

# Dentons Flashpoint

## Daily Global Situation Report

May 27, 2021

# Global Situation Update: May 27, 2021

---

## KEY TAKEAWAYS

Scientists claim to have solved the source of rare blood clots linked to the AstraZeneca and Johnson & Johnson vaccines.

Exxon and Shell lost two landmark shareholder and legal decisions in a major climate-driven blow to big oil.

Mali's president and prime minister resigned, confirming the country's second coup in ten months.

# Global Situation Update: May 27, 2021

## WHAT WE'RE WATCHING

Today, tensions remain high on the streets of Sohar, Oman following 5 days of protests over the country's floundering economy and mass layoffs in the city. Yesterday, police fired tear gas on protestors, while today there are reports of a budding protest in Bidiyah in eastern Oman. Street protests are rare in Oman.

The Sultan, who took power in January 2020, has responded by asking his government to fast-track the creation of thousands of new jobs, including instructing the Ministry of Defense and Labor to coordinate the hiring of qualified job seekers into the military, essentially standing up new regiments.

*Note: This report is based on sources and information deemed to be true and reliable, but Dentons makes no representations to same.*

# Global

---

## Globally, confirmed coronavirus cases topped 168.3 million with 3.4 million deaths.

- The head of a Japanese doctors' union warned that holding the **Olympic Games** with tens of thousands of people from around the world, could lead to the emergence of an "Olympic" strain of the coronavirus.
- High levels of nitrogen and phosphorus in the Sea of Marmara, situated between the Black and Aegean Seas, are leading to an explosion of the phytoplankton populations that discharge "sea snot," preventing fish from being able to breathe, causing mass die-offs, which in turn leads to plummeting oxygen levels that choke other forms of marine life. Rising water temperatures caused by **global warming and pollution** from Turkish agricultural and raw sewage runoff is being blamed.

# COVID-19 Vaccine

---

**Scientists in Germany claim to have solved the source of rare blood clots linked to the AstraZeneca and Johnson & Johnson vaccines, and say they believe the shots could be tweaked to prevent the reaction altogether.**

- The **EU** is demanding damages from **AstraZeneca**, which could reach billions of euros, if it fails to increase its deliveries of COVID-19 vaccines by next month.
- **India** cancelled local trials for “*well-established*” foreign coronavirus vaccines to fast-track imports as it battled a deadly surge in coronavirus cases.

# Markets & Business

---

## A Dutch court ruled Wednesday that Royal Dutch Shell must reduce its emissions by 45 percent by 2030 in another major climate-driven blow to big oil.

- An activist investor won at least two seats on **Exxon Mobil's** corporate board after questioning the oil major's carbon footprint, in an unprecedented setback for Exxon.
- **Ford** shares rose to their highest level in nearly five years after the company outlined new plans to electrify its coming vehicle lineup; Ford expects 40 percent of global vehicle volume to be electric by 2040.
- **Hyundai Motor Group** will reduce the number of combustion engine models in its line-up to free up resources to invest in electric vehicles.
- China's **Xiaomi Corp** reported that the US had formally lifted its designation as a Chinese Military Company and lifted restrictions on buying and trading its stock.
- **GameStop, AMC**, and a number of other "meme" stocks began to rally on Wednesday in a surge reminiscent of late-January.
- **WhatsApp** sued the Indian government over a new privacy rule they say will force them to break encryption.
- **Google** and national hospital chain **HCA Healthcare** struck a deal to develop healthcare algorithms using patient records.
- **HSBC** has sold its US retail banking network, effectively closing its North America business after a 40-year attempt to run a full-service bank in the country.
- **Uber** recognized Britain's GMB union, which will represent up to 70,000 drivers.

*Note: This report is based on sources and information deemed to be true and reliable, but Dentons makes no representations to same.*

# Africa

---

- **Somalia's** foreign minister reported that the Somali government and national leaders had reached an agreement to hold long-delayed elections.
- Former **South African** President Jacob Zuma plead not guilty in the first day of trials for multiple corruption charges.
- **Mali's** interim president and prime minister officially resigned, several days after being detained at a military camp by military leaders unhappy with a government reshuffle, confirming the country's second coup in ten months.
- The UN estimated that some 20,000 are homeless and 40 missing in the aftermath of a volcanic eruption in the **Democratic Republic of the Congo**.
- **Zambia's** president banned campaign rallies ahead of August elections, citing COVID-19 concerns.

*Note: This report is based on sources and information deemed to be true and reliable, but Dentons makes no representations to same.*

# Asia

---

- **India's** total coronavirus case count surpassed 27 million. An Indian official estimated that some 50,000 have been rendered homeless by Cyclone Yaas.
- **Malaysia's** finance ministry fired the head of the country's public transport operator over his handling of a train crash that killed over 200.
- **Taiwan** for the first time directly accused **Beijing** of blocking a deal with BioNTech for COVID-19 vaccines.
- **Chinese** tech hub Shenzhen will restrict residency rules to curb a population boom. China warned that "*politicizing*" the origins of COVID-19 would hamper further investigations and undermine global efforts to curb the pandemic.
- Millions of mice have swarmed parts of New South Wales and Queensland, threatening **Australia's** agriculture sector.

*Note: This report is based on sources and information deemed to be true and reliable, but Dentons makes no representations to same.*

# Europe

---

- Dominic Cummings, former advisor to **UK** Prime Minister Johnson, gave evidence to MPs on the government's initial handling of the pandemic in a succession of explosive testimony accusing the Johnson and most of his cabinet of gross mismanagement.
- **French** business confidence and consumer sentiment picked up in May as the country emerged from its winter lockdown and third wave of COVID-19. France will tighten restrictions on travelers from the **UK** over concerns about the prevalence of Indian variant B.1.167 there.
- The **Swiss** government jettisoned its new framework agreement to pursue closer ties with the **EU**, leading to a rapid rebuke from the European Commission.
- **Spain's** supreme court ruled that Prime Minister Sanchez's government should not pardon nine jailed Catalan separatist leaders.
- **Belarusian** President Lukashenko claimed that the reporter removed from the plane early in the week was plotting a "bloody rebellion." In a new video advocates said looked forced, the reporter's girlfriend confessed on video to publicizing the personal details of police officers.

*Note: This report is based on sources and information deemed to be true and reliable, but Dentons makes no representations to same.*

# Middle East

---

- Qasim Musleh, the head of a prominent **Iranian**-backed militia in **Iraq**, was arrested in Baghdad for involvement with terrorist crimes, likely prompting violent anti-government backlash from his and other paramilitary organizations.
- **Iran** banned cryptocurrency mining for four months due to blackouts triggered by the energy-intensive practice.
- **German** Chancellor Merkel met with **Egyptian** President al-Sisi to discuss the **Gaza** ceasefire.
- The World Food Programme tripled its assistance to **Lebanon**, citing the deepening economic crisis.
- The **UAE** will require all attendants at “live events” to be vaccinated from June 6. Dubai is using drones armed with cameras and facial recognition software to identify and fine residents not wearing masks. **Bahrain**, one of the more vaccinated countries in the world using China’s Sinopharm, will impose a two-week lockdown as coronavirus infections surge.

*Note: This report is based on sources and information deemed to be true and reliable, but Dentons makes no representations to same.*

# How do You Manage Risks?

---

*The coronavirus pandemic has not just added a new layer of risk for business leaders to navigate, but has accelerated drivers of change, including disruptive technologies, political and economic realignments and cultural priorities on equality, justice and conservation, while increasing vulnerabilities that bad actors seek to exploit.*

*Dentons Intelligence and Security Services Group offers bespoke services to provide business leaders with the intelligence they need to understand and thrive in complex operating environments.*

- ❖ due diligence and compliance investigations
- ❖ physical and cyber security assessments
- ❖ country and political risk assessments
- ❖ enterprise risk management and organizational resiliency advice
- ❖ crisis and incident response (physical security breaches and cyber incidents, insider threats and reputational impacts)

*To learn more about the bespoke intelligence and risk services from Dentons, contact [Karl Hopkins](#).*

# Americas

---

- Nearly a month of anti-government protests continued in **Colombia**, despite ongoing meetings between the government and strike leaders.
- Another mayoral candidate in north-central **Mexico** was killed, bringing the total number of candidates murdered ahead of June elections to 34.
- **Brazil** surpassed 450,000 COVID-19 deaths, per its health ministry.

*Note: This report is based on sources and information deemed to be true and reliable, but Dentons makes no representations to same.*

# Americas: US

- Across the nation, 165.1 million people have received at least **one dose of vaccine**, or 49.7 percent to the total population. **Pennsylvania** became the 10th US state to vaccinate 70 percent of its population with at least one dose, which is President Biden’s goal for the country to reach by July 4. **New York** will offer teens who get vaccinated over the coming two months an opportunity to win full scholarships to state college or university. Disneyland will reopen to visitors from outside of **California** starting in mid-June.
- The Food and Drug Administration granted emergency-use authorization to a monoclonal **antibody therapy** that researchers believe is effective on the B.1.617.2 coronavirus variant discovered in India.
- The SEC is weighing new protections for **SPAC investors**.
- At least eight people were killed in a **mass shooting** at a light-rail facility in San Jose, California; this is the 15th mass shooting of more than 4 people this year.
- Senators introduced bipartisan legislation that would review **Chinese** donations to universities. Senior US and **EU** diplomats met Wednesday to discuss grievances against China. President Biden has asked US intelligence agencies to “*redouble*” efforts to investigate the origins of the COVID-19 pandemic, asking for new conclusions to be delivered within 90 days.

*Note: This report is based on sources and information deemed to be true and reliable, but Dentons makes no representations to same.*

# Science Under the Scope: Understanding mRNA Vaccines

*Contributed by the Scowcroft Institute for International Affairs*

***The Pfizer-BioNTech and Moderna COVID-19 vaccines are the first mRNA vaccines produced on a mass scale. Some Americans have expressed concern about the vaccines because they believe that mRNA vaccines are a new and untested concept. In reality, decades of work had gone into understanding mRNA and finding ways to create effective mRNA vaccines before SARS-CoV-2 began its spread across the world.***

In 1961, mRNA was discovered and nine years later, in 1969, its first in vitro (outside a living organism) translation was done.<sup>1</sup> Almost immediately, some scientists saw the potential of mRNA for vaccines and therapeutics. By 1990, scientists conducted the first successful transcription of mRNA in animals, showing that mRNA could be an alternative to conventional vaccines and therapeutics.<sup>2</sup>

Despite the success of mRNA in the early 1990s, the platform was dismissed by the broader scientific community because it was considered too unstable to work with.<sup>3</sup> During this time, Dr. Katalin Kariko remained one of the biggest proponents of the platform. She submitted dozens of grant proposals to receive funding to explore the platform further, but all were turned down because reviewers thought mRNA was too vulnerable to the body's natural defenses to

be useful for vaccines.<sup>4</sup> Over the course of more than five years Dr. Kariko was never able to secure funding for her ideas and was eventually demoted out of her tenure-track position.<sup>5</sup> While demoralizing, the demotion did not deter her from her belief that mRNA was the future of vaccines, and in 2005 she and a colleague found a way to help mRNA evade the body's natural defenses. This discovery is the fundamental discovery that made the current COVID-19 vaccine possible.

With this problem solved, interest in mRNA grew. Scientists were excited about the technology because it was safer than conventional vaccines, advancements had found ways to make it more stable, and it had the potential for “*rapid, inexpensive, and scalable manufacturing.*”<sup>6</sup> In addition to these positive characteristics,

*Note: This report is based on sources and information deemed to be true and reliable, but Dentons makes no representations to same.*

# Science Under the Scope: Understanding mRNA Vaccines

scientists have known since the 1980s that mRNA is able to create a strong innate immune response and, unlike conventional vaccines, it creates a response in both B cells (antibodies) and T cells, which provide longer term immunity than B cells.<sup>7 8</sup>

Due to mRNA's ability to create such a strong innate immune response, many in the scientific community believe that it can eventually allow us to develop vaccines for some of the most elusive and difficult diseases, such as HIV. Additionally, the use of mRNA cancer vaccines --used for therapeutic rather than preventative purposes -- have demonstrated the ability to reduce and sometimes completely clear tumors.<sup>9</sup> The mRNA cancer vaccines have proven particularly effective for melanoma.<sup>10</sup> And because mRNA can teach our body to make proteins, there is potential that the technology could treat diseases like cystic fibrosis.

Prior to COVID-19, the founder of Moderna was already exploring ways that mRNA could be used for therapeutics and vaccines for a wide range of ailments. Thus, even though they were an unknown company compared to Pfizer and Johnson & Johnson, they were founded as a company focused on the potential of mRNA and have

been conducting research on mRNA vaccines since the early 2010s. It is this decade of work that allowed Moderna to be the first company to produce a COVID-19 vaccine for clinical trials.

The success of the mRNA COVID-19 vaccines has important implications for future vaccine development, cancer treatment, and therapeutic medicines.
