. Proportion of Patients Sustaining a Ureter Injury at the Time of Pelvic Organ Prolapse Repair

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	434
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Collection Type:	MIPS CQMs Specifications
Measure Description:	Percentage of patients undergoing pelvic organ prolapse repairs who sustain an injury to the ureter recognized either during or within 30 days after surgery.
Measure Steward:	American Urogynecologic Society
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program because this measure does not align with the Meaningful Measures Initiative as it is duplicative in denominator patient population to measure Q432: Proportion of Patients Sustaining a Bladder Injury at the Time of any Pelvic Organ Prolapse Repair with the quality action being completed concurrently. Additionally, the limited patient population and adoption of the quality measure does not allow for the creation of benchmarks to provide a meaningful impact to quality improvement.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.

C.19. Medication Management for People with Asthma

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality #:	444
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Efficiency and Cost Reduction
Collection Type:	MIPS CQMs Specifications
Measure Description:	The percentage of patients 5-64 years of age during the performance period who were identified as having persistent asthma and were dispensed appropriate medications that they remained on for at least 75% of their treatment period.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal	We propose the removal of this measure (finalized in 81 FR 77558 through 77675) as a quality measure from the MIPS program at the measure steward's request as it is no longer being maintained for inclusion.
In the Circumstance the Measure is Retained	There are no substantive changes or specialty set movement proposed for this measure.

TABLE Group D: Previously Finalized Quality Measures with Substantive Changes Proposed for the CY 2022 MIPS Performance Period/2024 MIPS Payment Year and Future Years

NOTE: Electronic clinical quality measures (eCQMs) that are National Quality Forum (NQF) endorsed are shown in Table D as follows: NQF # / eCQM NQF #.

The D Tables within the NPRM provide the substantive changes proposed for the quality measures in CY 2022. The changes that are made to the denominator codes sets are generalizations of the revisions communicated from the measure stewards to CMS. Additionally, International Classification of Diseases Tenth Edition (ICD-10) and Current Procedural Terminology (CPT) codes that are identified as invalid for CY 2022 may not be identified within the NPRM due to the availability of these changes to the public. If coding revisions to the denominator are impacted due to the timing of 2022 CPT and ICD-10 updates and assessment of these codes inclusion by the Measure Steward, these changes may be postponed until CY 2023. The 2022 Quality Measure Release Notes provide a comprehensive, detailed reference of exact codes changes to the denominators of the quality measures. The Quality Measure Release Notes are available for each of the collection types in the Quality Payment Program Resource Library at https://qpp.cms.gov/about/resource-library.

In addition to the proposed substantive changes, there may be changes to the coding utilized within the denominator that are not considered substantive in nature, but we believe are important to communicate to stakeholders. These changes align with the scope of the current coding; however, this will expand or contract the current eligible population, therefore, review the current year measure specification and the 2022 Quality Measure Release Notes or the eCQM Technical Release Notes once posted to review all coding changes. Language has also been added, to all applicable 2022 quality measure specifications, in the form of an 'Instructions Note', to clarify that telehealth encounters are allowed for determination of denominator eligibility. Only in the instance telehealth encounters have not been previously allowed as denominator eligible, will the D table corresponding to that measure reflect an update to the denominator allowing for telehealth encounters in the 'Substantive Change' cell.

It should be noted that in the 2021 PFS final rule (85 FR 84870), the CMS Web Interface Measures Specifications collection type would sunset starting with the CY 2022 MIPS performance period; however, in section IV.A.3.d.(1)(d) of this proposed rule, we are proposing to extend the availability of the CMS Web Interface measures as a collection type for the 2022 MIPS performance period and sunset the CMS Web Interface measures starting with the CY 2023 MIPS performance period. Therefore, we are proposing substantive changes to the CMS Web Interface Measure Specifications collection type as outlined in the applicable measures within the D tables. In conjunction with seeking public comment on the proposal to extend the availability of the CMS Web Interface measures as a collection type, we are seeking public comment on the substantive changes proposed for the CMS Web Interface Measure Specifications collection type given that the CMS Web Interface Measure Specifications collection type has generally remained the same for three consecutive (CY 2019, CY 2020, and CY 2021) MIPS performance periods.

D.1 Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%)

Category	Description
NQF # / eCQM NQF #:	0059 / N/A
Quality#:	001
CMS eCQM ID:	CMS122v10
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications | eCQM Specifications | CMS Web Interface Measure Specifications | MIPS CQMs Specifications
Current Measure Description:	Percentage of patients 18-75 years of age with diabetes who had hemoglobin A1c > 9.0% during the measurement period.
Substantive Change:	**Updated denominator exclusion: For the eCQM Specifications collection type:** **Revised:** 1. Exclude patients who are in hospice care for any part of the measurement period. 2. Exclude patients 66 and older who are living long term in an institution for more than 90 consecutive days during the measurement period. 3. Exclude patients 66 and older with an indication of frailty for any part of the measurement period who meet any of the following criteria: - Advanced illness with two outpatient encounters during the measurement period or the year prior - OR advanced illness with one inpatient encounter during the measurement period or the year prior - OR taking dementia medications during the measurement period or the year prior **Added:** 1. Exclude patients receiving palliative care during the measurement period. **Updated denominator exclusion: For the CMS Web Interface Measure Specifications collection type: Revised:** Patients age 66 and older in Institutional Special Needs Plans (SNP) or residing in long-term care with a POS code 32, 33, 34, 54 or 56 for more than 90 consecutive days during the measurement period. **Updated denominator confirmation: For the CMS Web Interface Measure Specifications collection type: Revised:** Determine if the patient has an active diagnosis of diabetes during the measurement period OR an active diagnosis of diabetes during the year prior. - If the patient has an active diagnosis of diabetes in the medical record, select "Yes" **Updated denominator note: For the MIPS CQMs Specifications collection type: Added:** To assess the age for exclusions, the patient's age at the end of the measurement period should be used. **Updated denominator guidance: For the CMS Web Interface Measure Specifications collection type: Added:** To assess the age for exclusions, the patient's age at the end of the measurement period should be used. **Updated numerator note: For the Medicare Part B Claims Measure Specifications collection type: Added:** To assess the age for exclusions, the patient's age on the date of the encounter should be used. **Updated guidance: For the CMS Web Interface Measure Specifications colleciton type: Added:** Do not include HbA1c levels reported by the patient. **Updated numerator guidance: For the CMS Web Interface Measure Specifications colleciton type: Removed:** - Patient Reported Requirement: Date and most recent value (distinct value required) **Updated denominator exclusion: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types:** **Added:** 1. Palliative care services provided to patient any time during the measurement period
Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Intermediate Outcome
Rationale:	We propose that the denominator exclusion language be updated for all collection types, except for the CMS Web Interface Measure Specifications collection type, to add an exclusion for patients receiving palliative care, as this patient population is not appropriate for the clinical quality action being assessed. Additionally, for the eCQM Specifications collection type language was added to clarify timing for those exclusions that have an age-related component. For the eCQM Specifications collection type, the term 'overlaps' was removed and replaced with plain language for clarity and the denominator exclusion for frailty or advanced illness was revised to update how these patients will be captured. We propose to revise the denominator note for the MIPS CQMs Specifications collection type, the numerator note for the Medicare Part B Claims Measure Specifications collection type, and the denominator guidance for the CMS Web Interface Measure Specifications collection type to clarify the timing for those exclusions that have an age-related component. We propose to update the denominator exclusion language for the CMS Web Interface Measure Specifications collection type, for the measure, long-term care will be defined as patients staying more than 90 consecutive days at the long-term care facility versus any 90 days within the performance period. Additionally, the denominator confirmation was updated to clarify that the diagnosis should be active during the performance period or year prior. We propose to update the guidance for the CMS Web Interface Measure Specifications collection type to ensure that patient reported HbA1c levels should not be utilized for quality action assessment for the purposes of this measure.

D.2 Heart Failure (HF): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) or Angiotensin Receptor-Neprilysin Inhibitor (ARNI) Therapy for Left Ventricular Systolic Dysfunction (LVSD)

Category	Description
NQF # / eCQM NQF #:	0081 / 0081e
Quality#:	005
CMS eCQM ID:	CMS135v10
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications | MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of heart failure (HF) with a current or prior left ventricular ejection fraction (LVEF) < 40% who were prescribed ACE inhibitor or ARB or ARNI therapy either within a 12-month period when seen in the outpatient setting OR at each hospital discharge.
Substantive Change:	**Updated definition: For the eCQM Specifications collection type: Added:** The LVSD may be determined by quantitative or qualitative assessment, which may be current or historical. Examples of a quantitative or qualitative assessment may include an echocardiogram: 1) that provides a numerical value of LVSD or 2) that uses descriptive terms such as moderately or severely depressed left ventricular systolic function. Any current or prior ejection fraction study documenting LVSD can be used to identify patients. **Updated value set/coding: For the eCQM Specifications collection type: Revised:** "Pregnancy" (2.16.840.1.113883.3.526.3.378) value set to more accurately capture pregnancy state
Steward:	American Heart Association
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to update the eCQM Specifications collection type definition section to align the measure language with the logic to allow for quantitative or qualitative documentation of moderate or severe left ventricular systolic dysfunction (LVSD). Additionally, we propose to update the eCQM Specifications “Pregnancy” value set to more accurately capture the state of pregnancy to ensure the denominator exclusion is being applied to the correct patient population.

D.3 Coronary Artery Disease (CAD): Beta-Blocker Therapy – Prior Myocardial Infarction (MI) or Left Ventricular Systolic Dysfunction (LVEF < 40%)

Category	Description
NQF # / eCQM NQF #:	0070 / 0070e
Quality#:	007
CMS eCQM ID:	CMS145v10
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications | MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of coronary artery disease seen within a 12-month period who also have a prior MI or a current or prior LVEF < 40% who were prescribed beta-blocker therapy.
Substantive Change:	**Updated definition: For the eCQM Specifications collection type: Added:** LVEF < 40% corresponds to qualitative documentation of moderate dysfunction or severe dysfunction (LVSD). The LVSD may be determined by quantitative or qualitative assessment, which may be current or historical. Examples of a quantitative or qualitative assessment may include an echocardiogram: 1) that provides a numerical value of LVSD or 2) that uses descriptive terms such as moderately or severely depressed left ventricular systolic function. Any current or prior ejection fraction study documenting LVSD can be used to identify patients. **Updated denominator logic: For the eCQM Specifications collection type: Revised:** Myocardial Infarction timing logic to use the start date for the myocardial infarction. **Updated value set/coding: For the eCQM Specifications collection type: Revised:** "Coronary Artery Disease No MI" (2.16.840.1.113883.3.526.3.369) to remove coding related to Dressler's Syndrome. **Updated denominator note: For the MIPS CQM Specifications collection type: Added:** Submission Criteria 1: LVEF < 40% corresponds to qualitative documentation of moderate dysfunction or severe dysfunction (LVSD). The LVSD may be determined by quantitative or qualitative assessment, which may be current or historical. Examples of a quantitative or qualitative assessment may include an echocardiogram: 1) that provides a numerical value of LVSD or 2) that uses descriptive terms such as moderately or severely depressed left ventricular systolic function. Any current or prior ejection fraction study documenting LVSD can be used to identify patients.
Steward:	American Heart Association
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to update the eCQM Specifications collection type definition section to align the measure language with the logic to allow for quantitative or qualitative documentation of moderate or severe left ventricular systolic dysfunction (LVSD). We propose to update the denominator logic for the eCQM Specifications collection type to use the start date for the myocardial infarction. This will ensure those patients without a documented myocardial infarction end date within the medical record will be captured within the measure denominator as these patients would be appropriate for the denominator eligible patient population. Additionally, we propose to remove 'Dressler's Syndrome' from the "Coronary Artery Disease No MI" value set for the eCQM Specifications collection type as this is not a conclusive diagnosis to indicate coronary artery disease and therefore, not appropriate for this value set.

D.4 Heart Failure (HF): Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction (LVSD)

Category	Description
NQF # / eCQM NQF #:	0083 / 0083e
Quality#:	008
CMS eCQM ID:	CMS144v10
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications | MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of heart failure (HF) with a current or prior left ventricular ejection fraction (LVEF) < 40% who were prescribed beta-blocker therapy either within a 12-month period when seen in the outpatient setting OR at each hospital discharge.
Substantive Change:	**Updated definition: For the eCQM Specifications collection type: Added:** The LVSD may be determined by quantitative or qualitative assessment, which may be current or historical. Examples of a quantitative or qualitative assessment may include an echocardiogram: 1) that provides a numerical value of LVSD or 2) that uses descriptive terms such as moderately or severely depressed left ventricular systolic function. Any current or prior ejection fraction study documenting LVSD can be used to identify patients
Steward:	American Heart Association
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to update the eCQM Specifications collection type definition section to align the measure language with the current measure logic to allow for quantitative or qualitative documentation of moderate or severe left ventricular systolic dysfunction (LVSD).

D.5 Anti-Depressant Medication Management

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	009
CMS eCQM ID:	CMS128v10
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of patients 18 years of age and older who were treated with antidepressant medication, had a diagnosis of major depression, and who remained on an antidepressant medication treatment. Two rates are reported. a. Percentage of patients who remained on an antidepressant medication for at least 84 days (12 weeks). b. Percentage of patients who remained on an antidepressant medication for at least 180 days (6 months).
Substantive Change:	**Updated denominator exclusion: Revised:** Exclude patients who are in hospice care for any part of the measurement period
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to revise the denominator exclusion to remove the term ‘overlaps’ and replace with plain language for clarity and to ensure consistency in implementation.

D.6 Appropriate Treatment for Upper Respiratory Infection (URI)

Category	Description
NQF # / eCQM NQF #:	0069 / N/A
Quality#:	065
CMS eCQM ID:	CMS154v10
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	eCQM Specifications | MIPS CQMs Specifications
Current Measure Description:	Percentage of episodes for patients 3 months of age and older with a diagnosis of upper respiratory infection (URI) that did not result in an antibiotic dispensing event.
Substantive Change:	**Updated denominator exclusion: For the eCQM Specifications collection type:** **Revised:** 1. Exclude URI episodes when the patient had hospice care for any part of the measurement period. 2. Exclude URI episodes when the patient had an active prescription of antibiotics in the 30 days prior to the episode date, including the episode date up until the time of the encounter. **Updated logic and logic definitions: For the eCQM Specifications collection type: Revised:** logic so definitions point to the encounter as a basis for evaluating other clinical data. **Updated value set/coding: For the eCQM Specifications collection type: Added:** value sets "Observation care discharge day management", "Home Healthcare Services", "Medical Disability Exam", and "Observation". **Updated denominator: For the MIPS CQMs Specifications collection type:** Added: Home Health setting and coding for Work Related or Medical Disability Evaluation services. **Updated denominator exclusion: For the MIPS CQMs Specifications collection type: Revised:** URI episodes when the patient had an active prescription of antibiotics (Table 1) in the 30 days prior to the episode date.
Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to update the eCQM Specifications collection type denominator exclusion to remove the term 'overlapping' and replace with plain language for clarity and to ensure consistency in implementation. Additionally, we propose to revise the denominator exclusion to align with the logic regarding the timing of the active prescription and the encounter for the purposes of this exclusion. We propose to update the eCQM Specifications collection type logic so that the definitions point to the encounter as a basis for evaluation of other clinical data as this will align with the measure intent and ensure appropriate time intervals for implementation. Additionally, we propose to add value sets to the eCQM Specifications collection type as these value sets are appropriate and applicable to this measure's denominator eligibility. We propose to revise the MIPS CQMs Specifications collection type denominator exclusion to clarify that all patients with active antibiotic prescriptions up to the time of the encounter should be excluded from the denominator eligible patient population. Additionally, we propose to update the denominator eligible coding to include home visits and disability evaluation services as these are appropriate and applicable clinical settings. In the event the proposed substantive change(s) are finalized, for the MIPS CQMs Specifications collection type, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark will be used for scoring.

D.7 Appropriate Testing for Pharyngitis

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	066
CMS eCQM ID:	CMS146v10
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	eCQM Specifications | MIPS CQMs Specifications
Current Measure Description:	The percentage of episodes for patients 3 years and older with a diagnosis of pharyngitis that resulted in an antibiotic dispensing event and a group A streptococcus (strep) test.
Substantive Change:	**Updated denominator exclusion: For the eCQM Specifications collection type: Revised:** 1. Exclude episodes where the patient is taking antibiotics in the 30 days prior to the episode date, or had an active prescription on the episode date. 3. Exclude episodes where the patient is in hospice care for any part of the measurement period. **Updated denominator logic: For the eCQM Specifications collection type: Revised:** definitions to point to the encounter as a basis for evaluating other clinical data **The measure guidance is revised to read: For the eCQM Specifications collection type:** This is an episode of care measure that examines all eligible episodes for the patient during the measurement period. The intent is to determine whether antibiotics are being dispensed appropriately. Antibiotics should only be dispensed if a strep test has been performed to confirm a bacterial infection. Antibiotics should not be dispensed for viral infections. This eCQM is an episode-based measure. An episode is defined as each eligible encounter for patients aged 3 years and older with a diagnosis of pharyngitis that resulted in an antibiotic dispensing event during the measurement period. This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (https://ecqi.healthit.gov/qdm) for more information on the QDM. **The measure initial patient population/denominator is revised to read: For all collection types:** Outpatient, telephone, online assessment (i.e. e-visit or virtual check-in), observation, or emergency department (ED) visits with a diagnosis of pharyngitis and an antibiotic dispensing event on or within 3 days after the episode date among patients 3 years or older. **Updated denominator criteria: For the MIPS CQMs Specifications collection type: Revised:** Prescribed or dispensed antibiotic on or within 3 days after the episode date (Table 1). **Updated denominator exclusion: For the MIPS CQMs Specifications collection type: Revised:** Episodes where the patient is taking antibiotics (Table 1) in the 30 days prior to the episode date, or had an active prescription on the episode date.
Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to update the eCQM Specifications collection type denominator exclusions to clarify timing of exclusion criteria and to remove the term 'overlap' and replace with plain language for clarity and to ensure consistency in implementation. We propose to update the eCQM Specifications collection type logic so that the definitions point to the encounter as a basis for evaluation of other clinical data as this will align with the measure intent and ensure appropriate time intervals for implementation. We propose to update the eCQM Specifications collection type guidance section to clarify the intent of the measure and appropriate antibiotic dispensing. Additionally, we propose to update the eCQM Specifications collection type initial patient population to capture those patients with an antibiotic dispensing event on or within 3 days after the episode event to align with intent of the measure. We propose to update the denominator and denominator criteria of the MIPS CQMs Specifications collection type to reflect that patients with an antibiotic dispensing event on or within 3 days after the episode event should be included within the denominator eligible population as this aligns with the intent of the measure to assess appropriate antibiotic dispensing. We propose to revise the MIPS CQMs Specifications collection type denominator exclusion to clarify that all patients with active antibiotic prescriptions up to the time of the encounter should be excluded from the denominator eligible patient population.

D.8 Acute Otitis Externa (AOE): Systemic Antimicrobial Therapy – Avoidance of Inappropriate Use

Category	Description
NQF # / eCQM NQF #:	0654 / N/A
Quality#:	093
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	Medicare Part B Claims Measure Specifications | MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 2 years and older with a diagnosis of AOE who were not prescribed systemic antimicrobial therapy.
Substantive Change:	**Modified collection type:** MIPS CQM Specifications collection type
Steward:	American Academy of Otolaryngology – Head and Neck Surgery
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to remove the Medicare Part B Claims Measure Specifications collection type as it has reached the end of the topped out lifecycle as finalized in 82 FR 53640. However, the benchmarking data continues to show a gap for the MIPS CQMs Specifications collection type, as such, the measure will be retained for this collection type.

D.9 Prostate Cancer: Avoidance of Overuse of Bone Scan for Staging Low Risk Prostate Cancer Patients

Category	Description
NQF # / eCQM NQF #:	0389 / 0389e
Quality#:	102
CMS eCQM ID:	CMS129v11
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	eCQM Specifications | MIPS CQMs Specifications
Current Measure Description:	Percentage of patients, regardless of age, with a diagnosis of prostate cancer at low (or very low) risk of recurrence receiving interstitial prostate brachytherapy, OR external beam radiotherapy to the prostate, OR radical prostatectomy who did not have a bone scan performed at any time since diagnosis of prostate cancer.
Substantive Change:	**Updated denominator criteria: For the MIPS CQMs Specifications collection type: Revised:** Any patient, regardless of age **The measure instructions are revised to read: For the MIPS CQMs Specifications collection type:** This measure is to be submitted once per performance period for patients with a diagnosis of prostate cancer at low (or very low) risk of recurrence who receive interstitial prostate brachytherapy, external beam radiotherapy to the prostate, radical prostatectomy during the performance period. The quality-data code or equivalent needs to be submitted only once during the performance period. It is anticipated that Merit-based Incentive Payment System (MIPS) eligible clinicians who perform the listed procedures as specified in the denominator coding will submit this measure. **Updated denominator note: For the MIPS CQMs Specification collection type: Added:** Most recent risk assessment of recurrence completed before the first prostate cancer treatment during the performance period will be used for denominator eligibility.
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to update the MIPS CQMs Specifications collection type to remove the gender specificity from the denominator criteria to ensure a complete patient population. Additionally, we propose to revise the measure instructions and denominator note for the MIPS CQMs Specifications collection type to reflect the update in measure submission frequency from once per episode to once per performance period utilizing the most recent risk assessment for purposes of denominator eligibility, as this is more aligned with the measure intent as well as bringing all collection types into alignment.

D.10 Preventive Care and Screening: Influenza Immunization

Category	Description
NQF # / eCQM NQF #:	0041 / 0041e
Quality#:	110
CMS eCQM ID:	CMS147v11
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	Medicare Part B Claims Measure Specifications | eCQM Specifications | CMS Web Interface Measure Specifications | MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 6 months and older seen for a visit between October 1 and March 31 who received an influenza immunization OR who reported previous receipt of an influenza immunization.
Substantive Change:	**Updated guidance: For the eCQM Specifications collection type: Added:** Patient self-report for procedures as well as immunizations should be recorded in 'Procedure, Performed' template or 'Immunization, Administered' template in QRDA-1. **Updated value set/coding: For the eCQM Specifications and CMS Web Interface Measure Specifications collection types: Removed:** "Previous Receipt of Influenza Vaccine" (2.16.840.1.113883.3.526.3.1185) value set.
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to update the eCQM Specifications collection type in order to accurately capture those patients who had previously received the influenza immunization. The current logic definition does not capture the date of immunization receipt nor does it ensure the patient was assessed during the flu season and is not fully aligned with measure intent. Therefore, the value set "Previous Receipt of Influenza Vaccine" will be removed from the measure and the guidance section will be updated to outline the process for capturing those patients who have previously received the influenza immunization for the purposes of this measure. Additionally, the value set "Previous Receipt of Influenza Vaccine" will be removed from CMS Web Interface Measure Specifications collection type to align with the eCQM Specifications collection type, however, this will not impact the numerator of the measure. Medical record documentation of previous receipt of the influenza vaccine during the flu season will still suffice for completion of the quality action, though this value set will no longer be available for mapping purposes.

D.11 Pneumococcal Vaccination Status for Older Adults

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	111
CMS eCQM ID:	CMS127v10
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	Medicare Part B Claims Measure Specifications | eCQM Specifications | MIPS CQMs Specifications
Current Measure Description:	Percentage of patients 65 years of age and older who have ever received a pneumococcal vaccine.
Substantive Change:	**The measure description is revised from 'Percentage of patients 65 years of age and older who have ever received a pneumococcal vaccine' to:** Percentage of patients 66 years of age and older who have ever received a pneumococcal vaccine. **The measure denominator exclusion is revised to read: For the eCQM Specifications collection type:** Exclude patients who are in hospice care for any part of the measurement period. **Updated initial patient population: For the eCQM Specifications collection type: Revised:** patient age changed to 66 years of age or older. **The measure numerator is revised to read: For all collection types:** Patients who received a pneumococcal vaccination on or after their 60th birthday and before the end of the measurement period; or had an adverse reaction to the vaccine before the end of the measurement period. **Updated value set/coding: For the eCQM Specifications collection type: Revised:** **Removed:** "Pneumococcal Vaccine" (2.16.840.1.113883.3.464.1003.110.12.1027) and "Pneumococcal Vaccine Administered" (2.16.840.1.113883.3.464.1003.110.12.1034) **Added:** "Pneumococcal Polysaccharide 23 Vaccine" (2.16.840.1.113883.3.464.1003.110.12.1089) **The measure denominator is revised to read: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types:** Patients 66 years of age and older with a visit during the measurement period **The measure denominator criteria is revised to read: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types:** Patients aged ≥ 66 years on date of encounter **The measure denominator note is revised to read: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types:** This measure assesses whether patients 66 years of age or older have received one or more pneumococcal vaccinations. **The measure numerator options are revised to read: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types:** **Performance Met:** Pneumococcal vaccine administered on or after patient's 60th birthday and before the end of the measurement period **Performance Met:** Documentation of medical reason(s) for not administering pneumococcal vaccine (e.g., adverse reaction to vaccine) **Performance Not Met:** Pneumococcal vaccine was not administered on or after patient's 60th birthday and before the end of the measurement period, reason not otherwise specified **The measure numerator note is revised to read: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types:** The measure provides credit for adults 66 years of age and older who have received the PPSV23 vaccine on or after the patient's 60th birthday. Patient reported vaccine receipt, when recorded in the medical record, is acceptable for meeting the numerator.
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to update the measure description, initial patient population, denominator, denominator criteria, and denominator note (as applicable) for all collection types to assess patients aged 66 years and older as this allows time for clinicians to administer the pneumococcal vaccination in accordance with current Advisory Committee on Immunization Practices (ACIP) recommendations. Additionally, the numerator for all collection types is proposed to be revised to assess for the administration of the pneumococcal vaccine on or after the patients 60th birthday and before the end of the measurement period or documentation of medical reason(s) for not administering the pneumococcal vaccine. We propose to update the eCQM Specifications collection type denominator exclusion to remove the term 'overlaps' and replace with plain language for clarity and to ensure consistency in implementation. Additionally, we propose to update the value sets for the eCQM Specifications collection type to reflect the updates to the measure to align with current ACIP recommendations that all adults age 65 years and older receive one dose of the 23-valent pneumococcal polysaccharide vaccine (PPSV23). The MIPS CQMs Specifications and Medicare Part B Claims Measure Specifications collection type will also be updated to only allow for the PPSV23 vaccine to suffice for numerator compliance. We propose to update the numerator options for the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types to allow for the receipt of the pneumococcal vaccine on or after the patient's 60th birthday or the documentation of medical reasons, such as an adverse reaction, to meet the quality action of this measure as it better aligns with current ACIP recommendations. Additionally, we propose to update the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types by revising the Numerator Note in order to align with current ACIP recommendations and clarify that patient self-reporting is allowable for this measure's required clinical quality action.

D.12 Breast Cancer Screening

Category	Description
NQF # / eCQM NQF #:	2372 / N/A
Quality#:	112
CMS eCQM ID:	CMS125v10
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications | eCQM Specifications | CMS Web Interface Measure Specifications | MIPS CQMs Specifications
Current Measure Description:	Percentage of women 50 - 74 years of age who had a mammogram to screen for breast cancer in the 27 months prior to the end of the measurement period.
Substantive Change:	**Updated denominator exclusion: For the eCQM Specifications collection type:** **Revised:** 1. Exclude patients who are in hospice care for any part of the measurement period. 2. Exclude patients 66 and older with an indication of frailty for any part of the measurement period who meet any of the following criteria: - Advanced illness with two outpatient encounters during the measurement period or the year prior - OR advanced illness with one inpatient encounter during the measurement period or the year prior - OR taking dementia medications during the measurement period or the year prior **Added:** 1. Exclude patients receiving palliative care during the measurement period. **For the CMS Web Interface Measure Specifications collection type:** **Revised:** 1. Patients age 66 and older in Institutional Special Needs Plans (SNP) or residing in long-term care with a POS code 32, 33, 34, 54 or 56 for more than 90 consecutive days during the measurement period. **Updated denominator note: For the MIPS CQMs Specifications collection type: Added:** To assess the age for exclusions, the patient's age at the end of the measurement period should be used. **Updated denominator exclusion: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types:** **Added:** Palliative care services used by patient any time during the measurement period **Updated denominator guidance: For the CMS Web Interface Measure Specifications collection type: Added:** To assess the age for exclusions, the patient's age at the end of the measurement period should be used. **Updated numerator note: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types:** **Added:** Patient reported mammograms, when recorded in the medical record, are acceptable for meeting the numerator. **For the Medicare Part B Claims Measure Specifications collection type:** **Added:** To assess the age for exclusions, the patient's age on the date of the encounter should be used.
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose that the denominator exclusion language be updated for all collection types to add an exclusion for patients receiving palliative care, as this patient population is not appropriate for the clinical quality action being assessed. Additionally, for the eCQM Specifications collection type language was added to clarify timing for those exclusions that have an age-related component. For the eCQM Specifications collection type, the term 'overlaps' was removed and replaced with plain language for clarity and the denominator exclusion for frailty or advanced illness was revised to update how these patients will be captured. We propose to revise the denominator note for the MIPS CQMs Specifications collection type, the numerator note for the Medicare Part B Claims Measure Specifications collection type, and the denominator guidance for the CMS Web Interface Measure Specifications collection type to clarify the timing for those exclusions that have an age-related component. Additionally, we propose to add a numerator note to the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types to allow for patient self-report as this is appropriate to avoid overtreatment. We propose to update the denominator exclusion language for the CMS Web Interface Measure Specifications collection type, for the measure, long-term care will be defined as patients staying more than 90 consecutive days at the long-term care facility versus any 90 days within the performance period.

D.13 Colorectal Cancer Screening

Category	Description
NQF # / eCQM NQF #:	0034 / N/A
Quality#:	113
CMS eCQM ID:	CMS130v10
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications | eCQM Specifications | CMS Web Interface Measure Specifications | MIPS CQMs Specifications
Current Measure Description:	Percentage of patients 50-75 years of age who had appropriate screening for colorectal cancer.
Substantive Change:	**Updated denominator exclusion: For the eCQM Specifications collection type:** **Revised:** 1. Exclude who are in hospice care for any part of the measurement period. 2. Exclude patients 66 and older with an indication of frailty for any part of the measurement period who meet any of the following criteria: - Advanced illness with two outpatient encounters during the measurement period or the year prior - OR advanced illness with one inpatient encounter during the measurement period or the year prior - OR taking dementia medications during the measurement period or the year prior **Added:** 1. Exclude patients receiving palliative care during the measurement period. **For the CMS Web Interface Measure Specifications collection type:** **Revised:** 1. Patients age 66 and older in Institutional Special Needs Plans (SNP) or residing in long-term care with a POS code 32, 33, 34, 54 or 56 for more than 90 consecutive days during the measurement period. **Updated denominator note: For the MIPS CQMs Specifications collection type: Added:** To assess the age for exclusions, the patient's age at the end of the measurement period should be used. **Updated denominator exclusion: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types:** **Added:** 1. Patient was provided palliative care services any time during the measurement period **Updated denominator guidance: For the CMS Web Interface Measure Specifications collection type: Added:** To assess the age for exclusions, the patient's age at the end of the measurement period should be used. **Updated numerator note: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types:** **Added:** Patient reported procedures and diagnostic studies, when recorded in the medical record, are acceptable for meeting the numerator. **For the Medicare Part B Claims Measure Specifications collection type:** **Added:** To assess the age for exclusions, the patient's age on the date of the encounter should be used.
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose that the denominator exclusion language be updated for all collection types to add an exclusion for patients receiving palliative care, as this patient population is not appropriate for the clinical quality action being assessed. Additionally, for the eCQM Specifications collection type language was added to clarify timing for those exclusions that have an age-related component. For the eCQM Specifications collection type, the term 'overlaps' was removed and replaced with plain language for clarity and the denominator exclusion for frailty or advanced illness was revised to update how these patients will be captured. We propose to revise the denominator note for the MIPS CQMs Specifications collection type, the numerator note for the Medicare Part B Claims Measure Specifications collection type, and the denominator guidance for the CMS Web Interface Measure Specifications collection type to clarify the timing for those exclusions that have an age-related component. Additionally, we propose to add a numerator note to the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types to allow for patient self-report as this is appropriate to avoid overtreatment. We propose to update the denominator exclusion language for the CMS Web Interface Measure Specifications collection type, for the measure, long-term care will be defined as patients staying more than 90 consecutive days at the long-term care facility versus any 90 days within the performance period.

D.14 Avoidance of Antibiotic Treatment for Acute Bronchitis/Bronchiolitis

Category	Description
NQF # / eCQM NQF #:	0058 / N/A
Quality#:	116
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	The percentage of episodes for patients ages 3 months and older with a diagnosis of acute bronchitis/bronchiolitis that did not result in an antibiotic dispensing event.
Substantive Change:	**Updated denominator exclusion: Revised:** Acute bronchitis/bronchiolitis episodes when the patient had a new or refill prescription of antibiotics (Table 1) in the 30 days prior to the episode date. **Updated numerator instructions: Removed:** Ticarcillin clavulanate and Erythromycin sulfisoxazole from Table 1 - Antibiotic Medications
Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to revise the denominator exclusion to clarify that all patients with active antibiotic prescriptions up to the time of the encounter should be excluded from the denominator eligible patient population. We propose to update Table 1 – Antibiotic Medications to ensure the list includes current and appropriate medications for the purposes of this measure. In the event the proposed substantive change(s) are finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark will be used for scoring.

D.15 Diabetes: Eye Exam

Category	Description
NQF # / eCQM NQF #:	0055 / N/A
Quality#:	117
CMS eCQM ID:	CMS131v10
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications | eCQM Specifications | MIPS CQMs Specifications
Current Measure Description:	Percentage of patients 18-75 years of age with diabetes and an active diagnosis of retinopathy overlapping the measurement period who had a retinal or dilated eye exam by an eye care professional during the measurement period or diabetics with no diagnosis of retinopathy overlapping the measurement period who had a retinal or dilated eye exam by an eye care professional during the measurement period or in the 12 months prior to the measurement period.
Substantive Change:	**The measure description is revised to read: For all collection types:** Percentage of patients 18-75 years of age with diabetes and an active diagnosis of retinopathy in any part of the measurement period who had a retinal or dilated eye exam by an eye care professional during the measurement period or diabetics with no diagnosis of retinopathy in any part of the measurement period who had a retinal or dilated eye exam by an eye care professional during the measurement period or in the 12 months prior to the measurement period. **Updated denominator exclusion: For the eCQM Specifications collection type:** **Revised:** 1. Exclude patients who are in hospice care for any part of the measurement period. 2. Exclude patients 66 and older with an indication of frailty for any part of the measurement period who meet any of the following criteria: - Advanced illness with two outpatient encounters during the measurement period or the year prior - OR advanced illness with one inpatient encounter during the measurement period or the year prior - OR taking dementia medications during the measurement period or the year prior **Added:** 1. Exclude patients receiving palliative care during the measurement period. **The measure guidance is revised to read: For the eCQM Specifications collection type:** Only patients with a diagnosis of Type 1 or Type 2 diabetes should be included in the denominator of this measure; patients with a diagnosis of secondary diabetes due to another condition should not be included. The eye exam must be performed by an ophthalmologist or optometrist, or there must be evidence that fundus photography results were read by a system that provides an artificial intelligence (AI) interpretation. This eCQM is a patient-based measure. This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (https://ecqi.healthit.gov/qdm) for more information on the QDM. **Updated denominator note: For the MIPS CQMs Specifications collection type: Added:** To assess the age for exclusions, the patient's age at the end of the measurement period should be used. **Updated denominator exclusion: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types:** **Added:** 1. Palliative care services provided to patient any time during the measurement period **The measure numerator is revised to read: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types:** Patients with an eye screening for diabetic retinal disease. This includes diabetics who had one of the following: • Diabetic with a diagnosis of retinopathy during the measurement period and a retinal or dilated eye exam by an eye care professional in the measurement period • Diabetic with no diagnosis of retinopathy during the measurement period and a retinal or dilated eye exam by an eye care professional in the measurement period or the year prior to the measurement period **The measure numerator note is revised to read: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types:** The eye exam must be performed or reviewed by an ophthalmologist or optometrist, or there must be evidence that fundus photography results were read by a system that provides an artificial intelligence (AI) interpretation. Alternatively, results may be read by a qualified reading center that operates under the direction of a medical director who is a retinal specialist **Updated numerator note: For the Medicare Part B Claims Measure Specifications collection type:** **Added:** To assess the age for exclusions, the patient's age on the date of the encounter should be used.
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to update the description of the measure to remove the term 'overlaps' and replace with plain language for clarity and to ensure consistency in implementation. Additionally, we propose to update the numerator for the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types to remove the terms 'overlaps' and 'overlapping' and replace with plain language for clarity and to ensure consistency in implementation. We propose that the denominator exclusion language be updated for all collection types to add an exclusion for patients receiving palliative care, as this patient population is not appropriate for the clinical quality action being assessed. Additionally, for the eCQM Specifications collection type language was added to clarify timing for those exclusions that have an age-related component. For the eCQM Specifications collection type, the term 'overlaps' was removed and replaced with plain language for clarity and the denominator exclusion for frailty or advanced illness was revised to update how these patients will be captured. Additionally, we propose to update the guidance for the eCQM Specifications collection type and numerator note for the MIPS

Category	Description
	CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types to allow for the use of artificial intelligence as it is applicable and clinically appropriate for numerator compliance for this measure. We propose to revise the denominator note for the MIPS CQMs Specifications collection type and the numerator note for the Medicare Part B Claims Measure Specifications collection type to clarify the timing for those exclusions that have an age-related component.

D.16 Diabetes: Medical Attention for Nephropathy

Category	Description
NQF # / eCQM NQF #:	0062 / N/A
Quality#:	119
CMS eCQM ID:	CMS134v10
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications | MIPS CQMs Specifications
Current Measure Description:	The percentage of patients 18-75 years of age with diabetes who had a nephropathy screening test or evidence of nephropathy during the measurement period.
Substantive Change:	**Updated denominator exclusion: For the eCQM Specifications collection type:** **Revised:** 1. Exclude patients who are in hospice care for any part of the measurement period. 2. Exclude patients 66 and older with an indication of frailty for any part of the measurement period who meet any of the following criteria: - Advanced illness with two outpatient encounters during the measurement period or the year prior - OR advanced illness with one inpatient encounter during the measurement period or the year prior - OR taking dementia medications during the measurement period or the year prior **Added:** 1. Exclude patients receiving palliative care during the measurement period. **Updated value set/coding: For the eCQM Specifications collection type: Removed:** coding related to transplant donors from "Kidney Transplant" (2.16.840.1.113883.3.464.1003.109.12.1012) value set. **Updated denominator note: For the MIPS CQMs Specifications collection type: Added:** To assess the age for exclusions, the patient's age at the end of the measurement period should be used. **Updated denominator exclusion: For the MIPS CQMs Specifications collection types:** **Added:** 1. Patients who use palliative care services any time during the measurement period
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose that the denominator exclusion language be updated for all collection types to add an exclusion for patients receiving palliative care, as this patient population is not appropriate for the clinical quality action being assessed. Additionally, for the eCQM Specifications collection type language was added to clarify timing for those exclusions that have an age-related component. For the eCQM Specifications collection type, the term 'overlaps' was removed and replaced with plain language for clarity and the denominator exclusion for frailty or advanced illness was revised to update how these patients will be captured. Additionally, we propose to update the "Kidney Transplant" value set to remove coding related to kidney transplant donors as it would be appropriate for these patients to still receive a screening for nephropathy. We propose to revise the denominator note for the MIPS CQMs Specifications collection type to clarify the timing for those exclusions that have an age-related component.

D.17 Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	128
CMS eCQM ID:	CMS69v10
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	Medicare Part B Claims Measure Specifications | eCQM Specifications | MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a BMI documented during the current encounter or within the previous twelve months AND who had a follow-up plan documented if most recent BMI was outside of normal parameters.
Substantive Change:	**The measure denominator exclusion is revised to read: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types:** 1. Documentation stating the patient has received or is currently receiving palliative or hospice care 2. Documentation of patient pregnancy anytime during the measurement period prior to and including the current encounter
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to update the denominator exclusions to increase clarity and add specificity to ensure the appropriate patient population is being excluded from the assessment of the quality action.

D.18 Preventive Care and Screening: Screening for Depression and Follow-Up Plan

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	134
CMS eCQM ID:	CMS2v11
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	Medicare Part B Claims Measure Specifications | eCQM Specifications | CMS Web Interface Measure Specifications | MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of the eligible encounter.
Substantive Change:	**The measure description is revised to read: For the CMS Web Interface Measure Specifications collection type:** Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age appropriate standardized depression screening tool AND if positive, a follow-up plan is documented on the date of the eligible encounter. **The measure guidance is revised to read: For the eCQM Specifications collection type:** The intent of the measure is to screen for depression in patients who have never had a diagnosis of depression or bipolar disorder prior to the eligible encounter used to evaluate the numerator. Patients who have ever been diagnosed with depression or bipolar disorder will be excluded from the measure. A depression screen is completed on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan must be documented on the date of the encounter, such as referral to a provider for additional evaluation, pharmacological interventions, or other interventions for the diagnosis or treatment of depression. This measure does not require documentation of a specific score, just whether results of the normalized and validated depression screening tool used are considered positive or negative. Each standardized screening tool provides guidance on whether a particular score is considered positive for depression. This eCQM is a patient-based measure. Depression screening is required once per measurement period, not at all encounters. Screening Tools: * An age-appropriate, standardized, and validated depression screening tool must be used for numerator compliance. * The name of the age-appropriate standardized depression screening tool utilized must be documented in the medical record. * The depression screening must be reviewed and addressed by the provider filing the code, on the date of the encounter. Positive pre-screening results indicating a patient is at high risk for self-harm should receive more urgent intervention as determined by the provider practice. * The screening should occur during a qualifying encounter or up to 14 days prior to the date of the qualifying encounter. * The measure assesses the most recent depression screening completed either during the eligible encounter or within the 14 days prior to that encounter. Therefore, a clinician would not be able to complete another screening at the time of the encounter to count towards a follow-up, because that would serve as the most recent screening. In order to satisfy the follow-up requirement for a patient screening positively, the eligible clinician would need to provide one of the aforementioned follow-up actions, which does not include use of a standardized depression screening tool. Follow-Up Plan: The follow-up plan must be related to a positive depression screening, for example: "Patient referred for psychiatric evaluation due to positive depression screening." Examples of a follow-up plan include but are not limited to: * Referral to a practitioner or program for further evaluation for depression, for example, referral to a psychiatrist, psychologist, social worker, mental health counselor, or other mental health service such as family or group therapy, support group, depression management program, or other service for treatment of depression * Other interventions designed to treat depression such as behavioral health evaluation, psychotherapy, pharmacological interventions, or additional treatment options Should a patient screen positive for depression: * A clinician should only order pharmacological intervention when appropriate and after sufficient diagnostic evaluation. However, for the purposes of this measure, additional screening and assessment during the qualifying encounter will not qualify as a follow-up plan. * A clinician should opt to complete a suicide risk assessment when appropriate and based on individual patient characteristics. However, for the purposes of this measure, a suicide risk assessment or additional screening using a standardized tool will not qualify as a follow-up plan. This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (https://ecqi.healthit.gov/qdm) for more information on the QDM. **For the CMS Web Interface Measure Specifications collection type:** A depression screen is completed on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan must be documented on the date of the encounter, such as referral to a provider for additional evaluation, pharmacological interventions, or other interventions for the treatment of depression. This is a patient-based measure. Depression screening is required once per measurement period, not at all encounters. This measure does not require documentation of a specific score, just whether results of the normalized and validated depression screening tool used are considered positive or negative. Each standardized screening tool provides guidance on whether a particular score is considered positive for depression. The intent of the measure is to screen for depression in patients who have never had a diagnosis of depression or bipolar disorder prior to the eligible encounter used to evaluate the numerator. Patients who have ever been diagnosed with depression or bipolar disorder will be excluded from the measure. Screening Tools: * An age-appropriate, standardized, and validated depression screening tool must be used for numerator compliance. * The name of the age-appropriate standardized depression screening tool utilized must be documented in the medical record * The depression screening must be reviewed and addressed by the provider, filing the code, on the date of the encounter. Positive pre-screening results indicating a patient is at high risk for self-harm should receive more urgent intervention as determined by the provider practice

Category	Description
	* The screening should occur during a qualifying encounter or up to 14 days prior to the date of the qualifying encounter * The measure assesses the most recent depression screening completed either during the eligible encounter or within the 14 days prior to that encounter. Therefore, a clinician would not be able to complete another screening at the time of the encounter to count towards a follow-up, because that would serve as the most recent screening. To satisfy the follow-up requirement for a patient screening positively, the eligible clinician would need to provide one of the aforementioned follow-up actions, which does not include use of a standardized depression screening tool. Follow-Up Plan: The follow-up plan must be related to a positive depression screening, for example: "Patient referred for psychiatric evaluation due to positive depression screening." Examples of a follow-up plan include but are not limited to: * Referral to a provider practitioner or program for further evaluation for depression, for example, referral to a psychiatrist, psychologist, social worker, mental health counselor, or other mental health service such as family or group therapy, support group, depression management program, or other service for treatment of depression * Other interventions designed to treat depression such as behavioral health evaluation, psychotherapy, pharmacological interventions, or additional treatment options Should a patient screen positive for depression, a clinician should: *Only order pharmacological intervention when appropriate and after sufficient diagnostic evaluation. However for the purposes of this measure, additional screening and assessment during the qualifying encounter will not qualify as a follow-up plan. *Opt to complete a suicide risk assessment when appropriate and based on individual patient characteristics. However, for the purposes of this measure, a suicide risk assessment or additional screening using a standardized tool will not qualify as a follow-up plan. **Updated guidance denominator: For the CMS Web Interface Measure Specifications collection type: Revised:** The intent of the measure is to screen for depression in patients who have never had a diagnosis of depression or bipolar disorder prior to the eligible encounter used to evaluate the numerator. Patients who have ever been diagnosed with depression or bipolar disorder will be excluded from the measure. **Updated denominator exclusion: For the CMS Web Interface Measure Specifications collection type: Revised:** Patients who have been diagnosed with depression or with bipolar disorder. **The measure numerator instructions are revised to read: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types:** Numerator Instructions: A depression screen is completed on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive, a follow-up plan must be documented on the date of the encounter, such as referral to a provider for additional evaluation, pharmacological interventions, or other interventions for the treatment of depression. This is a patient-based measure. Depression screening is required once per measurement period, not at all encounters. An age-appropriate, standardized, and validated depression screening tool must be used for numerator compliance. The name of the age-appropriate standardized depression screening tool utilized must be documented in the medical record. This measure does not require documentation of a specific score, just whether results of the normalized and validated depression screening tool used are considered positive or negative. Each standardized screening tool provides guidance on whether a particular score is considered positive for depression. The depression screening must be reviewed and addressed by the provider on the date of the encounter. Positive pre-screening results indicating a patient is at high risk for self-harm should receive more urgent intervention as determined by the provider practice. The screening should occur during a qualifying encounter or up to 14 days prior to the date of the qualifying encounter. The measure assesses the most recent depression screening completed either during the eligible encounter or within the 14 days prior to that encounter. Therefore, a clinician would not be able to complete another screening at the time of the encounter to count towards a follow-up, because that would serve as the most recent screening. In order to satisfy the follow-up requirement for a patient screening positively, the eligible clinician would need to provide one of the aforementioned follow-up actions, which does not include use of a standardized depression screening tool. Should a patient screen positive for depression, a clinician should: • Only order pharmacological intervention when appropriate and after sufficient diagnostic evaluation. However, for the purposes of this measure, additional screening and assessment during the qualifying encounter will not qualify as a follow-up plan. • Opt to complete a suicide risk assessment when appropriate and based on individual patient characteristics. However, for the purposes of this measure, a suicide risk assessment or additional screening using a standardized tool, will not qualify as a follow-up plan **Updated definitions (numerator): For the CMS Web Interface Measure Specifications collection type: Revised:** Follow-Up Plan: Documented follow-up for a positive depression screening must include one or more of the following: • Referral to a provider for additional evaluation and assessment to formulate a follow-up plan for a positive depression screen • Pharmacological interventions • Other interventions or follow-up for the diagnosis or treatment of depression **Updated numerator submission guidance: For the CMS Web Interface Measure Specifications collection type: Removed:** If recommended follow-up is additional evaluation or assessment, the additional evaluation or assessment must occur at the eligible encounter. **Revised:** Submission Guidance: Numerator Submission, Guidance Note: Use most recent screening for depression which occurred either during the encounter or up to 14 days prior to the encounter Although the patient may have access to the depression screening tool in advance of the encounter, the depression screening results must be documented on the date of the encounter. The results must be reviewed/verified and documented by the eligible professional in the medical record on the date of the encounter to meet the screening portion of this measure.

Category	Description
	Updated numerator option: For the CMS Web Interface Measure Specifications collection type: Revised: Medical Reason(s) Documentation of medical reason for not screening patient for depression (e.g., cognitive, functional, or motivational limitations that may impact accuracy of results; patient is in an urgent or emergent situation where time is of the essence and to delay treatment would jeopardize the patient's health status)
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to update the eCQM Specifications and CMS Web Interface Measure Specifications collection types guidance section to remove the requirement for an in-office review of the assessment as it is appropriate to allow this to be completed via telehealth encounter, clarify requirements as only documentation of a negative or positive depression screening is needed to align with the intent of the measure, and revise the numerator compliant follow-up plans based on stakeholder feedback to ensure clinical appropriateness. We propose to update the CMS Web Interface Measure Specification collection type description, guidance sections, definitions, and numerator sections to provide clarity as to what constitutes a follow-up plan. Additionally, language throughout the measure specification was updated allowing for alignment with clinical workflow. The measure assesses the most recent depression screening completed either during the encounter or up to 14 days prior to that encounter. Therefore, a clinician would not be able to complete another screening to count towards a follow-up, since that would serve as the most recent screening. To satisfy the follow-up requirement for a patient screening positively, the eligible clinician would need to provide one of the aforementioned follow-up actions, which does not include use of a standardized depression screening tool. Additionally, suicide risk assessments have been removed as a numerator compliant follow-up plan option as this should be completed when appropriate and based on the assessment by the clinician regarding the severity of the patient's symptoms of depression at the time of depression screening. We also propose to update the measure language and denominator exclusions to reflect that this measure is screening of depression for patients who have not been previously diagnosed or have an active diagnosis of depression or bipolar disorder. This preventive measure assesses screening and follow up plan for patients that are screened positive for depression. The denominator exception was revised in order to streamline the language. We propose to update the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types numerator instructions to clarify requirements as only documentation of a negative or positive depression screening is needed to align with the intent of the measure and revise instructions for the numerator compliant follow-up plans based on stakeholder feedback to ensure clinical appropriateness.

D.19 Oncology: Medical and Radiation – Pain Intensity Quantified

Category	Description
NQF # / eCQM NQF #:	0384 / 0384e
Quality#:	143
CMS eCQM ID:	CMS157v10
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	eCQM Specifications | MIPS CQMs Specifications
Current Measure Description:	Percentage of patient visits, regardless of patient age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy in which pain intensity is quantified.
Substantive Change:	**The measure guidance is revised to read: For the eCQM Specifications collection type:** This eCQM is an episode-based measure. An episode is defined as each eligible encounter for patients with a diagnosis of cancer who are also currently receiving chemotherapy or radiation therapy during the measurement period. For patients receiving radiation therapy, pain intensity should be quantified at each radiation treatment management encounter where the patient and physician have a face-to-face or telehealth interaction. Due to the nature of some applicable coding related to radiation therapy (e.g., delivered in multiple fractions), the billing date for certain codes may or may not be the same as the face-to-face or telehealth encounter date. In this instance, for the reporting purposes of this measure, the billing date should be used to pull the appropriate patients into the initial population. It is expected, though, that the numerator criteria would be performed at the time of the actual face-to-face or telehealth encounter during the series of treatments. A lookback (retrospective) period of 7 days, including the billing date, may be used to identify the actual face-to-face or telehealth encounter, which is required to assess the numerator. Therefore, pain intensity should be quantified during the face-to-face or telehealth encounter occurring on the actual billing date or within the 6 days prior to the billing date. For patients receiving chemotherapy, pain intensity should be quantified at each face-to-face or telehealth encounter with the physician while the patient is currently receiving chemotherapy. For purposes of identifying eligible encounters, patients "currently receiving chemotherapy" refers to patients administered chemotherapy on the same day as the encounter or during the 30 days before the date of the encounter AND during the 30 days after the date of the encounter. Pain intensity should be quantified using a standard instrument, such as a 0-10 numerical rating scale, visual analog scale, a categorical scale, or pictorial scale. Examples include the Faces Pain Rating Scale and the Brief Pain Inventory (BPI). This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (https://ecqi.healthit.gov/qdm) for more information on the QDM **Updated value set/coding: For the eCQM Specifications collection type: Removed:** Topical chemotherapy from value set "Chemotherapy Administration" (2.16.840.1.113883.3.526.3.1027) and coding for neurofibromatosis from value set “Cancer” (2.16.840.1.113883.3.526.3.1010). **Updated denominator criteria: For the MIPS CQMs Specifications collection type:** **Removed:** Submission critiera one coding related to neurofibromatosis. **Revised:** Patient procedure on or within 30 days before denominator eligible encounter AND Patient procedure on or within 30 days after denominator eligible encounter **Updated instructions: For the MIPS CQMs Specifications collection type: Revised:** NOTE: For patients receiving radiation therapy, pain intensity should be quantified at each radiation treatment management encounter, where the patient and physician have a face-to-face or telehealth interaction. Due to the nature of some applicable coding related to the radiation therapy (e.g., delivered in multiple fractions), the billing date for certain codes may or may not be the same as the face-to-face or telehealth encounter date. In this instance, for the reporting purposes of this measure, the billing date should be used to pull the appropriate patients into the initial population. It is expected, though, that the numerator criteria would be performed at the time of the actual face-to-face or telehealth encounter during the series of treatments. A lookback (retrospective) period of 7 days, including the billing date, may be used to identify the actual face-to-face or telehealth encounter, which is required to assess the numerator. Therefore, pain intensity should be quantified during the face-to-face or telehealth encounter occurring on the actual billing date or within the 6 days prior to the billing date. For patients receiving chemotherapy, pain intensity should be quantified at each face-to-face or telehealth encounter with the physician while the patient is currently receiving chemotherapy. For purposes of identifying eligible encounters, patients “currently receiving chemotherapy” refers to patients administered chemotherapy on the same day as the encounter or during the 30 days before the date of the encounter AND during the 30 days after the date of the encounter
Steward:	American Society of Clinical Oncology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to revise the eCQM Specifications guidance section to align the statement regarding timing of chemotherapy to ensure alignment with the logic timing constraints and added language for telehealth encounters as they are appropriate for inclusion for assessment of quality action completion. Additionally, we propose to remove topical chemotherapy from the "Chemotherapy Administration" value set and neurofibromatosis from the “Cancer” (2.16.840.1.113883.3.526.3.1010) value set as these patient populations are not appropriate for inclusion within the initial patient population for the purposes of clinical quality action assessment. We propose to remove coding related to neurofibromatosis from the MIPS CQMs Specifications collection type denominator criteria for Submission Criteria One as this patient population is not appropriate for inclusion with the denominator eligible patient population for the purposes of clinical quality action assessment. Additionally, the denominator criteria was revised to clarify the timing of the chemotherapy and align with the intent of the measure. We propose to update the MIPS CQMs Specifications collection type instructions note to add clarity in timing of chemotherapy and ensure alignment throughout the measure specification in accordance with measure intent.

D.20 Tuberculosis Screening Prior to First Course Biologic Therapy

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	176
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	If a patient has been newly prescribed a biologic disease-modifying anti-rheumatic drug (DMARD) therapy, then the medical record should indicate TB testing in the preceding 12-month period.
Substantive Change:	**Updated denominator instructions:** **Revised:** Patients are considered to be receiving a first course of therapy using a biologic DMARD only if they have been prescribed DMARD biologic therapy during the measurement period and also have not been prescribed DMARD biologic therapy in the 15 months preceding the encounter where DMARD biologic therapy was newly started. Biologic DMARD therapy includes **Added:** Guselkumab (Tremfya), Infliximab-axxq (Avsola), Ixekizumab (Taltz), Upadacitinib (RINVOQ) **Added:** To be included in the denominator, patient must have an encounter and a prescription for DMARD biologic therapy in the measurement period (1/1/2022-12/31/2022) WITHOUT a prior prescription for DMARD biologic therapy within the 15 months prior to the DMARD prescribed during the measurement period. **Updated denominator criteria: Added:** coding for federally qualified health center (FQHC) visit.
Steward:	American College of Rheumatology
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to update the denominator instructions to include a 15-month lookback period in response to stakeholder feedback to align with clinical workflow for more established patients and to add clarity regarding the denominator eligible patient population. Additionally, the medications list was updated to align with current DMARD medications available to treat rheumatic disease. We propose to add coding to the denominator eligibility criteria for visits that occur at a FQHC to allow of quality action assessment for these clinicians. This revision is not a reflection of any policy update and was made to allow those clinicians who bill exclusively through a FQHC to track their performance on the measure. This payment method is still not eligible for payment adjustments under MIPS.

D.21 Rheumatoid Arthritis (RA): Periodic Assessment of Disease Activity

Category	Description
NQF # / eCQM NQF #:	2523 / N/A
Quality#:	177
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of rheumatoid arthritis (RA) who have an assessment of disease activity using an ACR-preferred RA disease activity assessment tool at ≥50% of encounters for RA for each patient during the measurement year.
Substantive Change:	**Updated denominator criteria: Added:** coding for federally qualified health center (FQHC) visit.
Steward:	American College of Rheumatology
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to add coding to the denominator eligibility criteria for visits that occur at a FQHC to allow of quality action assessment for these clinicians.

D.22 Rheumatoid Arthritis (RA): Functional Status Assessment

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	178
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of rheumatoid arthritis (RA) for whom a functional status assessment was performed at least once within 12 months.
Substantive Change:	**Updated denominator criteria: Added:** coding for federally qualified health center (FQHC) visit.
Steward:	American College of Rheumatology
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to add coding to the denominator eligibility criteria for visits that occur at a FQHC to allow of quality action assessment for these clinicians.

D.23 Rheumatoid Arthritis (RA): Glucocorticoid Management

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	180
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of rheumatoid arthritis (RA) who have been assessed for glucocorticoid use and, for those on prolonged doses of prednisone > 5 mg daily (or equivalent) with improvement or no change in disease activity, documentation of glucocorticoid management plan within 12 months.
Substantive Change:	**Updated denominator criteria: Added:** coding for federally qualified health center (FQHC) visit.
Steward:	American College of Rheumatology
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to add coding to the denominator eligibility criteria for visits that occur at a FQHC to allow of quality action assessment for these clinicians.

D.24 Functional Outcome Assessment

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	182
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	Medicare Part B Claims Measure Specifications | MIPS CQMs Specifications
Current Measure Description:	Percentage of visits for patients aged 18 years and older with documentation of a current functional outcome assessment using a standardized functional outcome assessment tool on the date of the encounter AND documentation of a care plan based on identified functional outcome deficiencies on the date of the identified deficiencies.
Substantive Change:	**Modified collection type:** MIPS CQM Specifications collection type. **Updated numerator definition: Added:** EAT-10: A Swallowing Screening Tool, Health Partners Hearing Assessment and Tinneti Performance Oriented Mobility Assessment (POMA) as eligible standardized tools. **Revised:** Standardized Tool definition note to include speech and language capacity. Functional Outcome Deficiencies – Impairment or loss of function related to musculoskeletal/neuromusculoskeletal capacity, including but are not limited to: restricted flexion, extension and rotation, back pain, neck pain, pain in the joints of the arms or legs, and headaches OR Impairment or loss of function related to speech and language capacity, including but not limited to: swallowing, hearing, and balance disorders
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to remove the Medicare Part B Claims Measure Specifications collection type as it has reached the end of the topped out lifecycle as finalized in 82 FR 53640. However, the benchmarking data continues to show a gap for the MIPS CQMs Specifications collection type, as such, the measure will be retained for this collection type. We propose to update the numerator definition to include concepts of swallowing, hearing, and balance to the measure as it is appropriate to assess this patient population for impairment or loss of function and create a follow-up plan of care based upon any identified loss of function or impairment. In the circumstance the Medicare Part B Claims Measure Specifications collection type is not finalized for removal, all finalized substantive changes will be reflected within this collection type specification.

D.25 Cataracts: 20/40 or Better Visual Acuity within 90 Days Following Cataract Surgery

Category	Description
NQF # / eCQM NQF #:	0565 / 0565e
Quality#:	191
CMS eCQM ID:	CMS133v10
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications | MIPS CQMs Specifications
Current Measure Description:	Percentage of cataract surgeries for patients aged 18 years and older with a diagnosis of uncomplicated cataract and no significant ocular conditions impacting the visual outcome of surgery and had best-corrected visual acuity of 20/40 or better (distance or near) achieved in the operative eye within 90 days following the cataract surgery.
Substantive Change:	**Updated denominator exclusion: For the eCQM Specifications collection type: Added:** coding for homonymous bilateral field defects and generalized contraction of visual field to the "Visual Field Defects" (2.16.840.1.113883.3.526.3.1446) value set and coding for disorders of visual cortex in (due to) inflammatory disorders to the "Disorders of Visual Cortex" (2.16.840.1.113883.3.526.3.1458) value set. **Updated denominator exclusion: For all collection types:** **Removed:** episcleritis. **Updated denominator exclusion: For the MIPS CQMs Specifications collection type:** **Added:** diagnoses codes to the Significant Ocular Conditions 'Visual Fields Defects' for sector or arcuate defects, other localized visual field defect, homonymous and heteronymous bilateral field defects, and generalized contraction of visual field.
Steward:	American Academy of Ophthalmology
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We propose to update the eCQM Specifications collection type denominator exclusion coding to add appropriate coding for other relevant "disorders of visual field defects" and "disorders of visual cortex" diagnosis codes as these patients should not be included in the initial patient population for the assessment of the clinical quality action. The denominator exclusion coding was updated for all collection types removing diagnosis of episcleritis as a denominator exclusion as the measure steward's Technical Expert Panel (TEP) advised that this would not affect central visual acuity and as such, should not be a criteria for denominator exclusion as it would be appropriate for these patients to be assessed for best-corrected visual acuity following cataract surgery. We propose to update the denominator exclusion for the MIPS CQMs Specifications collection type to include appropriate coding for conditions to ensure the appropriate patient population is being included in the eligible denominator patient population for assessment of the clinical quality action.

D.26 Functional Status Change for Patients with Knee Impairments

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	217
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	A patient-reported outcome measure of risk-adjusted change in functional status for patients aged 14 years+ with knee impairments. The change in functional status (FS) is assessed using the FOTO Lower Extremity Physical Function (LEPF) patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk-adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).
Substantive Change:	**The measure description is revised to read:** A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with knee impairments. The change in functional status (FS) is assessed using the FOTO Lower Extremity Physical Function (LEPF) patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk-adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).
Steward:	Focus on Therapeutic Outcomes, Inc.
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale:	We propose to update the measure description to align language across Focus on Therapeutic Outcomes, Inc. (FOTO) measures in order to provide clarity to clinicians.

D.27 Functional Status Change for Patients with Lower Leg, Foot or Ankle Impairments

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	219
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with foot, ankle and lower leg impairments. The change in functional status (FS) is assessed using the FOTO Lower Extremity Physical Function (LEPF) patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk-adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static measure).

D.28 Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention

Category	Description
NQF # / eCQM NQF #:	0028 / 0028e
Quality#:	226
CMS eCQM ID:	CMS138v10
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	Medicare Part B Claims Measure Specifications | eCQM Specifications | CMS Web Interface Measure Specifications | MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 12 months AND who received tobacco cessation intervention if identified as a tobacco user. Three rates are reported: a. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 12 months b. Percentage of patients aged 18 years and older who were identified as a tobacco user who received tobacco cessation intervention c. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within 12 months AND who received tobacco cessation intervention if identified as a tobacco user
Substantive Change:	**The measure description is revised to read: For the eCQM Specifications collection type:** Percentage of patients aged 18 years and older who were screened for tobacco use one or more times during the measurement period AND who received tobacco cessation intervention if identified as a tobacco user. Three rates are reported: a. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times during the measurement period b. Percentage of patients aged 18 years and older who were identified as a tobacco user who received tobacco cessation intervention c. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times during the measurement period AND who received tobacco cessation intervention if identified as a tobacco user **For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types:** Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period AND who received tobacco cessation intervention on the date of the encounter or within the previous 12 months if identified as a tobacco user. **For the CMS Web Interface Measure Specifications collection type:** Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period AND who received tobacco cessation intervention on the date of the encounter or within the previous 12 months if identified as a tobacco user. Three rates are reported: a. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period. b. Percentage of patients aged 18 years and older who were identified as a tobacco user who received tobacco cessation intervention on the date of the encounter or within the previous 12 months. c. Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period AND who received tobacco cessation intervention if identified as a tobacco user on the date of the encounter or within the previous 12 months. **Updated guidance:** **For the eCQM Specifications collection type: Revised:** To satisfy the intent of this measure, a patient must have at least one tobacco use screening during the measurement period. If a patient has multiple tobacco use screenings during the measurement period, only the most recent screening, which has a documented status of tobacco user or tobacco non-user, will be used to satisfy the measure requirements. **For the CMS Web Interface Measure Specifications collection type: Revised:** To reflect a shortened timeframe of 12 months. **Updated value set/coding: For the eCQM Specifications and CMS Web Interface Measure Specifications collection type: Removed:** passive smoker from "Tobacco User" (2.16.840.1.113883.3.526.3.1170) value set. **The measure instructions are revised to read: For the MIPS CQMs Specifications collection types:** This measure is to be submitted a minimum of once per performance period for patients seen during the performance period. This measure is intended to reflect the quality of services provided for preventive screening for tobacco use. This measure may be submitted by Merit-based Incentive Payment System (MIPS) eligible clinicians who provided the measure-specific denominator coding. For implementation of the measure, the denominator eligible encounter should be used to determine if the numerator action for the tobacco cessation intervention was performed within the 12 month look back period from the date of the denominator eligible encounter. This measure will be calculated with 3 performance rates: 1) Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period 2) Percentage of patients aged 18 years and older who were identified as a tobacco user who received tobacco cessation intervention on the date of the encounter or within the previous 12 months 3) Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period AND who received tobacco cessation intervention if identified as a tobacco user on the date of the encounter or within the previous 12 months **For the Medicare Part B Claims Measure Specifications collection types:** This measure is to be submitted a minimum of once per performance period for patients seen during the performance period. This measure is intended to reflect the quality of services provided for preventive screening for tobacco use. For implementation of the measure, the denominator eligible encounter should be used to determine if the numerator action for the tobacco cessation

Category	Description
	intervention was performed within the 12 month look back period from the date of the denominator eligible encounter. This measure may be submitted by Merit-based Incentive Payment System (MIPS) eligible clinicians who provided the measure-specific denominator coding. This measure will be calculated with 3 performance rates: 1) Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period 2) Percentage of patients aged 18 years and older who were identified as a tobacco user who received tobacco cessation intervention on the date of the encounter or within the previous 12 months 3) Percentage of patients aged 18 years and older who were screened for tobacco use one or more times within the measurement period AND who received tobacco cessation intervention if identified as a tobacco user on the date of the encounter or within the previous 12 months **Updated submission criteria: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Added:** The language "on the date of the encounter or within the previous 12 months" to submission criteria 2 and 3. **Updated numerator: For the eCQM Specifications collection types: Revised:** NUMERATOR (SUBMISSION CRITERIA 1): Patients who were screened for tobacco use at least once within the measurement period NUMERATOR (SUBMISSION CRITERIA 3): Patients who were screened for tobacco use at least once within the measurement period AND who received tobacco cessation intervention if identified as a tobacco user **For the MIPS CQMs Specifications, Medicare Part B Claims Measure Specifications, and CMS Web Interface Measure Specifications collection types: Revised:**NUMERATOR (SUBMISSION CRITERIA 1): Patients who were screened for tobacco use at least once within the measurement period NUMERATOR (SUBMISSION CRITERIA 2): Patients who received tobacco cessation intervention on the date of the encounter or within the previous 12 months NUMERATOR (SUBMISSION CRITERIA 3): Patients who were screened for tobacco use at least once within the measurement period AND who received tobacco cessation intervention if identified as a tobacco user on the date of the encounter or within the previous 12 months **Updated numerator note: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Revised:** Replaced "12 months" with "the measurement period" for submission criteria 1 and 3. **Added:** The language "on the date of the encounter or within the previous 12 months" to submission criteria 2 and 3 in reference to tobacco cessation intervention. **Updated guidance numerator note: For the CMS Web Interface Measure Specifications collection type: Updated:** Revised language to reflect that the tobacco screening is once per performance period and tobacco cessation intervention if necessary must be completed during the encounter or previous 12 months. **Updated numerator options: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: Revised:** Submission Criteria 2: **Performance Met:** Patient identified as a tobacco user received tobacco cessation intervention on the date of the encounter or within the previous 12 months (counseling and/or pharmacotherapy) **Denominator Exception:** Documentation of medical reason(s) for not providing tobacco cessation intervention on the date of the encounter or within the previous 12 months (e.g., limited life expectancy, other medical reason) **Performance Not Met:** Patient identified as tobacco user did not receive tobacco cessation intervention on the date of the encounter or within the previous 12 months (counseling and/or pharmacotherapy), reason not given Submission Criteria 3: **Denominator Exception:** Documentation of medical reason(s) for not providing tobacco cessation intervention on the date of the encounter or within the previous 12 months if identified as a tobacco user (e.g., limited life expectancy, other medical reason)
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to update the language for the MIPS CQMs Specifications, the Medicare Part B Measure Specifications, and CMS Web Interface Measure Specifications collection types to clarify the timing for tobacco use screening and tobacco cessation intervention for those patients identified as tobacco users. The intent of the measure is to ensure all patients are screened for tobacco use on an annual basis (each performance period) and receive tobacco cessation intervention, if identified as a tobacco user on the date of the encounter or within the previous 12 months. We propose to update the eCQM Specifications collection type to reflect that both the tobacco use screening and tobacco use intervention for those patients identified as tobacco users should occur annually (each performance period). We understand that causes a slight misalignment between the different collection types, which is due to the annual update timeline differences between the collection types. This misalignment will be reviewed in future annual update cycles. Additionally, we propose to update the eCQM Specifications and CMS Web Interface Measure Specifications collection type to "Tobacco User" value set to remove passive smoker coding as these patients are not appropriate for inclusion in the tobacco user identified patient population as they do not meet the intent of the measure and the clinical quality action would not be applicable to them. In the event the proposed substantive change(s) are finalized, for the CMS Web Interface Measure Specifications collection type, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of the substantive changes. Under MIPS, the CMS Web Interface measures are scored in comparison to quality measure benchmarks established under the Medicare Shared Savings Program. The benchmarks established for the CMS Web Interface measures are based on historical data. If a benchmark is able to be established for a CMS Web Interface measure with the proposed substantive changes, then such benchmark would be used for scoring purposes. If a benchmark is not able to be established for a CMS Web Interface measure, then the following would apply for such CMS Web

Category	Description
	Interface measure: excluded from MIPS scoring in accordance with § 414.1380(b)(1)(i)(A)(2)(i) provided that the data completeness requirement is met and the applicable measure data is submitted via the CMS Web Interface.

D.29 Controlling High Blood Pressure

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	236
CMS eCQM ID:	CMS165v10
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications | eCQM Specifications | CMS Web Interface Measure Specifications | MIPS CQMs Specifications
Current Measure Description:	Percentage of patients 18 - 85 years of age who had a diagnosis of hypertension overlapping the measurement period or the year prior to the measurement period, and whose most recent blood pressure was adequately controlled (< 140/90 mmHg) during the measurement period.
Substantive Change:	**The measure description is revised to read: For all collection types:** Percentage of patients 18-85 years of age who had a diagnosis of essential hypertension starting before and continuing into, or starting during the first six months of the measurement period, and whose most recent blood pressure was adequately controlled (<140/90mmHg) during the measurement period. **Updated denominator exclusion: For the eCQM Specifications collection type:** **Revised:** 1. Exclude patients who are in hospice care for any part of the measurement period. 2. Exclude patients 66 and older with an indication of frailty for any part of the measurement period who meet any of the following criteria: - Advanced illness with two outpatient encounters during the measurement period or the year prior - OR advanced illness with one inpatient encounter during the measurement period or the year prior - OR taking dementia medications during the measurement period or the year prior **Added:** 1. Exclude patients 81 and older with an indication of frailty for any part of the measurement period. 2. Exclude patients receiving palliative care during the measurement period. **Revised:** Logic to allow ESRD encouncter to be on or before the end of the measurement period. **For the CMS Web Interface Measure Specifications collection type:** **Revised:** 1. Patients age 66 and older in Institutional Special Needs Plans (SNP) or residing in long-term care with a POS code 32, 33, 34, 54 or 56 for more than 90 consecutive days during the measurement period. 2. Patients 66 – 80 years of age with at least one claim/encounter for frailty during the measurement period AND a dispensed medication for dementia during the measurement period or the year prior to the measurement period. 3. Patients 66 - 80 years of age with at least one claim/encounter for frailty during the measurement period AND either one acute inpatient encounter with a diagnosis of advanced illness or two outpatient, observation, ED or nonacute inpatient encounters on different dates of service with an advanced illness diagnosis during the measurement period or the year prior to the measurement period. **Added:** 1. Patients 81 years of age and older with at least one claim/encounter for frailty during the measurement period. **Updated value set/coding: For the eCQM Specifications and CMS Web Interface Measure Specifications collection types:** **Revised:** "Pregnancy" (2.16.840.1.113883.3.526.3.378) value set to more accurately capture pregnancy state. **Removed:** coding related to transplant donors from "Kidney Transplant" (2.16.840.1.113883.3.464.1003.109.12.1012) value set. **The measure guidance is revised to read: For the eCQM Specifications collection type:** In reference to the numerator element, only blood pressure readings performed by a clinician or a remote monitoring device are acceptable for numerator compliance with this measure. This includes blood pressures taken in person by a clinician and blood pressures measured remotely by electronic monitoring devices capable of transmitting the blood pressure data to the clinician. Blood pressure readings taken by a remote monitoring device and conveyed by the patient to the clinician are also acceptable. It is the clinician's responsibility and discretion to confirm the remote monitoring device used to obtain the blood pressure is considered acceptable and reliable and whether the blood pressure reading is considered accurate before documenting it in the patient's medical record. Do not include BP readings: -Taken during an acute inpatient stay or an ED visit -Taken on the same day as a diagnostic test or diagnostic or therapeutic procedure that requires a change in diet or change in medication on or one day before the day of the test or procedure, with the exception of fasting blood tests. -Taken by the patient using a non-digital device such as with a manual blood pressure cuff and a stethoscope. If no blood pressure is recorded during the measurement period, the patient's blood pressure is assumed "not controlled." If there are multiple blood pressure readings on the same day, use the lowest systolic and the lowest diastolic reading as the most recent blood pressure reading. This eCQM is a patient-based measure. This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (https://ecqi.healthit.gov/qdm) for more information on the QDM. **The measure initial patient population is revised to read: For the eCQM Specifications and CMS Web Interface Measure Specifications collection types:** Patients 18-85 years of age who had a visit and diagnosis of essential hypertension starting before and continuing into, or starting during the first six months of the measurement period. **The measure denominator is revised to read: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types:** Patients 18-85 years of age who had a visit and diagnosis of essential hypertension starting before and continuing into, or starting during the first six months of the measurement period.

Category	Description
	Updated denominator exclusion: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types: **Added:** Palliative care services given to patient any time during the measurement period **Updated denominator confirmation: For the CMS Web Interface Measure Specifications collection type: Revised:** The language to reflect the diagnosis for essential hypertenision must start before and continue into, or start during the first six months of the measurement period. **Updated denominator guidance: For the CMS Web Interface Measure Specifications collection type: Added:** To assess the age for exclusions, the patient's age at the end of the measurement period should be used. **Updated denominator note: For the MIPS CQMs Specifications and the Medicare Part B Claims Measure Specifications collection types:** **Revised:** The diagnosis of essential hypertension must be present some time between 1 year prior to the measurement period and the first six months of the measurement period (January 1, 2021 - June 30, 2022). **For the MIPS CQMs Specifications collection type:** **Added:** To assess the age for exclusions, the patient's age at the end of the measurement period should be used. **The measure instructions note, numerator note, and narrative guidance are revised to read: For the MIPS CQMs Specifications, Medicare Part B Claims Measure Specifications, and CMS Web Interface Measure Specifications collection types:** In reference to the numerator element, only blood pressure readings performed by a clinician or a remote monitoring device are acceptable for numerator compliance with this measure. This includes blood pressures taken in person by a clinician and blood pressures measured remotely by electronic monitoring devices capable of transmitting the blood pressure data to the clinician. Blood pressure readings taken by a remote monitoring device and conveyed by the patient to the clinician are also acceptable. It is the clinician's responsibility and discretion to confirm the remote monitoring device used to obtain the blood pressure is considered acceptable and reliable and whether the blood pressure reading is considered accurate before documenting it in the patient's medical record. Do not include BP readings: • Taken during an acute inpatient stay or an ED visit • Taken on the same day as a diagnostic test or diagnostic or therapeutic procedure that requires a change in diet or change in medication on or one day before the day of the test or procedure, with the exception of fasting blood tests. BP readings taken on the same day that the member receives a common low-intensity or preventive procedure are eligible for use. For example, the following procedures are considered common low intensity or preventive (this list is just for reference, and is not exhaustive): • Vaccinations. • Injections (e.g., allergy, vitamin B-12, insulin, steroid, toradol, Depo-Provera, testosterone, lidocaine). • TB test. • IUD insertion. • Eye exam with dilating agents. • Wart or mole removal. • Taken by the patient using a non-digital device such as with a manual blood pressure cuff and a stethoscope. If no blood pressure is recorded during the measurement period, the patient's blood pressure is assumed "not controlled." If there are multiple blood pressure readings on the same day, use the lowest systolic and the lowest diastolic reading as the most recent blood pressure reading. **Updated numerator note: For the Medicare Part B Claims Measure Specifications collection type:** **Added:** To assess the age for exclusions, the patient's age on the date of the encounter should be used.
Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Intermediate Outcome
Rationale:	We propose to update the measure description to remove the term 'overlapping' and add clarity to the timing associated with the hypertension diagnosis. We propose that the denominator exclusion language be updated for all but the CMS Web Interface Measure Specifications collection type to add an exclusion for patients receiving palliative care, as this patient population is not appropriate for the clinical quality action being assessed. Additionally, for the eCQM Specifications collection type language was added to clarify timing for those exclusions that have an age-related component. For the eCQM Specifications collection type, the term 'overlaps' was removed and replace with plain language for clarity and the denominator exclusion for frailty or advanced illness was revised to update how these patients will be captured. We propose to update the CMS Web Interface Measure Specifications collection type denominator exclusions language to clarify that, for the measure, long-term care will be defined as patients staying more than 90 consecutive days at the long-term care facility versus any 90 days within the performance period. Additionally for the CMS Web Interface Measure Specifications collection type denominator exclusions, we propose to update the ages for the frailty and advanced illness exclusions and add an exclusion specific to those patients 81 years and older to ensure the appropriate patients are being assessed for the quality action. We propose to update the eCQM Specifications and CMS Web Interface Measure Specifications collection types "Pregnancy" value set to more accurately capture the state of pregnancy to ensure the denominator exclusion is being applied to the correct patient population and revised the logic for the end stage renal disease (ESRD) encounter to align with the intent of the measure. Additionally, we propose to update the "Kidney Transplant" value set to remove coding related to kidney transplant donors as it would be appropriate for these patients to still be assessed for blood pressure control if diagnosed with essential hypertension. We propose to revise the eCQM Specifications guidance section to provide clarification that patient obtained blood pressure readings captured via non-digital devices are not acceptable for this measure as they may not provide an accurate reading and therefore do not meet the intent of the measure, as well as the addition of clarifying language for what suffices as an acceptable blood pressure

Category	Description
	reading. Additionally, we propose to update the initial patient population for the eCQM Specifications collection type to align with clarification for the timing of the hypertension diagnosis. We propose to update the MIPS CQMs Specifications, Medicare Part B Claims Measure Specifications, and CMS Web Interface Measure Specifications collection types denominator, denominator note, and denominator confirmation to align with clarification for the timing of the hypertension diagnosis. Additionally for the MIPS CQMs Specifications, the Medicare Part B Claims Measure Specifications, and the CMS Web Interface Measure Specifications collection types, we propose to update the instructions note, numerator note, and narrative guidance to better clarify acceptable blood pressure readings for the purposes of clinical quality action assessment and examples of low intensity or preventive procedures that would not preclude the use of a blood pressure reading from that day or the day prior. We propose to revise the denominator note for the MIPS CQMs Specifications collection type, the numerator note for the Medicare Part B Claims Measure Specifications collection type, and the denominator guidance for the CMS Web Interface Measure Specifications collection type to clarify the timing for those exclusions that have an age-related component.

D.30 Use of High-Risk Medications in Older Adults

Category	Description
NQF # / eCQM NQF #:	0022/ N/A
Quality#:	238
CMS eCQM ID:	CMS156v10
National Quality Strategy Domain:	Patient Safety
Current Collection Type:	eCQM Specifications | MIPS CQMs Specifications
Current Measure Description:	Percentage of patients 65 years of age and older who were ordered at least two of the same high-risk medications.
Substantive Change:	**The measure description is revised to read:** **For the eCQM Specifications collection type:** Percentage of patients 65 years of age and older who were ordered at least two high-risk medications from the same drug class. Three rates are reported. 1. Percentage of patients 65 years of age and older who were ordered at least two high-risk medications from the same drug class. 2. Percentage of patients 65 years of age and older who were ordered at least two high-risk medications from the same drug class, except for appropriate diagnoses. 3. Total rate (the sum of the two numerators divided by the denominator, deduplicating for patients in both numerators). **For the MIPS CQMs Specifications collection type:** Percentage of patients 65 years of age and older who were ordered at least two high-risk medications from the same drug class. **Updated definition: For the eCQM Specifications collection type: Added:** Index prescription start date. The start date of the earliest prescription ordered for a high-risk medication during the measurement period. **The measure denominator exclusion is revised to read: For the eCQM Specifications collection type:** 1. Exclude patients who are in hospice care for any part of the measurement period. 2. Exclude patients receiving palliative care during the measurement period. **Updated logic and logic definitions: For the eCQM Specifications collection type: Removed:** the 90-day supply criterion to the non-benzodiazepine hypnotics. **Updated value set/coding: For the eCQM Specifications collection type:** **Added:** drug classes methscopeolamine and pyrilamine. **Removed:** drug class Diphenhydramine hydrochloride. **The measure numerator is revised to read: For the eCQM Specifications collection type:** Rate 1: Patients with at least two orders of the same high-risk medication to avoid from the same drug class. Rate 2: Patients with at least two orders of high-risk medications from the same medication class (i.e., antipsychotics and benzodiazepines), except for appropriate diagnoses. Total rate (the sum of the two previous numerators, deduplicated). **Updated numerator exclusion: For the eCQM Specifications collection type: Added:** Rate 2: For patients with two or more antipsychotic prescriptions ordered, exclude patients who did have a diagnosis of schizophrenia, schizoaffective disorder, or bipolar disorder on or between January 1 of the year prior to the measurement period and the Index Prescription Start Date (IPSD) for antipsychotics. For patients with two or more benzodiazepine prescriptions ordered, exclude patients who did have a diagnosis of seizure disorders, rapid eye movement sleep behavior disorder, benzodiazepine withdrawal, ethanol withdrawal, or severe generalized anxiety disorder on or between January 1 of the year prior to the measurement period and the IPSD for benzodiazepines. **Updated instructions: For the MIPS CQMs Specifications collection type:** **Added:** This measure will be calculated with 2 performance rates: 1. Percentage of patients 65 years of age and older who were ordered at least two high-risk medications from the same drug class. 2. Percentage of patients 65 years of age and older who were ordered at least two high-risk medications from the same drug class, except for appropriate diagnoses. For accountability reporting in the CMS MIPS program, the rate for submission criteria 1 is used for performance. **The measure denominator is revised to read: For the MIPS CQMs Specifications collection type:** SUBMISSION CRITERIA 1: PERCENTAGE OF PATIENTS 65 YEARS OF AGE AND OLDER WHO WERE ORDERED AT LEAST TWO HIGH-RISK MEDICATIONS FROM THE SAME DRUG CLASS Denominator (Submission Criteria 1): Patients 65 years and older who had a visit during the measurement period SUBMISSION CRITERIA 2: PERCENTAGE OF PATIENTS 65 YEARS OF AGE AND OLDER WHO WERE ORDERED AT LEAST TWO HIGH-RISK MEDICATIONS FROM THE SAME DRUG CLASS, EXCEPT FOR APPROPRIATE DIAGNOSES Denominator (Submission Criteria 2): Patients 65 years and older who had a visit during the measurement period **Updated denominator criteria: For the MIPS CQMs Specifications collection type: Added:** Submission Criteria 2 Denominator Criteria: Patient aged ≥ 65 years on date of encounter. Patient encounter during performance period (in alignment with submission criteria 1). Denominator exclusions for hospice and palliative care during the measurement period. **Updated denominator exclusion: For the MIPS CQMs Specifications collection type: Added:** Submission Criteria 1: Patients receiving palliative care during the measurement period. **The measure numerator is revised to read: For the MIPS CQMs Specifications collection type:**

Category	Description
	Numerator (Submission Criteria 1): Patients ordered at least two high-risk medications from the same drug class during the measurement year. Numerator (Submission Criteria 2): Patients with at least two orders of high-risk medications from the same drug class (i.e., antipsychotics and benzodiazepines), except for appropriate diagnoses. **Updated numerator definition: For the MIPS CQMs Specifications collection type: Revised:** Numerator (Submission Criteria 1): Definitions: The intent of the measure is to assess if the eligible clinician ordered high-risk medication(s).The intent of the numerator is to assess if the patient has either been ordered: • At least two high-risk medications from the same drug class (grouped by row) in Table 1 on different dates of service, or • At least two high-risk medications from the same drug class (grouped by row) in Table 2 on different dates of service, where the sum of days supply exceeds 90 days If the patient had a high-risk medication previously prescribed by another provider, they would not be counted towards the numerator unless the submitting provider also ordered a high-risk medication for them from the same drug class. Cumulative Medication Duration – an individual's total number of medication days over a specific period; the period counts multiple prescriptions with gaps in between, but does not count the gaps during which a medication was not dispensed. To determine the cumulative medication duration, determine first the number of the Medication Days for each prescription in the period: the number of doses divided by the dose frequency per day. Then add the Medication Days for each prescription without counting any days between the prescriptions. For example, there is an original prescription for 30 days with 2 refills for thirty days each. After a gap of 3 months, the medication was ordered again for 60 days with 1 refill for 60 days. The cumulative medication duration is (30 x 3) + (60 x 2) = 210 days over the 10 month period. Table 1 - High-Risk Medications at any dose or duration: **Removed:** Orphenadrine from Anticholinergics, first-generation antihistamines **Revised:** Antithrombotics – Dipyridamole, oral short-acting **Added:** Nonbenzodiazepine hypnotics – Eszopiclon, Zolpidem, Zaleplon Table 2 - High-Risk Medications With Days Supply Criteria **Removed:** Nonbenzodiazepine hypnotics **Added:** Numerator (Submission Criteria 2): Definitions: The intent of the numerator is to assess if the patient has been ordered at least two high-risk medications form the same drug class (grouped by row) in Table 3 on different dates or service. The intent of the measure is to assess if the submitting provider ordered the high-risk medication(s). If the patient had a high-risk medication previously prescribed by another provider, they would not be counted towards the numerator unless the submitting provider also ordered a high-risk medication for them from the same drug class. Index Prescription Start Date - the start date of the earliest prescription ordered for a high-risk medication during the measurement period. Table 3 - High-Risk Medications: Antipsychotics, first (conventional) and second (atypical) generation and Benzodiazepines, long, short, and intermediate acting. **Updated numerator instructions: For the MIPS CQMs Specifications collection type: Added:** Submission Criteria 2: INVERSE MEASURE - A lower calculated performance rate for this measure indicates better clinical care or control. The "Performance Not Met" numerator option for this measure is the representation of the better clinical quality or control. Submitting that numerator option will produce a performance rate that trends closer to 0%, as quality increases. For inverse measures a rate of 100% means all of the denominator eligible patients did not receive the appropriate care or were not in proper control. A high-risk medication is identified by: • A prescription for medications classified as high risk at any dose and for any duration listed in Table 3 **Updated numerator note: For the MIPS CQMs Specifications collection type: Removed:** numerator note. **Updated numerator options: For the MIPS CQMs Specifications collection type: Revised:** Submission Criteria 1: **Performance Met:** At least two orders for high-risk medications from the same drug class **Performance Not Met:** At least two orders for high-risk medications from the same drug class not ordered **Added:** Submission Criteria 2: **Performance Met:** At least two orders for high-risk medications from the same drug class **Performance Not Met:** At least two orders for high-risk medications from the same drug class not ordered **Performance Not Met:** Two or more antipsychotic prescriptions ordered for patients who had a diagnosis of schizophrenia, schizoaffective disorder, or bipolar disorder on or between January 1 of the year prior to the measurement period and the Index Prescription Start Date (IPSD) for antipsychotics **Performance Not Met:** Two or more benzodiazepine prescriptions ordered for patients who had a diagnosis of seizure disorders, rapid eye movement sleep behavior disorder, benzodiazepine withdrawal, ethanol withdrawal, or severe generalized anxiety disorder on or between January 1 of the year prior to the measurement period and the IPSD for benzodiazepines **Updated measure analytic: For all collection types: Revised:** performance rate 1 will be utilized for benchmarking purposes.
Steward:	National Committee for Quality Assurance

Category	Description
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to restructure all of the collection types to introduce new performance rates based upon the American Geriatric Society Beers Criteria and expert panel recommendations, with performance rate one being utilized for benchmarking purposes as it is more comprehensive in assessment and aligns across the collection types. These revisions allow for the inclusion of antipsychotics and benzodiazepines to ensure alignment with most recent recommendations. The description for the measure is being updated for all collection types to align with the revisions in the measure and reflect the restructuring within multiple components of the specifications. Additionally, there will be multiple performance rates: three performance rates for the eCQM Specifications collection type and two performance rates for the MIPS CQMs Specifications collection type. We propose that the denominator exclusion language be updated for all collection types to add an exclusion for patients receiving palliative care, as this patient population is not appropriate for the clinical quality action being assessed. For the eCQM Specifications collection type, the term 'overlaps' was removed and replaced with plain language for clarity and consistency in implementation. The eCQM Specifications collection type's value sets were revised to add and remove drug classes and the logic for the non-benzodiazepine hypnotics was revised to remove the 90-day supply criterion to align with the American Geriatric Society Beers Criteria guidelines. We propose to revise the MIPS CQMs Specifications collection type to add a second performance rate and submission criteria as the measure is restructured to align with the American Geriatric Society Beers Criteria guidelines. Additionally, the medication tables have been revised to align with the current guidelines and intent of the measure revisions. Multiple components of the MIPS CQMs Specifications collection type were updated to align with revised structure and the American Geriatric Society Beers Criteria guidelines to ensure consistent language throughout and alignment with the measure intent.

D.31 Weight Assessment and Counseling for Nutrition and Physical Activity for Children and Adolescents

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	239
CMS eCQM ID:	CMS155v10
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of patients 3-17 years of age who had an outpatient visit with a Primary Care Physician (PCP) or Obstetrician/Gynecologist (OB/GYN) and who had evidence of the following during the measurement period. Three rates are reported. • Percentage of patients with height, weight, and body mass index (BMI) percentile documentation. • Percentage of patients with counseling for nutrition. • Percentage of patients with counseling for physical activity.
Substantive Change:	**The measure title is revised from 'Weight Assessment and Counseling for Nutrition and Physical Activity for Children and Adolescents' to:** Weight Assessment and Counseling for Nutrition and Physical Activity for Children/Adolescents **Updated denominator exclusion: Revised:** Exclude patients who are in hospice care for any part of the measurement period. **Updated value set/coding: Revised:** "Pregnancy" (2.16.840.1.113883.3.526.3.378) value set to more accurately capture pregnancy state.
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to update the title for alignment across programs. We propose to update the “Pregnancy” value set to more accurately capture the state of pregnancy to ensure the denominator exclusion is being applied to the correct patient population and remove the term ‘overlaps’ and replace with plain language for clarity and consistency in implementation.

D.32 Childhood Immunization Status

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	240
CMS eCQM ID:	CMS117v10
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of children 2 years of age who had four diphtheria, tetanus and acellular pertussis (DTaP); three polio (IPV), one measles, mumps and rubella (MMR); three or four H influenza type B (HiB); three hepatitis B (Hep B); one chicken pox (VZV); four pneumococcal conjugate (PCV); one hepatitis A (Hep A); two or three rotavirus (RV); and two influenza (flu) vaccines by their second birthday.
Substantive Change:	**The measure denominator exclusion is revised to read:** Exclude patients who are in hospice care for any part of the measurement period. **The measure guidance is revised to read:** Numerator criteria includes evidence of receipt of the recommended vaccine or the following: -- DTaP: Adverse reaction to the DTaP or Td vaccine; or encephalopathy due to DTaP or Td vaccination -- Polio (IPV) vaccine: Adverse reaction to the IPV vaccine, streptomycin, polymyxin B, or neomycin -- MMR Vaccination: Immunodeficiency, HIV, lymphoreticular cancer, multiple myeloma, or leukemia; adverse reaction to neomycin; history of measles, mumps, or rubella; or a seropositive result for the antigens -- Hib: Adverse reaction to the Hib vaccine -- Hepatitis B: Seropositive result for the antigen, adverse reaction to the hepatitis B vaccine, adverse reaction to common baker's yeast, or a history of hepatitis B illness -- Chicken pox (varicella zoster): Seropositive result for the antigen; immunodeficiency, HIV, lymphoreticular cancer, multiple myeloma, or leukemia; adverse reaction to neomycin; or a history of varicella zoster -- Pneumococcal: Adverse reaction to the pneumococcal vaccine -- Hepatitis A: Seropositive result for the antigen, adverse reaction to the hepatitis A vaccine, or a history of hepatitis A illness -- Rotavirus: Adverse reaction to the rotavirus vaccine, severe combined immunodeficiency, or a history of intussusception -- Influenza: Adverse reaction to the influenza vaccine; immunodeficiency, HIV, lymphoreticular cancer, multiple myeloma, or leukemia; or adverse reaction to neomycin The measure allows a grace period by measuring compliance with these recommendations between birth and age two. This eCQM is a patient-based measure. This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (https://ecqi.healthit.gov/qdm) for more information on the QDM. **Updated logic and logic definitions: Added:** influenza LAIV vaccination as numerator compliant.
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to remove the term 'overlaps' from the denominator exclusion and replace with plain language for clarity and consistency in implementation. The measure guidance is updated to reflect the intent of the measure and clarify the criteria for numerator compliance more accurately. Additionally, we propose to update the logic and logic definitions to include the influenza LAIV vaccination to align with current clinical guidelines.

D.33 Ultrasound Determination of Pregnancy Location for Pregnant Patients with Abdominal Pain

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	254
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications | MIPS CQMs Specifications
Current Measure Description:	Percentage of pregnant female patients aged 14 to 50 who present to the emergency department (ED) with a chief complaint of abdominal pain or vaginal bleeding who receive a trans-abdominal or trans-vaginal ultrasound to determine pregnancy location.
Substantive Change:	**Modified collection type:** MIPS CQM Specifications collection type. **Updated denominator criteria: Revised:** Patient has any emergency department encounter during the performance period with Place of Service Indicator 23 (The claim form Place of Service field must indicate emergency department) OR Patient encounter during the performance period (CPT)
Steward:	American College of Emergency Physicians
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to update the denominator criteria to capture all patients with an encounter with a Place of Service indicator 23 to ensure that all applicable patients are being assessed for the quality action as it is appropriate for those patients who meet all other denominator criteria and are seen at any emergency department encounter. In the circumstance the Medicare Part B Claims Measure Specifications collection type is not finalized for removal, all finalized substantive changes will be reflected within this collection type specification.

D.34 Biopsy Follow-Up

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	265
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of new patients whose biopsy results have been reviewed and communicated to the primary care/referring physician and patient.
Substantive Change:	**The measure denominator note is revised to read:** *Signifies that this CPT Category I code is a non-covered service under the Medicare Part B Physician Fee Schedule (PFS). These non-covered services should be counted in the denominator population for MIPS CQMs. Only the first biopsy results for new patients should be reported for this measure. Do not include specimens sent for debridement.
Steward:	American Academy of Dermatology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to update the denominator note to clarify which biopsy, if multiple biopsies are performed, should be utilized for assessment of the clinical quality action and that only new patients should be reported for the purposes of this measure.

D.35 Dementia: Cognitive Assessment

Category	Description
NQF # / eCQM NQF #:	N/A / 2872e
Quality#:	281
CMS eCQM ID:	CMS149v10
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of patients, regardless of age, with a diagnosis of dementia for whom an assessment of cognition is performed and the results reviewed at least once within a 12-month period.
Substantive Change:	**Updated logic and logic definitions: Revised:** dementia and qualifying encounter logic to clarify timing of during the measurement period.
Steward:	American Academy of Neurology
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to revise the technical definition names and logic to provide clarity and ensure alignment with measure intent.

D.36 Parkinson's Disease: Psychiatric Symptoms Assessment for Patients with Parkinson's Disease

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	290
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of all patients with a diagnosis of Parkinson's Disease [PD] who were assessed for psychiatric symptoms once in the past 12 months
Substantive Change:	**The measure title is revised from 'Parkinson's Disease: Psychiatric Symptoms Assessment for Patients with Parkinson's Disease' to:** Assessment of Mood Disorders and Psychosis for Patients with Parkinson's Disease. **The measure description is revised to read:** Percentage of all patients with a diagnosis of Parkinson's Disease [PD] who were assessed for depression, anxiety, apathy, AND psychosis once during the measurement period. **Updated denominator criteria: Removed:** coding related to Hospital Inpatient Services. **The measure numerator is revised to read:** Patients who were assessed for depression, anxiety, apathy, AND psychosis once during the measurement period. **The measure numerator definition is revised to read:** Assessed – use of a screening tool or discussion with the patient or care partner. Please see "Opportunity for Improvement" section below for suggestions on possible screening tools. Psychosis: includes hallucinations, illusions, delusions, paranoia **Updated numerator instructions:** **Added:** For Depression: Patient Health Questionnaire 2 (PHQ2), Patient Health Questionnaire 9 (PHQ9), Montgomery-Asberg Depression Rating Scale (MADRS) For Anxiety: Parkinson Anxiety Scale (PAS) **Removed:** For Impulse Control Disorder (9): Questionnaire for Impulsive-Compulsive Disorders in Parkinson's Disease-Rating Scale (QUIP-RS) Minnesota Impulsive Disorders Interview **Updated numerator note: Removed:** the Numerator Note. **The measure numerator options are revised to read:** **Performance Met:** Depression, anxiety, apathy, AND psychosis assessed **Performance Not Met:** Depression, anxiety, apathy, AND psychosis not assessed
Steward:	American Academy of Neurology
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to update the measure to lessen the requirements necessary for numerator compliance to balance quality patient care and clinician burden based upon feedback and recommendations from the measure steward's expert work group. The measure title, description, numerator, and numerator options will have updates to align with the proposed change to the measure's clinical quality action requirement. We propose to remove Hospital Inpatient Services from the denominator criteria as patients seen in the inpatient setting are not appropriate for inclusion within the denominator eligible patient population for the clinical quality action being assessed, as this is to address care for patients seen during outpatient encounters. Additionally, we propose to revise the numerator definition to more clearly define what "assessed" means for the purposes of this measure and what components are included within the term "psychosis". We propose to revise the list of tools available for use in the Parkinson's disease patient population to align with current availability and applicability. We propose to remove the numerator note to align with the updated time frame to ensure annual assessment.

D.37 Parkinson's Disease: Cognitive Impairment or Dysfunction Assessment for Patients with Parkinson's Disease

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	291
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of all patients with a diagnosis of Parkinson's Disease [PD] who were assessed for cognitive impairment or dysfunction once in the past 12 months.
Substantive Change:	**The measure title is revised from 'Parkinson's Disease: Cognitive Impairment or Dysfunction Assessment for Patients with Parkinson's Disease' to:** Assessment of Cognitive Impairment or Dysfunction for Patients with Parkinson's Disease. **The measure description is revised to read:** Percentage of all patients with a diagnosis of Parkinson's Disease [PD] who were assessed for cognitive impairment or dysfunction once during the measurement period. **Updated denominator criteria: Removed:** coding related to Hospital Inpatient Services. **The measure numerator is revised to read:** Patients (or care partner as appropriate) who were assessed for cognitive impairment or dysfunction once during the measurement period. **The measure numerator definition is revised to read:** Assessed – Is defined as a discussion with the patient or care partner or use of a screening tool OR referral to neuropsychologist for testing. **Updated numerator instructions: Added:** Neuro-QoL and Patient-Reported Outcomes Measurement Information System (PROMIS). **Updated numerator note: Removed:** the Numerator Note. **Updated numerator options: Added:** **Denominator Exception:** Patient or care partner decline assessment **Denominator Exception:** On date of encounter, patient is not able to participate in assessment or screening, including non-verbal patients, delirious, severely aphasic, severely developmentally delayed, severe visual or hearing impairment and for those patients, no knowledgeable informant available.
Steward:	American Academy of Neurology
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to update the measure's title to remove redundancy in wording. We propose to remove Hospital Inpatient Services from the denominator criteria as patients seen in the inpatient setting are not appropriate for inclusion within the denominator eligible patient population for the clinical quality action being assessed, as this is to address cares for patients seen during outpatient encounters. We propose to update the measure numerator and numerator definition to include the care partner within the assessment of the clinical quality action as patients who have severe cognitive impairment may be unable to accurately respond to questions, leaving clinicians to rely on care partners for accurate information. We propose to add the PROMIS and Neuro-QoL (Quality of Life) to the list of tools in the numerator instructions as these are applicable to the intent of the measure. Additionally, we propose to update the numerator options to add denominator exceptions as the measure steward's expert work group felt it was important not to penalize clinicians for patients/care partners who are unable to participate in or decline the assessment. Additionally, we propose to update the description and numerator to reflect that the quality action should be completed annually to ensure timely capture of cognitive impairment or dysfunction. To align with these revisions, we propose to remove the numerator note.

D.38 Parkinson's Disease: Rehabilitative Therapy Options

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	293
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of all patients with a diagnosis of Parkinson's Disease (or caregiver(s), as appropriate) who had rehabilitative therapy options (i.e., physical, occupational, and speech therapy) discussed once in the past 12 months.
Substantive Change:	**The measure title is revised from 'Parkinson's Disease: Rehabilitative Therapy Options' to: Rehabilitative** Therapy Referral for Patients with Parkinson's Disease. **The measure description is revised to read:** Percentage of all patients with a diagnosis of Parkinson's Disease who were referred to physical, occupational, speech, or recreational therapy once during the measurement period. **Updated denominator criteria: Added:** Physical and Occupational Therapy, Speech Language Pathology **The measure numerator is revised to read**: Patients who were referred to physical, occupational, speech, or recreational therapy once during the measurement period. **Updated numerator note: Removed:** the Numerator Note. **The measure numerator options is revised to read:** **Performance Met:** Referral to physical, occupational, speech, or recreational therapy **Denominator Exception:** Patient and/or care partner decline referral **Denominator Exception:** Clinician determines patient does not require referral **Denominator Exception:** Patient already receiving physical/occupational/speech/recreational therapy during the measurement period **Performance Not Met:** Patient not referred, reason not otherwise specified
Steward:	American Academy of Neurology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to update the measure title to remove redundancy in wording. We propose to update the measure description and numerator to include recreational therapy as it is clinically relevant and can be beneficial to the Parkinson's disease patient population. We propose to update and expand the denominator coding to include additional MIPS eligible clinician types as this measure may be appropriate to their scope of care. We propose to remove the numerator note to align with the updated time-frame to ensure annual assessment. Additionally, we propose to update the numerator options to align with the addition of recreational therapy as numerator compliant and allowing for denominator exceptions for those patients that decline a referral, do not need a referral based on the stage of the disease, or for those patients who are already receiving one or more of the services, as clinicians should not be penalized in these situations.

D.39 Initiation and Engagement of Alcohol and Other Drug Dependence Treatment

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	305
CMS eCQM ID:	CMS137v10
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of patients 13 years of age and older with a new episode of alcohol or other drug abuse or (AOD) dependence who received the following. Two rates are reported. a. Percentage of patients who initiated treatment including either an intervention or medication for the treatment of AOD abuse or dependence within 14 days of the diagnosis. b. Percentage of patients who engaged in ongoing treatment including two additional interventions or a medication for the treatment of AOD abuse or dependence within 34 days of the initiation visit. For patients who initiated treatment with a medication, at least one of the two engagement events must be a treatment intervention.
Substantive Change:	**The measure denominator exclusion is revised to read:** 1. Exclude patients with a negative diagnosis history, defined as an encounter or medication treatment for a diagnosis of alcohol, opioid or other drug abuse or dependence in the 60 days prior to the first episode of alcohol or drug dependence. 2. Exclude patients who are in hospice care for any part of the measurement period. **Updated initial patient population: Revised:** logic for timing associated with the timing of the first dependence diagnosis. **Updated numerator logic: Revised:** timing attribute associated with orders of medications to 'authorDatetime'. **The measure stratification is revised to read:** Report a total score, and each of the following strata: Stratum 1: Patients age 13-17 at the start of the Measurement Period Stratum 2: Patients age >=18 at the start of the Measurement Period
Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to revise the denominator exclusion to more accurately represent the intent to exclude patients with prior and recent history of substance abuse treatment as this patient population is not appropriate for the clinical quality action being assessed. The term ‘overlaps’ was removed from the denominator exclusion and replaced with plain language for clarity and consistency in implementation. We propose to revise the logic for the timing associated with the first dependence diagnosis timing to align with the intent of the measure to correctly capture all diagnoses during the measurement period through November 14. We propose to update the datatype for “Medication, Order” to use ‘authorDatetime’ as this is the preferred timing attribute. We propose to revise the anchor for age calculations of the stratifications to align with those within the initial patient population for alignment.

D.40 Cervical Cancer Screening

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	309
CMS eCQM ID:	CMS124v10
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of women 21-64 years of age who were screened for cervical cancer using either of the following criteria: * Women age 21-64 who had cervical cytology performed within the last 3 years * Women age 30-64 who had cervical human papillomavirus (HPV) testing performed within the last 5 years
Substantive Change:	**Updated denominator exclusion:** **Revised:** Exclude patients who are in hospice care for any part of the measurement period. **Added:** Exclude patients receiving palliative care during the measurement period. **Updated value set/coding: Updated:** replaced "Congenital absence of cervix (disorder)" ("SNOMEDCT Code (37687000)") with "Congenital or Acquired Absence of Cervix" (2.16.840.1.113883.3.464.1003.111.12.1016) value set.
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose that the denominator exclusion language be updated for all collection types to add an exclusion for patients receiving palliative care, as this patient population is not appropriate for the clinical quality action being assessed and the term 'overlaps' was removed and replaced with plain language for clarity and consistency in implementation. We propose to update the value sets for the denominator exclusion to include acquired absence of cervix as this patient population is not appropriate for the clinical quality action being assessed.

D.41 Chlamydia Screening for Women

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	310
CMS eCQM ID:	CMS153v10
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of women 16-24 years of age who were identified as sexually active and who had at least one test for chlamydia during the measurement period.
Substantive Change:	**Updated denominator exclusion: Revised:** Exclude patients whose who are in hospice care for any part of the measurement period. **Updated value set: Added:** Clutton's joints "Diagnoses Used to Indicate Sexual Activity" value set.
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to remove the term 'overlaps' and replace with plain language for clarity and consistency in implementation. We propose to update the "Diagnoses Used to Indicate Sexual Activity" value set to align with coding utilized in other programs, however, this code set will undergo further refinements in future years.

D.42 Falls: Screening for Future Fall Risk

Category	Description
NQF # / eCQM NQF #:	0101 / N/A
Quality#:	318
CMS eCQM ID:	CMS139v10
National Quality Strategy Domain:	Patient Safety
Current Collection Type:	eCQM Specifications | CMS Web Interface Measure Specifications
Current Measure Description:	Percentage of patients 65 years of age and older who were screened for future fall risk during the measurement period.
Substantive Change:	**Updated denominator exclusion: For the eCQM Specifications collection type: Revised:** Exclude patients who are in hospice care for any part of the measurement period. **Updated denominator exclusion: For the CMS Web Interface Measure Specifications collection type: Removed:** Exclude patients who were assessed to be non-ambulatory during the measurement period. **Updated denominator guidance: For the CMS Web Interface Measure Specifications collection type: Removed:** Denominator Exclusion, count as non-ambulatory only if non-ambulatory at the most recent encounter during the measurement period (i.e., patient is not ambulatory, bed ridden, immobile, confined to chair, wheelchair bound, dependent on helper pushing wheelchair, independent in wheelchair or minimal help in wheelchair).
Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose for the eCQM Specifications collection type to remove the term 'overlaps' from the denominator exclusion and replace with plain language for clarity and consistency in implementation. We proposed for the CMS Web Interface Measure Specifications collection type to remove the denominator exclusion for non-ambulatory patients to address implementation challenges as there is a lack of available documentation for a non-ambulatory status. Additionally, the denominator guidance has been updated to reflect this revision.

D.43 Atrial Fibrillation and Atrial Flutter: Chronic Anticoagulation Therapy

Category	Description
NQF # / eCQM NQF #:	1525 / N/A
Quality#:	326
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications | MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with nonvalvular atrial fibrillation (AF) or atrial flutter who were prescribed warfarin OR another FDA-approved oral anticoagulant drug for the prevention of thromboembolism during the measurement period.
Substantive Change:	**Modified collection type:** MIPS CQM Specifications collection type. **The measure description is revised to read:** Percentage of patients aged 18 years and older with atrial fibrillation (AF) or atrial flutter who were prescribed an FDA-approved oral anticoagulant drug for the prevention of thromboembolism during the measurement period. **Updated denominator exclusion: Added:** 1. Patients with moderate or severe mitral stenosis 2. Patients with mechanical prosthetic heart valve
Steward:	American Heart Association
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to remove the Medicare Part B Claims Measure Specifications collection type as it has reached the end of the topped out lifecycle as finalized in 82 FR 53640. However, the benchmarking data continues to show a gap for the MIPS CQMs Specifications collection type, as such, the measure will be retained for this collection type. We propose to revise the measure description to align with the language revisions in the measure to no longer explicitly state the valve types. We propose to add denominator exclusions that align with language revisions to remove those patients for whom the clinical quality action being assessed would not be appropriate. In the circumstance the Medicare Part B Claims Measure Specifications collection type is not finalized for removal, all finalized substantive changes will be reflected within this collection type specification.

D.44 Maternity Care: Elective Delivery or Early Induction Without Medical Indication at < 39 Weeks (Overuse)

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	335
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients, regardless of age, who gave birth during a 12-month period who delivered a live singleton at < 39 weeks of gestation completed who had elective deliveries by cesarean section (C-section), or early inductions of labor, without medical indication.
Substantive Change:	**The measure title is revised from 'Maternity Care: Elective Delivery or Early Induction Without Medical Indication at < 39 Weeks (Overuse)' to:** Maternity Care: Elective Delivery (Without Medical Indication) at < 39 Weeks (Overuse) **The measure description is revised to read:** Percentage of patients, regardless of age, who gave birth during a 12-month period, delivered a live singleton at < 39 weeks of gestation, and had elective deliveries (without medical indication) by cesarean birth or induction of labor. **The measure numerator options are revised to read:** **Performance Met:** Elective delivery (without medical indication) by cesarean birth or induction of labor performed (<39 weeks of gestation) **Denominator Exception:** Medical indication for delivery by cesarean birth or induction of labor (<39 weeks of gestation) [Documentation of reason(s) for elective delivery (e.g., hemorrhage and placental complications, hypertension, preeclampsia and eclampsia, rupture of membranes (premature or prolonged), maternal conditions complicating pregnancy/delivery, fetal conditions complicating pregnancy/delivery, late pregnancy, prior uterine surgery, or participation in clinical trial)] **Performance Not Met:** Elective delivery (without medical indication) by cesarean birth or induction of labor not performed (<39 weeks of gestation) **Updated performance calculation: Revised:** Measure analytic was updated to be inverse.
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We propose to update the measure analytic to be inverse to better align with the intent of the measure as this is an overuse measure. We propose to update the measure title, description, and numerator options to align with the revision in analytic as a lower calculated performance rate will now indicate better clinical care for the purposes of this measure. In the event the proposed substantive change(s) are finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark will be used for scoring.

D.45 Maternity Care: Postpartum Follow-up and Care Coordination

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	336
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients, regardless of age, who gave birth during a 12-month period who were seen for postpartum care before or at 8 weeks of giving birth and received the following at a postpartum visit: breast-feeding evaluation and education, postpartum depression screening, postpartum glucose screening for gestational diabetes patients, family and contraceptive planning counseling, tobacco use screening and cessation education, healthy lifestyle behavioral advice, and an immunization review and update.
Substantive Change:	**The measure description is revised to read:** Percentage of patients, regardless of age, who gave birth during a 12-month period who were seen for postpartum care before or at 12 weeks of giving birth and received the following at a postpartum visit: breast-feeding evaluation and education, postpartum depression screening, postpartum glucose screening for gestational diabetes patients, family and contraceptive planning counseling, tobacco use screening and cessation education, healthy lifestyle behavioral advice, and an immunization review and update. **The measure denominator is revised to read:** All patients, regardless of age, who gave birth during a 12-month period and were seen for postpartum care at a visit before or at 12 weeks of giving birth. **Updated denominator criteria: Revised:** Postpartum care visit before or at 12 weeks of giving birth. **Updated instructions:** This measure is to be submitted a minimum of once per performance period for all patients seen for postpartum care before or at 12 weeks of giving birth during the performance period. **Updated numerator definition: Revised:** to align with the measure change from 8 weeks to 12 weeks postpartum.
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to update the timeframe for the postpartum care visit from before or at 8 weeks of giving birth to before or at 12 weeks of giving birth, which is reflected in revisions to multiple components of the measure for alignment. This revision aligns with American College of Obstetricians and Gynecologists (ACOG) guidance and better aligns with current clinical workflows. This also ensures a more complete patient population is addressed to drive quality care.

D.46 HIV Medical Visit Frequency

Category	Description
NQF # / eCQM NQF #:	2079 / N/A
Quality#:	340
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients, regardless of age with a diagnosis of HIV who had at least one medical visit in each 6 month period of the 24 month measurement period, with a minimum of 60 days between medical visits.
Substantive Change:	**The measure denominator note is revised to read:** In order to determine denominator eligibility, patients should be diagnosed with HIV during the first 3 months of the 24-month measurement period or have a diagnosis prior to the 24- month measurement period. The 24-month measurement period is defined as the 24 months prior to and including the date of the first qualifying encounter during the performance period (i.e., January 1, 2022 through December 31, 2022). Performance of the measure is met when there is at least one medical visit in each 6 month interval with 60 days between denominator eligible encounters for patients with HIV within the 24-month measurement period.
Steward:	Health Resources and Services Administration
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to revise the denominator note to clarify the 24-month period to ensure alignment with the measure intent and consistency in implementation.

D.47 Total Knee Replacement: Shared Decision-Making: Trial of Conservative (Non-surgical) Therapy

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	350
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients regardless of age undergoing a total knee replacement with documented shared decision-making with discussion of conservative (non-surgical) therapy (e.g., non-steroidal anti-inflammatory drug (NSAIDs), analgesics, weight loss, exercise, injections) prior to the procedure.
Substantive Change:	**The measure title is revised from 'Total Knee Replacement: Shared Decision-Making: Trial of Conservative (Non-surgical) Therapy' to:** Total Knee or Hip Replacement: Shared Decision-Making: Trial of Conservative (Non-surgical) Therapy. **The measure description is revised to read:** Percentage of patients regardless of age undergoing a total knee or total hip replacement with documented shared decision- making with discussion of conservative (non-surgical) therapy (e.g., non-steroidal anti-inflammatory drug (NSAIDs), analgesics, weight loss, exercise, injections) prior to the procedure. **Updated instructions: Revised:** This measure is to be submitted each time a procedure for total knee or total hip replacement is performed during the performance period. **Updated denominator: Added:** Total hip replacement.
Steward:	American Association of Hip and Knee Surgeons
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to update the measure to include total hip replacements as denominator eligible as the clinical quality action being assessed is applicable to this procedure as well. This will ensure that a broader patient population is being assessed as it is important to for the patient and clinician to engage in shared decision making to ensure that joint replacement therapy is the best treatment option. Multiple components of the measure will be updated to reflect the additional procedure of total hip replacement. In the event the proposed substantive change(s) are finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark will be used for scoring.

D.48 Total Knee Replacement: Venous Thromboembolic and Cardiovascular Risk Evaluation

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	351
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients regardless of age undergoing a total knee replacement who are evaluated for the presence or absence of venous thromboembolic and cardiovascular risk factors within 30 days prior to the procedure (e.g., History of Deep Vein Thrombosis (DVT), Pulmonary Embolism (PE), Myocardial Infarction (MI), Arrhythmia and Stroke).
Substantive Change:	**The measure title is revised from 'Total Knee Replacement: Venous Thromboembolic and Cardiovascular Risk Evaluation' to:** Total Knee or Hip Replacement: Venous Thromboembolic and Cardiovascular Risk Evaluation. **The measure description is revised to read:** Percentage of patients regardless of age undergoing a total knee or total hip replacement who are evaluated for the presence or absence of venous thromboembolic and cardiovascular risk factors within 30 days prior to the procedure (e.g., History of Deep Vein Thrombosis (DVT), Pulmonary Embolism (PE), Myocardial Infarction (MI), Arrhythmia and Stroke). **Updated instructions: Revised:** This measure is to be submitted each time a procedure for total knee or total hip replacement is performed during the performance period. **Updated denominator: Added:** Total hip replacement.
Steward:	American Association of Hip and Knee Surgeons
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to update the measure to include total hip replacements as denominator eligible as the clinical quality action being assessed is applicable to this procedure as well. This will ensure that a broader patient population is being assessed as it is important to evaluate this patient population for venous thromboembolic and cardiovascular risk factors within 30 days prior to the procedure to ensure that joint replacement therapy is the best treatment option. Multiple components of the measure will be updated to reflect the additional procedure of total hip replacement. In the event the proposed substantive change(s) are finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark will be used for scoring.

D.49 Patient-Centered Surgical Risk Assessment and Communication

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	358
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients who underwent a non-emergency surgery who had their personalized risks of postoperative complications assessed by their surgical team prior to surgery using a clinical data-based, patient-specific risk calculator and who received personal discussion of those risks with the surgeon.
Substantive Change:	**Updated denominator criteria: Added:** Coding related to 'Ablation, irreversible electroporation; 1 or more tumors per organ'
Steward:	American College of Surgeons
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to update the denominator criteria to add a procedure that is appropriate for the measure intent.

D.50 Follow-Up Care for Children Prescribed ADHD Medication (ADD)

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	366
CMS eCQM ID:	CMS136v11
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of children 6-12 years of age and newly dispensed a medication for attention-deficit/hyperactivity disorder (ADHD) who had appropriate follow-up care. Two rates are reported. a) Percentage of children who had one follow-up visit with a practitioner with prescribing authority during the 30-Day Initiation Phase. b) Percentage of children who remained on ADHD medication for at least 210 days and who, in addition to the visit in the Initiation Phase, had at least two additional follow-up visits with a practitioner within 270 days (9 months) after the Initiation Phase ended.
Substantive Change:	**Updated denominator exclusion: Revised:** For all denominators: Exclude patients who are in hospice care for any part of the measurement period. **The measure guidance is revised to read:** This eCQM is a patient-based measure. This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (https://ecqi.healthit.gov/qdm) for more information on the QDM. **The measure numerator is revised to read:** Numerator 1: Patients who had at least one visit with a practitioner with prescribing authority within 30 days after the IPSD. Numerator 2: Patients who had at least one visit with a practitioner with prescribing authority during the Initiation Phase, and at least two follow-up visits during the Continuation and Maintenance Phase. **Updated performance calculation: Revised:** Performance Rate 2 will be used for benchmarking purposes.
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to remove the term 'overlaps' from the denominator exclusion and replace with plain language for clarity and consistency in implementation. We propose to update the guidance to remove the language regarding how cumulative medication duration is calculated as this is outdated and no longer in alignment with the measure intent. We propose to revise the numerator language to allow for telehealth visits as these are appropriate for inclusion when assessing for the clinical quality action. We propose to update the performance calculation for the measure to utilize the performance rate for submission criteria 2 as this is more indicative of quality care during and after the Initiation Phase. In the event the proposed substantive change(s) are finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark will be used for scoring.

D.51 Depression Remission at Twelve Months

Category	Description
NQF # / eCQM NQF #:	0710 / 0710e
Quality#:	370
CMS eCQM ID:	CMS159v10
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications | CMS Web Interface Measure Specifications | MIPS CQMs Specifications
Current Measure Description:	The percentage of adolescent patients 12 to 17 years of age and adult patients 18 years of age or older with major depression or dysthymia who reached remission 12 months (+/- 60 days) after an index event date.
Substantive Change:	**Updated logic definitions: For the eCQM Specifications collection type: Revised:** timing of denominator exclusion elements; 'Global."ToDate" {element} on or before end of "Measurement Assessment Period". **Updated denominator criteria: For all collection types: Added:** coding for mental and behavioral health MIPS eligible clinicians to both submission criteria. **Updated initial population: For the CMS Web Interface Measure Specifications collection type: Revised:** Adolescent patients 12 to 17 years of age and adult patients 18 years of age and older with a diagnosis of major depression or dysthymia and an initial Patient Health Questionnaire-9 item version (PHQ-9) or Patient Health Questionnaire-9 Modified for Teens and Adolescents (PHQ-9M) score greater than nine during the index event. Patients may be assessed using PHQ-9 or PHQ-9M on the same date or up to 7 days prior to the encounter (index event). **Updated guidance: For the CMS Web Interface Measure Specifications collection type: Added:** When a baseline assessment is conducted with PHQ 9M, the follow-up assessment can use either a PHQ 9M or PHQ 9. **Updated denominator exclusion: For the CMS Web Interface Measure Specifications collection type: Added:** Patients with a diagnosis of personality disorder emotionally labile.
Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We propose to update the eCQM Specifications collection type to revise the timing of the denominator exclusion elements to ensure the full 12 months + 60 days after the index event date is allowed in order to align with the measure intent and language. We propose to expand the denominator eligible encounters for all collection types to include mental and behavioral health MIPS eligible clinicians as this measure is applicable to their scope of care. We propose to update the CMS Web Interface Measure Specification collection type as the measure steward believes that allowing flexibility for the timeframe in which a PHQ-9/PHQ-9M can be obtained will accommodate pre-visit planning or distribution of a PHQ-9/PHQ-9M tool prior to the encounter (office visit, psychiatry or psychotherapy visit, telephone or online encounter). The intent of this change includes the following principles: (1) The patient must have the corresponding diagnosis at the time of the index encounter. (2) The patient must have completed the PHQ-9/PHQ-9M and have a score greater than 9. (3) That same PHQ-9/PHQ-9M is directly tied to and used during the index encounter. We propose to revise the denominator exclusion language for the CMS Web Interface Measure Specifications collection type for a diagnosis of personality disorder to further clarify ensuring the correct patient population is being excluded from quality action assessment. We propose to update the guidance for CMS Web Interface Measure Specifications collection type to add clarity regarding the assessment that may be used for the follow-up assessment for the purposes of meeting performance for this measure.

D.52 Closing the Referral Loop: Receipt of Specialist Report

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	374
CMS eCQM ID:	CMS50v10
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	eCQM Specifications | MIPS CQMs Specifications
Current Measure Description:	Percentage of patients with referrals, regardless of age, for which the referring provider receives a report from the provider to whom the patient was referred.
Substantive Change:	**The measure numerator note is revised to read: For the MIPS CQMs Specifications collection type:** The consultant report that will successfully close the referral loop should be related to the first referral for a patient during the measurement period. If there are multiple consultant reports received by the referring provider which pertain to a particular referral, use the first consultant report to satisfy the measure. The provider to whom the patient was referred is responsible for sending the consultant report that will fulfill the communication. Note: this is not the same provider who would report on the measure.
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to update the numerator note for the MIPS CQMs Specification collection type to add clarifying language that the first referral for a patient should be utilized for the purposes of assessing whether the referral loop was closed and the clinical quality action completed, as this aligns with the intent of the measure.

D.53 Functional Status Assessment for Total Knee Replacement

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	375
CMS eCQM ID:	CMS66v10
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of patients 18 years of age and older who received an elective primary total knee arthroplasty (TKA) and completed a functional status assessment within 90 days prior to the surgery and in the 270-365 days after the surgery.
Substantive Change:	**The measure denominator exclusion is revised to read:** 1. Exclude patients with two or more fractures indicating trauma at the time of the total knee arthroplasty or patients with severe cognitive impairment that starts before or in any part of the measurement period. 2. Exclude patients who are in hospice care for any part of the measurement period. **Updated value set/coding: Revised:** 'Primary TKA Procedure' (2.16.840.1.113883.3.464.1003.198.12.1007) value set to include revisions of one component of total prosthetic replacement of knee joint.
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to remove the term 'overlaps' from the denominator exclusion and replace with plain language for clarity and consistency in implementation. We propose to expand the 'Primary TKA Procedure' value set to include revisions of one component of total prosthetic replacement of knee joint to create a more complete denominator eligible patient population as completing a functional status assessment would be appropriate for this patient population.

D.54 Functional Status Assessment for Total Hip Replacement

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	376
CMS eCQM ID:	CMS56v10
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of patients 18 years of age and older who received an elective primary total hip arthroplasty (THA) and completed a functional status assessment within 90 days prior to the surgery and in the 270-365 days after the surgery.
Substantive Change:	**The measure denominator exclusion is revised to read:** 1. Exclude patients with two or more fractures indicating trauma at the time of the total hip arthroplasty or patients with severe cognitive impairment that starts before or in any part of the measurement period. 2. Exclude patients who are in hospice care for any part of the measurement period.
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to remove the term ‘overlaps’ from the denominator exclusion and replace with plain language for clarity and consistency in implementation.

D.55 Functional Status Assessments for Congestive Heart Failure

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	377
CMS eCQM ID:	CMS90v11
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of patients 18 years of age and older with congestive heart failure who completed initial and follow-up patient-reported functional status assessments.
Substantive Change:	**The measure title is revised from 'Functional Status Assessments for Congestive Heart Failure' to:** Functional Status Assessments for Heart Failure. **The measure description is revised to read:** Percentage of patients 18 years of age and older with heart failure who completed initial and follow-up patient-reported functional status assessments. **The measure denominator exclusion is revised to read:** 1. Exclude patients with severe cognitive impairment in any part of the measurement period. 2. Exclude patients who are in hospice care for any part of the measurement period. **The measure guidance is revised to read:** Initial functional status assessment (FSA) and encounter: The initial FSA is an FSA that occurs two weeks before or during an encounter, in the 180 days or more before the end of the measurement period. Follow-up FSA: The follow-up FSA must be completed at least 30 days but no more than 180 days after the initial FSA. The same FSA instrument must be used for the initial and follow-up assessment. This eCQM is a patient-based measure. This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (https://ecqi.healthit.gov/qdm) for more information on the QDM. **The measure initial patient population is revised to read:** Patients 18 years of age and older who had two outpatient encounters during the measurement period and a diagnosis of heart failure that starts before and continues into the measurement period. **Updated logic and logic definitions: Updated:** restructured the logic to ensure the patient meets the denominator criteria by 1) had multiple assessments in the year and that 2) there is sufficient time for them to have had repeat assessments in the year 3) there is sufficient time between assessments for their condition to have changed or for them to have responded to treatment (30-180days).
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to remove the term ‘congestive’ from the measure title and description based upon the expert work group recommendations in order to align the language with the denominator eligible patient population to ensure all appropriate patients are included in the initial patient population. We propose to remove the term ‘overlaps’ from the denominator exclusion and replace with plain language for clarity and consistency in implementation. We propose to revise the measure guidance to aid in measure implementation, align with measure intent and the timing constraints within the logic of the measure. We propose to update the initial patient population to clarify timing of the heart failure diagnosis and ensure alignment with the logic. Additionally, we propose to revise the logic to more clearly reflect relationships between the encounter and assessment(s), as identifying the first encounter without ensuring a relationship with an assessment does not meet the intent of the measure.

D.56 Children Who Have Dental Decay or Cavities

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	378
CMS eCQM ID:	CMS75v10
National Quality Strategy Domain:	Community/Population Health
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of children, 6 months - 20 years of age, who have had tooth decay or cavities during the measurement period.
Substantive Change:	**The measure description is revised to read:** Percentage of children, 6 months - 20 years of age at the start of the measurement period, who have had tooth decay or cavities during the measurement period **The measure denominator exclusion is revised to read:** Exclude patients who are in hospice care for any part of the measurement period. **The measure numerator is revised to read:** Children who had a diagnosis of cavities or decayed teeth in any part of the measurement period.
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We propose to revise the measure description to be more explicit of the timing associated with the patient's age. We propose to remove the term 'overlaps' from the denominator exclusion and numerator and replace with plain language for clarity and consistency in implementation.

D.57 Primary Caries Prevention Intervention as Offered by Primary Care Providers, including Dentists

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	379
CMS eCQM ID:	CMS74v11
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of children, 6 months - 20 years of age, who received a fluoride varnish application during the measurement period.
Substantive Change:	**The measure denominator exclusion is revised to read:** Exclude patients who are in hospice care for any part of the measurement period
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to remove the term ‘overlaps’ from the denominator exclusion and replace with plain language for clarity and consistency in implementation.

D.58 Adherence to Antipsychotic Medications For Individuals with Schizophrenia

Category	Description
NQF # / eCQM NQF #:	1879 / N/A
Quality#:	383
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of individuals at least 18 years of age as of the beginning of the performance period with schizophrenia or schizoaffective disorder who had at least two prescriptions filled for any antipsychotic medication and who had a Proportion of Days Covered (PDC) of at least 0.8 for antipsychotic medications during the performance period.
Substantive Change:	**Updated denominator criteria: Added:** Filled at least two prescriptions for any of the qualifying antipsychotic medications listed under "Denominator Note" during the performance period **Added:** outpatient mental health encounters ocurring at federally qualified health centers for the 'Patient encounter during the performance period determination Outpatient Setting Option 1'. **Updated denominator note: Added:** lumateperone to 'Atypical Antipsychotic Medications'
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Intermediate Outcome
Rationale:	We propose to add denominator criteria to ensure that only those patients who fill at least two prescriptions for any of the qualifying antipsychotic medications are included within the denominator eligible patient population as this aligns with the intent of the measure and protects clinicians from being held accountable for non-established patients. We propose to add outpatient mental health encounters ocurring at FQHCs as denominator eligible as schizophrenia may be diagnosed at these encounters. This revision is not a reflection of any policy update and was made to allow those clinicians who bill exclusively through a FQHC to track their performance on the measure. This payment method is still not eligible for payment adjustments under MIPS. We propose to update the 'Atypical Antipsychotic Medications' to align with current Food and Drug Administration (FDA) approved treatments for adults with schizophrenia.

D.59 Follow-Up After Hospitalization for Mental Illness (FUH)

Category	Description
NQF # / eCQM NQF #:	0576 / N/A
Quality#:	391
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	The percentage of discharges for patients 6 years of age and older who were hospitalized for treatment of selected mental illness or intentional self-harm diagnoses and who had a follow-up visit with a mental health practitioner. Two rates are submitted: • The percentage of discharges for which the patient received follow-up within 30 days after discharge. • The percentage of discharges for which the patient received follow-up within 7 days after discharge.
Substantive Change:	**The measure description is revised to read:** The percentage of discharges for patients 6 years of age and older who were hospitalized for treatment of selected mental illness or intentional self-harm diagnoses and who had a follow-up visit with a mental health provider. Two rates are submitted: • The percentage of discharges for which the patient received follow-up within 30 days after discharge • The percentage of discharges for which the patient received follow-up within 7 days after discharge
Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to revise the description to utilize the term provider in place of practitioner for alignment within the specification.

D.60 Lung Cancer Reporting (Biopsy/Cytology Specimens)

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	395
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	Medicare Part B Claims Measure Specifications | MIPS CQMs Specifications
Current Measure Description:	Pathology reports based on biopsy and/or cytology specimens with a diagnosis of primary non-small cell lung cancer classified into specific histologic type or classified as non-small cell lung cancer not otherwise specified (NSCLC-NOS) with an explanation included in the pathology report.
Substantive Change:	**The measure description is revised to read: For all collection types:** Pathology reports based on lung biopsy and/or cytology specimens with a diagnosis of primary non-small cell lung cancer classified into specific histologic type following the International Association for the Study of Lung Cancer (IASLC) guidance or classified as non-small cell lung cancer not otherwise specified (NSCLC-NOS) with an explanation included in the pathology report. **The measure numerator is revised to read: For all collection types:** Lung biopsy and cytology specimen reports with a diagnosis of primary non-small cell lung cancer classified into specific histologic type following IASLC guidance (see below) (including but not limited to squamous cell carcinoma or adenocarcinoma) OR classified as NSCLC-NOS with an explanation included in the pathology report IASLC Guidance: The IASLC recommends the following regarding terminology for small biopsy and cytology specimens: 1. Do not use the term “large cell carcinoma” 2. Do not use the term “AIS (adenocarcinoma in situ)” or “MIA (minimally invasive adenocarcinoma)”—if a noninvasive pattern is present in a small biopsy, the term “lepidic growth” should be used instead 3. Do not use the term “BAC (bronchioloalveolar carcinoma)” All three recommendations must be followed in order for a case to be considered Met (ie if any one of these terms is present, the case is Not Met) **The measure numerator options are revised to read: For all collection types:** **Performance Met:** Primary non-small cell lung cancer lung biopsy and cytology specimen report documents classification into specific histologic type following IASLC guidance OR classified as NSCLC- NOS with an explanation **Denominator Exception:** Documentation of medical reason(s) for not including the histological type OR NSCLC-NOS classification with an explanation (e.g. Specimen insufficient or non-diagnostic, specimen does not contain cancer, or other documented medical reasons) **Performance Not Met:** Primary non-small cell lung cancer lung biopsy and cytology specimen report does not document classification into specific histologic type OR histologic type does not follow IASLC guidance OR is classified as NSCLC-NOS but without an explanation
Steward:	College of American Pathologists
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to revise the measure description to add clarity in alignment with the measure intent. We propose to update the numerator and numerator options to add guidance regarding what phrases should be avoided within the pathology reports to align with IASLC guidance and to clarify what is acceptable for numerator compliance.

D.61 Lung Cancer Reporting (Resection Specimens)

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	396
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	Medicare Part B Claims Measure Specifications | MIPS CQMs Specifications
Current Measure Description:	Pathology reports based on resection specimens with a diagnosis of primary lung carcinoma that include the pT category, pN category and for non-small cell lung cancer (NSCLC), histologic type.
Substantive Change:	**The measure description is revised to read: For all collection types:** Pathology reports based on lung resection specimens with a diagnosis of primary lung carcinoma that include the pT category, pN category and for non-small cell lung cancer (NSCLC), histologic type.
Steward:	College of American Pathologists
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to revise the measure description to include the term ‘lung’ for clarity and alignment within the specification.

D.62 Melanoma Reporting

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	397
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	Medicare Part B Claims Measure Specifications | MIPS CQMs Specifications
Current Measure Description:	Pathology reports for primary malignant cutaneous melanoma that include the pT category and a statement on thickness, ulceration and mitotic rate.
Substantive Change:	**The measure description is revised to read: For all collection types:** Pathology reports for primary malignant cutaneous melanoma that include the pT category, thickness, ulceration and mitotic rate, peripheral and deep margin status and presence or absence of microsatellitosis for invasive tumors. **The measure instructions are revised to read: For all collection types:** This measure is to be submitted each time a patient's pathology report addresses specimens with a diagnosis of malignant cutaneous melanoma; however, only one quality-data code (QDC) per date of service for a patient is required. In instances where multiple specimens from different/unique lesions are submitted and resulted in a single report, each eligible specimen must be Met in order for the case to be considered Met (Denominator Exclusions and Denominator Exceptions are not considered eligible specimens). If any eligible specimen is Not Met, the quality data code for Not Met should be submitted for this report. This measure may be submitted by Merit-based Incentive Payment System (MIPS) eligible clinicians who perform the quality actions described in the measure based on the services provided and the measure-specific denominator coding. **The measure numerator is revised to read: For all collection types:** Pathology reports for primary malignant cutaneous melanoma that include the pT category thickness, ulceration and mitotic rate, peripheral and deep margin status and presence or absence of microsatellitosis for invasive tumors **The measure numerator options are revised to read: For all collection types:** **Performance Met:** Pathology report includes the pT Category, thickness, ulceration and mitotic rate, peripheral and deep margin status and presence or absence of microsatellitosis for invasive tumors **Denominator Exception:** Documentation of medical reason(s) for not including pT Category,thickness, ulceration and mitotic rate, peripheral and deep margin status and presence or absence of microsatellitosis for invasive tumors (e.g., negative skin biopsies, insufficient tissue, or other documented medical reasons) **Performance Not Met:** Pathology report does not include the pT Category, thickness, ulceration and mitotic rate, peripheral and deep margin status and presence or absence of microsatellitosis for invasive tumors
Steward:	College of American Pathologists
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to update the measure for all collection types to require to new data elements for numerator compliance to align with updated American Academy of Dermatology (AAD) guideline recommendations. This revision is reflected in the proposed description, numerator, and numerator options language revisions to ensure the measure is aligned with the current clinical recommendations. Additionally, we propose to revise the instructions for all collection types to clarify how to handle instances where there are multiple samples included within one report.

D.63 One-Time Screening for Hepatitis C Virus (HCV) for Patients at Risk

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	400
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 18 years and older with one or more of the following: a history of injection drug use, receipt of a blood transfusion prior to 1992, receiving maintenance hemodialysis, OR birthdate in the years 1945-1965 who received one-time screening for hepatitis C virus (HCV) infection.
Substantive Change:	**The measure title is revised from 'One-Time Screening for Hepatitis C Virus (HCV) for Patients at Risk' to:** One-Time Screening for Hepatitis C Virus (HCV) for all Patients. **The measure description is revised to read:** Percentage of patients age >= 18 years who received one-time screening for hepatitis C virus (HCV) infection **The measure instructions are revised to read:** This measure is to be submitted a minimum of once per performance period for all patients > =18 years of age seen during the performance period AND who were seen twice for any visits or who had at least one preventive visit within the 12-month performance period. This measure may be submitted by Merit-based Incentive Payment System (MIPS) eligible clinicians who perform the quality actions described in the measure based on the services provided and the measure-specific denominator coding. **The measure denominator is revised to read:** All patients >= 18 years of age who had at least one preventive visit OR were seen at least twice within the 12-month reporting period. **Updated denominator criteria: Removed:** Patients who were born in the years 1945 to 1965 OR History of receiving blood transfusions prior to 1992 OR Receiving maintenance hemodialysis (CPT) OR History of injection drug use
Steward:	American Gastroenterological Association
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to update this measure to align with current clinical recommendations which no longer require at-risk conditions for HCV screening. The measure will be updated to require one-time HCV screening for all patients aged 18 years and older, in accordance with current clinical recommendations. We propose to revise the measure title, description, instructions, and denominator to reflect the removal of the at-risk criteria. Additionally, we propose to remove the at-risk criteria from the denominator criteria. In the event the proposed substantive change(s) are finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark will be used for scoring.

D.64 Clinical Outcome Post Endovascular Stroke Treatment

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	409
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients with a mRs score of 0 to 2 at 90 days following endovascular stroke intervention.
Substantive Change:	**The measure description is revised to read:** Percentage of patients with a Modified Rankin Score (mRS) score of 0 to 2 at 90 days following endovascular stroke intervention. **Updated instructions: Revised:** This measure is to be submitted a minimum of once per performance period for patients undergoing an endovascular stroke intervention procedure during the performance period. This measure is intended to reflect the success of the endovascular intervention inclusive of appropriate patient selection. This measure may be submitted by Merit-based Incentive Payment System (MIPS) eligible clinicians who perform the quality actions described in the measure based on the services provided and the measure- specific denominator coding. Include only patients that have cerebrovascular accidents through September 18 of the performance period. This will allow the evaluation of clinical outcome 90 days after the cerebrovascular accident within the performance period. Assessment of the mRS between 75 and 105 days is considered acceptable for reporting this measure. **Added:** Unique to this measure is the Minimum Process of Care Performance Threshold Requirement. This measure based threshold requires that at least 90% of all eligible patients have an mRS score assessed 90 days following endovascular stroke intervention. Therefore, if the performance rate for Submission Criteria 1 is below 90%, the MIPS eligible clinician would not be able to meet the denominator of the Submission Criteria 2 and this measure CANNOT BE SUBMITTED. CMS anticipates the performance rate for Submission Criteria 2 will be calculated using 100% of patients that met performance in Submission Criteria 1. This measure contains two submission criteria which together measure the outcome following an endovascular stroke intervention. Submission Criteria 1 evaluates whether an appropriate percentage of patients received the applicable clinical follow-up assessment using mRS. Submission Criteria 2 evaluates the rate of achieving an mRS score of 0 to 2 in those patients for whom an mRS score was obtained (during clinical follow-up, Submission Criteria 1). The rate of achieving an mRS of 0 to 2 at 90 days (Submission Criteria 2) can be used to compare this measure to performance prior to the 2021 performance year, when the measure had a single performance rate. For accountability reporting in the CMS MIPS program, the rate for Submission Criteria 2 is used for performance. For the purposes of submitting this measure Data Completeness has been determined in Submission Criteria 1. THERE ARE TWO SUBMISSION CRITERIA FOR THIS MEASURE: 1) Percentage of patients with mRS score assessed at 90 days following endovascular stroke intervention AND 2) Percentage of patients with mRS score of 0 to 2 assessed at 90 days following endovascular stroke intervention **Updated denominator: Revised:** **Submission Criteria 1:** Percentage of patients with clinical follow-up and mRS score assessed at 90 days following endovascular stroke intervention. **Denominator (Submission Criteria 1):** All patients with CVA undergoing endovascular stroke treatment. **Submission Criteria 2**: Percentage of patients with Performance Met for Submission Criteria 1 with an mRS score of 0 to 2 assessed at 90 days following endovascular stroke intervention therapy. **Denominator (Submission Criteria 2):** Patients with Performance Met for Submission Criteria 1 who received clinical follow-up and mRS score assessed at 90 days following endovascular stroke intervention therapy. **Updated denominator criteria: Revised:** Denominator (Submission Criteria 1) • All patients • Diagnosis for ischemic stroke • Patient procedure (endovascular stroke treatment) Denominator (Submission Criteria 2) • Minimum Process of Care Threshold Requirement: At least 90% of all eligible patients had an mRS score assessed at 90 days following endovascular stroke intervention (GXXXX submitted for Submission Criteria 1) **Updated numerator: Revised:** **Numerator (Submission Criteria 1):** Patients who received clinical follow-up and mRS score assessed at 90 days. **Numerator (Submission Criteria 2):** Patients with Performance Met for Submission Criteria 1 with 90 day mRS score of 0-2. **Updated numerator note: Added:** For the purposes of submitting this measure Data Completeness has been determined in Submission Criteria 1. The performance rate calculated for Submission Criteria 2 of this measure is calculated using the subset of patients identified in the Performance Met Numerator Option of Submission Criteria 1 (GXXXX). **Updated numerator options:** **Added:** Numerator Options (Submission Criteria 1): **Performance Met:** Clinical follow-up and mRS score assessed at 90 days following endovascular stroke intervention **Performance Not Met:** Clinical follow-up and mRS score not assessed at 90 days following endovascular stroke intervention **Revised:** Numerator Options (Submission Criteria 2): **Performance Met:** Patients with 90 day mRS score of 0 to 2 **Performance Not Met:** Patients with 90 day mRS score greater than 2

Category	Description
Steward:	Society of Interventional Radiology
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We propose an update to the measure that includes a new submission criterion to assess whether a clinical follow-up and mRS score is being completed post endovascular stroke treatment. Additionally, this new submission criterion will ensure that the denominator eligible patient population being assessed for an mRS score of 0 – 2 is representative of the assessed population post treatment to determine the degree of disability or dependence in daily activities for patient suffering stroke. We propose to add an additional denominator criterion for submission criteria 2 that requires a 'Minimum Process of Care Threshold Requirement' of 90%. This ensures that patients are receiving post treatment follow-ups as a standard of care being and assessed for good outcomes following a stroke. This update is reflected with the restructure of multiple components of the specification to ensure clarity on the implantation of the measure change. We also propose to update the measure instructions to clarify what timeframe constitutes the 90-day follow-up and to align with the revisions to add a submission criterion. In the event the proposed substantive change(s) are finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark will be used for scoring.

D.65 Door to Puncture Time for Endovascular Stroke Treatment

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	413
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients undergoing endovascular stroke treatment who have a door to puncture time of less than two hours.
Substantive Change:	**The measure description is revised to read:** Percentage of patients undergoing endovascular stroke treatment who have a door to puncture time of 90 minutes or less **The measure numerator is revised to read:** Patients with CVA undergoing endovascular stroke treatment who have a door to puncture time of less than 90 minutes **Updated numerator options: Revised:** To align with door to puncture time of 90 minutes or less.
Steward:	Society of Interventional Radiology
High Priority Measure:	Yes
Measure Type:	Intermediate Outcome
Rationale:	We propose to revise the measure to reflect an updated door to puncture time of 90 minutes or less to more closely align with Target Stroke (a national initiative organized by the American Heart Association/American Stroke Association) which has an initial goal of achieving a door-to-puncture time of no more than 60 minutes for at least 50 percent of acute ischemic stroke patients. Additionally, The Joint Commission has set an ambitious goal of 80 percent of patients treated within 1 hour for primary stroke centers. This revision will drive quality care for this patient population as every delay in time from onset to arterial puncture will result in significant decreases in likelihood of a good outcome.

D.66 Emergency Medicine: Emergency Department Utilization of CT for Minor Blunt Head Trauma for Patients Aged 2 Through 17 Years

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	416
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	Medicare Part B Claims Measure Specifications | MIPS CQMs Specifications
Current Measure Description:	Percentage of emergency department visits for patients aged 2 through 17 years who presented with a minor blunt head trauma who had a head CT for trauma ordered by an emergency care provider who are classified as low risk according to the Pediatric Emergency Care Applied Research Network (PECARN) prediction rules for traumatic brain injury.
Substantive Change:	**Updated numerator options: For all collection types: Added:** **Performance Met:** Pediatric patient with minor blunt head trauma and PECARN prediction criteria are not assessed.
Steward:	American College of Emergency Physicians
High Priority Measure:	Yes
Measure Type:	Efficiency
Rationale:	We propose to add a Performance Met numerator option to this measure to ensure those patients without a documented PECARN prediction score are correctly submitted as a Performance Met. As the PECARN prediction should be assessed for all patients seen for minor blunt head trauma, those patients without a documented PECARN predication score would not meet the intent of the measure.

D.67 Osteoporosis Management in Women Who Had a Fracture

Category	Description
NQF # / eCQM NQF #:	0053 / N/A
Quality#:	418
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications | MIPS CQMs Specifications
Current Measure Description:	The percentage of women age 50-85 who suffered a fracture in the six months prior to the performance period through June 30 of the performance period and who either had a bone mineral density test or received a prescription for a drug to treat osteoporosis in the six months after the fracture.
Substantive Change:	**The measure description is revised to read: For all collection types:** The percentage of women 50–85 years of age who suffered a fracture and who had either a bone mineral density (BMD) test or prescription for a drug to treat osteoporosis in the six months after the fracture. **Updated denominator note: For the MIPS CQMs Specifications collection type: Added:** To assess the age for exclusions, the patient's age at the end of the measurement period should be used. **Updated denominator exclusion: For all collection types:** **Added:** Patients who receive palliative care services any time during the intake period through the end of the measurement year **Added:** Donzepezil-memantine to Dementia medication list. **Updated numerator note: For the Medicare Part B Claims Measure Specifications collection type: Added:** To assess the age for exclusions, the patient's age on the date of the encounter should be used.
Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to update the description for alignment with other programs. We propose that the denominator exclusion language be updated to add an exclusion for patients receiving palliative care, as this patient population is not appropriate for the clinical quality action being assessed. Additionally, the medications were update for the Dementia medication list to include Donzepezil-memantine as this is an applicable medication for the purposes of the denominator exclusion. We propose to revise the denominator note for the MIPS CQMs Specifications collection type and the numerator note for the Medicare Part B Claims Measure Specifications collection type to clarify the timing for those exclusions that have an age-related component.

D.68 Photodocumentation of Cecal Intubation

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	425
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	Medicare Part B Claims Measure Specifications | MIPS CQMs Specifications
Current Measure Description:	The rate of screening and surveillance colonoscopies for which photodocumentation of at least two landmarks of cecal intubation is performed to establish a complete examination.
Substantive Change:	**Modified collection type:** MIPS CQM Specifications collection type
Steward:	American Society for Gastrointestinal Endoscopy
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to remove the Medicare Part B Claims Measure Specifications collection type as it has reached the end of the topped-out lifecycle as finalized in 82 FR 53640. However, the benchmarking data continues to show a gap for the MIPS CQMs Specifications collection type, as such, the measure will be retained for this collection type.

D.69 Prevention of Post-Operative Nausea and Vomiting (PONV) – Combination Therapy

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	430
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients, aged 18 years and older, who undergo a procedure under an inhalational general anesthetic, AND who have three or more risk factors for post-operative nausea and vomiting (PONV), who receive combination therapy consisting of at least two prophylactic pharmacologic antiemetic agents of different classes preoperatively and/or intraoperatively.
Substantive Change:	**Updated numerator definition: Added:** Propofol for induction and maintenance of anesthesia
Steward:	American Society of Anesthesiologists
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to revise the numerator definition to add propofol as this is a commonly used prophylactic antiemetic and aligns with current clinical recommendations.

D.70 Statin Therapy for the Prevention and Treatment of Cardiovascular Disease

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	438
CMS eCQM ID:	CMS347v5
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications | CMS Web Interface Measure Specifications | MIPS CQMs Specifications
Current Measure Description:	Percentage of the following patients - all considered at high risk of cardiovascular events - who were prescribed or were on statin therapy during the measurement period: • Adults aged ≥ 21 years who were previously diagnosed with or currently have an active diagnosis of clinical atherosclerotic cardiovascular disease (ASCVD); OR • Adults aged ≥ 21 years who have ever had a fasting or direct low-density lipoprotein cholesterol (LDL-C) level ≥ 190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial or pure hypercholesterolemia; OR • Adults aged 40-75 years with a diagnosis of diabetes with a fasting or direct LDL-C level of 70-189 mg/dL.
Substantive Change:	**The measure description is revised to read: For all collection types:** Percentage of the following patients - all considered at high risk of cardiovascular events - who were prescribed or were on statin therapy during the measurement period: *All patients who were previously diagnosed with or currently have an active diagnosis of clinical atherosclerotic cardiovascular disease (ASCVD), including an ASCVD procedure; OR *Patients aged >= 20 years who have ever had a low-density lipoprotein cholesterol (LDL-C) level >= 190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia; OR *Patients aged 40-75 years with a diagnosis of diabetes **The measure definition is revised to read: For the eCQM Specifications collection type:** Clinical atherosclerotic cardiovascular disease (ASCVD) includes: * Acute coronary syndromes * History of myocardial infarction * Stable or unstable angina * Coronary or other arterial revascularization * Stroke or transient ischemic attack (TIA) * Peripheral arterial disease of atherosclerotic origin Lipoprotein density cholesterol (LDL-C) result: * A fasting or non-fasting LDL-C laboratory test performed and direct or calculated test result documented in the medical record. When both direct and calculated test results are available on the same day, the direct LDL-C test result should be used. Statin therapy: * Administration of one or more of a group of medications that are used to lower plasma lipoprotein levels in the treatment of hyperlipoproteinemia. Statin Medication Therapy List (NOTE: List does NOT include dosage): [Generic name] (Brand or trade name) and (-) Medication type, if applicable: [Atorvastatin] (Lipitor) - Statin [Fluvastatin] (Lescol XL or Lescol) - Statin [Lovastatin (Mevinolin)](Mevacor or Altoprev) -Statin [Pitavastatin] (Livalo or Zypitamag or Nikita) - Statin [Pravastatin Sodium] (Pravachol) - Statin [Rosuvastatin Calcium] (Crestor) - Statin [Simvastatin] (Zocor) - Statin [Amlodipine Besylate/Atorvastatin Calcium] (Caduet) – Fixed Dose Combination [Ezetimibe/Simvastatin] (Vytorin) – Fixed Dose Combination Statin-Associated Muscle Symptoms (SAMS) – The 2018 ACC/AHA/MS Guideline (Grundy et al., 2019) includes the following SAMS: myalgias, myositis, myopathy, or statin-associated autoimmune myopathy. Patients who experience significant or repeated statin-associated muscle symptoms may prefer not to take or continue statin therapy and therefore may be removed from the denominator. **Updated denominator exception:** **For the eCQM Specifications CMS Web Interface Measure Specifications collection types:** **Revised:** Patients with statin-associated muscle symptoms or an allergy to statin medication **Removed:** Patients with diabetes who have the most recent fasting or direct LDL-C laboratory test result < 70 mg/dL and are not taking statin therapy **For the MIPS CQM Specifications collection type:** **Revised:** Documentation of medical reason(s) for not currently being a statin therapy user or receiving an order (prescription) for statin therapy (e.g., patients with statin-associated muscle symptoms or an allergy to statin medication therapy, patients who are receiving palliative or hospice care, patients with active liver disease or hepatic disease or insufficiency, and patients with end stage renal disease [ESRD]) **Removed:** Submisstion Criteria Three: Documentation of patients with diabetes who have a most recent fasting or direct LDL-C laboratory test result < 70 mg/dL and are not taking statin therapy **Updated denominator exclusion: For all collection types: Added:** Timeframe of 'at any time during the measurement period' to all denominator exclusions. **The measure guidance is revised to read: For the eCQM Specifications collection type:** Initial Population Guidance: The initial population covers three distinct populations. Use the following process to prevent counting patients more than once. Initial Population 1: All patients who were previously diagnosed with or currently have an active diagnosis of clinical ASCVD, including an ASCVD procedure, before the end of the measurement period. -If YES, meets Initial Population 1 risk category

Category	Description
	-If NO, screen for next risk category Initial Population 2: Patients aged >= 20 years at the beginning of the measurement period who have ever had a laboratory test result of LDL-C >= 190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia -If YES, meets Initial Population 2 risk category -If NO, screen for next risk category Initial Population 3: Patients aged 40 to 75 years at the beginning of the measurement period with an active diagnosis of Type 1 or Type 2 diabetes at any time during the measurement period -If YES, meets Initial Population 3 risk category -If NO, patient does NOT meet Initial Population criteria and is NOT eligible for measure inclusion Initial Population Guidance for Encounter: -In order for the patient to be included in the Initial Population, the patient must have ONE initial population-eligible visit, defined as follows: outpatient visit, initial or established office visit, face-to-face interaction, preventive care services, or annual wellness visit. LDL-C Laboratory test result options: The measure can be reported for all patients with a documented LDL-C level recorded as follows: To meet Initial Population 1: There is no LDL-C result required. To meet Initial Population 2: If a patient has ANY previous laboratory result of LDL-C >= 190 mg/dL, report the highest value >= 190 mg/dL. To meet Initial Population 3: There is no LDL-C result required. Numerator instructions and guidance: -Current statin therapy use must be documented in the patient's current medication list or ordered during the measurement period. -ONLY statin therapy meets the measure Numerator criteria (NOT other cholesterol lowering medications). -Prescription or order does NOT need to be linked to an encounter or visit; it may be called to the pharmacy. -Statin medication "samples" provided to patients can be documented as "current statin therapy" if documented in the medication list in health/medical record. -Patients who meet the denominator criteria for inclusion, but are not prescribed or using statin therapy, will NOT meet performance for this measure unless they have an allowable denominator exception. Patients with an allowable denominator exception should be removed from the denominator of the measure and reported as a valid exception. -There is only one performance rate calculated for this measure: the weighted average of the three populations. -Adherence to statin therapy is not calculated in this measure. -It may not be appropriate to prescribe statin therapy for some patients (see exceptions and exclusions for the complete list) Intensity of statin therapy in primary and secondary prevention: The expert panel of the 2018 ACC/AHA/MS Guidelines (Grundy et al., 2019) defines recommended intensity of statin therapy on the basis of the average expected LDL-C response to specific statin and dose. Although intensity of statin therapy is important in managing cholesterol, this measure assesses prescription of ANY statin therapy, irrespective of intensity. Assessment of appropriate intensity and dosage documentation added too much complexity to allow inclusion of statin therapy intensity in the measure at this time. Lifestyle modification coaching: A healthy lifestyle is important for the prevention of cardiovascular disease. However, lifestyle modification monitoring and documentation added too much complexity to allow its inclusion in the measure at this time. This eCQM is a patient-based measure. This version of the eCQM uses QDM version 5.5. Please refer to the eCQI resource center (https://ecqi.healthit.gov/qdm) for more information on the QDM. **Updated guidance/denominator confirmation: For the CMS Web Interface Measure Specifications collection type: Revised:** Language within all of the guidance/confirmation sections was updated to reflect the changes to the initial patient poulations. **The measure initial patient population is revised to read: For the eCQM Specifications and CMS Web Interface Measure Specifications collection types:** Population 1: All patients who were previously diagnosed with or currently have an active diagnosis of clinical ASCVD, including an ASCVD procedure Population 2: Patients aged >= 20 years at the beginning of the measurement period who have ever had a laboratory result of LDL-C >=190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia Population 3: Patients aged 40 to 75 years at the beginning of the measurement period with Type 1 or Type 2 diabetes **Updated denominator:** **For the eCQMs Specifications collection type: Revised:** Equals Initial Population **For the CMS Web Interface Measure Specifications collection types: Revised:** Population 1: All patients who were previously diagnosed with or currently have an active diagnosis of ASCVD, including an ASCVD procedure, Population 2: Patients aged >= 20 years at the beginning of the measurement period who have ever had laboratory result of LDL-C >= 190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia Population 3: Patients aged 40 to 75 years at the beginning of the measurement period with Type 1 or Type 2 diabetes **The measure rate aggregation is revised to read: For the eCQM Specifications collection type:** This measure is intended to have one reporting rate, which aggregates the following populations into a single performance rate for reporting purposes:

Category	Description
	Population 1: All patients who were previously diagnosed with or currently have an active diagnosis of clinical ASCVD, including an ASCVD procedure, before the end of the measurement period. Population 2: Patients aged >= 20 years at the beginning of the measurement period who have ever had a laboratory test result of LDL-C >= 190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia. Population 3: Patients aged 40 to 75 years at the beginning of the measurement period with an active diagnosis of Type 1 or Type 2 diabetes at any time during the measurement period. For the purposes of this measure, a single performance rate can be calculated as follows: Performance Rate = (Numerator 1 + Numerator 2 +Numerator 3)/ [(Denominator 1 - Denominator Exclusions 1- Denominator Exceptions 1) + (Denominator 2 - Denominator Exclusions 2 - Denominator Exceptions 2) +(Denominator 3 - Denominator Exclusions 3 - Denominator Exceptions 3)] **Updated definition: For the MIPS CQMs Specifications collection type:** **Revised:** Lipoprotein Density Cholesterol (LDL-C) result – A fasting or non-fasting LDL-C laboratory test performed and direct or calculated test result documented in the medical record. When both direct and calculated test results are available, the direct LDL-C test result should be used. **Added:** - Statin-Associated Muscle Symptoms (SAMS) – The 2018 ACC/AHA/MS Guideline (Grundy et al., 2019) includes the following SAMS: myalgias, myositis, myopathy, or statin-associated autoimmune myopathy. Patients who experience significant or repeated statin-associated muscle symptoms may prefer not to take or continue statin therapy and therefore may be removed from the denominator. The following ICD-10-CM codes are included in the Denominator Exception (G9781) to define SAMS: G72.0, G72.9, M60.9, M79.10. - Zypitamag and Nikita to statin medication therapy list. **Revised:** Caduet and Vytorin to 'Fixed Dose Combination'. **For the CMS Web Interface Measure Specifications collection type:** **Revised:** Statin therapy - Administration of one or more of a group of medications that are used to lower plasma lipoprotein levels in the treatment of hyperlipoproteinemia. Table 1 - Statin Medication Therapy List (NOTE: List does NOT include dosage): [Generic name] (Brand or trade name) and (-) Medication type, if applicable: [Atorvastatin] (Lipitor) - Statin [Fluvastatin] (Lescol XL or Lescol) - Statin [Lovastatin (Mevinolin)](Mevacor or Altoprev) -Statin [Pitavastatin] (Livalo or Zypitamag or Nikita) - Statin [Pravastatin Sodium] (Pravachol) - Statin [Rosuvastatin Calcium] (Crestor) - Statin [Simvastatin] (Zocor) - Statin [Amlodipine Besylate/Atorvastatin Calcium] (Caduet) – Fixed Dose Combination [Ezetimibe/Simvastatin] (Vytorin) – Fixed Dose Combination Statin-Associated Muscle Symptoms (SAMS) – The 2018 ACC/AHA/MS Guideline (Grundy et al., 2019) includes the following SAMS: myalgias, myositis, myopathy, or statin-associated autoimmune myopathy. Patients who experience significant or repeated statin-associated muscle symptoms may prefer not to take or continue statin therapy and therefore may be removed from the denominator. Lipoprotein Density Cholesterol (LDL-C) result - A fasting or non-fasting LDL-C laboratory test performed and direct or calculated test result documented in the medical record. When both direct and calculated test results are available on the same day, the direct LDL-C test result should be used. **Updated denominator: For the MIPS CQMs Specifications collection type: Revised:** Submission Criteria: 1) All patients who were previously diagnosed with or currently have an active diagnosis of clinical ASCVD, including an ASCVD procedure. 2) Patients aged ≥ 20 years at the beginning of the measurement period who have ever had a laboratory result of LDL-C ≥ 190 mg/dL or were previously diagnosed with or currently have an active diagnosis of familial hypercholesterolemia. 3) Patients aged 40 to 75 years at the beginning of the measurement period with Type 1 or Type 2 diabetes. **Updated denominator criteria is revised to read: For the MIPS CQMs Specifications collection type:** **Updated:** Submission Criteria 1: **Revised:** - All patients, regardless of age - Previously diagnosed or have an active diagnosis of clinical ASCVD, including ASCVD procedure. Submissiont Criteria 2: **Revised:** - Patient aged ≥ 20 years at the beginning of the measurement period - Any LDL-C laboratory test result ≥ 190 mg/dL - History of or active diagnosis of familial hypercholesterolemia Submission Criteria 3: **Removed:** Patient’s highest fasting or direct LDL-C laboratory test result in the measurement period or two years prior to the beginning of the measurement period is 70 –189 mg/dL **Updated numerator guidance: For the CMS Web Interface Measure Specifications collection type: Revised:** These drugs may be used as a Denominator Exception if present in the patient's record accompanied by an appropriate conditional reason why the patient isn't taking the drug (e.g. statin-associated muscle symptoms or an allergy to statin medication)

Category	Description
	- Documentation of statin therapy prescribed or being taken during the measurement period can be completed during a telehealth encounter.
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to update the measure to align with 2018 American College of Cardiology (ACC)/American Heart Association (AHA) cholesterol guidelines and recommendations. These revisions are reflected in multiple components of the measure specifications for all collection types. The measure definitions and/or guidance sections for all collection types were revised to align with and add clarity to the revisions within the measure to align with current clinical guidelines and recommendations. We propose to remove the denominator exception found in submission criteria 3 for patients with diabetes not taking statin therapy who have the most recent fasting or direct LDL-C laboratory test result < 70 mg/dL as it is no longer applicable as the denominator criteria was revised to remove LDL-C laboratory testing criteria. Additionally, we propse to add statin-associate muscle symptoms to the denominator exception for documentation of medical reason(s) for all submission criteria and all collection types as it would not be appropriate to prescribe statin therapy for this patient population. We proposed to update the numerator guidance for the CMS Web Interface Measure Specifications collection type to allow for the documentation of statin therapies prescribed or taken during the measurement period to be completed during a telehealth encounter as this aligns with the intent of the measure and clinical workflow. We propose to revise the statin medication therapy list for all collection types to reflect current clinical guidelines and recommendations. Additionally, we propose to update the denominator exclusions for all submission criterias and collection types to include a timing component in order to clarify when it must occur and for consistency in implementation.

D.71 Appropriate Workup Prior to Endometrial Ablation

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	448
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Communication and Care Coordination
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients, aged 18 years and older, who undergo endometrial sampling or hysteroscopy with biopsy and results are documented before undergoing an endometrial ablation.
Substantive Change:	**The measure denominator definition is revised to read:** Index Date –Date of first endometrial ablation during the performance period. **Updated denominator exclusion: Revised:** Patients who had an endometrial ablation procedure during the 12 months prior to the index date (exclusive of the index date). **The measure numerator is revised to read:** Patients who received endometrial sampling or hysteroscopy with biopsy and results were documented during the 12 months prior to the index date (exclusive of the index date) of the endometrial ablation. **The measure numerator options are revised to read:** **Performance Met:** Endometrial sampling or hysteroscopy with biopsy and results documented during the 12 months prior to the index date (exclusive of the index date) of the endometrial ablation **Performance Not Met:** Endometrial sampling or hysteroscopy with biopsy and results not documented during the 12 months prior to the index date (exclusive of the index date) of the endometrial ablation
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to revise the measure denominator definition to reference the first endometrial ablation as the index date. This change aligns with the measure intent as the timing of the quality action should be assessed based on the date of the endometrial ablation procedure. We propose to revise the denominator exclusion for clarity in timing of previous endometrial ablations that may suffice for this exclusion. Additionally, we propose to revise the numerator and numerator options for clarity in timing of the quality action as well as to align with the revised definition for Index Date to ensure alignment with measure intent.

D.72 Appropriate Treatment for Patients with Stage I (T1c) - III HER2 Positive Breast Cancer

Category	Description
NQF # / eCQM NQF #:	1858 / N/A
Quality#:	450
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of female patients aged 18 to 70 with stage I (T1c) - III HER2 positive breast cancer for whom appropriate treatment is initiated.
Substantive Change:	**Updated denominator criteria: Added:** exclusion for telehealth
Steward:	American Society of Clinical Oncology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to add an exclusion for telehealth as adjuvant therapy would require an in-person encounter and this will ensure only the appropriate patients are being pulled into the denominator eligible patient population.

D.73 Back Pain After Lumbar Discectomy/Laminectomy

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	459
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	For patients 18 years of age or older who had a lumbar discectomy/laminectomy procedure, back pain is rated by the patients as less than or equal to 3.0 OR an improvement of 5.0 points or greater on the Visual Analog Scale (VAS) Pain scale at three months (6 to 20 weeks) postoperatively.
Substantive Change:	**Updated numerator definition: Revised:** Preoperative Assessment VAS Pain - A preoperative VAS pain scale score can be obtained from the patient any time up to three months preoperatively, inclusive of the date of the procedure. Assessment scores obtained via a telephone screening or more than three months before the procedure will not be used for measure calculation. If more than one preoperative VAS was obtained, use the VAS that is the most recent and prior to the procedure. Postoperative Assessment VAS Pain - A postoperative VAS pain scale score can be obtained from the patient at three months (6 - 20 weeks) after the date of procedure. Assessment scores obtained via a telephone screening or prior to six weeks and after 20 weeks postoperatively will not be used for measure calculation. If more than one postoperative VAS was obtained during the six to 20 weeks following the procedure, use the most recent score obtained during the allowable timeframe.
Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale:	We propose to revise the numerator definition to clarify which assessment should be utilized if multiple assessments are administered.

D.74 Back Pain After Lumbar Fusion

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	460
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	For patients 18 years of age or older who had a lumbar fusion procedure, back pain is rated by the patient as less than or equal to 3.0 OR an improvement of 5.0 points or greater on the Visual Analog Scale (VAS) Pain scale at one year (9 to 15 months) postoperatively.
Substantive Change:	**Updated numerator definition: Revised:** Preoperative Assessment VAS Pain - A preoperative VAS pain scale score can be obtained from the patient any time up to three months preoperatively, inclusive of the date of the procedure. Assessment scores obtained via a telephone screening or more than three months before the procedure will not be used for measure calculation. If more than one preoperative VAS was obtained, use the VAS that is the most recent and prior to the procedure. Postoperative Assessment VAS Pain - A postoperative VAS pain scale score can be obtained from the patient one year (9 to 15 months) after the date of procedure. Assessment scores obtained via a telephone screening or prior to 9 months and after 15 months postoperatively will not be used for measure calculation. If more than one postoperative VAS was obtained during the 9 to 15 months following the procedure, use the most recent score obtained during the allowable timeframe.
Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale:	We propose to revise the numerator definition to clarify which assessment should be utilized if multiple assessments are administered.

D.75 Leg Pain After Lumbar Discectomy/Laminectomy

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	461
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	For patients 18 years of age or older who had a lumbar discectomy/laminectomy procedure, leg pain is rated by the patient as less than or equal to 3.0 OR an improvement of 5.0 points or greater on the VAS Pain scale at three months (6 to 20 weeks) postoperatively.
Substantive Change:	**Updated numerator definition: Revised:** Preoperative Assessment VAS Pain - A preoperative VAS pain scale score can be obtained from the patient any time up to three months pre-operatively, inclusive of the date of the procedure. Assessment scores obtained via a telephone screening or more than three months before the procedure will not be used for measure calculation. If more than one preoperative VAS was obtained, use the VAS that is the most recent and prior to the procedure. Postoperative Assessment VAS Pain - A postoperative VAS pain scale score can be obtained from the patient three months (6 to 20 weeks) after the date of the procedure. Assessment scores obtained via a telephone screening or prior to 6 weeks and after 20 weeks postoperatively will not be used for measure calculation. If more than one postoperative VAS was obtained during the six to 20 weeks following the procedure, use the most recent score obtained during the allowable timeframe.
Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale:	We propose to revise the numerator definition to clarify which assessment should be utilized if multiple assessments are administered.

D.76 Bone Density Evaluation for Patients with Prostate Cancer and Receiving Androgen Deprivation Therapy

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	462
CMS eCQM ID:	CMS645v5
National Quality Strategy Domain:	Effective Clinical Care
Current Collection Type:	eCQM Specifications
Current Measure Description:	Patients determined as having prostate cancer who are currently starting or undergoing androgen deprivation therapy (ADT), for an anticipated period of 12 months or greater and who receive an initial bone density evaluation. The bone density evaluation must be prior to the start of ADT or within 3 months of the start of ADT.
Substantive Change:	**Updated logic definitions:** **Revised:** First Androgen Deprivation Therapy' to 'Androgen Deprivation Therapy Start Date'. **Added:** 'Androgen Deprivation Therapy for Urology Care Medication Active Start Dates' and 'Androgen Deprivation Therapy for Urology Care Medication Order Start Dates.
Steward:	Oregon Urology Institute
High Priority Measure:	No
Measure Type:	Process
Rationale:	We propose to revise the logic to include order for androgen deprivation therapy as an option to meet eligibility for the initial patient population as these patients would be appropriate for inclusion to be assessed for the quality action.

D.77 Prevention of Post-Operative Vomiting (POV) – Combination Therapy (Pediatrics)

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	463
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Patient Safety
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	Percentage of patients aged 3 through 17 years, who undergo a procedure under general anesthesia in which an inhalational anesthetic is used for maintenance AND who have two or more risk factors for post-operative vomiting (POV), who receive combination therapy consisting of at least two prophylactic pharmacologic anti-emetic agents of different classes preoperatively and/or intraoperatively.
Substantive Change:	**Updated numerator definition: Added:** Propofol for induction and maintenance of anesthesia.
Steward:	American Society of Anesthesiologists
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to revise the numerator definition to add Propofol as this is a commonly used prophylactic antiemetic and aligns with current clinical recommendations.

D.78 Functional Status After Lumbar Fusion

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	469
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	For patients 18 years of age and older who had a lumbar fusion procedure, functional status is rated by the patient as less than or equal to 22 OR a change of 30 points or greater on the Oswestry Disability Index (ODI version 2.1a) at one year (9 to 15 months) postoperatively.
Substantive Change:	**The measure description is revised to read:** For patients 18 years of age and older who had a lumbar fusion procedure, functional status is rated by the patient as less than or equal to 22 OR an improvement of 30 points or greater on the Oswestry Disability Index (ODI version 2.1a) at one year (9 to 15 months) postoperatively **Updated instructions: Revised: NOTE**: This measure is a target-based measure with two ways to meet the numerator; either a postoperative ODI score that is less than or equal to 22 OR an improvement of 30 points or greater from the preoperative to postoperative score. It is expressed as a proportion or rate. Patients having received a lumbar fusion procedure who are not assessed for functional status postoperatively remain in the denominator and are considered as not meeting the target. The measure intent is that MIPS eligible clinicians will submit all denominator eligible procedures for performance calculation. **The measure numerator is revised to read:** All eligible patients whose functional status is less than or equal to 22 OR an improvement of 30 points or greater on the Oswestry Disability Index (ODI Version 2.1a) patient reported outcome tool at one year (9 to 15 months) postoperatively **Updated numerator definition: Revised:** Preoperative Assessment Oswestry Disability Index (ODI version 2.1a)- A preoperative ODI functional assessment score can be obtained from the patient any time up to three months preoperatively, inclusive of the date of the procedure. Assessment scores obtained more than three months before the procedure will not be used for measure calculation. If more than one preoperative ODI was obtained, use the ODI that is the most recent and prior to the procedure. Postoperative Assessment Oswestry Disability Index (ODI version 2.1a) - A postoperative ODI functional assessment score can be obtained from the patient one year (9 to 15 months) after the date of procedure. Assessment scores obtained prior to nine months and after fifteen months postoperatively will not be used for measure calculation. If more than one postoperative ODI was obtained during the 9 to 15 months following the procedure, use the most recent score obtained during the allowable timeframe. Functional Status Target #2 - A patient who does not meet Functional Status Target #1 is assessed both preoperatively within 3 months prior to the procedure AND postoperatively at one year (9 to 15 months) after the procedure AND the improvement is greater than or equal to 30 points. **The measure numerator note is revised to read:** NUMERATOR NOTE: It is recommended that both a preoperative and postoperative tool be administered to the patient to increase the chance that one of the numerator targets will be met. The following situations are those in which the numerator target cannot be reached and Performance Not Met M1043 or G2143 is submitted. • ODI is not administered postoperatively at one year (9 to 15 months) • Functional status is measured using a different patient reported functional status tool or ODI version • Postoperative ODI is administered less than 9 months or greater than 15 months (1 year window) • Postoperative ODI is greater than 22 and no valid preoperative ODI to measure improvement • Postoperative ODI was greater than 22 and preoperative ODI (to measure improvement) is administered beyond the three month timeframe prior to and including the date of procedure (e.g. 6 months before procedure.) **The measure numerator options are revised to read:** **Performance Met:** Functional status measured by the Oswestry Disability Index (ODI version 2.1a) at one year (9 to 15 months) postoperatively was less than or equal to 22 OR Functional status measured by the ODI version 2.1a within three months preoperatively AND at one year (9 to 15 months) postoperatively demonstrated an improvement of 30 points or greater. **Performance Not Met:** Functional status was not measured by the Oswestry Disability Index (ODI version 2.1a) at one year (9 to 15 months) postoperatively. **Performance Not Met:** Functional status measured by the Oswestry Disability Index (ODI version 2.1a) at one year (9 to 15 months) postoperatively was greater than 22 AND Functional status measured by the ODI version 2.1a within three months preoperatively AND at one year (9 to 15 months) postoperatively demonstrated an improvement of less than 30 points.
Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale:	We propose to revise the numerator definition to clarify which assessment should be utilized if multiple assessments are administered. Additionally, we propose to update multiple components of the measure specifications to remove ‘a change’ and replace it with ‘an improvement’ as the intent of the measure is to assess if there was improvement in a patient’s functional status.

D.79 Functional Status After Primary Total Knee Replacement

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	470
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	For patients age 18 and older who had a primary total knee replacement procedure, functional status is rated by the patient as greater than or equal to 37 on the Oxford Knee Score (OKS) or a 71 or greater on the KOOS, JR tool at one year (9 to 15 months) postoperatively.
Substantive Change:	**Updated numerator definition: Revised:** Measure Assessment Period (Performance Period) - The period of time following the procedure date that is in which a postoperative Oxford Knee Score (OKS) or KOOS, JR. functional status score can be obtained reflecting a one year post operative assessment with a 9 to 15 month window. If more than one postoperative assessment was obtained during the 9 to 15 month window, use the most recent score during the allowable timeframe.
Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale:	We propose to revise the numerator definition to clarify which assessment should be utilized if multiple assessments are administered.

D.80 Functional Status After Lumbar Discectomy/Laminectomy

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	471
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	For patients age 18 and older who had lumbar discectomy/laminectomy procedure, functional status is rated by the patient as less than or equal to 22 OR a change of 30 points or greater on the Oswestry Disability Index (ODI version 2.1a) at three months (6 to 20 weeks) postoperatively.
Substantive Change:	**The measure description is revised to read:** For patients age 18 and older who had lumbar discectomy/laminectomy procedure, functional status is rated by the patient as less than or equal to 22 OR an improvement of 30 points or greater on the Oswestry Disability Index (ODI version 2.1a) at three months (6 to 20 weeks) postoperatively **The measure numerator is revised to read:** All eligible patients whose functional status is less than or equal to 22 OR an improvement of 30 points or greater on the Oswestry Disability Index (ODI version 2.1a) at three months (6 to 20 weeks) postoperatively **Updated numerator definition: Revised:** Preoperative Assessment Oswestry Disability Index (ODI version 2.1a) - A preoperative ODI functional assessment score can be obtained from the patient any time up to three months preoperatively, inclusive of the date of the procedure. Assessment scores obtained more than three months before the procedure will not be used for measure calculation. If more than one preoperative ODI was obtained, use the ODI that is the most recent and prior to the procedure. Postoperative Assessment Oswestry Disability Index (ODI version 2.1a) - A postoperative ODI functional assessment score can be obtained from the patient three months (6 to 20 weeks) after the date of procedure. Assessment scores obtained prior to six weeks and after twenty weeks postoperatively will not be used for measure calculation. If more than one postoperative ODI was obtained during the 6 to 20 weeks following the procedure, use the most recent score obtained during the allowable timeframe. ODI can be obtained below or at the following link https://eprovide.mapi-trust.org/instruments/oswestry-disability-index. Functional Status Target #2 - A patient who does not meet Functional Status Target #1 is assessed both preoperatively within 3 months prior to the procedure AND postoperatively at three months (6 to 20 weeks) after the procedure AND the improvement is greater than or equal to 30 points. **Updated instructions: Revised:** NOTE: This measure is a target-based measure with two ways to meet the numerator; either a postoperative ODI score that is less than or equal to 22 OR an improvement of 30 points or greater from the preoperative to postoperative score. It is expressed as a proportion or rate. Patients having received a lumbar discectomy/laminectomy procedure who are not assessed for functional status postoperatively remain in the denominator and are considered as not meeting the target. The measure intent is that MIPS eligible clinicians will submit all denominator eligible procedures to be utilized for performance calculation. **The measure numerator note is revised to read:** NUMERATOR NOTE: It is recommended that both a preoperative and postoperative be administered to the patient increasing chances that one of the numerator targets will be met. The following situations are those in which the numerator target cannot be reached and Performance Not Met M1049 or G2145 is submitted. • ODI is not administered postoperatively at three months (6 to 20 weeks) • Functional status is measured using a different patient reported functional status tool or ODI version • Postoperative ODI is administered less than 6 weeks or greater than 20 weeks (3 month window) • Postoperative ODI is greater than 22 and no valid preoperative ODI to measure improvement • Postoperative ODI is greater than 22 and preoperative ODI (to measure improvement) is administered beyond the three month timeframe prior to and including the date of procedure (e.g. 6 months before procedure) **The measure numerator options are revised to read:** **Performance Met:** Functional status measured by the Oswestry Disability Index (ODI version 2.1a) at three months (6 – 20 weeks) postoperatively was less than or equal to 22 OR Functional status measured by the ODI version 2.1a within three months preoperatively AND at three months (6 - 20 weeks) postoperatively demonstrated an improvement of 30 points or greater. **Performance Not Met:** Functional status was not measured by the Oswestry Disability Index (ODI version 2.1a) at three months (6 - 20 weeks) postoperatively. **Performance Not Met:** Functional status measured by the Oswestry Disability Index (ODI version 2.1a) at three months (6 – 20 weeks) postoperatively was greater than 22 AND Functional status measured by the ODI version 2.1a within three months preoperatively AND at three months (6 - 20 weeks) postoperatively demonstrated an improvement of less than 30 points.
Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale:	We propose to revise the numerator definition to clarify which assessment should be utilized if multiple assessments are administered. Additionally, we propose to update multiple components of the measure specifications to remove ‘a change’ and replace it with ‘an improvement’ as the intent of the measure is to assess if there was improvement in a patient’s functional status.

D.81 Appropriate Use of DXA Scans in Women Under 65 Years Who Do Not Meet the Risk Factor Profile for Osteoporotic Fracture

Category	Description
NQF # / eCQM NQF #:	N/A / 3475e
Quality#:	472
CMS eCQM ID:	CMS249v4
National Quality Strategy Domain:	Efficiency and Cost Reduction
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of female patients 50 to 64 years of age without select risk factors for osteoporotic fracture who received an order for a dual-energy x-ray absorptiometry (DXA) scan during the measurement period.
Substantive Change:	**Updated denominator exclusion: Revised:** The following risk factors may occur at any time in the patient's history or during the measurement period: Rheumatoid arthritis Hyperthyroidism Malabsorption Syndromes: celiac disease, inflammatory bowel disease, ulcerative colitis, Crohn's disease, cystic fibrosis, malabsorption Chronic liver disease Chronic malnutrition Osteoporotic fracture The following risk factors may occur any time in the patient's history prior to the start of the measurement period but do not need to be active at the start of the measurement period: Documentation of history of hip fracture in parent Glucocorticoids [cumulative medication duration >= 90 days]
Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We propose to revise the denominator exclusion to remove the dosage requirements associate with glucocorticoid usage calculation to more accurately capture patients with relevant exposure and to exclude patients who had an osteoporotic fracture at any point in time, based upon stakeholder feedback. This will ensure that only patients appropriate for the assessment of the quality action are being included within the initial patient population.

D.82 Leg Pain After Lumbar Fusion

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	473
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-Centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	For patients 18 years of age or older who had a lumbar fusion procedure, leg pain is rated by the patient as less than or equal to 3.0 OR an improvement of 5.0 points or greater on the Visual Analog Scale (VAS) Pain* scale at one year (9 to 15 months) postoperatively.
Substantive Change:	**Updated numerator definition: Revised:** Preoperative Assessment VAS Pain - A preoperative VAS pain scale score can be obtained from the patient any time up to three months preoperatively, inclusive of the date of the procedure. Assessment scores obtained via a telephone screening or more than three months before the procedure will not be used for measure calculation. If more than one preoperative VAS was obtained, use the VAS that is the most recent and prior to the procedure. Postoperative Assessment VAS Pain - A postoperative VAS pain scale score can be obtained from the patient one year (9 to 15 months) after the date of procedure. Assessment scores obtained via a telephone screening or prior to 9 months and after 15 months postoperatively will not be used for measure calculation. If more than one postoperative VAS was obtained during the 9 to 15 months following the procedure, use the most recent score obtained during the allowable timeframe.
Steward:	Minnesota Community Measurement
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale:	We propose to revise the numerator definition to clarify which assessment should be utilized if multiple assessments are administered.

D.83 Urinary Symptom Score Change 6-12 Months After Diagnosis of Benign Prostatic Hyperplasia

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	476
CMS eCQM ID:	CMS771v3
National Quality Strategy Domain:	Person and Caregiver-centered Experience and Outcomes
Current Collection Type:	eCQM Specifications
Current Measure Description:	Percentage of patients with an office visit within the measurement period and with a new diagnosis of clinically significant Benign Prostatic Hyperplasia who have International Prostate Symptoms Score (IPSS) or American Urological Association (AUA) Symptom Index (SI) documented at time of diagnosis and again 6-12 months later with an improvement of 3 points.
Substantive Change:	**Updated logic definitions: Revised:** the denominator exclusion "Patients with an initial BPH diagnosis that starts during, or within 30 days of hospitalization" logic has been updated to identify the encounter for the first diagnosis. **Updated value set/coding: Updated:** the denominator exclusion "Patients with a diagnosis of morbid obesity, or with a BMI Exam >40 before the follow up urinary symptom score" value set was updated to allow only calculated BMIs
Steward:	Large Urology Group Practice Association and Oregon Urology Institute
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale:	We propose to revise the logic of the denominator exclusion to ensure that the first encounter is being utilized to correctly identify the initial Benign Prostatic Hyperplasia (BPH) diagnosis to align with the intended timing component of the exclusion. Additionally, we propose to update the body mass index (BMI) denominator exclusion value set to allow for calculated BMIs to align with the measure intent and ensure only applicable patients are being excluded.

D.84 Functional Status Change for Patients with Neck Impairments

Category	Description
NQF # / eCQM NQF #:	N/A / N/A
Quality#:	478
CMS eCQM ID:	N/A
National Quality Strategy Domain:	Person and Caregiver-centered Experience and Outcomes
Current Collection Type:	MIPS CQMs Specifications
Current Measure Description:	This is a patient-reported outcome measure of risk-adjusted change in functional status for patients aged 14 years+ with neck impairments. The change in functional status (FS) is assessed using the FOTO Neck FS patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk-adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static/paper-pencil).
Substantive Change:	**The measure description is revised to read:** A patient-reported outcome measure of risk-adjusted change in functional status for patients 14 years+ with neck impairments. The change in functional status (FS) is assessed using the FOTO Neck FS patient-reported outcome measure (PROM). The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk-adjusted) and used as a performance measure at the patient level, at the individual clinician level, and at the clinic level to assess quality. The measure is available as a computer adaptive test, for reduced patient burden, or a short form (static/paper-pencil)
Steward:	Focus on Therapeutic Outcomes, Inc.
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale:	We propose to update the measure description to align language across Focus on Therapeutic Outcomes, Inc. (FOTO) measures.

APPENDIX 2: IMPROVEMENT ACTIVITIES

NOTE: In this proposed rule, for the 2022 MIPS performance/2024 MIPS payment year and future years, we are proposing to add 7 new improvement activities, modify 15 previously adopted improvement activities, and remove 6 previously adopted improvement activities. These proposals are discussed in detail below. We request comments on our proposals.

Table A: Proposed New Improvement Activities for the MIPS CY 2022 Performance Period/2024 MIPS Payment Year and Future Years

New Improvement Activity	
Proposed Activity ID:	**IA_AHE_XX**
Proposed Subcategory:	Achieving Health Equity
Proposed Activity Title:	Create and Implement an Anti-Racism Plan
Proposed Activity Description:	Create and implement an anti-racism plan using the CMS Disparities Impact Statement or other anti-racism planning tools.[1] The plan should include a clinic-wide review of existing tools and policies, such as value statements or clinical practice guidelines, to ensure that they include and are aligned with a commitment to anti-racism and an understanding of race as a political and social construct, not a physiological one. The plan should also identify ways in which issues and gaps identified in the review can be addressed and should include target goals and milestones for addressing prioritized issues and gaps. This may also include an assessment and drafting of an organization's plan to prevent and address racism and/or improve language access and accessibility to ensure services are accessible and understandable for those seeking care. The clinician or practice can also consider including in their plan ongoing training on anti-racism and/or other processes to support identifying explicit and implicit biases in patient care and addressing historic health inequities experienced by people of color. More information about elements of the CMS Disparities Impact Statement is detailed in the template and action plan document at https://www.cms.gov/About-CMS/Agency-Information/OMH/Downloads/Disparities-Impact-Statement-508-rev102018.pdf.
Proposed Weighting:	High
Rationale:	This proposed activity aims to address systemic inequities, including systemic racism, as called for in Executive Order 13985: Advancing Racial Equity and Support for Underserved Communities Through the Federal Government, published January 20, 2021.[2] This activity begins with the premise that it is important to acknowledge systemic racism as a root cause for differences in health outcomes between socially-defined racial groups.[3, 4] We believe this activity has the potential to improve clinical practice or care delivery and is likely to result in improved outcomes, per the improvement activity definition at § 414.1305, because it supports clinicians in identifying health disparities and implementing processes to reduce racism and provide equitable quality health care. This activity is intended to help clinicians move beyond analyzing data to taking real steps to naming and eliminating the causes of the disparities identified. We also propose making this activity high-weighted because clinicians will need considerable time and resources to develop a thorough anti-racism plan that is informed by data, and to implement it throughout the practice or system. See the definition for high weighting in the CY 2019 PFS final rule (83 FR 59780 through 59781).
New Improvement Activity	
Proposed Activity ID:	**IA_AHE_XX**
Proposed Subcategory:	Achieving Health Equity
Proposed Activity Title:	Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols
Proposed Activity Description:	Create or improve, and then implement, protocols for identifying and providing appropriate support to: a) patients with or at risk for food insecurity, and b) patients with or at risk for poor nutritional status. (Poor nutritional status is sometimes referred

	to as clinical malnutrition or undernutrition and applies to people who are overweight and underweight.) Actions to implement this improvement activity may include, but are not limited to, the following: • Use Malnutrition Quality Improvement Initiative (MQii) or other quality improvement resources and standardized screening tools to assess and improve current food insecurity and nutritional screening and care practices. • Update and use clinical decision support tools within the clinician's electronic medical record to align with the new food insecurity and nutrition risk protocols. • Update and apply requirements for staff training on food security and nutrition. • Update and provide resources and referral lists, and/or engage with community partners to facilitate referrals for patients who are identified as at risk for food insecurity or poor nutritional status during screening. Activities must be focused on patients at greatest risk for food insecurity and/or malnutrition—for example patients with low income who live in areas with limited access to affordable fresh food, or who are isolated or have limited mobility.
Proposed Weighting:	Medium
Rationale:	Food insecurity is a widespread and worsening issue in the United States. Estimates indicate that the number of food insecure people in the United States increased from 35.2 million people (1 in 9 people) in 2019 to 45 million people (1 in 7 people) in 2020.[5] Older adults are particularly at risk because of low income, mobility issues, dementia, and other factors such as social isolation. Food insecurity also disproportionately affects Black and Latinx households.[6] Malnutrition is also widespread in the United States.[7] Both food insecurity and malnutrition are associated with worse health outcomes and higher spending on healthcare.**Error! Bookmark not defined.** For example, adults who are malnourished at the time of hospitalization or surgery are more likely to have worse hospitalization, surgical, and recovery outcomes.[8] The improvement activity fills a gap in the inventory, which does not currently include an improvement activity related to food insecurity or malnutrition. We believe this activity has the potential to improve clinical practice or care delivery and is likely to result in improved outcomes, because ameliorating food insecurity and malnutrition leads to better health outcomes.[9, 10] This activity creates an opportunity for clinicians to help address food insecurity and malnutrition, and provides the Malnutrition Quality Improvement Initiative as a resource.[11] Evidence indicates that they can help patients by increasing enrollment in the Supplemental Nutrition Assistance Program (SNAP) (https://www.fns.usda.gov/snap/supplemental-nutrition-assistance-program), which is associated with reduced food insecurity[12] or connecting their patients to other community resources. This activity also creates an opportunity for clinicians to help address malnutrition by ensuring patients in need receive a detailed nutritional assessment and appropriate nutritional care. We propose weighting this activity medium, because this activity may be accomplished by providing literature and/or facilitating a conversation with a patient during a regular visit. The estimated level of effort for clinicians is comparable to other medium-weighted activities in the inventory, and less than that of high-weighted activities. See the definition of medium weighting in the CY 2019 PFS final rule (83 FR 59780 through 59781).
New Improvement Activity	
Proposed Activity ID:	**IA_BMH_XX**
Proposed Subcategory:	Behavioral and Mental Health
Proposed Activity Title:	Implementation of a Trauma-Informed Care (TIC) Approach to Clinical Practice
Proposed Activity Description:	Create and implement a plan for trauma-informed care (TIC) that recognizes the potential impact of trauma experiences on patients and takes steps to mitigate the

	effects of adverse events in order to avoid re-traumatizing or triggering past trauma. Actions in this plan may include, but are not limited to, the following: • Incorporate trauma-informed training into new employee orientation • Offer annual refreshers and/or trainings for all staff • Recommend and supply TIC materials to third party partners, including care management companies and billing services • Identify patients using a screening methodology • Flag charts for patients with one or more adverse events that might have caused trauma • Use ICD-10 diagnosis codes for adverse events when appropriate TIC is a strengths-based healthcare delivery approach that emphasizes physical, psychological, and emotional safety for both trauma survivors and their providers.[13] Core components of a TIC approach are: awareness of the prevalence of trauma; understanding of the impact of past trauma on services utilization and engagement; and a commitment and plan to incorporate that understanding into training, policy, procedure, and practice.[14]
Proposed Weighting:	Medium
Rationale:	We propose this activity because the psychological impact of trauma influences the clinical care needs of a large population in the United States and adopting a TIC approach can help all clinicians avoid retraumatizing affected patients and support providers and staff who have experienced trauma themselves.[15] Research indicates that clinicians have a positive view of TIC but need more resources and support to apply the concepts to practice.[16] For the purposes of this proposed improvement activity, trauma is the experience of a harmful or life-threatening event or series of events and their longer-term psychological impact, which can include development of post-traumatic stress disorder (PTSD) and changes to brain functioning and even genetics.[17] Approximately 60 percent of men and 50 percent of women in the U.S. have experienced trauma in their lifetimes and 7-8 percent of the population will have PTSD at some point in their lives.[18] Multi-generational trauma, whereby experiences that traumatized earlier generations, such as the genocide of Native American tribes, are passed down, impact many families and communities.[19] Clinicians (and not just mental health clinicians) who take a TIC approach anticipate and avoid institutional processes and individual practices that are likely to retraumatize individuals who have histories of trauma.[20] We believe this activity has the potential to improve clinical practice or care delivery and is likely to result in improved outcomes, because trauma-informed approaches in healthcare are associated with improved outcomes for patients.[21] We propose weighting this activity medium, because this activity may be accomplished by conducting a training, providing resources, or incorporating new procedures into a clinician's practice. The estimated level of effort for clinicians is comparable to other medium-weighted activities in the inventory, and less than that of high-weighted activities. See the definition of medium weighting in the CY 2019 PFS final rule (83 FR 59780 through 59781).
New Improvement Activity	
Proposed Activity ID:	**IA_BMH_XX**
Proposed Subcategory:	Behavioral and Mental Health
Proposed Activity Title:	Promoting Clinician Well-Being
Proposed Activity Description:	Develop and implement programs to support clinician well-being and resilience—for example, through relationship-building opportunities, leadership development plans, or creation of a team within a practice to address clinician well-being—using one of the following approaches: • Completion of clinician survey on clinician well-being with subsequent implementation of an improvement plan based on the results of the survey. • Completion of training regarding clinician well-being with subsequent implementation of a plan for improvement.

Proposed Weighting:	High
Rationale:	We believe this activity will help clinicians prioritize and improve their own well-being and the well-being of their staff and colleagues. Focusing on improving clinician well-being is especially critical now, given the stress that the COVID-19 public health emergency has exerted on clinicians. Many organizations, including the National Academies of Sciences, Engineering, and Medicine,[22] have prioritized interventions to improve clinician well-being. Studies indicate that clinician burnout, including emotional exhaustion, depersonalization, and reduced personal accomplishment, is associated with poorer quality healthcare and reduced safety for patients.[23, 24] Studies also indicate that some interventions have been shown to reduce burnout and improve well-being.[25] This improvement activity fills a gap because the inventory does not currently include an improvement activity related to clinician well-being. We believe this activity has the potential to improve clinical practice or care delivery and is likely to result in improved outcomes, because promoting clinician well-being and mitigating burnout leads to better quality health care and increased patient safety.[25] Given the impact of the COVID-19 pandemic on the medical community and the considerable time and resources required to mitigate its effects and promote well-being among clinicians, we believe that this activity should be weighted as high, in alignment with our definition in the CY 2019 PFS final rule (83 FR 59780 through 59781).
New Improvement Activity	
Proposed Activity ID:	**IA_ERP_XX**
Proposed Subcategory:	Emergency Response and Preparedness
Proposed Activity Title:	Implementation of a Personal Protective Equipment (PPE) Plan
Proposed Activity Description:	Implement a plan to acquire, store, maintain, and replenish supplies of personal protective equipment (PPE) for all clinicians or other staff who are in physical proximity to patients. In accordance with guidance from the Centers for Disease Control and Prevention (CDC) the PPE plan should address: • Conventional capacity: PPE controls that should be implemented in general infection prevention and control plans in healthcare settings, including training in proper PPE use. • Contingency capacity: actions that may be used temporarily during periods of expected PPE shortages. • Crisis capacity: strategies that may need to be considered during periods of known PPE shortages. The PPE plan should address all of the following types of PPE: • Standard precautions (e.g., hand hygiene, prevention of needle-stick or sharps injuries, safe waste management, cleaning and disinfection of the environment) • Eye protection • Gowns (including coveralls or aprons) • Gloves • Facemasks • Respirators (including N95 respirators)
Proposed Weighting:	Medium
Rationale:	The COVID-19 pandemic illustrated the importance of maintaining adequate PPE supplies for caregivers. Especially early in the pandemic, inadequate PPE supplies reduced access to care and exposed healthcare workers to unnecessary risk.[26] While clinicians may be following surge capacity procedures, they may not have a written plan for both preventing and preparing for surge capacity. In a survey conducted in mid-March of 2020, over 50 percent of physician practices cited a lack of supplies as an obstacle to caregiving.[27] Also, in a 2009 survey of American College of Emergency Physician Disaster Medicine Section members, fewer than 75 percent of respondents indicated that their emergency department had a plan for responding to pandemic

	influenza and other infectious disease threats.[28] This proposed improvement activity is based on the CDC guidelines for optimizing PPE supplies [29] and aligns with World Health Organization guidelines.[30] We believe that including this improvement activity in the inventory would encourage formalizing the process for creating a PPE plan, training staff, and ensuring adequate PPE inventory. Thus, it has the potential to improve clinical practice or care delivery and is likely to result in improved outcomes, because both clinicians and their patients will be safer when responding to epidemics, reducing the transmission of viruses and allowing clinicians to provide patients with appropriate care because supplies are available. We propose that this activity should be weighted as medium, because it may be accomplished by conducting a training, providing resources, or incorporating new procedures into a clinician's practice. The estimated level of effort for clinicians is comparable to other medium-weighted activities in the inventory, and less than that of high-weighted activities. See the definition of medium weighting in the CY 2019 PFS final rule (83 FR 59780 through 59781).
New Improvement Activity	
Proposed Activity ID:	**IA_ERP_XX**
Proposed Subcategory:	Emergency Response and Preparedness
Proposed Activity Title:	Implementation of a Laboratory Preparedness Plan
Proposed Activity Description:	Develop, implement, update, and maintain a preparedness plan for a laboratory intended to support continued or expanded patient care during COVID-19 or another public health emergency. The plan should address how the laboratory would maintain or expand patient access to health care services to improve beneficiary health outcomes and reduce healthcare disparities. For laboratories without a preparedness plan, clinicians would meet with stakeholders, record minutes, and document a preparedness plan, as needed. The laboratory must then implement the steps identified in the plan and maintain them. For laboratories with existing preparedness plans, clinicians should review, revise, or update the plan as necessary to meet the needs of the current PHE, implement new procedures, and maintain the plan. Maintenance of the plan in this activity could include additional hazard assessments, drills, training, and/or developing checklists to facilitate execution of the plan. Participation in debriefings to evaluate the effectiveness of plans are additional examples of engagement in this activity.
Proposed Weighting:	Medium
Rationale:	The COVID-19 pandemic demonstrated a need for many laboratories to develop and implement protocols to respond to the public health emergencies, as an increase in demand (due to a surge in COVID testing) and reduced staffing (due to needing to maintain distancing and other factors, such as childcare becoming unavailable) compromised laboratory functioning.[31] We believe that including this improvement activity in the inventory would encourage formalizing, updating, and maintaining preparedness plans to better equip laboratories to address another public health emergency, as well as other disasters such as floods, fires, or other emergencies. Such a plan will allow laboratory staff to respond and maintain operations during emergency situations. Thus, it has the potential to improve clinical practice or care delivery and is likely to result in improved outcomes, because if needed laboratory services increase with the surge in demand, staff will be prepared to meet those needs. We propose weighting this activity medium, because this activity may be accomplished by developing a plan and training staff on that plan. The estimated level of effort for clinicians is comparable to other medium-weighted activities in the inventory, and less

	than that of high-weighted activities. See the definition of medium weighting in the CY 2019 PFS final rule (83 FR 59780 through 59781).
New Improvement Activity	
Proposed Activity ID:	IA_PSPA_XX
Proposed Subcategory:	Patient Safety and Practice Assessment
Proposed Activity Title:	Application of CDC's Training for Healthcare Providers on Lyme Disease
Proposed Activity Description:	Apply the Centers for Disease Control and Prevention's (CDC) Training for Healthcare Providers on Lyme Disease using clinical decision support (CDS). CDS for Lyme disease should be built directly into the clinician workflow and support decision making for a specific patient at the point of care. Specific examples of how the guideline could be incorporated into a CDS workflow include but are not limited to: electronic health record (EHR) based prescribing prompts, order sets that require review of guidelines before prescriptions can be entered, and prompts requiring review of guidelines before a subsequent action can be taken in the record.
Proposed Weighting:	Medium
Rationale:	Lyme disease has a high burden of disease, with approximately 476,000 cases diagnosed and treated annually. Additionally, the places where Lyme disease is common is expanding.[32] We believe that including this improvement activity in the inventory would increase knowledge about Lyme disease. The CDC has developed a training course to support clinicians in identifying and treating Lyme disease, and this course would provide foundational knowledge to incorporate Lyme disease diagnosis and treatment into the workflow using CDS.[33] It has the potential to improve clinical practice and care delivery and is likely to result in improved outcomes; additional education to improve Lyme disease testing, ordering, and reporting systems are likely to improve patient care, reduce errors, and result in better Lyme disease-related outcomes. [34, 35, 36] We propose weighting this activity medium because this activity may be accomplished by conducting a training and incorporating new procedures into a clinician's practice. The estimated level of effort for clinicians is comparable to other medium-weighted activities in the inventory, and less than that of high-weighted activities. See the definition of medium weighting in the CY 2019 PFS final rule (83 FR 59780 through 59781).

Table B: Proposed Changes to Previously Adopted Improvement Activities for the 2022 MIPS Performance Period/2024 MIPS Payment Year and Future Years

Current Improvement Activity	
Current Activity ID:	**IA_AHE_1**
Current Subcategory:	Achieving Health Equity
Current Activity Title:	Engagement of new Medicaid patients and follow-up
Current Activity Description:	Seeing new and follow-up Medicaid patients in a timely manner, including individuals dually eligible for Medicaid and Medicare. A timely manner is defined as within 10 business days for this activity.
Current Weighting:	Medium
Proposed Change and Rationale:	This improvement activity was originally finalized in the CY 2017 Quality Payment Program final rule (81 FR 77825). The proposed modified activity would continue to address the important objective of providing timely care to Medicaid patients, but also expand the target population to include all patients who are underserved and may face barriers to timely access to appropriate care. We also propose modifying the description so that, instead of stating patients should receive follow-up in a "timely manner," defined as within 10 business days, clinicians would use their own time-to-treat data (i.e., data measuring the time between clinician identifying a need for an appointment and the patient having a scheduled appointment) to ensure that patients receive follow-up within standard guidelines and create, implement and monitor an approach for improvement in engagement in care. We want to broaden the description, because the amount of time that is clinically relevant for a follow up visit varies widely,[1] and therefore, setting a specific definition of "timely manner" may not be clinically appropriate for all patients. The proposed modification acknowledges this variation and encourages clinicians to use their own time-to-treat data and standard practice guidelines to enhance engagement. The proposed modified activity describes that this approach to improving engagement in care may include screening for treatment barriers, especially transportation barriers, and providing resources to patients who need assistance, including access to federally-mandated Medicaid transportation benefits. Lack of suitable transportation can pose a barrier to accessing needed care for many underserved patients—particularly for those who are elderly, disabled, or low-income.[2] As finalized in federal regulation (42 CFR 431.53 and 440.170), Medicaid beneficiaries are eligible for the non-emergency medical transportation benefit, which assures transportation to and from non-emergency medical care for those without other options.[3] This activity is intended to encourage clinicians to direct Medicaid beneficiaries and other underserved patients to access resources to reduce barriers to their timely access of needed care and ultimately help them achieve better health outcomes. We believe that participation in the modified version of this improvement activity would be more likely to result in improved outcomes, because it creates more flexibility around the timeline for follow-up by using time-to-treat data, specifies that these data guide an approach for patient engagement, and addresses a broader range of underserved populations.
Proposed Revised Activity Title	Enhance Engagement of Medicaid and Other Underserved Populations
Proposed Revised Activity Description:	To improve responsiveness of care for Medicaid and other underserved patients: use time-to-treat data (i.e., data measuring the time between clinician identifying a need for an appointment and the patient having a scheduled appointment) to identify patterns by which care or engagement with Medicaid patients or other groups of underserved patients has not achieved standard practice guidelines; and with this information, create, implement, and monitor an approach for improvement. This approach may include screening for patient barriers to treatment, especially transportation barriers, and providing resources to improve engagement (e.g., state Medicaid non-emergency medical transportation benefit).
Current Improvement Activity	
Current Activity ID:	**IA_AHE_5**
Current Subcategory:	Achieving Health Equity

Current Activity Title:	MIPS Eligible Clinician Leadership in Clinical Trials or Community-Based Participatory Research (CBPR)
Current Activity Description:	MIPS eligible clinician leadership in clinical trials, research alliances or community-based participatory research (CBPR) that identify tools, research or processes that can focuses on minimizing disparities in healthcare access, care quality, affordability, or outcomes.
Current Weighting:	Medium
Proposed Change and Rationale:	This improvement activity was originally finalized in the CY 2018 Quality Payment Program final rule (82 FR 54175). This proposed modification would add as an explicit option that the research could focus on addressing health-related social needs as drivers of health. Risks for health-related social needs are more acute and widespread in underserved communities.[4] These risks are linked to worse health outcomes and addressing them can reduce costs.[5] The modification would also change verbiage in ways that clarify the activity, but do not affect the intent of the activity. The health-related social needs included in the proposed modification are aligned with our Accountable Health Communities (AHC) Model (https://innovation.cms.gov/innovation-models/ahcm), which looks at the impact of identifying and addressing patients' health-related social needs on their health outcomes. AHC has prioritized five areas of health-related social needs, namely: food insecurity, housing insecurity, transportation, utilities, and interpersonal safety.[6] These areas were selected as priority, because there is high-quality evidence linking it with poor health or increased health care utilization and cost, there are community providers who can help meet the need, and health care providers are not yet comprehensively screening for or addressing these needs.[7] We propose to modify this improvement activity to identify the same five health-related social needs prioritized in the AHC Model as potential areas of research. Criteria for selecting new improvement activities, which we are proposing to update in section IV.A.3.d.(3)(c)(i), align with those used for prioritizing health-related social needs. With this modification, this improvement activity would become more explicitly a part of our plan to help clinicians provide patient-centered care to patients who have complex and multi-faceted needs. We believe that participation in the modified version of this improvement activity would be more likely to result in improved outcomes, because it explicitly includes research into health-related social needs, which are central to understanding and addressing disparities in achieving positive health outcomes . We believe that we will achieve the objectives of the Quality Payment Program—specifically, to improve beneficiary population health, to improve the care received by Medicare beneficiaries, and to lower costs to the Medicare program—by helping address health-related social needs.
Proposed Revised Activity Description:	Lead clinical trials, research alliances, or community-based participatory research (CBPR) that identify tools, research, or processes that focus on minimizing disparities in healthcare access, care quality, affordability, or outcomes. Research could include addressing health-related social needs like food insecurity, housing insecurity, transportation barriers, utility needs, and interpersonal safety.
Current Improvement Activity	
Current Activity ID:	**IA_BE_1**
Current Subcategory:	Beneficiary Engagement
Current Activity Title:	Use of certified EHR to capture patient reported outcomes
Current Activity Description:	In support of improving patient access, performing additional activities that enable capture of patient reported outcomes (e.g., home blood pressure, blood glucose logs, food diaries, at-risk health factors such as tobacco or alcohol use, etc.) or patient activation measures through use of certified EHR technology, containing this data in a separate queue for clinician recognition and review.
Current Weighting:	Medium
Proposed Change and Rationale:	This improvement activity was originally finalized in the CY 2017 Quality Payment Program final rule (81 FR 77825). We propose to modify the activity by replacing examples of patient reported outcomes with current industry standards -- functional status, symptoms and symptom burden, health behaviors, and patient experience. We also propose to include a definition for patient activation[8] -- measures of patient involvement in their care -- to improve clarity of the activity.

	Finally, we also propose to simplify the wording in ways that clarify the activity but do not affect the purpose. These proposed modifications would improve the accuracy, applicability, and clarity of the activity. We believe that participation in the modified version of this improvement activity would be more likely to result in improved outcomes, because it promotes clarity by providing more accurate and current industry standard patient reported outcomes.
Proposed Revised Activity Description:	To improve patient access, perform activities beyond routine care that enable capture of patient reported outcomes (e.g., related to functional status, symptoms and symptom burden, health behaviors, or patient experience) or patient activation measures (i.e., measures of patient involvement in their care) through use of certified electronic health record technology, and record these outcomes data for clinician review.
Current Improvement Activity	
Current Activity ID:	**IA_BE_6**
Current Subcategory:	Beneficiary Engagement
Current Activity Title:	Collection of and follow-up on patient experience and satisfaction data on beneficiary engagement
Current Activity Description:	Collection of and follow-up on patient experience and satisfaction data on beneficiary engagement, including development of improvement plan.
Current Weighting:	High
Proposed Change and Rationale:	This improvement activity was originally finalized in the CY 2017 Quality Payment Program final rule (81 FR 77825). We are proposing to combine multiple activities into this IA-BE-6 improvement activity to remove overlapping content and improve the applicability and ease of use. In addition to this activity, the previously adopted BE_13 (81 FR 77825) and PSPA_11 (81 FR 77825) improvement activities also require the collection of patient experience and satisfaction data with the objective of increasing patient-centeredness of care. The previously adopted activity descriptions are as follows: • IA_BE_13: Regularly assess the patient experience of care through surveys, advisory councils and/or other mechanisms. • IA_PSPA_11: Participation in the Consumer Assessment of Healthcare Providers and Systems Survey (CAHPS) or other supplemental questionnaire items (e.g., Cultural Competence or Health Information Technology supplemental item sets) We propose to modify IA_BE_6 to include additional detail covering the unique content of IA_BE_13 and IA_PSPA_11. Specifically, we propose to add surveys such as CAHPS, advisory councils, and other mechanisms in the modified version of BE_6 as options for tools used for collecting the patient experience data. We also propose to update the title of the improvement activity to better reflect the full scope of the revised activity description. We also propose to add language that would encourage clinicians to consider the linguistic needs of their population, so that the satisfaction survey results can include the perspectives of patient groups who may not feel comfortable taking a survey in English.
Proposed Revised Title:	Regularly Assess Patient Experience of Care and Follow Up on Findings
Proposed Revised Activity Description:	Collect and follow up on patient experience and satisfaction data. This activity also requires follow-up on findings of assessments, including the development and implementation of improvement plans. To fulfill the requirements of this activity, eligible clinicians can use surveys (e.g., Consumer Assessment of Healthcare Providers and Systems Survey), advisory councils, or other mechanisms. Clinicians may consider implementing patient surveys in multiple languages, based on the needs of their patient population.
Current Improvement Activity	
Current Activity ID:	**IA_BE_16**
Current Subcategory:	Beneficiary Engagement
Current Activity Title:	Evidenced-based techniques to promote self-management into usual care

Current Activity Description:	Incorporate evidence-based techniques to promote self-management into usual care, using techniques such as goal setting with structured follow-up, Teach Back, action planning or motivational interviewing.
Current Weighting:	Medium
Proposed Change and Rationale:	This improvement activity was originally finalized in the CY 2017 Quality Payment Program final rule (81 FR 77825). We propose to combine this IA_BE_16 with the previously adopted IA_BE_17, IA_BE_18, IA_BE_20, and IA_BE_21 because of overlapping and duplicative content and to improve the applicability and ease of use of the inventory. The above previously adopted improvement activities included effective interventions for helping patients better engage in self-management. The previously adopted activity descriptions are as follows: • IA_BE_17: Use tools to assist patients in assessing their need for support for self-management (e.g., the Patient Activation Measure or "How's My Health"). (81 FR 77825) • IA_BE_18: Provide peer-led support for self-management. (81 FR 77825) • IA_BE_20: Provide condition-specific chronic disease self-management support programs or coaching or link patients to those programs in the community. (81 FR 77825) • IA_BE_21: Provide self-management materials at an appropriate literacy level and in an appropriate language. (81 FR 77825) We are proposing to change IA_BE_16 to include additional detail covering the unique content of IA_BE_17, IA_BE_18, IA_BE_20, and IA_BE_21. Specifically, we are proposing to add tools for self-management, peer-led support, provision of self-management materials, and retain the examples of evidence-based approaches patients better engage in self-management included in the original IA_BE_16: goal setting with structured follow-up,[9] Teach-back methods,[10] action planning,[11] assessment of need for self-management (e.g., the Patient Activation Measure[12]), and motivational interviewing[13] as options for tools and resources to provide patients as part of fulfilling the requirements for the activity. These tools and techniques could be particularly helpful for people with substance use disorders and individuals managing chronic physical conditions such as diabetes and heart disease[14]. We also propose to add that evidence-based techniques for promoting self-management should be culturally and linguistically tailored.
Proposed Revised Activity Title:	Promote Self-management in Usual Care
Proposed Revised Activity Description:	To help patients self-manage their care, incorporate culturally and linguistically tailored evidence-based techniques for promoting self-management into usual care, and provide patients with tools and resources for self-management. Examples of evidence-based techniques to use in usual care include: goal setting with structured follow-up, Teach-back methods , action planning, assessment of need for self-management (e.g., the Patient Activation Measure), and motivational interviewing. Examples of tools and resources to provide patients directly or through community organizations include: peer-led support for self-management, condition-specific chronic disease or substance use disorder self-management programs, and self-management materials.
Current Improvement Activity	
Current Activity ID:	**IA_BE_25**
Current Subcategory:	Beneficiary Engagement
Current Activity Title:	Drug Cost Transparency
Current Activity Description:	To receive credit for this improvement activity, MIPS eligible clinicians must attest that their practice provides counseling to patients and/or their caregivers about the costs of drugs and the patients' out-of-pocket costs for the drugs. If appropriate, the clinician must also explore with their patients the availability of alternative drugs and patients' eligibility for patient assistance programs that provide free medications to people who cannot afford to buy their medicine. One source of information for pricing of pharmaceuticals could be a real-time benefit tool (RTBT), which provides to the prescriber, real-time patient-specific formulary and benefit information for drugs, including cost-sharing for a beneficiary. (CMS finalized in the Modernizing Part D and Medicare Advantage to Lower Drug Prices and Reduce Out of Pocket Expenses final rule (84 FR 23832, 23883) that beginning January 1, 2021 Medicare Part D plans will

	be required to implement one or more RTBT(s).)
Current Weighting:	High
Proposed Change and Rationale:	This improvement activity was originally finalized in the CY 2020 PFS final rule (84 FR 63539). In the CY 2020 PFS final rule (84 FR 63515), we adopted IA_BE_25, titled "Drug Cost Transparency to include requirements for use of real-time benefit tools" beginning with the 2020 performance year and for subsequent years. It allows a real-time benefit tool (RTBT) to be one source of information for pricing of pharmaceuticals, which provides to the prescriber real-time patient-specific formulary and benefit information for drugs, including cost-sharing for a beneficiary. The 2021 Consolidated Appropriations Act (H.R. 116-133, Pub. L. 116-260) subtitle B included section 119 "Increasing the use of real-time benefit tools to lower beneficiary costs" subsection (c) "Inclusion of Use of Real-Time Electronic Information in Shared Decision-Making Under MIPS" amended Section 1848(q)(2)(B)(iii)(IV) of the Act by adding at the end the following new sentences: ``This subcategory shall include as an activity, for performance periods beginning on or after January 1, 2022, use of a real-time benefit tool as described in section 1860D-4(o). The Secretary may establish this activity as a standalone or as a component of another activity." In response to this amendment, in this proposed rule, we propose to modify this improvement activity such that beginning with the 2022 MIPS performance period/2024 MIPS payment year and for subsequent years the activity would require use of RTBT in order to receive credit for this activity. As previously finalized, use of RTBT is optional. We also propose to update the description in ways that clarify the activity, but do not affect the intent of the activity. We believe that requiring RTBT would make this activity more likely to reduce the costs of care. As explained in the CY 2019 Modernizing Part D final rule (84 FR 23832), RTBTs that are integrated with at least one prescriber's e-prescribing and electronic medical record systems can make beneficiary-specific drug coverage and cost information visible to prescribers. Using RTBT thus allows the prescriber and patient, when appropriate, to choose among clinically acceptable alternatives while weighing costs. By making RTBT a requirement, this modification would also require prescribers to look for alternative drugs, in contrast to the existing activity where such comparisons are optional. We believe that furthering prescription price transparency is critical to lowering overall drug costs and patients' out-of-pocket costs and improving medication adherence. Additionally, it can help advance efforts to improve patient safety, quality of care, and efficiencies and cost savings in the delivery of care.
Proposed Revised Activity Description:	Provide counseling to patients and/or their caregivers regarding: costs of medications using a real time benefit tool (RTBT) which provides to the prescriber real-time patient-specific formulary and benefit information for drugs, including cost-sharing for a beneficiary
Current Improvement Activity	
Current Activity ID:	**IA_CC_14**
Current Subcategory:	Care Coordination
Current Activity Title:	Practice improvements that engage community resources to support patient health goals
Current Activity Description:	Develop pathways to neighborhood/community-based resources to support patient health goals that could include one or more of the following: • Maintain formal (referral) links to community-based chronic disease self-management support programs, exercise programs and other wellness resources with the potential for bidirectional flow of information; and provide a guide to available community resources. • Including through the use of tools that facilitate electronic communication between settings; • Screen patients for health-harming legal needs; • Screen and assess patients for social needs using tools that are preferably health IT enabled and that include to any extent standards-based, coded question/field for the capture of data as is feasible and available as part of such tool; and/or

	• Provide a guide to available community resources.
Current Weighting:	Medium
Proposed Change and Rationale:	This improvement activity was originally finalized in the CY 2017 Quality Payment Program final rule (81 FR 77825). The previously adopted improvement activity includes screening as one option to assess patients specifically for social and legal needs. We propose to modify this improvement activity to instead require screening for a range of health-related social needs using evidence-based tools before and in addition to supporting connections to community resources. We believe that screening patients using evidence-based tools can help clinicians adopt a more systematic approach to addressing health related social needs among their patient population, including effective documentation and follow-up, and avoid missing patients who have such needs. Including screening in addition to supporting connections to community resources, represents a continuum of support that clinicians can provide to patients from within the health system. We also propose to remove the promotion of systems for communication that have the "potential for bi-directional flow of information" and the option for using "tools that facilitate electronic communication between settings." In many communities, the resources and programs that might best provide patients who have health-related social needs with support may not have the baseline technological capacity to engage with clinician groups in ways that eclipse basic forms of communication like phone and email. We also propose to add an option for using electronic health records to document screening results, trigger follow-up, and analyze data to better tailor approaches. For practices that already have processes for enabling connections to community resources established, this option would allow continued improvement and provision of more streamlined and systematized support to patients in need. The specific set of health-related social needs that clinicians might choose to prioritize remains part of the improvement activity, as does examples that were previously mentioned in the activity—for example, health-related legal needs. We believe that participation in the modified version of this improvement activity would be more likely to result in improved outcomes, because it requires clinicians to both screen for and address health related social needs, which are major contributors to health care access and health outcomes. In light of the above list of proposed changes in this modification, we are also proposing to increase the weight for this activity from medium to high. Specifically, the modifications now require screening in addition to an activity that links patients to community resources. Previously, the activity required screening *or* linkages to community. Conducting screening then devoting clinical staff time to using that data to identify and disseminate appropriate community resource information to patients takes considerable time and resources. We are proposing to increase the weight for this activity from medium to high to reflect the additional effort required, per high-weight criteria finalized in the CY 2019 PFS final rule (83 FR 59780 through 59781).
Proposed Weighting:	High
Proposed Revised Activity Description:	Select and screen for the health-related social needs (HRSN) that are relevant for your patient population using tools that have been tested with underserved populations. If possible, use a screening tool that is health IT-enabled and includes standards-based, coded question/field for the capture of data. After screening, address HRSNs identified through at least one of the following: • Update a guide to available community resources and provide it to patients who are found to be at risk in one or more HRSN area; • Maintain formal (referral) links to key community resources and programs to strengthen the referral process, implementing closed-loop referrals where feasible; or • Record findings of screening and trigger follow-up within the electronic health record (EHR); then analyze EHR data on patients with one or more HRSN needed to identify and implement approaches to better serve their holistic needs through linkages with community resources.

	HRSNs prioritized by your practice might include health-harming legal needs, which require both health and legal support to resolve, areas such as food and housing insecurity, or needs such as exercise, nutrition, or chronic disease self-management.
Current Improvement Activity	
Current Activity ID:	**IA_CC_15**
Current Subcategory:	Care Coordination
Current Activity Title:	PSH Care Coordination
Current Activity Description:	Participation in a Perioperative Surgical Home (PSH) that provides a patient-centered, physician-led, interdisciplinary, and team-based system of coordinated patient care, which coordinates care from pre-procedure assessment through the acute care episode, recovery, and post-acute care. This activity allows for reporting of strategies and processes related to care coordination of patients receiving surgical or procedural care within a PSH. The clinician must perform one or more of the following care coordination activities: • Coordinate with care managers/navigators in preoperative clinic to plan and implementation comprehensive post discharge plan of care; • Deploy perioperative clinic and care processes to reduce post-operative visits to emergency rooms; • Implement evidence-informed practices and standardize care across the entire spectrum of surgical patients; or • Implement processes to ensure effective communications and education of patients' post-discharge instructions.
Current Weighting:	Medium
Proposed Change and Rationale:	This improvement activity was originally finalized in the CY 2018 Quality Payment Program final rule (82 FR 54175). We are proposing to increase the weight for this activity from medium to high, because it came to our attention that the level of effort to complete this activity was better aligned to our high-weight criteria, which specifies that high-weight activities reflect high intensity activities, requiring significant investment of time and resources. This activity requires team-based, interdisciplinary care coordinated across multiple care settings and requires efforts to both plan for and implement the selected care coordination actions. We note that the activity description would remain the same.
Proposed Weighting:	High
Current Improvement Activity	
Current Activity ID:	**IA_EPA_1**
Current Subcategory:	Expanded Practice Access
Current Activity Title:	Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record
Current Activity Description:	Provide 24/7 access to MIPS eligible clinicians, groups, or care teams for advice about urgent and emergent care (e.g., MIPS eligible clinician and care team access to medical record, cross-coverage with access to medical record, or protocol-driven nurse line with access to medical record) that could include one or more of the following: • Expanded hours in evenings and weekends with access to the patient medical record (e.g., coordinate with small practices to provide alternate hour office visits and urgent care); • Use of alternatives to increase access to care team by MIPS eligible clinicians and groups, such as e-visits, phone visits, group visits, home visits and alternate locations (e.g., senior centers and assisted living centers); and/or • Provision of same-day or next-day access to a consistent MIPS eligible clinician, group or care team when needed for urgent care or transition management.
Current Weighting:	High
Proposed Change and Rationale:	This improvement activity was originally finalized in the CY 2017 Quality Payment Program final rule (81 FR 77825). We propose to remove references to a "consistent" MIPS eligible clinician, group or care team, because the requirement for a consistent clinician is unclear and unnecessary to achieve the activity's objectives. We also propose to limit the scope of the activity to "urgent care" only rather than both "urgent and emergent care," because emergent care would only require the activity's interventions when also urgent. We believe that participation in the modified version of

	this improvement activity would be more likely to result in improved outcomes, because the improved clarity will promote expanded access to MIPS eligible clinicians in urgent care settings. We believe that these modifications help clarify the nature and intent of this activity, and thus will help clinicians selecting it to improve access to care for their patients.
Proposed Revised Activity Description:	Provide 24/7 access to MIPS eligible clinicians, groups, or care teams for advice about urgent care (e.g., MIPS eligible clinician and care team access to medical record, cross-coverage with access to medical record, or protocol-driven nurse line with access to medical record) that could include one or more of the following: • Expanded hours in evenings and weekends with access to the patient medical record (e.g., coordinate with small practices to provide alternate hour office visits and urgent care); • Use of alternatives to increase access to care team by MIPS eligible clinicians and groups, such as e-visits, phone visits, group visits, home visits and alternate locations (e.g., senior centers and assisted living centers); and/or • Provision of same-day or next-day access to a MIPS eligible clinician, group or care team when needed for urgent care or transition management.
Current Improvement Activity	
Current Activity ID:	**IA_EPA_2**
Current Subcategory:	Expanded Practice Access
Current Activity Title:	Use of telehealth services that expand practice access
Current Activity Description:	Use of telehealth services and analysis of data for quality improvement, such as participation in remote specialty care consults or teleaudiology pilots that assess ability to still deliver quality care to patients.
Current Weighting:	Medium
Proposed Change and Rationale:	This improvement activity was originally finalized in the CY 2017 QPP final rule (81 FR 77825). We propose to shift the focus of the activity to developing standardized approaches for telehealth in their daily practice and away from the analysis of data to evaluate effectiveness. This proposed shift retains the objective of the original activity, namely, of improving health outcomes for patients utilizing telehealth services. We believe this proposed shift makes the activity more relevant, because while telehealth has become a routine part of health care during the COVID-19 pandemic and is perceived as effective by clinicians and patients, clinicians may not have implemented it in a standardized manner or as widely as possible due to the rapid adaptation needed during the pandemic.[15] We believe that participation in the modified version of this improvement activity would be more likely to result in improved outcomes, because it promotes creation and implementation of standardized telehealth services, which can improve access and quality of care by offering another mode by which patients can interact with their care team.
Proposed Revised Activity Description:	Create and implement a standardized process for providing telehealth services to expand access to care.
Current Improvement Activity	
Current Activity ID:	**IA_PM_6**
Current Subcategory:	Population Management
Current Activity Title:	Use of toolsets or other resources to close health care disparities across communities
Current Activity Description:	Take steps to improve healthcare disparities, such as Population Health Toolkit or other resources identified by CMS, the Learning and Action Network, Quality Innovation Network, or National Coordinating Center. Refer to the local Quality Improvement Organization (QIO) for additional steps to take for improving health status of communities as there are many steps to select from for satisfying this activity. QIOs work under the direction of CMS to assist eligible clinicians and groups with quality improvement, and review quality concerns for the protection of beneficiaries and the Medicare Trust Fund.
Current Weighting:	Medium
Proposed Change and Rationale:	This improvement activity was originally finalized in the CY 2017 Quality Payment Program final rule (81 FR 77825). We propose to add language that is more explicit about the improvement activity's focus on using population health data analysis to assess the prevalence of inequities in a practice and community. Specifically, we propose to modify the activity description to specify that population

	health data analysis tools should be used to identify health inequities; clinicians should then assess the options for effective interventions to address those inequities.[16] We also are proposing to add a requirement that clinicians create, refine, and implement an action plan to address inequities based on the data analysis conducted. We are also proposing to remove references to the Learning and Action Network, Quality Innovation Network, and National Coordinating Center as organizations that may identify tools or resources, because they may not be appropriate resources to support clinicians in assessing and addressing health disparities. Population health data analytic tools may be identified in a number of ways, and we seek to keep the activity broad in this manner. We also propose to replace the term "disparities" with "inequities" in both the title and description of the activity, which acknowledges structural problems like racism are inequities (i.e., state of being unfair) rather than using the term disparities, which is defined as being different or not at parity but does not clearly state the unjustness of the result. We are also proposing to modify the title to recognize that inequities in both health (i.e., status and outcomes) and health care (i.e., access, quality, and safety) may be addressed. With the proposed modifications, clinicians attesting to this improvement activity would need to first analyze inequities in their patient populations, and then use that data to identify and then address issues or gaps. We believe that participation in the modified version of this improvement activity would be more likely to result in improved outcomes, because it is more focused on a data-driven approach to population health analysis and requires practices to use this data to inform a formal action planning process to address them.
Proposed Revised Activity Title:	Use of Toolsets or Other Resources to Close Health and Health Care Inequities Across Communities
Proposed Revised Activity Description:	Address inequities in health outcomes by using population health data analysis tools to identify health inequities in the community and practice, and assess options for effective and relevant interventions such as Population Health Toolkit or other resources identified by the clinician, practice, or by CMS. Based on this information, create, refine, and implement an action plan to address and close inequities in health outcomes and/or health care access, quality, and safety.
Current Improvement Activity	
Current Activity ID:	**IA_PM_11**
Current Subcategory:	Population Management
Current Activity Title:	Regular review practices in place on targeted patient population needs
Current Activity Description:	Implementation of regular reviews of targeted patient population needs, such as structured clinical case reviews, which includes access to reports that show unique characteristics of eligible clinician's patient population, identification of vulnerable patients, and how clinical treatment needs are being tailored, if necessary, to address unique needs and what resources in the community have been identified as additional resources.
Current Weighting:	Medium
Proposed Change and Rationale:	This improvement activity was originally finalized in the CY 2017 Quality Payment Program final rule (81 FR 77825). We propose to make explicit the acknowledgement that structural issues, like racism, are a root cause of many disparities in health outcomes across populations. Specifically, we propose to modify the improvement activity to encourage clinicians to explore structural issues like racism explicitly and openly during their reviews of targeted patient population needs. We propose to remove reference to "vulnerable patients" and replace it with "underserved patients" to better clarify that there is nothing inherently vulnerable about a person. Instead, their poorer health outcomes are due to systemic failures within and beyond the health system—failures which leave the health needs of underserved communities unmet. We believe these additions would allow clinicians to gain perspective and ideas beneficial to their patients by specifically identifying underserved patients, related structural inequities such as those due to racism, and tailor treatment needs and identify community resources to address those problems.

	We are also proposing to modify the description language in ways that clarify the activity, but do not change the intent. We believe that participation in the modified version of this improvement activity would be more likely to result in improved outcomes, because it requires clinicians to implement regular reviews of patient population needs to identify and address the needs of underserved populations and connect those patients to resources in the community.
Proposed Revised Activity Description:	Implement regular reviews of targeted patient population needs, such as structured clinical case reviews, which include access to reports that show unique characteristics of eligible clinician's patient population, identification of underserved patients, and how clinical treatment needs are being tailored, if necessary, to address unique needs and what resources in the community have been identified as additional resources. The review should consider how structural inequities, such as racism, are influencing patterns of care and consider changes to acknowledge and address them. Reviews should stratify patient data by demographic characteristics and health related social needs to appropriately identify differences among unique populations and assess the drivers of gaps and disparities and identify interventions appropriate for the needs of the sub-populations.
Current Improvement Activity	
Current Activity ID:	**IA_PSPA_6**
Current Subcategory:	Patient Safety and Practice Assessment
Current Activity Title:	Consultation of the Prescription Drug Monitoring program
Current Activity Description:	Clinicians would attest to reviewing the patients' history of controlled substance prescription using state prescription drug monitoring program (PDMP) data prior to the issuance of a Controlled Substance Schedule II (CSII) opioid prescription lasting longer than 3 days. For the transition year, clinicians would attest to 60 percent review of applicable patient's history. For the Quality Payment Program Year 2 and future years, clinicians would attest to 75 percent review of applicable patient's history performance.
Current Weighting:	High
Proposed Change and Rationale:	This improvement activity was originally finalized in the CY 2017 Quality Payment Program final rule (81 FR 77825). We propose to increase the percentage of applicable patients for whom clinicians must review prescription history within the PDMP from 75 percent to 100 percent and remove language referencing prior year requirements, which are now obsolete. States are increasingly mandating that providers review the PDMP for all applicable patients.[17] We also propose to include an exception for patients receiving palliative and hospice care, as they are exempt from CDC prescribing guidelines.[18] The CDC has identified increasing use of PDMP as the most promising state-level strategy for improving clinical care and outcomes for at-risk patients.[19] We support the continued efforts of clinicians to increase usage of PDMP in their practice. We also propose to modify the description language in ways that clarify the activity but do not affect its intent. We believe that participation in the modified version of this improvement activity would be more likely to result in improved outcomes, because it supports use of prescription drug monitoring programs to reduce overprescribing of controlled substance prescriptions lasting longer than three days,[20] which can lead to substance use disorder.
Proposed Revised Activity Description:	Review the history of controlled substance prescriptions for 100 percent* of patients using state prescription drug monitoring program (PDMP) data prior to the issuance of a Controlled Substance Schedule II (CSII) opioid prescription lasting longer than 3 days. *Apply exceptions for patients receiving palliative and hospice care.
Current Improvement Activity	
Current Activity ID:	**IA_PSPA_18**
Current Subcategory:	Patient Safety and Practice Assessment
Current Activity Title:	Measurement and improvement at the practice and panel level
Current Activity Description:	Measure and improve quality at the practice and panel level, such as the American Board of Orthopaedic Surgery (ABOS) Physician Scorecards, that could include one or

	more of the following: • Regularly review measures of quality, utilization, patient satisfaction and other measures that may be useful at the practice level and at the level of the care team or MIPS eligible clinician or group (panel); and/or • Use relevant data sources to create benchmarks and goals for performance at the practice level and panel level.
Current Weighting:	Medium
Proposed Change and Rationale:	This improvement activity was originally finalized in the CY 2017 Quality Payment Program final rule (81 FR 77825). We propose to modify this activity to include the opportunities for clinicians to fulfill this improvement activity by applying the quality, utilization, patient satisfaction, and other measures or quality improvement actions to address inequities in quality and outcomes for underserved populations, including racial, ethnic, and gender minorities. We also propose to improve the activity language in ways that clarify the activity, but do not affect its intent, including simplifying the first activity option by removing the language "that may be useful at the practice level and at the level of the care team or MIPS eligible clinician or group (panel)," since it is stated at the beginning of the description that these activities can take place at the practice and panel levels. We believe that participation in the modified version of this improvement activity would be more likely to result in improved outcomes, because clinicians who review these relevant data sources for particular underserved populations and create benchmarks and goals for improvement are likely to provide better quality and more equitable care.
Proposed Revised Activity Description:	Measure and improve quality at the practice and panel level, such as the American Board of Orthopaedic Surgery (ABOS) Physician Scorecards that could include one or more of the following: • Regularly review measures of quality, utilization, patient satisfaction and other measures; and/or • Use relevant data sources to create benchmarks and goals for performance at the practice or panel levels. Clinicians can apply the measurement and quality improvement to address inequities in quality and outcomes for underserved populations, including racial, ethnic, and/or gender minorities.
Current Improvement Activity	
Current Activity ID:	**IA_ERP_3**
Current Subcategory:	Emergency Response and Preparedness
Current Activity Title:	COVID-19 Clinical Data Reporting with or without Clinical Trial
Current Activity Description:	To receive credit for this improvement activity, a MIPS eligible clinician or group must: (1) participate in a COVID-19 clinical trial utilizing a drug or biological product to treat a patient with a COVID-19 infection and report their findings through a clinical data repository or clinical data registry for the duration of their study; or (2) participate in the care of patients diagnosed with COVID-19 and simultaneously submit relevant clinical data to a clinical data registry for ongoing or future COVID-19 research. Data should be submitted to the extent permitted by applicable privacy and security laws. Examples of COVID-19 clinical trials may be found on the U.S. National Library of Medicine website at https://clinicaltrials.gov/ct2/results?cond=COVID-19. In addition, examples of COVID-19 clinical data registries may be found on the National Institute of Health website at https://search.nih.gov/search?utf8=%E2%9C%93&affiliate=nih&query=COVID19+registries&commit=Search. For purposes of this improvement activity, clinical data registries must meet the following requirements: (1) the receiving entity must declare that they are ready to accept data as a clinical registry; and (2) be using the data to improve population health outcomes. Most public health agencies and clinical data registries declare readiness to accept data from clinicians via a public online posting. Clinical data registries should make publicly available specific information on what data the registry gathers, technical requirements or specifications for how the registry can receive the data, and how the

	registry may use, re-use, or disclose individually identifiable data it receives. For purposes of credit toward this improvement activity, any data should be sent to the clinical data registry in a structured format, which the registry is capable of receiving. A MIPS eligible clinician may submit the data using any standard or format that is supported by the clinician's health IT systems, including but not limited to, certified functions within those systems. Such methods may include, but are not limited to, a secure upload function on a web portal, or submission via an intermediary, such as a health information exchange. To ensure interoperability and versatility of the data submitted, any electronic data should be submitted to the clinical data registry using appropriate vocabulary standards for the specific data elements, such as those identified in the United States Core Data for Interoperability (USCDI) standard adopted in 45 CFR 170.213.
Weighting:	High
Proposed Action and Rationale:	We previously adopted this improvement activity to the inventory for the 2020 and 2021 MIPS performance periods only in response to the PHE for COVID-19 and planned to reassess its need for the 2022 MIPS performance period/2024 MIPS payment year and future years. We are now proposing to continue this improvement activity for the 2022 MIPS performance period/2024 MIPS payment year and future years. Despite increasing dissemination of COVID-19 vaccines, we anticipate that COVID-19 infections may continue to be prevalent in communities with low vaccine adoption and/or among groups (i.e., children) who do not yet have access to vaccines. Additionally, new variants of COVID may introduce additional challenges to the eradication and treatment of the illness. Due to these concerns, clinicians may likely continue to encounter COVID-19 patients, and therefore we anticipate the need for COVID-19 clinical trials and data collection/sharing through registries to continue through CY 2022 and future years. Each year we will reassess whether there remains a need for additional data sharing or if preventive measures and clinical treatments have advanced to the point where these type of data are not needed. We want eligible clinicians to be able to attest to this improvement activity if it is still pertinent. If this improvement activity becomes no longer needed, we will remove the activity through rulemaking. While COVID-19 continues to be a PHE and a great concern for clinicians, patients, and communities, we believe that continued participation in this improvement activity is likely to result in improved outcomes by improving the collection of data clinicians use for the care of their patients as they monitor and manage COVID-19. We note that the activity description would remain the same.

TABLE C: Improvement Activities Proposed for Removal for the 2022 MIPS Performance Period/2024 MIPS Payment Year and Future Years

In this rule, we are proposing to remove six previously finalized improvement activity from the MIPS Program for the 2022 MIPS performance period/2024 MIPS payment year and future years. These improvement activities are discussed in detail below. Improvement activity removal factors are discussed in the MIPS CY 2020 final rule (84 FR 62568 through 63563).

Current Improvement Activity	
Current Activity ID:	**IA_ BE_13**
Current Subcategory:	Beneficiary Engagement
Current Activity Title:	Regularly assess the patient experience of care through surveys, advisory councils and/or other mechanisms
Current Activity Description:	Regularly assess the patient experience of care through surveys, advisory councils and/or other mechanisms.
Current Weighting:	Medium
Removal Rationale:	We are proposing to remove this activity under removal factor 1, improvement activity is "duplicative" and removal factor 2, there is an alternative activity with a stronger relationship to quality care or improvements in clinical practice. We believe IA_BE_13 is duplicative, because it is similar to, but only represents a partial component of proposed modified IA_BE_6. In this proposed rule, we are proposing to consolidate the unique language from IA_BE_13 into IA_BE_6 per the proposed changes in Table B. The proposed revised IA_PM_6 adds additional detail from IA_BE_13 (e.g., use of advisory councils). IA_BE_6 has a stronger relationship to improvement in clinical practice because it also requires the development of an improvement plan based on the results of the patient experience data gathered and assessed. We note that this proposed removal is made in conjunction with our proposal to change IA_BE_6 in Table B, as well as our proposal to remove IA_PSPA_11 in Table C.
Current Improvement Activity	
Current Activity ID:	**IA_PSPA_11**
Current Subcategory:	Patient Safety and Practice Assessment
Current Activity Title:	Participation in CAHPS or other supplemental questionnaire
Current Activity Description:	Participation in the Consumer Assessment of Healthcare Providers and Systems Survey or other supplemental questionnaire items (e.g., Cultural Competence or Health Information Technology supplemental item sets).
Current Weighting:	High
Removal Rationale:	We are proposing to remove this activity under removal factor 1, improvement activity is "duplicative." We believe IA_PSPA_11 is duplicative, because it is similar to, but only represents a partial component of proposed modified IA_BE_6. In this proposed rule, we are proposing to consolidate the unique language from IA_PSPA_11 into IA_BE_6 per the proposed change in Table B. The proposed revised IA_BE_6 adds additional detail from IA_PSPA_11 (e.g., CAHPS). We note that this proposed removal is made in conjunction with our proposal to change IA_BE_6 in Table B, as well as our proposal to remove IA_BE_13 in Table C.
Current Improvement Activity	
Current Activity ID:	**IA_BE_17**
Current Subcategory:	Beneficiary Engagement
Current Activity Title:	Use of tools to assist patient self-management
Current Activity Description:	Use tools to assist patients in assessing their need for support for self-management (e.g., the Patient Activation Measure or How's My Health).
Current Weighting:	Medium
Removal Rationale:	We are proposing to remove this activity under removal factor 1, improvement activity is "duplicative" and removal factor 2, there is an alternative activity with a stronger relationship to quality care or improvements in clinical practice. We believe IA_BE_17 is duplicative, because it is similar to, but only represents a partial component of proposed modified IA_BE_16. In this proposed rule, we are proposing to consolidate the unique language from IA_BE_17, IA_BE_18, IA_BE_20, and IA_BE_21 into IA_BE_16 per the proposed change in Table B. The proposed revised IA_BE_16 adds additional detail from IA_BE_17 (e.g., Patient Activation Measure). Proposed modified IA_BE_16 has a stronger relationship to improvement in clinical practice, because it emphasizes the incorporation of new tools and techniques into routine care processes. We note that this proposed removal is made in conjunction with our proposal to change

	IA_BE_16 in Table B, as well as our proposals to remove IA_BE_18, IA_BE_20, and IA_BE_21 in Table C.
Current Improvement Activity	
Current Activity ID:	**IA_BE_18**
Current Subcategory:	Beneficiary Engagement
Current Activity Title:	Provide peer-led support for self-management.
Current Activity Description:	Provide peer-led support for self-management.
Current Weighting:	Medium
Removal Rationale:	We are proposing to remove this activity under removal factor 1, improvement activity is "duplicative" and removal factor 2, there is an alternative activity with a stronger relationship to quality care or improvements in clinical practice. We believe IA_BE_18 is duplicative, because it is similar to, but only represents a partial component of proposed modified IA_BE_16. In this proposed rule, we are proposing to consolidate the unique language from IA_BE_17, IA_BE_18, IA_BE_20, and IA_BE_21 into IA_BE_16 per the proposed change in Table B. The proposed revised IA_BE_16 adds additional detail from IA_BE_18 (e.g., peer-led support for self-management). Proposed modified IA_BE_16 has a stronger relationship to improvement in clinical practice because it emphasizes the incorporation of new tools and techniques into routine care processes. We note that this proposed removal is made in conjunction with our proposal to modify IA_BE_16 in Table B, as well as our proposals to remove IA_BE_17, IA_BE_20, and IA_BE_21 in Table C.
Current Improvement Activity	
Current Activity ID:	**IA_BE_20**
Current Subcategory:	Beneficiary Engagement
Current Activity Title:	Implementation of condition-specific chronic disease self-management support programs
Current Activity Description:	Provide condition-specific chronic disease self-management support programs or coaching or link patients to those programs in the community.
Current Weighting:	Medium
Removal Rationale:	We are proposing to remove this activity under removal factor 1, improvement activity is "duplicative" and removal factor 2, there is an alternative activity with a stronger relationship to quality care or improvements in clinical practice. We believe IA_BE_20 is duplicative, because it is similar to, but only represents a partial component of proposed modified IA_BE_16. In this proposed rule, we are proposing to consolidate the unique language from IA_BE_17, IA_BE_18, IA_BE_20, and IA_BE_21 into IA_BE_16 per the proposed change in Table B. The proposed revised IA_BE_16 adds additional detail from IA_BE_20 (e.g., condition-specific chronic disease self-management support programs). Proposed modified IA_BE_16 has a stronger relationship to improvement in clinical practice because it emphasizes the incorporation of new tools and techniques into routine care processes. We note that this proposed removal is made in conjunction with our proposal to change IA_BE_16 in Table B, as well as our proposals to remove IA_BE_17, IA_BE_18, and IA_BE_21 in Table C.
Current Improvement Activity	
Current Activity ID:	**IA_BE_21**
Current Subcategory:	Beneficiary Engagement
Current Activity Title:	Improved practices that disseminate appropriate self-management materials
Current Activity Description:	Provide self-management materials at an appropriate literacy level and in an appropriate language.
Current Weighting:	Medium
Removal Rationale:	We are proposing to remove this activity under removal factor 1, improvement activity is "duplicative" and removal factor 2, there is an alternative activity with a stronger relationship to quality care or improvements in clinical practice. We believe IA_BE_21 is duplicative, because it is similar to, but only represents a partial component of proposed modified IA_BE_16. In this proposed rule, we are proposing to consolidate the unique language from IA_BE_17, IA_BE_18, IA_BE_20, and IA_BE_21 into IA_BE_16 per the proposed change in Table B. The proposed revised IA_BE_16 adds additional detail from IA_BE_21 (e.g., provision of appropriate self-management materials). Proposed modified IA_BE_16 has a stronger relationship to improvement in clinical practice because it emphasizes the incorporation of new tools and techniques into routine care processes. We note that this proposed removal is made in conjunction

	with our proposal to change IA_BE_16 in Table B, as well as our proposals to remove IA_BE_17, IA_BE_18, and IA_BE_20 in Table C.

APPENDIX 3: MVP INVENTORY

MVP Development Background

In the CY 2021 PFS final rule (85 FR 84849 through 84854), we finalized a set of criteria to be used in the development of MVPs. In addition, in section IV.A.3.b of this proposed rule, we discuss additional proposed MVP policies, including MVP reporting requirements and selection of measures and activities within an MVP.

This appendix includes seven proposed MVPs for implementation beginning with the CY 2023 MIPS performance period/2025 MIPS payment year.[268] Each proposed MVP includes measures and activities from the quality performance category, improvement activities performance category, and the cost performance category that are relevant to the clinical theme of the MVP. In addition, as described in the CY 2021 PFS final rule (85 FR 84841) and section IV.A.3.b.(4)(b)(i)(C) of this proposed rule, all proposed MVPs include a foundational layer, which is comprised of population health measures and Promoting Interoperability performance category measures. We refer readers to section IV.A.3.b.(4)(b)(i) of this proposed ruled for key considerations and overall development approach for proposing the MVPs included in this appendix. For additional details regarding the proposed annual maintenance process for MVPs, we refer readers to section IV.A.3.b.(4)(b)(ii) of this proposed rule.

MVP Development Performance Category Sources

The MVP tables proposed below contain a set of MIPS quality measures, QCDR measures, improvement activities, cost measures, and foundational measures based on clinical topics. For further reference, the sources of the measures and activities in the MVP tables are as follows:

- Existing MIPS quality measures considered in developing the MVPs are located in Appendix 1: MIPS Quality Measures of this proposed rule.
- Existing QCDR measures considered in developing the MVPs were based on the most recent publication of the 2021 QCDR Measure Specification file. The QCDR measures are listed in the 2021 QCDR Measure Specification file located in the QPP Resource Library. [269] An updated list of 2022 QCDR measures will be available in December 2021.
- Improvement activities considered in developing the MVPs are located in the 2021 Improvement Activities Inventory and the 2021 MIPS Data Validation Criteria located in the QPP Resource Library.[270]
- Existing cost measures considered in developing the MVPs are located in the CY 2020 PFS final rule (84 FR 62979).
- For further details on the proposed new episode-based cost measures, refer to section IV.A.3.d.(2)(b) of this proposed rule.
- For further details on the population health measures included in the foundational layer, refer to section IV.A.3.b.(4)(b)(i)(C)(aa)of this proposed rule.
- Existing Promoting Interoperability measures adopted in prior rulemaking and included in the foundational layer are located in the QPP Resource Library.[271] In addition, see section IV.A.3.d.(4)(c) for any proposed modifications to the existing Promoting Interoperability measures.

Please note that new quality and Promoting Interoperability measures proposed for inclusion in MIPS beginning with the CY 2022 MIPS performance period/2024 MIPS payment year are identified with a caret symbol (^) within the MVP tables in this appendix. In addition, existing quality measures and improvement activities with proposed revisions are identified with an asterisk (*) before the quality measure or improvement activity ID # within the MVP tables in this appendix. See Appendix 1: MIPS Quality Measures and Appendix 2: Improvement Activities for further details regarding the proposed substantive changes and revisions in this proposed rule.

Quality measures that are considered high priority are noted with an exclamation point (!) and outcome measures are noted with a double exclamation point (!!). Quality measure collection types are identified in parentheses after each quality measure title within each MVP table.

QCDR measures proposed in the MVP tables below are noted with a pound sign (#) to indicate that testing data is pending on or before September 1, 2021. In order to determine whether a QCDR measure may be finalized within an MVP, we will need to receive QCDR measure testing data for review by the end of the self-nomination period (i.e., no later than September 1 of the year prior to the applicable performance period). We strongly encourage that QCDRs share testing data for their fully tested QCDR measures at the time of MVP candidate submission, which may be prior to the September 1st deadline. If a QCDR is unable to submit testing data to demonstrate that their QCDR measure is fully tested by the end of the self-nomination period (September 1st), or otherwise does not meet our requirements, we will not finalize the inclusion of the QCDR measure within an MVP. We refer readers to section IV.A.3.b.(4)(b)(i) of this proposed rule for additional details regarding QCDR measures and selection of measures within an MVP.

---

[271] See the 2021 MIPS Promoting Interoperability Measure Specifications: https://qpp-cm-prod-content.s3.amazonaws.com/uploads/1260/2021%20MIPS%20Promoting%20Interoperability%20Measure%20Specifications.zip for Promoting Interoperability measure details.

In addition, consistent with Executive Order 13985, "Advancing Racial Equity and Support for Underserved Communities Through the Federal Government," each MVP includes improvement activities designed to advance health equity and address and eliminate barriers to care in underserved communities.[272] Improvement activities that include a health equity component are noted with a tilde (~) before the improvement activity ID # within the MVP table. Improvement activity medium/high weight designations are identified in parentheses after each improvement activity. IA_PCMH is noted with a percent (%) before the improvement activity ID # within the MVP tables below to indicate that attestation to this improvement activity would provide full credit for the improvement activities performance category within the MVP.

[272] https://www.whitehouse.gov/briefing-room/presidential-actions/2021/01/20/executive-order-advancing-racial-equity-and-support-for-underserved-communities-through-the-federal-government/.

Table A: Proposed Advancing Rheumatology Patient Care MVP Beginning with the CY 2023 MIPS Performance Period/2025 MIPS Payment Year

Rheumatic diseases are comprised of complex chronic autoimmune and inflammatory conditions that affect joints, bones, muscles, and organs, which may eventually lead to poor outcomes and disability in patients if not well-controlled. Timely and appropriate care is critically important to the long-term health of patients. The proposed Advancing Rheumatology Patient Care MVP focuses on the clinical theme of providing fundamental treatment and management of rheumatological conditions and is most applicable to clinicians who specialize in treating patients with rheumatologic conditions.

Quality Measures

Within the quality component of this MVP, we propose to include six MIPS quality measures and three QCDR measures, which promote the assessment and control of rheumatic diseases to reduce the risk of disability and disease-related complications. We reviewed the MIPS quality measure inventory and believe the following quality measures proposed within this MVP provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in treating patients with rheumatologic conditions:

- Q176: Tuberculosis Screening Prior to First Course Biologic Therapy: This MIPS quality measure addresses the aspect of screening for tuberculosis (TB) prior to prescribing a biologic disease-modifying anti-rheumatic (DMARD) therapy. This is especially important as patients administered DMARD therapy are at higher risk for TB infection.
- Q177: Rheumatoid Arthritis (RA): Periodic Assessment of Disease Activity: This MIPS quality measure is important for monitoring RA disease activity to facilitate timely and appropriate, optimal treatment for patients.
- Q178: Rheumatoid Arthritis (RA): Functional Status Assessment: This MIPS quality measure examines for evidence of symptoms that may limit or disrupt the patient's quality of life.
- Q180: Rheumatoid Arthritis (RA): Glucocorticoid Management: This MIPS quality measure addresses the need to closely monitor patients who receive glucocorticoid as a part of their rheumatologic care, in order to avoid potential complications. Glucocorticoid therapy is highly effective treatment for relieving symptoms in patients with RA.
- ACR12: Disease Activity Measurements for Patients with PsA: This QCDR measure promotes regular assessment of functional limitations and disease activity for treatment planning and clinical decision making for patients with psoriatic arthritis (PsA).
- ACR14: Gout Serum Urate Target: This QCDR measure is an outcome that assesses the control of gout by assessing control of serum urate levels. This relevant measure helps clinicians evolve to patient-centered, evidence-driven best practices.
- ACR15: Safe Hydroxychloroquine Dosing: This QCDR measure addresses the need to closely monitor patients who receive dosing of hydroxychloroquine as a part of their rheumatologic care, in order to avoid potential complications.

In conjunction with the aforementioned rheumatologic specific measures, we propose to include the following broadly applicable MIPS quality measures that are relevant to rheumatic disease care:

- Q111: Pneumococcal Vaccination Status for Older Adults: This MIPS quality measure has been included to ensure that pneumococcal vaccinations are comprehensively assessed and used. Vaccinations play an important role in the management of patients with rheumatological conditions who are at an increased risk for infections because of their underlying condition, comorbidities, and use of immunosuppressive therapies.
- Q130: Documentation of Current Medications in the Medical Record: This MIPS quality measure promotes care coordination to collect complete and reliable medication records.

Only one MIPS vaccination quality measure was included within this MVP. We selected Q111: Pneumococcal Vaccination Status for Older Adults rather than Q110: Preventive Care and Screening: Influenza Immunization because it is more relevant to the Rheumatology MVP. Q111 focuses on the prevention of pneumonia, which is a common cause of illness and death for patients with underlying conditions and those being treated with immunosuppressive therapies.

Improvement Activities

Within the improvement activities component of this MVP, we propose to include 11 improvement activities that reflect actions and processes undertaken by clinicians who provide rheumatic care to patients. These improvement activities provide an opportunity for meaningful improvement and patient engagement for clinicians who specialize in treating patients with rheumatologic conditions. Therefore, the following improvement activities are proposed for inclusion in this MVP:

- IA_AHE_3: Promote use of Patient-Reported Outcome Tools: Utilization of patient-reported outcome tools often helps clinicians make decisions about the best course of care and which patients may benefit from a particular intervention.
- IA_BE_15: Engagement of patients, family and caregivers in developing a plan of care: Patient engagement while developing a plan of care is a key element of general adherence to the overall care plan established by the clinician for the rheumatologic patient population.
- IA_PM_16: Implementation of medication management practice improvements: Reliable medication records are essential for the care of rheumatology patients, as medication-based therapies may consist of various classes of agents (for example, nonsteroidal anti-inflammatory drugs [NSAIDS], corticosteroids) to slow the progression of rheumatologic disease.

Additional improvement activities are included to offer clinician choice and to promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide additional opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care for rheumatology patients:

- IA_BE_1: Use of certified EHR to capture patient reported outcomes

- IA_BE_4: Engagement of patients through implementation of improvements in patient portal
- IA_BMH_2: Tobacco use
- IA_BMH_4: Depression screening
- IA_EPA_1: Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record
- IA_EPA_2: Use of telehealth services that expand practice access
- IA_PSPA_6: Consultation of the Prescription Drug Monitoring Program
- IA_PSPA_28: Completion of an Accredited Safety or Quality Improvement Program

Cost Measures

Within the cost component of this MVP, we propose the Total Per Capita Cost (TPCC) measure because it captures the overall costs of care after establishing a primary care relationship, including the care provided by rheumatologists. The TPCC measure focuses on the ongoing management of rheumatology conditions and aligns with the intent of this MVP. We considered including the Medicare Spending Per Beneficiary (MSPB) Clinician measure, but ultimately did not include it because it only focuses on inpatient care. Currently, there are no applicable episode-based measures available, but one could be considered for development in the future. Refer to section IV.A.3.d.(2) of this proposed rule for details on the current cost measure development process and potential cost measure development process that could lead to an episode-based measure related to this MVP.

TABLE A: Proposed Advancing Rheumatology Patient Care MVP Beginning with the CY 2023 MIPS Performance Period/2025 MIPS Payment Year

As noted in the introduction of this appendix, we considered measures and improvement activities available within the MIPS inventory and selected those that we determined best fit the clinical concept of the proposed Advancing Rheumatology Patient Care MVP. We request comment on the measures and activities included in this MVP.

Quality	Improvement Activities	Cost
(*) Q111: Pneumococcal Vaccination Status for Older Adults (Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications) **(!) Q130:** Documentation of Current Medications in the Medical Record (Medicare Part B Claims Measure Specifications, eCQM Specifications, MIPS CQMs Specifications) **(*) Q176:** Tuberculosis Screening Prior to First Course Biologic Therapy (MIPS CQMs Specifications) **Q177:** Rheumatoid Arthritis (RA): Periodic Assessment of Disease Activity (MIPS CQMs Specifications) **Q178:** Rheumatoid Arthritis (RA): Functional Status Assessment (MIPS CQMs Specifications) **Q180:** Rheumatoid Arthritis (RA): Glucocorticoid Management (MIPS CQMs Specifications) **ACR12:** Disease Activity Measurements for Patients with PsA (QCDR) **(!!)(#) ACR14:** Gout Serum Urate Target (QCDR) **(!)(#) ACR15:** Safe Hydroxychloroquine Dosing (QCDR)	**(~) IA_AHE_3:** Promote use of Patient-Reported Outcome Tools (High) **(*)(~) IA_BE_1:** Use of certified EHR to capture patient reported outcomes (Medium) **IA_BE_4:** Engagement of patients through implementation of improvements in patient portal (Medium) **IA_BE_15:** Engagement of patients, family and caregivers in developing a plan of care (Medium) **IA_BMH_2:** Tobacco use (Medium) **IA_BMH_4:** Depression screening (Medium) **(*)(~) IA_EPA_1:** Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record (High) **(*)IA_EPA_2:** Use of telehealth services that expand practice access (Medium) **IA_PM_16:** Implementation of medication management practice improvements (Medium) **(*)IA_PSPA_6:** Consultation of the Prescription Drug Monitoring Program (High) **IA_PSPA_28:** Completion of an Accredited Safety or Quality Improvement Program (Medium)	**Total Per Capita Cost (TPCC)**

Table B: Proposed Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP Beginning with the CY 2023 MIPS Performance Period/2025 MIPS Payment Year

Cerebral infarction, or stroke, is the 9th most expensive condition treated in United States hospitals.[273] According to the Centers for Disease Control and Prevention (CDC), "more than 868,000 Americans die of heart disease or stroke every year—one-third of all deaths."[274] The proposed Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP focuses on the clinical theme of providing fundamental prevention and treatment of those patients at risk for or that have had a stroke. This proposed MVP would be most applicable to clinicians who treat clinically varied patient types within the practice of neurology and vascular surgery.

Quality Measures

Within the quality component of this MVP, we propose to include nine MIPS quality measures, which focus on both stroke prevention and driving positive outcomes for the stroke patient population. We reviewed the MIPS quality measure inventory and believe the quality measures proposed within this MVP below provide a meaningful and comprehensive stroke prevention and intervention set.

This MVP includes the following measures that support the goal of reducing the risk of stroke:

- Q236: Controlling High Blood Pressure: This MIPS quality measure requires controlled blood pressure for patients diagnosed with hypertension which leads to better health outcomes including reducing the risk of stroke.
- Q326: Atrial Fibrillation and Atrial Flutter: Chronic Anticoagulation Therapy AND Q438: Statin Therapy for the Prevention and Treatment of Cardiovascular Disease: These MIPS quality measures were included to ensure patients at an increased risk of stroke receive the appropriate preventive medication regimen. The use of statin therapy reduces the risk of atherosclerotic cardiovascular disease (ASCVD). The use of an anticoagulant will reduce risk of thromboembolism occurring with atrial fibrillation which is associated with a greater risk of recurrent stroke, more severe disability, and mortality.
- Q344: Rate of Carotid Artery Stenting (CAS) for Asymptomatic Patients, Without Major Complications (Discharged to Home by Post-Operative Day #2): This MIPS quality outcome measure promotes appropriate selection of patients for this procedure by assessing percentage of patients discharged to home no later than post-operative day two. Patients at low risk for morbidity, with a surgeon who performs the procedure with a very low complication rate, achieve the benefit of reduction of long-term risk of stroke.
- Q441: Ischemic Vascular Disease (IVD) All or None Outcome Measure (Optimal Control): This MIPS quality measure supports the mitigation of stroke risk for patients with established ischemic vascular disease with quality actions that promote blood pressure control, tobacco free status, patient use of daily aspirin, and use of statin which captures the clinical concepts represented in the Million Hearts® Initiative.

For those patients who do suffer a stroke, this MVP drives timely treatment to drive quality and cultivate positive outcomes with the inclusion of the following measures:

- Q187: Stroke and Stroke Rehabilitation: Thrombolytic Therapy: This MIPS quality measure drives careful screening and timely treatment to promote better outcomes for patients with a stroke diagnosis.
- Q409: Clinical Outcome Post Endovascular Stroke Treatment: This MIPS quality measure utilizes the modified Rankin scale (mRs) to assess degree of disability or dependence in the daily activities of patients suffering a stroke. An mRs of 2 or less after endovascular therapy is considered an excellent outcome following a stroke.
- Q413: Door to Puncture Time for Endovascular Stroke Treatment: This MIPS quality measure drives efficiency so that stroke patients are given the best chance of functional recovery by ensuring door to puncture time is less than 90 minutes.

We understand that the two time-dependent measures (Q187 and Q413) may place small and rural practices at a disadvantage as they may not have the resources to implement rapid stroke response systems; however, MVPs allow for some clinician choice with regards to quality measure submission, which would allow those small and rural practices to select other quality measures to meet the quality reporting requirements described in section IV.A.3.b.(4)(d) of this proposed rule.

In conjunction with the aforementioned stroke and stroke prevention quality measures, we propose to include the following broadly applicable quality measure that is relevant to stroke care:

- Q047: Advance Care Plan: The inclusion of this MIPS quality measure captures the clinical interaction of documenting a patient's voice for possible, future life-sustaining medical intervention. This engagement between the clinician (or clinician staff) and the patient allows the patient to be autonomous and communicate their ideal of clinical care that ensures coordinated care is implemented as documented in the patient's medical record.

We considered including Q260: Rate of Carotid Endarterectomy (CEA) for Asymptomatic Patients, without Major Complications (Discharged to Home by Post-Operative Day #2) within the MVP. However, we determined that Q344: Rate of Carotid Artery Stenting (CAS) for Asymptomatic Patients, Without Major Complications (Discharged to Home by Post-Operative Day #2) was more appropriate because CAS may be utilized more often in the asymptomatic patient population. Additionally, trial results have shown CAS to be an effective CEA alternative for high-risk surgical patients, allowing the measure to indicate both appropriateness of use and overall outcome. Therefore, we believe the patient population for Q344 will

[273] https://www.hcup-us.ahrq.gov/reports/statbriefs/sb261-Most-Expensive-Hospital-Conditions-2017.jsp.
[274] https://www.cdc.gov/chronicdisease/about/costs/index.htm#ref1.

be more encompassing; consequently, the inclusion of this measure will make this MVP more applicable to a broader set of clinicians and allow them to select the most meaningful quality measures.

Improvement Activities

Within the improvement activities component of this MVP, we propose to include nine improvement activities that reflect actions and processes undertaken by clinicians working to coordinate meaningful stroke care and prevention. We have reviewed the MIPS improvement activity inventory and believe the improvement activities proposed within this MVP provide an opportunity for meaningful improvement and patient engagement for clinicians who treat patients at risk for or who have had a stroke. Therefore, the following improvement activities are proposed for inclusion in this MVP:

- IA_PM_13: Chronic care and preventative care management for empaneled patients: This improvement activity reflects opportunities for clinicians to coordinate meaningful stroke care and prevention within an empaneled support network.
- IA_PM_15: Implementation of episodic care management practice improvements AND IA_BE_4: Engagement of patients through implementation of improvements in patient portal: Promotes patient engagement in their own care and provides an opportunity for the patient to connect with others recovering from or at risk for stroke to improve their outcomes.

Additional improvement activities are included to offer clinician choice and to promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide additional opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care for stroke patients:

- IA_BE_1: Use of certified EHR to capture patient reported outcomes
- IA_BE_24: Financial Navigation Program
- IA_CC_2: Implementation of improvements that contribute to more timely communication of test results
- IA_CC_13: Practice improvements for bilateral exchange of patient information
- IA_CC_17: Patient Navigator Program
- IA_PCMH: Implementation of Patient-Centered Medical Home model

Cost Measures

Within the cost component of this MVP, we propose the Intracranial Hemorrhage or Cerebral Infarction episode-based measure because it focuses on the costs related to inpatient clinicians' treatment for the following types of stroke: intracerebral or subdural hemorrhage, and cerebral infarction. The TPCC measure was considered but not included in this MVP since the neurology specialty is excluded from the TPCC measure attribution. We considered including the MSPB Clinician measure but ultimately did not include it as it encompasses all inpatient care, rather than focusing on the specific costs related to stroke.

TABLE B: Proposed Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP Beginning with the CY 2023 MIPS Performance Period/2025 MIPS Payment Year

As noted in the introduction of this appendix, we considered measures and improvement activities available within the MIPS inventory and selected those that we determined best fit the clinical concept of the proposed Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP. We request comment on the measures and activities included in this MVP.

Table C: Proposed Advancing Care for Heart Disease MVP Beginning with the CY 2023 MIPS Performance Period/2025 MIPS Payment Year

Heart disease cost the United States about $219 billion each year from 2014 to 2015, including the cost of health care services, medicines, and lost productivity due to death.[275] Additionally, heart disease can lead to serious illness, disability, lower quality of life, and may be fatal.[276] The proposed Advancing Care for Heart Disease MVP focuses on the clinical theme of providing fundamental treatment and management of costly clinical conditions that contribute to, or may result from, heart disease. This proposed MVP would be most applicable to clinicians who treat clinically varied patient types within the practice of cardiology.

Quality Measures

Within the quality component of this MVP, we propose to include eight MIPS quality measures, which promote the management and risks associated with heart disease. We believe this MVP will support the improvement of patient symptoms with disease management and mitigation of clinical risk which contribute to heart disease. We reviewed the MIPS quality measure inventory and believe the following quality measures proposed within this MVP provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in treating patients with conditions related to heart disease conditions:

- Q005: Heart Failure (HF): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) or Angiotensin Receptor-Neprilysin Inhibitor (ARNI) Therapy for Left Ventricular Systolic Dysfunction (LVSD): This MIPS quality measure addresses the use of ACE, ARB, or ARNI pharmacological therapy to reduce the clinical symptoms of heart failure, reduce the risks of morbidity, and mortality.
- Q007: Coronary Artery Disease (CAD): Beta-Blocker Therapy – Prior Myocardial Infarction (MI) or Left Ventricular Systolic Dysfunction (LVEF < 40%): This MIPS quality measure addresses the use of beta-blocker pharmacological therapy to reduce the potential of cardiovascular hospitalizations and revascularization intervention. Additionally, the use of this therapy may reduce angina symptoms for patients.
- Q008: Heart Failure (HF): Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction (LVSD): This MIPS quality measure addresses the use of beta-blocker pharmacological therapy to reduce the clinical symptoms of heart failure, reduce the risks of morbidity, and mortality.
- Q243: Cardiac Rehabilitation Patient Referral from an Outpatient Setting: This MIPS quality measure supports the use of cardiac rehabilitation, to support the reduction of morbidity and mortality, for patients that have experienced an event related to coronary artery disease. NQF 0642: Cardiac Rehabilitation Referral from an Inpatient Setting may be an option for this MVP for future program years. In order for this measure to be considered it would need to be available as a MIPS quality measure.
- Q441: Ischemic Vascular Disease (IVD) All or None Outcome Measure (Optimal Control): This MIPS quality measure supports the mitigation of risk for patients with established coronary artery disease (CAD) with quality actions that promote blood pressure control, tobacco free status, patient use of daily aspirin, and use of statin which captures the clinical concepts represented in the Million Hearts® Initiative. Despite the title of the measure encompassing all ischemic vascular disease, this MIPS quality measure includes the coding to support patients specifically diagnosed with CAD.

In conjunction with the aforementioned heart disease specific measures, we propose to include the following broadly applicable quality measures that are relevant to heart disease care:

- Q047: Advance Care Plan: The inclusion of this MIPS quality measure captures the clinical interaction of documenting a patient's voice for possible, future life-sustaining medical intervention. This engagement between the clinician (or clinician staff) and the patient allows the patient to be autonomous and communicate their ideal of clinical care that ensures coordinated care is implemented as documented in the patient's medical record.
- Q128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan: This MIPS quality measure addresses the assessment of body mass index (BMI) and maintenance of a healthy body weight. Specifically, it will support the assessment and follow up plan for those patients identified with having a high BMI which is a risk factor of heart disease.
- Q238: Use of High-Risk Medications in Older Adults: This MIPS quality measure supports patient safety by assessing for the use of high-risk medications.

Improvement Activities

Within the improvement activities component of this MVP, we propose to include 11 improvement activities that reflect actions and processes undertaken by clinicians working to improve care for patients with heart disease. We have reviewed the MIPS improvement activity inventory and believe the improvement activity proposed within this MVP provides an opportunity for meaningful improvement and patient engagement for clinicians who specialize in managing risks and treating patients with heart disease. Therefore, the following improvement activity is proposed for inclusion within this MVP:

- IA_BE_15: Engagement of patients, family and caregivers in developing a plan of care: Drives the urgency of an "informed active patient" and the need to establish communication of healthcare goals and objectives with a proactive team for better health outcomes.

Additional improvement activities are included to offer clinician choice and to promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide additional

[275] https://www.cdc.gov/heartdisease/facts.htm#:~:text=Heart%20Disease%20in%20the%20United%20States&text=Heart%20disease%20costs%20the%20United,year%20from%202014%20to%202015.

[276] https://millionhearts.hhs.gov/learn-prevent/cost-consequences.html.

opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care for patients experiencing symptoms of and/or managing heart disease:

- IA_BE_12: Use evidence-based decision aids to support shared decision-making
- IA_BE_24: Financial Navigation Program
- IA_BE_25: Drug Cost Transparency
- IA_CC_9: Implementation of practices/processes for developing regular individual care plans
- IA_CC_14: Practice improvements that engage community resources to support patient health goals
- IA_EPA_4: Additional improvements in access as a result of QIN/QIO TA
- IA_PM_14: Implementation of methodologies for improvements in longitudinal care management for high risk patients
- IA_PSPA_4: Administration of the AHRQ Survey of Patient Safety Culture
- IA_PSPA_7: Use of QCDR data for ongoing practice assessment and improvements
- IA_PSPA_30: PCI Bleeding Campaign

Cost Measures

Within the cost component of this MVP, we propose the Elective Outpatient Percutaneous Coronary Intervention (PCI) and ST Elevation Myocardial Infarction (STEMI) with PCI episode-based measures, as well as the TPCC measure. All three of these cost measures capture costs of care related to the practice of cardiology. The two episode-based measures assess costs related to PCI: the first, Elective Outpatient PCI, focuses on the specific outpatient procedure as a common procedure that is important for the treatment of stable and urgent coronary artery disease. The second, STEMI with PCI, focuses on inpatient care for severe heart attack. In addition, the TPCC measure assesses the total costs of care after identifying the start of a clinician-patient relationship, including cardiologists. The TPCC measure is appropriate given its broader focus on the ongoing costs of care, similar to the quality measures in this MVP. This range of cost measures aligns with the broad focus of the MVP to apply to clinicians providing care to patients with heart disease. We considered including the MSPB Clinician measure, but ultimately did not include it because it encompasses all inpatient care, rather than focusing on the specific costs related to cardiology.

TABLE C: Proposed Advancing Care for Heart Disease MVP Beginning with the CY 2023 MIPS Performance Period/2025 MIPS Payment Year

As noted in the introduction of this appendix, we considered measures and improvement activities available within the MIPS inventory and selected those that we determined best fit the clinical concept of the proposed Advancing Care for Heart Disease MVP. We request comment on the measures and activities included in this MVP.

	(^) Safety Assurance Factors for EHR Resilience Guide (SAFER Guide)

Table D: Proposed Optimizing Chronic Disease Management MVP Beginning with the CY 2023 MIPS Performance Period/2025 MIPS Payment Year

Chronic disease represents 90% of the nation's $3.8 trillion in annual health care expenditures for people with chronic and mental health conditions.[277] The proposed Optimizing Chronic Disease Management MVP focuses on the clinical theme of providing fundamental treatment and management of chronic disease such as diabetes, coronary artery disease, chronic obstructive disease, and major adult depression. This MVP would be most applicable to clinicians who treat clinically varied patient types with those chronic clinical conditions including but not limited to family practice, internist, or geriatric care.

Quality Measures

Within the quality component of this MVP, we propose to include nine MIPS quality measures which focus on a variety of chronic conditions that may impact overall patient health. There may be instances in which a patient could be diagnosed with multiple chronic conditions impacting everyday activities of daily living. In order to preserve clinician choice, we included quality measures that were determined to be priority areas within chronic disease management. We reviewed the MIPS quality measure inventory and believe the following quality measures proposed within this MVP provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in treating patients with chronic conditions:

- Q006: Coronary Artery Disease (CAD): Antiplatelet Therapy: This MIPS quality measure addresses the use of antiplatelet therapy for patients diagnosed with CAD. Antiplatelet therapy use has shown to reduce the occurrence of vascular events for patients experiencing CAD.
- Q107: Adult Major Depressive Disorder (MDD): Suicide Risk Assessment: This MIPS quality measure supports assurance that a suicide risk assessment is completed once a patient has a new diagnosis or recurrent episode with MDD.
- Q118: Coronary Artery Disease (CAD): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy - Diabetes or Left Ventricular Systolic Dysfunction (LVEF < 40%): This MIPS quality measure addresses the use of ACE or ARB pharmacological therapy to reduce the clinical symptoms of heart failure, reduce the risks of morbidity and mortality in patients with CAD and/or diabetes.
- Q119: Diabetes: Medical Attention for Nephropathy: This MIPS quality measure supports screening for or evidence of nephropathy. High blood sugar levels in patients with diabetes put them at a higher risk of damaging their kidneys and causing chronic kidney disease, which can lead to kidney failure.
- Q236: Controlling High Blood Pressure: This MIPS quality measure promotes the quality action maintaining a patient blood pressure to maintain a systolic pressure of < 140 mmHg and diastolic pressure of < 90 mmHg. Controlling HBP will significantly reduce the risks of cardiovascular disease mortality and lead to better health outcomes like reduction of heart attacks, stroke, and kidney disease.
- Q398: Optimal Asthma Control: This MIPS quality composite measure evaluates pediatric and adult patients whose asthma is well-controlled as demonstrated by one of three age-appropriate patient reported outcome tools and assesses risk of exacerbation.
- Q438: Statin Therapy for the Prevention and Treatment of Cardiovascular Disease: The MIPS quality action represented within this quality measure is the prescription or maintenance of statin therapy. The use of statin therapy reduces the risk of atherosclerotic cardiovascular disease (ASCVD).

In conjunction with the aforementioned chronic disease management specific measures, we propose to include the following broadly applicable quality measures that are relevant to chronic disease management:

- Q047: Advanced Care Plan: The inclusion of this MIPS quality measure captures the clinical interaction of documenting a patient's voice for possible, future life-sustaining medical intervention. This engagement between the clinician (or clinician staff) and the patient allows the patient to be autonomous and communicate their ideal of clinical care that ensures coordinated care is implemented as documented in the patient's medical record.
- TBD: Person-Centered Primary Care Measure Patient Reported Outcome Performance Measure: This MIPS quality measure represents a comprehensive set of patient-clinician interaction assessments within the broad scope of primary care. This quality measure focuses on a patient's relationship with the clinician or practice.

The following quality measures were considered for this proposed MVP but not included based on the rationales below:

- Q052: Chronic Obstructive Pulmonary Disease (COPD): Long-Acting Inhaled Bronchodilator was considered; however, Q398 was selected because we believe the clinical concept represented within Q398 is more appropriate as it supports a broader age range of patients and promotes improved outcomes in asthma management.
- Q321: Consumer Assessment of Healthcare Providers and Systems (CAHPS) for MIPS Clinician/Group Survey was considered; however, we selected the newly proposed MIPS measure TBD: Person-Centered Primary Care Measure Performance Measure (PCPCM PRO-PM) because we want to capture the patient experience, but limit to one quality measure capturing patient voice.
- Q370: Depression Remission at Twelve Months was considered; however, Q107 was selected because we felt it was important to focus on suicide prevention as it is the 10th leading cause of death in the United States[278]. Although we acknowledge it is important to work towards remission for those patients that suffer from depression, we believe that ongoing suicide risk assessments for those patients with new or ongoing major depressive disorder is a more critical health priority.

---

[277] https://www.cdc.gov/chronicdisease/about/costs/index.htm.

[278] Mortality in the United States, 2019 NCHS Data Brief No. 395 Kenneth D. Kochanek, M.A., Jiaquan Xu, M.D., and Elizabeth Arias, Ph.D. https://www.cdc.gov/nchs/fastats/leading-causes-of-death.htm.

Improvement Activities

Within the improvement activities component of this MVP, we propose to include 12 improvement activities that reflect actions and processes undertaken by clinicians working to optimize chronic disease management for their patient populations. We have reviewed the MIPS improvement activity inventory and believe the improvement activities proposed within this MVP provide an opportunity for meaningful improvement and patient engagement for clinicians who focus on a variety of chronic conditions that may impact overall patient health. Therefore, the following improvement activities are proposed for inclusion within this MVP:

- IA_BE_4: Engagement of patients through implementation of improvements in patient portal: Promotes the use of patient portals for the treatment of chronic disease, such as diabetes and leads to better medication adherence and overall chronic disease management.
- IA_BE_21: Improved Practices that Disseminate Appropriate Self-Management Materials: Promotes the use of clinical literature to inform patients of evidenced-based approaches to self-management for the treatment of chronic disease.
- IA_CC_13: Practice improvements for bilateral exchange of patient information: A core component of patient safety, contributing to the reduction of medication errors and patient harm. Additionally, bilateral exchange assists caregivers with relevant clinical decision support and enhances public health reporting initiatives.

Additional improvement activities are included to offer clinician choice and to promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide additional opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care for patients diagnosed with chronic conditions:

- IA_AHE_3: Promote use of Patient-Reported Outcome Tools
- IA_BE_20: Implementation of condition-specific chronic disease self-management support programs
- IA_BE_22: Improved practices that engage patients pre-visit
- IA_CC_2: Implementation of improvements that contribute to more timely communication of test results
- IA_CC_12: Care coordination agreements that promote improvements in patient tracking across settings
- IA_CC_14: Practice improvements that engage community resources to support patient health goals
- IA_EPA_1: Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record
- IA_PCMH: Implementation of Patient-Centered Medical Home model
- IA_PSPA_19: Implementation of formal quality improvement methods, practice changes or other practice improvement processes

Cost Measures

Within the cost component of this MVP, we propose the TPCC measure because it focuses on the total cost of primary care including ongoing care for major chronic comorbidities after identifying the start of a clinician-patient relationship. The TPCC measure aligns with the types of care being assessed by the quality measures and improvement activities within this MVP. We considered including the MSPB Clinician measure, but ultimately did not include it because the measure applies only to inpatient care and does not align with the types of care envisaged by this MVP. Currently, there are no applicable episode-based measures available for this MVP, but the addition and/or development of applicable episode-based measures could be considered in the future. Refer to section IV.A.3.d.(2) of this proposed rule for details on two chronic condition episode-based measures which focus on asthma/COPD and diabetes that are being proposed for use in the Cost performance category in this proposed rule and could be applicable to this MVP in a future rulemaking cycle.

TABLE D: Proposed Optimizing Chronic Disease Management MVP Beginning with the CY 2023 MIPS Performance Period/2025 MIPS Payment Year

As noted in the introduction of this appendix, we considered measures and improvement activities available within the MIPS inventory and selected those that we determined best fit the clinical concept of the proposed Optimizing Chronic Disease Management MVP. We request comment on the measures and activities included in this MVP.

Table E: Proposed Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP Beginning with the CY 2023 MIPS Performance Period/2025 MIPS Payment Year

Emergency Medicine treatment of high frequency pain conditions have considerable influence on healthcare quality and cost.[16] There is significant variation in admission decision rates for conditions including chest pain and abdominal pain.[279] Opportunities for advancement also exist for headache and back pain within the Emergency Department (ED), which identify significant clinician variation in opioid prescribing and imaging utilization for these clinical conditions.[280] The measure topics addressed in this proposed MVP fall within the Center for Disease Control and Prevention (CDC) National Hospital Ambulatory Medical Care Survey (NHAMCS) 2017 ED Summary tables, which list the top eight principal reasons for visiting the ED.[281] The proposed Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP focuses on important assessors of the care emergency clinicians provide to patients with undifferentiated high-risk conditions. By focusing on these specific measures and activities, emergency clinicians can reduce clinical variability, improve the quality of emergency care and potentially lower costs. This MVP would be most applicable to clinicians who treat clinically varied patient types within the ED.

Quality Measures

Within the quality component of this MVP, we propose to include five MIPS quality measures and five QCDR measures, which focus on chest pain, abdominal pain, headache, and back pain which promotes assessment of the undifferentiated high-risk conditions seen with high frequency and specific to emergency medicine clinicians. The chosen quality measures address complementary clinical care opportunities by assessing appropriate imaging utilization, laboratory testing, and medication prescribing. We reviewed the MIPS quality measure inventory and believe the following quality measures proposed within this MVP provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in treating patients in the ED:

- Q116: Avoidance of Antibiotic Treatment for Acute Bronchitis/Bronchiolitis: This MIPS quality measure promotes appropriate prescribing of antibiotics for patients with acute bronchitis. The overprescribing of antibiotics contributes to antibiotic drug resistance, potentially leading to patient harm.
- Q254: Ultrasound Determination of Pregnancy Location for Pregnant Patients with Abdominal Pain: This MIPS quality measure addresses the use of ultrasound for detection of ectopic pregnancy for pregnant patients presenting with abdominal pain or vaginal bleeding. Early ultrasound can shorten the time to diagnosis and reduce the associated morbidity with a delay in diagnosis.
- Q331: Adult Sinusitis: Antibiotic Prescribed for Acute Viral Sinusitis (Overuse): This MIPS quality measure promotes appropriate prescribing of antibiotics for patients with viral sinusitis. The overprescribing of antibiotics contributes to antibiotic drug resistance, potentially leading to patient harm.
- Q415: Emergency Medicine: Emergency Department Utilization of CT for Minor Blunt Head Trauma for Patients Aged 18 Years and Older: This MIPS quality measure promotes appropriate use of head CT utilization in the ED for adult patients that present with minor blunt head trauma. It ensures that clinicians are purposefully ordering these studies to reduce cost and unnecessary harm to the patient by limiting radiation exposure.
- ACEP21: Coagulation studies in patients presenting with chest pain with no coagulopathy or bleeding: This QCDR measure promotes appropriate care and testing for patients that present with chest pain. It ensures that clinicians are purposefully ordering these studies which may lead to significant reduction in resource utilization without any decrease in value of healthcare provided to the patient.
- ACEP50: ED Median Time from ED arrival to ED departure for all Adult Patients: This QCDR measure promotes improving ED productivity and efficiency by expediting evaluation and treatment of new patients. When treatment times are prolonged, delays in care can occur and patients are put at risk for increased morbidity and mortality.
- ACEP52: Appropriate Emergency Department Utilization of Lumbar Spine Imaging for Atraumatic Low Back Pain: This QCDR measure addresses appropriate diagnostic imaging for patients presenting with low back pain. Diagnostic imaging does not reliably identify the cause of most back pain and does not improve clinical outcome or time to recovery. Unnecessary or routine imaging (X-ray, MRI, CT scans) for low back pain exposes patients to unnecessary harms such as radiation and referral for unnecessary treatment that increases healthcare costs.
- ECPR46: Avoidance of Opiates for Low Back Pain or Migraines: This QCDR measure promotes appropriate prescribing of opiates. Opioid pain medications are often inappropriately utilized for the treatment of migraine headaches and uncomplicated low back pain and over-prescribing of opioids has contributed to the opioid epidemic.
- ECPR55: Avoidance of Long-Acting (LA) or Extended-Release (ER) Opiate Prescriptions and Opiate Prescriptions for Greater Than 3 Days Duration for Acute Pain: This QCDR measure promotes appropriate prescribing of long-acting and extended-release opiates with the intent of reducing the potential for opioid use disorders. Poor prescribing practices and over-prescribing of opioids has contributed to the opioid epidemic. Long-acting opioid pain medications can increase the risk for physical dependence and opioid use disorders. This measure is intended to prevent inappropriate prescribing of opioids and reduce the associated potential for opioid use disorders.

In conjunction with the aforementioned ED specific measures, we propose to include the following broadly applicable quality measure that is relevant to care provided in the ED:

- Q321: CAHPS for MIPS Clinician/Group survey: This survey will provide direct input from patients and their experience regarding timely care, effective communication, shared decision making, care coordination, promotion of health and education, completion of health status/functionality, and courtesy of office staff.

---

Improvement Activities

Within the improvement activities component of this MVP, we propose to include 10 improvement activities that reflect actions and processes undertaken by clinicians working to improve care processes associated with undifferentiated high-risk conditions. We have reviewed the MIPS improvement activity inventory and believe the improvement activities proposed within this MVP provide an opportunity for meaningful improvement and patient engagement specific to emergency medicine clinicians. Therefore, the following improvement activities are proposed for inclusion within this MVP:

- IA_PSPA_19: Implementation of formal quality improvement methods, practice changes or other practice improvement processes: Provides opportunities to address the challenges presented by patients with undifferentiated high-risk conditions in the emergency healthcare setting.
- IA_PSPA_20: Leadership engagement in regular guidance and demonstrated commitment for implementing practice improvement changes: Encourages the development of innovative strategies for addressing patients with undifferentiated high-risk conditions in emergency room scenarios presenting with diagnostic uncertainty.

Additional improvement activities are included to offer clinician choice and to promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide additional opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care for patients seen by emergency medicine clinicians for assessment of undifferentiated high-risk conditions:

- IA_BE_4: Engagement of patients through implementation of improvements in patient portal
- IA_BE_6: Collection and follow-up on patient experience and satisfaction data on beneficiary engagement
- IA_CC_2: Implementation of improvements that contribute to more timely communication of test results
- IA_CC_14: Practice improvements that engage community resources to support patient health goals
- IA_PSPA_1: Participation in an AHRQ-listed patient safety organization
- IA_PSPA_6: Consultation of the Prescription Drug Monitoring Program
- IA_PSPA_7: Use of QCDR data for ongoing practice assessment and improvements
- IA_PSPA_15: Implementation of Antimicrobial Stewardship Program (ASP)

Cost Measures

Within the cost component of this MVP, we propose the MSPB Clinician measure because it applies to care received in the inpatient setting and covers a small share of emergency medicine clinicians. The TPCC measure was considered but not included in this MVP because the TPCC cost measure focuses on primary care and ongoing clinician-patient relationships, which is not the nature of emergency medicine care; in addition, the emergency medicine specialty is excluded from the TPCC measure attribution. Currently, there are no applicable episode-based measures available for this MVP, but one could be considered for development in the future. Refer to section IV.A.3.d.(2)(c) of this proposed rule for details on the current cost measure development process and potential cost measure development process that could lead to an episode-based measure related to this MVP.

TABLE E: Proposed Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP Beginning with the CY 2023 MIPS Performance Period/2025 MIPS Payment Year

As noted in the introduction of this appendix, we considered measures and improvement activities available within the MIPS inventory and selected those that we determined best fit the clinical concept of the proposed Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP. We request comment on the measures and activities included in this MVP.

Table F: Proposed Improving Care for Lower Extremity Joint Repair MVP Beginning with the CY 2023 MIPS Performance Period/2025 MIPS Payment Year

Arthritis and lower extremity (LE) fracture can be costly conditions and lead to increased pain and decreased functional ability. Osteoarthritis, hip, and lower extremity fractures have been identified within the top 20 most expensive conditions for hospital costs; 19,906 million, 5,628 million and 4,368 million in 2017 respectively.[282] The proposed Improving Care for Lower Extremity Joint Repair MVP focuses on the clinical theme of providing fundamental treatment and management of patients with osteoarthritis and lower extremity surgical repair, such as fracture and total joint replacement, to ensure appropriate care and reduce costs. This MVP would be most applicable to clinicians who treat clinically varied patient types and who may also be assessed for, or who have undergone, lower extremity surgical repair, including pre- and post-operatively.

Quality Measures

Within the quality component of this MVP, we propose to include six MIPS quality measures, which promote assessment and treatment of care for patients with lower extremity orthopedic conditions, with emphasis on osteoarthritis and total joint repair/replacement. We have reviewed the MIPS quality measure inventory and believe the following quality measures proposed within this MVP provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in treating patients with osteoarthritis and LE joint repair. We decided to keep the focus on total hip and knee replacement because these procedures are directly applicable to the Medicare patient population. Therefore, the following measures are proposed:

- Q350: Total Knee Replacement: Shared Decision-Making: Trial of Conservative (Non-surgical) Therapy: This MIPS quality measure promotes care for non-surgical patients diagnosed with osteoarthritis with the potential to reduce overall healthcare costs associated with this chronic condition.
- Q351: Total Knee Replacement: Venous Thromboembolic and Cardiovascular Risk Evaluation: This MIPS quality measure promotes appropriate pre-operative evaluation for potential venous and cardiovascular complications and to help minimize surgical risk for patients undergoing a total joint repair.
- Q376: Functional Status Assessment for Total Hip Replacement: This MIPS quality measure is a patient-reported outcome measure, that addresses functional status assessment and improvement in patients that undergo a total hip replacement.
- Q470: Functional Status After Primary Total Knee Replacement: This MIPS quality measure is a patient-reported outcome measure, that addresses functional status assessment and improvement in patients that undergo a total knee replacement.
- Q480: Risk-standardized complication rate (RSCR) following elective primary total hip arthroplasty (THA) and/or total knee arthroplasty (TKA) for Merit-based Incentive Payment System: This MIPS quality measure is an administrative claims outcome measure that addresses lower extremity total joint surgery complications rates. As an administrative claims measure, there is no additional burden on the clinician for reporting.

In conjunction with the aforementioned lower extremity joint repair specific measures, we propose to include the following broadly applicable MIPS quality measure that are relevant to care provided by orthopedic clinicians:

- Q128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan: This MIPS quality measure addresses the assessment of body mass index (BMI) and maintenance of a healthy body weight. Specifically, it supports surgical or non-surgical patients diagnosed with osteoarthritis with potential to reduce overall healthcare costs and surgical risk associated with this chronic condition.

The following quality measures were considered for this proposed MVP but not included based on the rationales below:

- CCOME6: Patient-Reported Pain and/or Function Improvement after APM Surgery and CCOME7: Patient-Reported Pain and/or Function Improvement after Total Hip Arthroplasty were considered; however, although these QCDR measures are robust outcome measures and would be applicable to orthopedic surgeons, testing requirements will not be completed in time to include within the MVP.
- Q217: Functional Status Change for Patients with Knee Impairments and Q218: Functional Status Change for Patients with Hip Impairments were considered; however, these MIPS quality measures are more appropriate for clinicians providing rehabilitative services (i.e., physical therapy and occupational therapy).
- Q024: Communication with the Physician or Other Clinician Managing On-Going Care Post-Fracture for Men and Women Aged 50 Years and Older was considered; however, to allow for clinician choice in measure selection and to capture those patients who may need osteopathic care for fractures that may not require surgery.

Improvement Activities

Within the improvement activities component of this MVP, we propose to include 11 improvement activities that reflect actions and processes undertaken by clinicians focused on interventional strategies for the improvement of lower extremity joint repair. We have reviewed the MIPS improvement activity inventory and believe the improvement activities proposed within this MVP provide an opportunity for meaningful improvement and patient engagement for clinicians who specialize in treating patients with osteoarthritis and LE joint problems. Therefore, the following improvement activities are proposed for inclusion within this MVP:

- IA_CC_15: PSH Care Coordination: Contributes to the coordinated care of the patient required after a procedure such as a hip/knee replacement. The Perioperative Surgical Home (PSH) strives to provide the patient with the "right care, in the right place, at the right time" to ensure patient satisfaction while reducing complications and costs.
- IA_PSPA_27: Invasive Procedure or Surgery Anticoagulation Medication Management: To address blood-clotting issues commonly associated with hip/knee replacement. Statistical data indicates that hip and knee replacements are a commonly performed inpatient procedure with long recovery times that often incur sizable expenses in terms of hospitalization and rehabilitation.

[282] https://www.cms.gov/Research-Statistics-Data-and-Systems/Statistics-Trends-and-Reports/Chronic-Conditions/CC_Main. https://www.hcup-us.ahrq.gov/reports/statbriefs/sb261-Most-Expensive-Hospital-Conditions-2017.jsp.

Additional improvement activities are included to offer clinician choice and to promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide additional opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care for patients experiencing LE joint problems:

- IA_AHE_3: Promote use of Patient-Reported Outcome Tools
- IA_BE_6: Collection and follow-up on patient experience and satisfaction data on beneficiary engagement
- IA_BE_12: Use evidence-based decision aids to support shared decision-making
- IA_CC_7: Regular training in care coordination
- IA_CC_9: Implementation of practices/processes for developing regular individual care plans
- IA_CC_13: Practice improvements for bilateral exchange of patient information
- IA_PSPA_6: Consultation of the Prescription Drug Monitoring Program
- IA_PSPA_7: Use of QCDR data for ongoing practice assessment and improvements
- IA_PSPA_18: Measurement and improvement at the practice and panel level

Cost Measures

Within the cost component of this MVP, we propose the Elective Primary Hip Arthroplasty and Knee Arthroplasty episode-based measures because they evaluate the costs of care for clinicians performing elective hip arthroplasty and knee arthroplasty procedures. These two episode-based measures are closely linked to the quality measures within this MVP and help provide a holistic evaluation of the value of care for elective lower extremity joint repair. The TPCC measure was considered but not included in this MVP because the TPCC cost measure focuses on primary care and ongoing clinician-patient relationships, which is not the nature of orthopedic surgery care; in addition, the orthopedic surgery specialty is excluded from the TPCC measure attribution. We considered including the MSPB Clinician measure, but ultimately did not include it as it encompasses all inpatient care, rather than focusing on the specific costs related to lower extremity joint repair.

TABLE F: Proposed Improving Care for Lower Extremity Joint Repair MVP Beginning with the CY 2023 MIPS Performance Period/2025 MIPS Payment Year

As noted in the introduction of this appendix, we considered measures and improvement activities available within the MIPS inventory and selected those that we determined best fit the clinical concept of the proposed Improving Care for Lower Extremity Joint Repair MVP. We request comment on the measures and activities included in this MVP.

Table G: Proposed Patient Safety and Support of Positive Experiences with Anesthesia MVP Beginning with the CY 2023 MIPS Performance Period/2025 MIPS Payment Year

Clinicians within the profession of anesthesiology evaluate, monitor, and deliver patient care before, during, and after surgeries and/or procedures to ensure optimal patient outcomes. We believe that as the population ages, and the need for surgery and interventional procedures steadily increases, the anesthesiologist can play a significant role in delivering cost-effective health care without affecting the quality of care being delivered. Relative to overall disease healthcare burden, a total of 28%-32% of global disease comes from surgical diseases.[283] The proposed Patient Safety and Support of Positive Experiences with Anesthesia MVP focuses on increasing quality of anesthesia care, improving postoperative outcomes, promoting patient safety, and enhancing satisfaction for patients receiving anesthesia. The measures are used for a variety of surgical procedures that anesthesiologists deliver care for, and are broadly applicable to anesthesiologists practicing within ambulatory, outpatient, and inpatient hospital settings. This MVP would be most applicable to clinicians who provide anesthesia services to patients within the surgical setting or who are considered anesthesiologists or other qualified anesthesia professionals.

Quality Measures

Within the quality component of this MVP, we propose to include five MIPS quality measures and three QCDR measures, which intend to drive the quality of care within an anesthesia episode and is based on guidelines that lead to better patient outcomes for both the adult and pediatric patient populations. The anesthesiology-related quality measures are inclusive of all phases of anesthesia care: pre, intra and postoperative, including coordination with the anesthesiologist's surgical colleagues. We reviewed the MIPS quality measure inventory and believe the following quality measures proposed within this MVP provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in providing anesthesia services:

- Q404: Anesthesiology Smoking Abstinence: This MIPS quality measure uses targeted interventions to encourage smoking cessation, which can be critically important in reducing surgical risks and preventing infection, ultimately leading to faster patient recovery and reduced costs. Smoking is a precursor to multiple health challenges including respiratory and cardiovascular diseases which may interfere with metabolic processes such as oxygen delivery and uptake and drug metabolism.
- Q424: Perioperative Temperature Management: This MIPS quality measure ensures the maintenance of normothermia during surgery. Perioperative hypothermia is known to be a common occurrence with anesthesia, which can result in fluctuations in body temperature causing adverse effects on physiological functioning. This is a key clinical action under the control of the anesthesiologist that can directly lead to reduced surgical site infections, faster recovery, and reduced costs.
- Q430: Prevention of Post-Operative Nausea and Vomiting (PONV) – Combination Therapy: This MIPS quality measure encourages effective prophylactic regimens to be used by the anesthesiologist to reduce this highly dissatisfying side effect of anesthesia. Nausea and vomiting are common side effects following anesthesia that can cause electrolyte imbalance, dehydration, aspiration, and/or slow wound healing. Decreasing occurrence of side effects can shorten recovery times, reduce costs and resources.
- Q463: Prevention of Post-Operative Vomiting (POV) – Combination Therapy (Pediatrics): This MIPS quality measure encourages effective prophylactic regimens to be used by the anesthesiologist to reduce this highly dissatisfying side effect of anesthesia. A pediatric-specific measure is needed because the risk factors and recommended prophylaxis are different from the adult population.
- Q477: Multimodal Pain Management: This patient-centered MIPS quality measure assesses the effective peri- and postoperative pain management through the utilization of multimodal pain management. Optimal perioperative pain management improves patients' function and rehabilitation after surgery. Additionally, this measure dissuades the use of opioids, which not only work primarily through a single mechanism, but can lead to a host of side effects that can be life threatening or lead to opioid abuse.

In conjunction with the MIPS quality measures specific to anesthesia, we propose to include the following QCDR measures that are relevant to reducing operative infection and incorporating the patient voice.

- AQI48: Patient-Reported Experience with Anesthesia: This QCDR measure uses patient voice to assess a patient's overall experience with anesthesia care helping to better understand the patient's satisfaction and experience.
- AQI69: Intraoperative Antibiotic Redosing: This QCDR measure addresses the importance of infection prevention by encouraging adequate and timely redosing of intraoperative antibiotics.
- AQI70: Prevention of Arterial Line Infection: This QCDR measure addresses the appropriate use of sterile techniques which are essential to prevent costly and dangerous infections.

This MVP supports the vital practice of anesthesia care in protecting patient safety and mitigating patient risk. Reducing the risk of infection, pain management, post-operative management of nausea and vomiting, as well as patient and family engagement and satisfaction can all lead to the overall goal of better outcomes for patients undergoing surgery.

Improvement Activities

Within the improvement activities component of this MVP, we propose to include 11 improvement activities that reflect actions and processes undertaken by anesthesiologists to identify interventional strategies to promote positive patient experiences with anesthesia. We have reviewed the MIPS improvement activity inventory and believe the improvement activities proposed within this MVP provide an opportunity for meaningful improvement regarding complications associated with anesthesia, which may

[283] Karim HMR. Healthcare delivery cost and anesthesiologists: Time to have a greater role and responsibility. World J Anesthesiol 2019; 8(3): 19-24.

include postoperative vomiting (POV), cardiovascular collapse, and respiratory depression. Therefore, the following improvement activities are proposed for inclusion in this MVP:

- IA_PSPA_7: Use of QCDR data for ongoing practice assessment and improvements: Promotes follow-up systems, tools, and/or strategies that could address complications often encountered after anesthesia.
- IA_PSPA_20: Leadership engagement in regular guidance and demonstrated commitment for implementing practice improvement changes: Promotes follow-up systems, tools, and/or strategies that could address complications often encountered after anesthesia.

Additional improvement activities are included to offer clinician choice and to promote patient engagement and patient-centeredness, health equity, shared decision making, and care coordination. These improvement activities provide additional opportunities for clinicians to drive outcomes and improve quality of care for patients receiving anesthesia:

- IA_BE_6: Collection and follow-up on patient experience and satisfaction data on beneficiary engagement
- IA_BE_22: Improved practices that engage patients pre-visit
- IA_BMH_2: Tobacco use
- IA_CC_2: Implementation of improvements that contribute to more timely communication of test results
- IA_CC_15: PSH Care Coordination
- IA_CC_19: Tracking of clinician's relationship to and responsibility for a patient by reporting MACRA patient relationship codes
- IA_EPA_1: Provide 24/7 Access to MIPS Eligible Clinicians or Groups Who Have Real-Time Access to Patient's Medical Record
- IA_PSPA_1: Participation in an AHRQ-listed patient safety organization
- IA_PSPA_16: Use of decision support and standardized treatment protocols

Cost Measures

Within the cost component of this MVP, we propose the MSPB Clinician measure because it focuses on clinicians providing inpatient care and applies to a small subset of anesthesiologists. The TPCC measure was considered but not included in this MVP because this cost measure focuses on primary care and ongoing clinician -patient relationships, which is not the nature of anesthesiology care; in addition, the anesthesiology specialty is excluded from the TPCC measure attribution. Currently, there are no applicable episode-based measures available, but one could be considered for development in the future. Refer to section IV.A.3.d.(2) of this proposed rule for details on the current cost measure development process and potential cost measure development process that could lead to an episode-based measures related to this MVP.

TABLE G: Proposed Patient Safety and Support of Positive Experiences with Anesthesia MVP Beginning with the CY 2023 MIPS Performance Period/2025 MIPS Payment Year

As noted in the introduction of this appendix, we considered measures and improvement activities available within the MIPS inventory and selected those that we determined best fit the clinical concept of the proposed Patient Safety and Support of Positive Experiences with Anesthesia MVP. We request comment on the measures and activities included in this MVP.
